1291. Do you think it is possible that there should be at the Foreign Office any department or any gentlemen who can be acquainted with all those minute details of manufacture and trade in England; or do you think it advisable that there should be a gentleman there to give information upon such subjects?—As regards the working of the two offices, I most respectfully and humbly say that it is a very difficult question for me to answer, because I do not know really the arrangements between the two departments. I am speaking in ignorance, really, and therefore anything that I may say must be received in that way. But, judging from what I have seen, there are certain gentlemen connected with the Board of Trade who are most efficient officers, and who are capital men for the Chambers of Commerce to communicate with. I humbly think it would be better, in place of two offices writing upon the same subject to a gentleman in the country, if the Foreign Office did it entirely, supposing that to be the office through which it is necessary that

that the foreign correspondence should pass. At the same time, if it is to be the department to look after foreign trade, I then would have a proper and efficient staff attached to the Foreign Office, and have nothing to do with the Board of Trade in reference to foreign tariffs.

1292. You say that there are very efficient gentlemen attached to the Board of Trade?—Yes, no doubt.

1293. What harm do you see in communicating with the Board of Trade if you receive the same information from them as from the Foreign Office?—We receive the same information, but it is a very complicated system. If the two offices have to write backwards and forwards to each other it must cause a delay. It is not the way in which any private business in the country is conducted; I can give an illustration of that, if necessary.

1294. Supposing a legal question arises abroad: supposing a British subject is illtreated, or his goods are taken; when that case is referred to the Foreign Office, does the Foreign Office act upon it, or does it refer to the law officers of the Crown to obtain an opinion first?—I really do not know.

1295. Do you mean to say that the Foreign Office is bound to give an opinion upon questions of law, upon questions relating to matters under the Home Office, and upon matters concerning the Army and Navy; that, in fact, the Foreign Office is bound to have a department in it which can give at once information upon every public subject?—I only speak in reference to my own department of trade.

1296. Is there anything exceptional which distinguishes trade from other questions?—It is perfectly evident that there is the Board of Trade, which is able to give information to the gentlemen in the country with reference to trade, and it is only by having trade matters attached to one office instead of the other that there may be difficulties I am not aware of.

1297. Do you mean to say that the Board of Trade should be amalgamated with the Foreign Office?—No.

1298. What is your plan, then?—I would allow the Board of Trade to look after the trade at home (and I suppose, from what I see, that they would have a great deal to do); but I think that if the Foreign Office is really going to take up these foreign duties, I then would wish to see an efficient staff there to work the whole thing out.

1299. What distinction do you draw between trade abroad and at home; surely they are so closely connected that you cannot divide the one from the other?—Then merge the whole into the Board of Trade, and let us correspond directly with the Board of Trade.

1300. You would be satisfied if the whole thing were merged in the Board of Trade, and you had only to correspond with the Board of Trade?—Yes; with one office instead of two.

1301. With the Board of Trade only?—Yes; or the Foreign Office, either the one or the other.

1302. *Chairman.*] Am I to understand, from that answer, that you would be satisfied if you felt that you were corresponding with those gentlemen who had to do the work?—Yes; to carry out the results or carry out the details.

1303. However intelligent you find the gentlemen at the Board of Trade, your objection is not to corresponding with them individually, but rather your objection is to corresponding with intelligent gentlemen who can only convey your representations to another office; you prefer corresponding with that office itself?—Yes, precisely.

1304. You would prefer finding the same intelligence in the office that does the work, as you find now in the office that does not do the work?—Yes.

1305. I suppose the French jute trade is not so large as the Scotch jute trade, is it?—It is nothing in comparison to it.

1306. You stated, in answer to a question of mine, that the duty levied upon Scotch jute goods in Italy is precisely the same as that levied upon French jute goods?—Yes.

1307. You never wished to be put in a different position from France, did you?—We have no objection to compete with France.

1308. Your only object was that jute goods should be put in the same *ad valorem* position as linen goods?—Yes.

1309. Jute imports into Italy from France were put in a different position from linen imports into Italy from France previous to the treaty, were they not?—I believe the same.

1310. Do not you suppose that if your representations, which you sent in 1862, had been forwarded by our Government to the Italian Government, and representations had accordingly been made to them of the desirableness of putting jute in the same position as linen, you would have had the assistance then of the French Government, because it would have been to the interest of the French jute manufacturers to get their jute goods admitted at a lower scale into Italy?—It is reasonable to think so.

1311. Therefore you do not suppose that there could have been any objection on the part of France to jute goods being put in the same position as linen goods?—I cannot see any.

1312. Mr. *Layard.*] This is merely a matter of your own opinion?—As a matter of course: I do not know the facts. The Italian Government may have had some reason with which I am not acquainted.

1313. Mr. *Butler-Johnstone.*] The French jute trade being a small one, and the English jute trade being a large one, and at the same time the French linen trade being a large one, if jute was put upon a worse footing in Italy than linen, would not the French linen manufacturers reap an advantage as against the English jute manufacturers?—I do not see why they should.

1314. *Chairman.*] Is there no competition between jute and linen?—To a certain extent there is.

1315. Mr. *Butler-Johnstone.*] In every country there is that competition?—Yes.

1316. Where jute is upon less favoured terms than linen in a tariff, would not the advantage redound to the benefit of the French linen manufacturer as against the English jute manufacturer?—The duty is the same in both cases.

1317. *Chairman.*] Do you suppose that the jute being put upon the same footing as linen would be a cause of the diminution of the export of linen goods to Italy, or any other country?—No doubt the dearer you make jute the more it will increase the consumption of linen.

1318. Mr. *Butler-Johnstone.*] Then the French linen manufacturers have an interest in preventing English jute manufacturers from coming into competition with their linen?—It is quite possible; at the same time, practically, they ought

Mr. *R. Sturrock.*

7 June 1864.

not to do so, because they do not interfere much with each other now.

1319. *Chairman.*] Is that a feeling which is ever felt by the linen manufacturers, as compared with the jute manufacturers, at Dundee?—Never.

1320. Mr. *Charles Turner.*] Is not jute used for the same purposes as flax and hemp?—The fact is that formerly there were certain articles, such as bags and sacking and pack-sheets, which were entirely made of flax and hemp; but the consequence of the introduction of jute is that that has altogether ceased to be the case, and they are now made entirely from jute.

1321. Is not jute imported exclusively from Calcutta?—Altogether from India.

1322. How do you account for jute being bought in this country, on French account, taken to France, and manufactured in France, and then exported again to Dundee, in competition with jute coming direct to this country?—The French, previously to the Treaty of 1860, had a very bad system. They had a very large and heavy import duty upon jute coming from entrepôts such as London. The consequence was that the French spinners had to import direct from India, but in the French Treaty the Emperor very wisely knocked off this heavy duty, and now the French spinners get their jute principally from London. Of course London imports the jute direct from India; and the consequence is that, as the jute-spinners at Dundee are 400 miles from London, and as the distance to France is not so great, the French spinners can get a bale of jute put down as cheaply in Dunkirk or Lisle as we can in Dundee. I wish to hand in the memorial and the schedule to which I have referred in speaking of the Italian Treaty.—(*The same were handed in.*—Vide *Appendix.*)

JOHN EVANS, Esq., called in; and Examined.

J. Evans, Esq.

1323. *Chairman.*] YOU are engaged in the manufacture of paper, are you not?—Yes; our house is that of Messrs. John Dickinson & Co., one of the largest in the paper trade.

1324. There is an association of papermakers, is there not?—There has been one formed of late years, of which I am the chairman.

1325. To watch over the interests of the paper trade?—Yes, exactly.

1326. Is not the trade with which you are connected interested in the fiscal regulations of other countries?—Perhaps more so than any other, because we derive a considerable portion of our materials from the Continent, and the price of the whole of our materials of home production is regulated by the price at which we can obtain them abroad.

1327. There is a heavy export duty levied on rags by most Continental tariffs, is there not?—There is; and in consequence of that duty foreign manufacturers procure their materials at 25 or 30 per cent. lower than we can, whilst, in consequence of the enactments in accordance with the treaty with France, foreign paper is admitted into this country duty-free, and we are thus exposed to a most unfair competition.

1328. You were not informed, I think, either by the Board of Trade or the Foreign Office, of this probable position in which you would be placed by the treaty?—No; I am not aware that anyone in connection with the trade received any information whatever as to what was going to happen to the trade in consequence of the French Treaty, until after its arrangements had been, if not completed, at least agreed upon.

1329. I need hardly ask you whether you consider the position in which you were placed by the French Treaty to be a disadvantageous position?—Certainly.

1330. Since you were placed in that position, have you made representations to the Government to do the utmost in their power to lessen this export duty upon rags?—At the time of the treaty being concluded, I think there was an absolute prohibition on the export of rags from France. Since that time that prohibition has been removed, and a very high duty, which often amounts to a prohibition, has been substituted for it. We have made representations to the First Lord of the Treasury, the Foreign Office, the Board of Trade, and the Committee of the House of Commons which sat upon the question, but up to this time no beneficial results have ensued.

1331. What was the recommendation of that Committee?—The recommendation of the Committee was, that the British Government should continue to make strenuous exertions to effect the removal of all restrictions abroad upon the export of all papermaking materials.

1332. What steps have been taken by the British Government (I suppose I must say by the Foreign Office) in accordance with this recommendation?—I am unable to say with certainty what steps have been taken. I understand that certain circulars, which were drawn up by the Board of Trade, have been sent round abroad by the Foreign Office, but we have had no results up to the present time.

1333. Was not it the case that the Chancellor of the Exchequer, in his speech in bringing forward the Budget, stated that the evil would be removed as far as France was concerned?—He stated that some concession with regard to those duties would be made by France; but on my inquiring at the Board of Trade at the time, they knew nothing about the matter alluded to by Mr. Gladstone, and up to the present time I have received no information from them upon the subject.

1334. Am I to understand from that, that either Mr. Gladstone must have made that statement without having received information from the Foreign Office, or that, if he did obtain such information, it did not reach the Board of Trade?—I am unable to say whether he derived his information from the Foreign Office or not. I inquired at the Board of Trade, and the Board of Trade could give me no information upon the subject; and I believe they have heard nothing upon the subject up to this time from the Foreign Office.

1335. Have you applied yourself to the Foreign Office upon the matter?—I have not applied since the speech of the Chancellor of the Exchequer. I had previously been to the Foreign Office in the course of the spring, and found that Earl Russell was so thoroughly unacquainted with the subject that I thought it needless for us to apply again.

1336. Do you consider that any revision of tariffs by any foreign country requires a special watching by our Government on behalf of your interests?—As far as our interest is concerned, speaking of the papermakers' interest, I consider that it wants watching most closely, for, apparently, it will only be under a most-favoured-nation clause that we shall ever get redress from the grievance of which we complain.

1337. You consider, do you not, that you are at present in a disadvantageous position on account of the bonus that is given by Foreign Governments to the raw material of your article of manufacture?—The export duty upon rags, by restricting the sale in those countries where it is levied, acts as a bonus upon the exportation of paper, and we are therefore compelled to compete with paper produced from material purchased at a price of 30 per cent. less than that which we have to pay.

1338. A treaty has been lately concluded between this country and Italy, putting our trade with Italy in the same position as the trade of Italy with France: is the export duty in any part of the kingdom of Italy increased from what it was before Italy became a kingdom?—We were informed by the Board of Trade at one time, and by the Chancellor of the Exchequer in his speech upon the Budget, that under the treaty with Italy the duties upon rags would be abolished: the fact of the case is that, so far from their being abolished, they have been doubled in those parts of Italy from which we derive our supplies of rags.

1339. Which part of Italy is that?—Sicily, and some other parts of the old kingdom of the Two Sicilies.

1340. Did you import rags largely from that part before the treaty?—There was a large exportation of rags thence, but they principally went to America.

1341. So far as that part of Italy is concerned, you have been put in a worse position since the Sardinian or Piedmontese tariff applied to the whole of Italy than you were in before?—Yes, certainly.

1342. Did the Board of Trade or the Foreign Office inform you, in the course of the year 1862, that the Italian Government was revising its tariff for the kingdom of Italy?—We received no official information of it, but I was aware that that was the case.

1343. Were you officially informed that a gentleman was sent over by the Italian Government?—No, I was not informed of it, nor was I aware of it.

1344. You, as the Chairman of the Papermakers' Association, would have been glad to have been put in communication with such a gentleman, would you not?—Yes, certainly.

1345. Do you know whether it was found too late to do anything with regard to paper in 1863, when the Government made representations, after the Franco-Italian Treaty was concluded, and sent over Mr. Mallet to Turin?—I understood that it was too late.

1346. Generally speaking, do you, when making your representations in the interests of trade, apply to the Foreign Office or to the Board of Trade, or to both offices?—I have generally gone to the Board of Trade, but on two or three occasions we have gone up as a deputation to the Foreign Office.

1347. Mr. *Somerset Beaumont.*] Whom did you see at the Foreign Office, when you state that you found Earl Russell so thoroughly unacquainted with the subject?—It was Earl Russell himself.

1348. Why did you go to the Foreign Office instead of to the Board of Trade?—We have been to the First Lord of the Treasury, we have been to the Chancellor of the Exchequer, we have been to the Board of Trade, and we have been to the Foreign Office; in short, we have been to every branch of the Government, in hopes of getting some redress from what we consider the most unfair position in which our trade is placed. It was in order that we might leave no stone unturned that we went to the Foreign Office.

1349. When you go to the Foreign Office do you always see the same Minister?—I have been there only on two occasions, and therefore I am not able to answer the question.

1350. You also stated that the Chancellor of the Exchequer had told you that the export duty upon Italian rags would be abolished?—It was so reported in the report of his speech in introducing the Budget.

1351. You did not hear that from him himself?—I did not hear it from him himself; but I have no doubt that he said so, and that it was under misinformation that he made that statement.

1352. Mr. *Butler-Johnstone.*] When you heard that an Italian representative had come over to obtain information with regard to the Italian Tariff, did you take any steps to have communications with him, or was there any desire to have direct communication with him?—I did not hear that he had been sent over.

1353. If you had heard that such a gentleman was over in England, would you have taken any steps, or wished to have had personal communication with him?—That is a hypothetical question; but if we had had the slightest idea that there was any possibility of the duty on rags being raised, we should at once have put ourselves in communication with him.

1354. But you did not feel that the fact of an Italian gentleman being over here on matters of tariff gave a right to any Chamber of Commerce to have direct communication with him?—I was not aware of his being over here, and therefore formed no opinion upon the subject.

1355. Mr. *Somerset Beaumont.*] Have you any knowledge of the foreign rag trade?—I am a large consumer of foreign rags.

1356. Have you any reason for supposing that the export duty upon rags from any foreign countries would or might be abolished, if more earnest representations were made to the Foreign Governments by whom they are levied?—I have a very strong opinion that if, in the negotiation of the treaty with France, it had been made a condition of our free admission of French paper into this country that they should have given us free-trade in rags, such a matter might have been carried out.

1357. You are not of opinion, then, that the paper manufacturers are so much opposed to the export duty being reduced in some foreign countries, that what you complain of might not be removed if proper representations were made?—At that time we had something that we could have given them in exchange for the exportation of rags, namely, the importation of paper into this country.

1358. Mr. *Layard.*] You are not aware, I presume,

J. Evans, Esq.

7 June 1864.

presume, of the negotiations which have been going on between Her Majesty's Government and foreign Governments with regard to rags?—I have had no official information; I know that some have taken place.

1359. You cannot say that there has been no attempt on the part of the Government to facilitate the importation of rags?—Certainly not.

1360. What do you mean by saying that Earl Russell was unacquainted with the whole subject?—I will tell you how I saw that he was so thoroughly unacquainted with the subject. After I had spoken to him for some time, explaining the state of affairs, he asked me how it was that French papermakers could produce paper cheaper than we did, when he knew, or ought to have known, that the French got their materials 30 or 40 per cent. cheaper than we did.

1361. Was that the proof of his ignorance?—It was a proof of his unacquaintance with the subject.

1362. You say that because he asked you how it was that the French manufacturers could make paper cheaper than English manufacturers?—Yes; the question with regard to the lowering of the rag duties abroad has been brought under the notice of Her Majesty's Government and Earl Russell, time after time. Therefore, when I found that, notwithstanding its having been brought in that repeated manner under his notice, he asked me this question, it appeared to me to be evident that he had not taken in at all the bearings of the case.

1363. Then you found your charge of ignorance against Earl Russell upon the fact of his asking you why the French manufacturers could make paper cheaper than the English?—I do not bring a charge of ignorance against Earl Russell; I only say that I found his Lordship quite unacquainted with the facts of the case, notwithstanding our having brought it under the notice of the Government and himself repeatedly in the course of the last few years.

1364. You found your opinion of Earl Russell being thoroughly unacquainted with the subject entirely upon the fact of his having asked you why the French manufacturers could make paper cheaper than we?—Partly upon that, and partly upon other things.

1365. Have the French any treaty, as regards rags with any other country, more favourable than we have?—They have not that I am aware of.

1366. Then, if there is no difference between their rag import trade and our rag import trade, that appears to be a very pertinent question which he asked you, namely, why they should make paper cheaper than we?—Excuse me; I am afraid that you do not quite understand the circumstances. The case is this: America is in the market constantly buying rags. She buys rags in England free of duty, and she buys rags in France upon which she has to pay an export duty. In consequence of that the price of rags is always lower in France than it is in England, by the amount of the export duty.

1367. Then your opinion is that we ought to place a duty again upon rags?—Upon paper, rather. It is a question which seems to me to be rather beside the object of my coming here; but it is my opinion that our present course of proceeding is to encourage this system of placing export duties upon rags, inasmuch as we have placed the French manufacturers in the full possession of the benefit derived from their protective system. We must encourage the continuance of the protective system, because we have given the French manufacturers the full advantage of their protection.

1368. I wish to ascertain upon what ground your charge is founded against the Government: do you complain of the Government for not obtaining for you this reduction of the foreign export duty on rags, or do you complain of the Government for not putting a duty upon the export of rags, so as to give you a more favourable position in the market than you now have; which is your complaint?—My complaint is that in the negotiation with France, which was the root of this mischief, our interests were not sufficiently regarded. I saw Mr. Cobden in Paris.

1369. Is not it the fact that the doubt as to Mr. Gladstone's statement, to which you alluded as being made in introducing the Budget, is connected with a doubt as to the construction of the treaty between Italy and France; is not there some doubt as to the construction of that treaty with reference to rags?—The mistake no doubt originated in that. There was no mention of rags in the tariff, and therefore it was supposed that the duty had been abolished. Instead of that, the Italians reserved to themselves the right to put any duty they pleased upon rags.

1370. Is it not still doubtful?—I have seen the reply from our Minister in Italy, and he says there is no doubt upon the point.

1371. At one time it was thought, both in England and in France, that there was no duty in Italy, was it not?—It was thought so in England; I cannot say as to France.

1372. It arose upon a question of the construction of the treaty, did it not?—It did.

1373. *Chairman.*] Your idea that Earl Russell was unacquainted with the subject arose, did it not, from the fact that you had sent information to the Government, showing that the French manufacturer had his raw material at a cheaper price than the English manufacturer, in consequence of the export duty upon rags; and you were surprised therefore that Earl Russell should ask you why the French manufacturer could make paper cheaper?—Yes, exactly; it amounted to that.

Veneris, 10° *die Junii*, 1864.

MEMBERS PRESENT:

Mr. Bazley.	Mr. Milner Gibson.
Mr. S. Beaumont.	Mr. Gregory.
Mr. Butler-Johnstone.	Mr. Henley.
Mr. Cobden.	Mr. Kinnaird.
Sir Minto Farquhar.	Mr. Layard.
Mr. S. FitzGerald.	Mr. Pender.
Mr. W. E. Forster.	Mr. C. Turner.

WILLIAM EDWARD FORSTER, Esq., in the Chair.

EDMUND HAMMOND, Esq., called in; and Examined.

E. Hammond, Esq. 10 June 1864.

1374. *Chairman.*] You are, I believe, the permanent Under Secretary for Foreign Affairs?—I am permanent Under Secretary.

1375. How long have you been in that position?—I have been Under Secretary rather more than ten years, and I was for rather more than thirty years before that a clerk in the Foreign Office. Altogether, my service is rather longer than forty years.

1376. What is the precise position of the permanent Under Secretary?—The permanent Under Secretary and the Parliamentary Under Secretary are exactly on the same footing in the office; there is no distinction between them except in permanency.

1377. Is not there the distinction of the different countries being divided geographically?—Yes, we divide the world between us. I can give the division, if necessary.

1378. Are the clerks in the Foreign Office apportioned according to this division?—Yes. I could best explain the working of the Foreign Office by reading a passage from the evidence which I gave before the Diplomatic Committee. "The staff of the Foreign Office consists of a Secretary of State, two Under Secretaries of State, one of whom is a permanent officer, while the other is changeable with each successive Administration; an Assistant Under Secretary of State, who is also a permanent officer; and clerks in their several classes, and with their several attributes, as now to be described:—1st. A chief clerk, who, under the general control of one or other of the Under Secretaries of State, though mainly under that of the permanent one, looks to all matters connected with the general and financial affairs of the office, and, among other details, prepares the commissions of consuls, and controls the issue of passports, but he takes no part either in the political or commercial business of the office. 2d. Eight senior clerks, each managing a separate division of the office, one of whom superintends the correspondence with Her Majesty's consuls, with the exception of those in China, Japan, and Siam; another superintends the slave-trade correspondence; and the remaining six, the political and commercial correspondence of their respective divisions. 3d. Eight assistant clerks, of whom one is attached to each of the divisions, and whose duty is more immediately to assist the senior clerk, and to act for him in his absence; twenty-five junior clerks, who are assigned in nearly equal proportions to each of the divisions. These forty-one clerks carry on the general correspondence, foreign as well as domestic, of the office; but there are also other departments in the office, composed as follows, namely:—librarian, sub-librarian, and five clerks; superintendent in the treaty department, assistant, and one clerk; three clerks attached to the chief clerk's department; a translator and a financial clerk, in the consular division." That is the establishment of the office. The rest of the paper is a narrative of how we carry on the business in the office. It is a paper which was originally prepared for the use of the Prussian Foreign Office, and then I translated it, and put it in as a memorandum in my evidence before the Diplomatic Committee.

1379. Although the two Under Secretaries divide the world between them, I suppose that either of them, in the absence of the other, will take the business connected with that part of the world which is not especially under his charge?—Yes. When the two Under Secretaries are present, we distribute the business between us, as I said; but if one is absent, the remaining Under Secretary takes charge of the whole of the political department.

1380. The chief clerk, I understand by this paper, is concerned with all the countries?—He has nothing to do with the political or commercial business of the office; he has merely to deal with the internal arrangements of the office generally, including the financial part of it. He has nothing to do with the general work of the office, so to speak.

1381. Of the senior clerks, one superintends the correspondence with Her Majesty's consuls, with some exceptions; another superintends the Slave Trade correspondence, and the remaining six, the political and commercial correspondence of their respective divisions; they are divided, are they not?—They are divided.

1382. Is there any inter-communication between yourself and the other Under Secretary?—Constant. The manner in which the communication is carried on is described in the paper from which I have already quoted. We each of us

E. Hammond, Esq.

10 June 1864.

us see everything connected with foreign politics which comes into the office. The process by which it is done is this: when despatches come back to me, for instance, from the Secretary of State, I immediately send the box on to the Parliamentary Under Secretary, that he may read the despatches, and then he returns them to me. Just in the same manner Mr. Layard, when his despatches come back from the Secretary of State, sends them to me, that I may see them, and after doing so, I return them to him. That being done, the Under Secretary looks to the directions which may have been given upon the despatches, and he sends the despatches into the office, in order that they may be registered, and the directions executed in the department.

1383. Then the custom of the office is, that each of the Under Secretaries is aware of the despatches which are sent?—Yes. In order to prevent an erroneous impression with regard to the domestic correspondence between the Foreign Office and other offices, and between the Foreign Office and individuals, I may state that if there is anything of sufficient importance to require consultation between the two Under Secretaries, particularly if there is any point upon which a question is likely to arise in Parliament, it is immediately communicated by myself to Mr. Layard, because Mr. Layard being the Parliamentary Under Secretary, it is necessary that he should know everything of that kind. Generally speaking, all political despatches are seen by both the Under Secretaries, and all non-political correspondence upon important questions also. The communication between the two Under-Secretaries is perfectly unreserved whenever there is a necessity for it.

1384. That communication is generally conducted by personal interview and by conversation, not by writing, I suppose?—We do not write between ourselves. If the Committee will allow me I will read the whole of that paper, in order to show exactly the working of the whole of the Foreign Office. It goes through the whole of the detail, explaining not only how we communicate between ourselves, but how we communicate with the Cabinet, and how we communicate with Her Majesty, and what we do with the papers afterwards. In fact, the paper was drawn by me with the title of "The Adventures of a Paper in the Foreign Office." It describes the system thus: "The system pursued in each of the eight divisions, which it is the object of this memorandum more particularly to explain, is the same. Each division attends to the whole of the correspondence, except that relating to consular matters, and to the slave trade, which is carried on exclusively by the consular or slave trade divisions, connected with the countries allotted to it, whether that correspondence is carried on with British diplomatic agents employed abroad, or with the ministers of foreign powers accredited to the British Government, or with the different departments of the Government, or with individuals. The description, therefore, of the process, in one division, will do for all. To begin, then, with the receipt of letters in the office. Four clerks have apartments in the office, with fire and lights found them, in addition to their salary; one of whom, in turn, attends to the receipt and despatch of telegrams out of office hours, opens the despatches which arrive between the time of the office being closed in the evening, and 11 or 12 o'clock the following morning, notes on the dockets of the despatches the date of their receipt, and then sends them in locked boxes to the private residence of one or other of the Under-Secretaries of State, who, after having read them, sends them on to the Secretary of State. The Secretary of State, on reading the despatches, gives such directions upon them as they appear to him to require, and returns them to the Under-Secretary of State from whom he received them, who, after making himself acquainted with the directions of the Secretary of State, sends the despatches to the senior clerk of the division under whose superintendence the correspondence of the country from which they come is placed. The despatches are then immediately registered, in a diary divided into countries, which is kept in each division, and, that being done, the directions given by the Secretary of State are executed under the superintendence and responsibility of the senior clerk, who distributes the work as he sees fit among the junior clerks of the division. Copies are made of such of them as should be communicated to other Ministers abroad, or to the different departments at home. Drafts of answers are prepared, or of letters to parties whose applications for interference or information are reported on; notice is given to the senior clerks of the other divisions of despatches, of which they should have copies made in order to send abroad; for, as a general rule, the head of each division ought to know in the course of the day whether certain despatches have arrived, or have been sent off, which should be communicated to Her Majesty's Ministers in the countries under their several superintendence. As regards despatches or letters which may arrive in the course of the day, either from abroad or from foreign Ministers, or from public departments, or from private individuals, a similar course is pursued, with the exception that domestic letters are generally brought unopened to one of the Under Secretaries of State, who sends them, after having opened, and read them, if he sees fit to do so, into the proper division, from whence they are returned, when docketed and registered, to the Under Secretary of State, to be forwarded by him to the Secretary of State, or otherwise disposed of. When the drafts or despatches, or letters, have been prepared, they are submitted by the senior clerk to the Under Secretary of State, who sees that they are properly written, and if they relate to matters of no great importance, approves them at once, and returns them to the senior clerk, or, in the contrary case, forwards them to the Secretary of State for his approval, and when they are returned by the latter, they are sent back to the division to be written out for the signature either of the Secretary of State or of the Under Secretary of State, as the case may be. When written out, they are given to the Under Secretary of State for his signature, or for that of the Secretary of State, and they then go back to the senior clerk, who is responsible for their being duly despatched by messenger, or by post, or otherwise. In mere matters of detail, the senior clerk sometimes does not trouble the Under Secretary of State with a draft of a letter, but submits it at once to him for signature, being responsible to him for the terms of the answer being correct; but, as a general rule, no official letter, however trifling should be sent out of the office without an exact copy being kept of it. When the despatch or letter is sent off, the draft,

draft, or copy of it, is docketed and registered in the same diary that the letter to which it is an answer is entered in, the letters received being entered on the left hand page, while those sent are entered on the right hand page. The paper is then put by into the press, according to its country, unless in the case of important despatches, which are circulated to the Cabinet Ministers, as will hereafter be explained. The work is carried on very quickly, and no formal difficulties exist to occasion delay. Very frequently despatches are received and answered, and disposed of in one and the same day; and, in fact, in ordinary circumstances, despatches or letters received in the several divisions are disposed of, one way or the other, in two or three days after their arrival. They are either answered or communicated to other public departments, or to interested parties. Of course there are exceptions to this rule in regard to matters which require consideration, and previous communications with the Sovereign or the Cabinet. It is not generally the practice to draw up memoranda or detailed observations on the despatches which come in, such a practice tending to occasion delay. The papers are retained in each division unbound, for about 18 months or two years. They are then handed over to the librarian, who causes them to be arranged for binding; the despatches received, and those sent, being bound in separate volumes, while the departmental letters, and letters from individuals, with their answers, are bound up indiscriminately in other volumes. When the correspondence is bound, it remains in charge of the librarian, who has a fresh register made of the contents of the volumes, somewhat more detailed than the Divisional Diaries, and this register is again indexed according to persons and subjects. By these arrangements we can very quickly refer to the correspondence even of some years standing, and get at the papers which it is desired to consult, in a very short space of time. When a detailed report on a matter which may have occurred some years back is required, the librarian prepares it. If the question has its origin within 15 years, the senior clerk of the division either draws up the memorandum himself, or desires one of his subordinates to do so, being still himself responsible for its correctness. There is a special department in the office called the Treaty Department, in which the drafts of treaties, and everything connected with them in all stages of negotiation carried on in this country, are prepared. The senior clerk of each division should, however, be kept acquainted with any treaty in negotiation with a country under his superintendence. There is a private printing establishment in the office, and also one for bookbinding, so that everything required for carrying on the business is concentrated under the same roof. It has been stated that the work of the office is placed under the control of one or other of the Under Secretaries of State; it remains to be shown how each of them keeps himself acquainted with the correspondence specially under the superintendence of the other. Except on questions of a peculiar interest or of a difficult character, one Under Secretary of State does not usually trouble himself with the domestic correspondence which belongs to the countries assigned to the other. But as regards the correspondence with Her Majesty's Ministers abroad, the matter is thus arranged. No allusion has hitherto been made, while tracing a paper from its entrance into the office to its consignment to the press, of the division to which it belongs, to the manner in which despatches from and to Her Majesty's Ministers abroad are communicated to the Queen or to the Cabinet Ministers; but this is the process: When the Secretary of State has given his directions on the despatches which arrive from abroad, or has not seen occasion to give orders, the despatches and, in matters of importance, the drafts of answers, when approved by the Secretary of State, are sent by the senior clerk of the division to the Prime Minister first and then to the Queen (in case of important drafts for Her Majesty's approval previously to their being sent off), and they are afterwards circulated among the Cabinet Ministers. But the boxes, on their way to the Prime Minister, ought to pass, in the first instance, through the hands of the Under Secretary of State under whose direct superintendence the correspondence of the several countries is not placed, and he thus is enabled to make himself acquainted with matters of political interest recorded in that correspondence. As regards the discipline of the office, the nominal hours of attendance are, as in other offices, six. The office, however, does not close, nor are the clerks released from attendance, till the work required, whatever may be its amount, is completed, and consequently the clerks, or some of them very often do not get away till seven or eight o'clock, or even later. As a general rule, no junior clerk leaves the office without permission of the senior of his division, while the latter does not himself go away without first ascertaining that the Under Secretary of State no longer requires his attendance. The clerks are allowed two months' vacation in the course of the year, and they settle among themselves, and with the assent of the senior clerks in the respective divisions, and the sanction of one of the Under Secretaries of State, at what time they shall take their leaves. We are not, however, very particular as to occasional absences for a few days. We tax the clerks at times very severely, and therefore we are not very strict in other matters, but in no case can a clerk absent himself without permission previously obtained, either from a senior clerk, or from one of the Under Secretaries of State. The great object is to keep up a feeling of good fellowship among the clerks themselves, and zeal for proper conduct of the business. There is no mystery observed in the distribution of the business; implicit reliance is placed on the honour and discretion of every clerk, and no hesitation is shown by any of the clerks, however high their standing in the office may be, to assist, in case of emergency, in carrying on any part, however trifling, of the business of the office. This paper has been designed to show, generally, the manner in which the everyday work of the Foreign Office is performed, and therefore no detailed account is given of the manner in which the business of the chief clerk's, or of the librarian's, or treaty, or translator's department is carried on, and no detailed particulars of the matters coming within the special province of each of those departments."

E. Hammond, Esq.
10 June 1864.

1385. Mr. *Layard.*] The arrangment of the business between the two Under Secretaries, of which you have given a description, is a mere matter for our own consideration, as regards the convenience of business, is it not?—Yes.

1386. *Chairman.*] Upon what matters does your office communicate with the Board of Trade?

E. Hammond, Esq.
10 June 1864.

Trade?—Upon everything relating to trade and commerce between this country and foreign countries which comes under our notice.

1387. Upon all questions relating to foreign tariffs, I suppose?—Yes; everything that comes into our office connected with trade and commerce goes to the Board of Trade.

1388. I will go through them in detail. Do you communicate with the Board of Trade upon any commercial treaties you receive between one foreign country and another?—Always.

1389. In fact, all questions relating to foreign tariffs, either as between this country and another country, or as between another country and a third country?—Certainly.

1390. Do you communicate with them, with regard to all navigation laws and charges upon shipping?—Certainly; everything that comes within our knowledge.

1391. I think you do not communicate with them upon complaints that are made by merchants against foreign Governments, do you?—It would depend very much upon the nature of the complaint. Some complaints are so clear and evident, that we can deal with them ourselves. Anything that we want an opinion upon, as bearing upon trade generally, we should of course ask the opinion of the Board of Trade upon; some cases are, apparently, very clear, and we can deal with them ourselves, or deal with them with the assistance of the law officers of the Crown. But if there is the slightest doubt about the interpretation of a treaty, we should go first to the law officers of the Crown; or we might take the opinion of the Board of Trade first, and then refer to the law officers of the Crown. We should not make a representation to a foreign Government, with reference to the interpretation of a treaty, without consultation with the law officers of the Crown, in order that they might judge whether or not we were justified in making it.

1392. Complaints made by merchants against consuls; do you communicate those to the Board of Trade?—Those ought always to come to us. I believe they occasionally do go to the Board of Trade; but the Board of Trade refers them to us.

1393. Upon your receiving them, do you refer them to the Board of Trade?—No; we should deal with them ourselves, except in certain cases; for instance, if there was a complaint which came under the Mercantile Marine Act, of which the Board of Trade have the supervision, we should refer it to the Board of Trade, as being most competent to judge of it.

1394. How should you deal with a complaint, by a merchant against a consul, for neglecting the interests of trade?—It is very hard to give an answer to a general question of that kind, without seeing the nature of the complaint. If it was a complaint, that we required the assistance of the Board of Trade to decide upon, we should refer it to the Board of Trade; but if it was one we could dispose of ourselves, we should not refer to the Board of Trade upon it.

1395. In what case do you consider that you would require the assistance of the Board of Trade; would it be when some fact with reference to trade was involved?—It might be something upon which we might require the advice of the Board of Trade how to deal with the question.

1396. You cannot lay down any general rule to govern these cases?—No; we consider the Board of Trade as a Government Department, to whose advice and assistance we have recourse, whenever we have occasion to do so, unreservedly.

1397. Are Post Office arrangements, between this and another country, communicated to the Board of Trade?—They would go to the Treasury or the Post Office.

1398. Are all the reports of the consuls, upon trade, sent to the Board of Trade?—I believe they are, invariably; they ought to be. In order to facilitate their going to the Board of Trade, our consuls are required to send in their reports in duplicate, so that there may be no delay.

1399. Do they send other reports to you, besides the reports upon trade?—They report on everything that comes within their observation, connected with the trade of the country.

1400. Do the consuls report upon other questions besides commercial questions?—If anything of a political nature, for instance a military movement or a naval movement was going on, they would report to us.

1401. Supposing that the consuls report to you upon matters not commercial, are those matters always kept in distinct and separate reports from the reports upon commerce?—They are not kept distinct; that is to say, they come under the same series of numbers, but we deal with them differently. We should not send to the Board of Trade a question of so many ships going to be launched or built in any particular port; that would be sent to the Admiralty; but they come under the regular series of consular despatches, and are bound up in the regular series.

1402. Supposing a letter from a consul contained information with reference to trade, and also information with reference to some other matter, would that letter be sent to the Board of Trade, or would merely that part of it be sent to the Board of Trade which referred to commercial matters?—Merely that part of it; but we should send a letter to the consul, desiring to know why he disobeyed our standing rule by including, in one despatch, more than one subject. We have a standing rule, that every despatch shall be confined to one subject, and not be like the old Indian correspondence, when they used to write a letter of five or six hundred paragraphs, containing the whole history of the Presidency for a certain time.

1403. The same rule applies to the reports of Secretaries of Legations, I suppose?—Yes.

1404. Are all reports, sent by our Ministers and Secretaries of Legations, forwarded to the Board of Trade?—The Secretaries of Legations have no direct correspondence with the Foreign Office at all; they make periodical reports, but under their instructions they make them to the head of their mission. The head of the mission then transmits them to this country, and they are then sent to the Board of Trade, and then published and communicated to Parliament and to the Chambers of Commerce throughout the country.

1405. Does the Foreign Office ever take the initiative in commercial matters; does it commence a negotiation with a foreign Government without the suggestion of the Board of Trade?—We certainly should not attempt anything of that kind without the most unreserved communication with the Board of Trade.

1406. Is

1406. Is it the general rule that all commercial negotiations begin by suggestions from the Board of Trade rather than by the initiative of the Foreign Office?—I can hardly say that there is any general rule upon the subject. If we saw an opening for anything to be done abroad, we should ask the opinion of the Board of Trade whether it was desirable to take it up. Generally speaking, I should say that the Board of Trade, being more conversant with the commercial interests of the country, having more communication with the commercial bodies, and therefore being better able to judge what is for the advantage of the country with regard to commerce, and having before them also all the details, as far as we can supply them with them, of what is going on in foreign countries, would make the suggestion to the Foreign Office; but whether the suggestion came from the Foreign Office to the Board of Trade, or from the Board of Trade to the Foreign Office, the whole of the transactions connected with it would be settled and arranged between the Foreign Office and the Board of Trade. Our communication is unreserved and unrestricted in the widest sense of the word.

1407. What I understand is this, that upon any question coming before the Foreign Office with regard to trade, a communication is made to the Board of Trade, and their opinion is asked upon it, may I ask whether, as a rule, it is the custom of the Foreign Office to act upon such an opinion?—Generally speaking, we do. I will not say that it is the universal rule, because as there are two Cabinet ministers consulting, you may say, together, the one being the President of the Board of Trade, and the other, Secretary of State for Foreign Affairs, there may be between those two Ministers, as there may be between the Ministers of the Cabinet generally, differences of opinion which are discussed and settled between them. The Foreign Secretary, judging from his general knowledge of politics abroad, might think that it was not opportune, and might convince the President of the Board of Trade that it was not opportune to press a particular point at a particular time, and that inconvenience might arise from doing so. In that case, probably, we should not carry out the original suggestion of the Board of Trade. But that is a thing of such rare occurrence, that I state it merely that the Committee may not go away with an impression which is at all inaccurate. The Secretary of State does not consider himself absolutely bound to attend to the suggestions from the Board of Trade, but the exceptional cases in which he does not attend to them, are very rare indeed. There is a case of that kind which appears in the papers printed for the use of the Committee. I wish to make it clearly understood, that if the Secretary of State sees, for political reasons, or for general governmental reasons, that it is inexpedient to press a particular question upon a foreign government at a particular time, he would not necessarily act upon the opinion of the Board of Trade in that matter, because, of course, the ministry being composed of men of intelligence, things are talked over between them, and one opinion prevails.

1408. Is it the rule of the Foreign Office to act upon the opinion given by the Board of Trade, unless a reason be given to that Office why that opinion should not be acted upon, and an opportunity be given to them to state the ground upon which they rest their opinion?—I should say not. We should not have an argument with the Board of Trade upon a question of political expediency.

1409. Supposing that the Foreign Office takes one view upon a question, and the Board of Trade takes another, I imagine that the Foreign Office, having really to conduct the negotiation, must ultimately act according to its own view. Does it give the Board of Trade an opportunity to state the reasons upon which they ground their different opinion?—I can hardly say that that sort of case precisely occurs. If we should demur to acting upon the suggestions of the Board of Trade, it would be rather a political demurrer, which the Board of Trade are not precisely the office to take cognisance of.

1410. Am I to understand from that that if the difference of opinion was upon commercial grounds purely, the opinion of the Board of Trade would be taken?—We should not question it; we should act upon their suggestion. The rule is so universal, I may almost say, that we do carry out the suggestions of the Board of Trade to the best of our ability, that it is only to be perfectly fair with the Committee that I state the possible exception.

1411. Returning to the consular reports, and the reports of the secretaries of legation, through their ministers, I see, by this paper, that one clerk superintends the correspondence with Her Majesty's consuls; does he superintend the correspondence with the secretaries of legation also?—No; we have no correspondence with the secretaries of legation; there is none in the office.

1412. It comes to you through the Ministers, does it not?—The mere report comes; it is not a correspondence exactly; there is no independent correspondence kept up with the Secretaries of Legation; but, according to the arrangement made in Lord Clarendon's time, the Secretaries of Legation are required to send periodical reports upon matters of general interest in the country where they reside, sometimes on trade and sometimes on other matters. These reports, in order that there may be no question of clashing with the Minister, must come through the Minister's hands to the Foreign Office, and then as the correspondence with the Minister comes within the political department, these reports also come to the political department.

1413. First, as regards the consuls' reports; whose business is it in the Foreign Office to inform either the Secretary of State or yourself, or Mr. Layard, as to whether the reports of the consuls are always sent, and whether, when sent, they are as full and as intelligent as it is reasonable to expect that they should be?—The Assistant Under-Secretary of State has the immediate superintendence of the Consular Department; the reports go on to the Board of Trade, as a matter of course.

1414. Am I to understand from that, that there is no official at the Foreign Office who may be considered to test the consuls' reports as to whether they are full or not?—If they were insufficient, probably the Assistant Under-Secretary would notice it, and call my attention to the fact, and the Secretary of State might very likely take notice of it if the reports were found insufficient.

1415. As a general rule you would consider

E. Hammond, Esq.

10 June 1864.

that they were sufficient, unless there was an objection made by the Board of Trade?—No; I cannot say that; we would exercise our own judgment; we do not consider ourselves bound to be restricted by the opinion of anybody as to whether our agents abroad do their duty or not; if our attention was called to their not doing their duty properly, of course we should examine into the matter, but if we ourselves perceived that they did not do their duty properly, then we should take notice of it without our attention being called to it by anybody else.

1416. Supposing any consul neglected to send a report, should you consider it your business to find out why he omitted to do so?—I apprehend that the Assistant Under Secretary would do so. Though I do not see all the letters that pass to the consuls, yet I think I may give a safe answer upon that subject, for all the reports of the consuls which are presented to Parliament, come to me, that I may see the proofs, and I constantly see in the margin of a proof when the report has been delayed, "Desire the consul to send his reports in earlier." That is, a notice is to be given to the consul. I know what is done in that way; it is so much a matter of detail, that it would not be thought necessary to call my attention to it; it would be done in the Consular Department, as a matter of course.

1417. Supposing you do not receive from a Minister at any foreign place the report made to him upon trade by the Secretary of Legation, whose place would it be at the Foreign Office to find out why that was not sent?—Strictly speaking, the clerk in the particular department ought to call my attention to it.

1418. These reports were formerly made by the foreign Ministers themselves, were they not?—Never in my recollection; it was quite a novelty introduced by Lord Clarendon. I speak now of the reports of the Secretaries of Legation; the consular reports were always made.

1419. Do all the Secretaries of Legation report, or rather, does every foreign Minister send in a report made to him by his Secretary of Legation?—The Secretaries of Legation ought to do so; they are not always very regular; in general, they are very fairly regular. Of course there are exceptions; when a man is away on leave, or when a change takes place in the office, and when the time of the Secretary of Legation has been engrossed by other duties; in such case he may not make his report in the proper time. Another reason may be, that he may have a difficulty in obtaining assured information, and having some regard for his own credit, he does not like to send an imperfect report. Generally speaking, I think they very fairly keep the time. If my attention was called to their not doing so, I should immediately take notice of it.

1420. I do not see any report either from Spain or from Russia in this volume; has there been any report from either?—There was a very valuable report indeed, printed in the volume for 1862, from Mr. Lumley, at St. Petersburgh; it extended over 37 pages, and gave an account of the Russian trade in Central Asia; it was one of the most valuable reports I have seen. The reason why Mr. Lumley has not reported since, is on account of the great difficulty he has had in respect of obtaining valuable information. I have called the attention of Mr. Lumley to the fact of his reports not having been made.

1421. Is that report of 1862 the only report he has ever made?—There has been nothing since 1862; I have not gone back to see what there was before that. He says, "The delay has arisen from his disinclination to send in reports of an incomplete nature. Information on the subjects he has taken up has been promised, but has not yet reached him, and he did not consider himself justified in sending in reports that would have been merely translations of trade and navigation returns." I think the Committee will allow that that is a good and sufficient excuse for Mr. Lumley not having reported in due time.

1422. How is it in regard to Spain?—In regard to Spain I also thought it right to ask Mr. Edwardes why it was that he had not sent any report, and he gave what was to my mind a sufficient reason, and what the Secretary of State also considered a sufficient reason, namely, that from his various occupations, and from the general business of the mission having pressed upon him severely, he was not able to give that attention to the subject which would enable him to make a satisfactory report.

1423. Have you not seen, in reading the evidence that we have received, that one or two of the merchants seem to think that Spain and Russia are, more than almost any other countries, countries from which it is desirable to obtain information, on account of the very high duties and the very great extent to which, as we suppose, the interests of the inhabitants of those countries are injured by those duties?—I am aware of that statement; I give you the answers which I have obtained from the parties themselves. I presume the merchants in this country would not be benefited by having an incomplete report from Russia, for instance; that they would rather have no report at all than a report not founded upon good and sufficient data. With respect to Spain, I say that, from peculiar causes, there was very severe pressure upon Mr. Edwardes at the time, and he was not able to give that attention to the subject that it required; he was a good part of the time in charge of the mission.

1424. Mr. *Seymour Fitzgerald.*] Was not the Minister away part of the time?—A good part of the time, and Mr. Edwardes was in charge of the mission. There was a considerable pressure of work in the mission; and Mr. Edwardes has, to my certain knowledge, done a great deal more in that mission than it generally devolves upon a Secretary of Legation to perform.

1425. *Chairman.*] Do you mean to say that you suppose that the commercial men throughout the country would rather have no report at all than a full report of the whole trade, or that they would rather have no report than one in which facts were stated which were not true?—The Secretaries of Legations are not required to make a full report on the whole trade; they may take up any portion of the trade. I may explain to you the history of those Secretaries of Legations' reports. They were designed much more for a lesson or a study for the Secretaries of Legations, than for the general information of the community at large in this country. It was our desire to improve the diplomatic service, and we set this task to the Secretaries of Legation to give them more to do than in the ordinary state of things they would have to do, and to turn their attention more particularly to subjects of commercial industry. It was so little the intention that those reports should be made use of as anything

anything but a lesson or a study for a Secretary of Legation, that we did not publish them in the first instance.

1426. Am I to understand from that, that you do not intend those reports, valuable as they are (and nobody disputes their value), to be a means of conveying to the commercial public facts that immediately require their attention, but rather to be a means of giving general historical information with regard to trade, and doing good also to those who make them, by increasing their knowledge?—Yes. As an illustration I may mention a valuable and curious report, which some of the Honourable Members present may have seen, upon the clockmaking trade of Switzerland. I forget, at the moment, the name of the gentleman who made it. It is one of the most interesting that I have ever seen.

1427. Mr. *Layard.*] There is a distinction between those reports and the communication of fact; those reports are merely generalizations, but all facts relating to trade; for instance, alterations in tariff, or new regulations, are communicated at once fully by the minister, are they not?—Yes; those reports, of which I have been speaking, are rather in the shape of essays. The secretaries of legation may take up any subject. Some of the reports published now have not much to do with trade. There is one upon the Danish election law. It is a report showing extreme industry upon the part of Mr. Lytton, and is very highly creditable to him, but it probably will not very much enlighten the commercial body of this country.

1428. The facts relating to trade are immediately communicated by the ministers, are they not?—Yes.

1429. *Chairman.*] Do you not think that it would be advisable that the Secretary of Legation at Madrid should send to the minister a report showing the mode in which the present Spanish tariff is put into force?—It would be very advisable, supposing that it was given in measured and discreet terms. But if he was in the report to raise questions which would set the whole of the Spanish manufacturing population, and Spain generally, in arms against him and against any change, I should think it very unadvisable to publish such a report.

1430. Do you not think that the mere statement of such a fact as that goods arriving in Spain are confiscated, or have a heavy fine laid upon them, if there is more than a certain proportion of cotton as compared with wool in them, would be attended with advantage, although, no doubt, indiscreet reports might not be so?—That would enter as an element into a commercial report. It very much depends upon the way in which it is put. I should look very closely indeed at any commercial report from a Secretary of Legation in Spain to see that more harm was not done to the commercial interests of the country by publishing it, than by not letting it go forward. In the case of a country like Spain, where there is a very strong interest against modifications in the tariff, I would not publish anything which would imperil the existing Government, and perhaps create a revolution in the country. I would not say that I would necessarily let a report go forward to the world, though it might be very useful to us to have it in the Foreign Office.

1431. Mr. *Kinnaird.*] You have the facts in the Foreign Office?—Yes; I apprehend that the whole commercial world has the facts; a merchant must know, in importing his goods into Spain, under what restrictions he imports them. He does not require the Government to tell him at every step what he is to do, and what he is not to do. Those are things which, I apprehend, the merchant himself would necessarily be acquainted with.

1432. Mr. *Gregory.*] Do you expunge from the reports any expression which you consider incautious?—I certainly should not allow any expression to be published which would do harm, and which would compromise either the trade of the country or the individual from whom we obtained that report. Of course, a great deal of the information which a man obtains is in confidence.

1433. *Chairman.*] Are you aware that there is a strong free trade feeling in Spain?—I am not aware of that.

1434. Do you not consider that, in the present state of political feeling in Spain, a temperate statement of the mode in which the tariff is levied, and the injury that it must give to Spanish interests, could do no harm, and might do good?—I cannot conceive the possibility of its doing any good; I can conceive the possibility, if it gets abroad, of its doing a great deal of harm. If it was notorious that such a representation had been made to the Spanish Government on the part of the British Government, you would have all the manufacturing interests in Spain rise up in arms against it, and, especially, that important part of Spain, Catalonia, which, I believe, has a very predominant influence over the councils, not only of the present, but of any Spanish Government which may be called to power.

1435. Do you not imagine that those merchants are at this moment quite alive to any regulation that may affect their interests?—They are perfectly alive to it, and perfectly prepared to resist an innovation, even to the extent of civil war, I believe.

1436. Do you not think that any information that was given to show how a large body of the nation was injured would be of advantage?—I should doubt its influencing, to any great extent, the people of the province of Catalonia, which is a manufacturing country.

1437. Mr. *Layard.*] Have not the Government been in constant communication with the Spanish Government upon the subject of a general reduction of the tariff, and also upon special subjects?—The British Government have done their utmost to induce the Spanish Government to carry more liberal views into action.

1438. *Chairman.*] Do the representations from British merchants and commercial bodies, such as Chambers of Commerce, upon foreign commerce, generally come to the Foreign Office through the Board of Trade?—They sometimes come to the Foreign Office. What the communications between the Chambers of Commerce and the Board of Trade are, I am not able to say.

1439. Are you generally informed by the Board of Trade that representations have been made to them upon a foreign commercial subject, and does the Board of Trade in consequence communicate with you?—If the Board of Trade sees occasion to communicate with us, it does so; but it is impossible for me to say whether the Board of Trade send everything to us, or whether they send a selection only. I presume

E. Hammond, Esq.
10 June 1864.

that the Board of Trade, whenever they get a communication which they think desirable to impart to the Foreign Office, do communicate it.

1440. Do you imagine that the Board of Trade would consider it within their discretion either to forward such communication, though it was upon foreign commerce, to you, or not, as they thought best?—According as they thought it advisable; I imagine that they would judge for themselves.

1441. Sometimes deputations from commercial bodies come to you direct, do they not?—Occasionally they do.

1442. When they do come, are their representations always referred to the Board of Trade? —Yes; I may say that they always are.

1443. The rule is to send them to the Board of Trade?—Yes. I will put it thus: we should not take action upon a representation with regard to foreign trade, without communication with the Board of Trade.

1444. Then you are not aware whether, in case any British merchant, or any British subject, or any number of British subjects had any representation to make upon foreign commercial matters, it would be sure to arrive at your office, if it went to the Board of Trade only?—No; I cannot say what the rule of the Board of Trade is upon the subject. Honourable Members present will know better than I do. The Right Honourable President of the Board of Trade could tell what has been the practice.

1445. There is no understanding or arrangement between the Foreign Office and the Board of Trade, which would necessitate, as a matter of course, that such representations should be forwarded to you?—No; but I think you must assume that the Board of Trade would, if it saw a reasonable ground for forwarding the representation, send it on to the Foreign Office; but I do not think that the Board of Trade could be expected to, or would, send on to the Foreign Office, any representation which they did not see there was sufficient ground for putting before a foreign government. I think it must be a matter quite within the discretion of the Board of Trade, whether they would do it or not.

1446. You have stated that all questions of trade that come before your office are, as a rule, referred to the Board of Trade, and that you communicate with the Board of Trade in regard to them; is that communication with the Board of Trade conducted in writing?—We send them copies of the papers.

1447. If you wish for the opinion of the Board of Trade, do you request such opinion in writing?—We should ask it in writing. Of course, I do not mean to say that the Secretary of State may not ask a question of the President of the Board of Trade informally, but all official communications between us and the Board of Trade are in writing.

1448. How are those communications generally made, are they made by you?—By the Under Secretary of State.

1449. With what official of the Board of Trade?—With the Secretary of the Board of Trade. We write to the Secretary of the Board of Trade, not necessarily by name. Sometimes, I believe, we write to him by name, but the general rule is not to do so.

1450. I see, from these papers, that the form is, generally, "Mr. Hammond to Sir Emerson Tennent"; you never put the Under Secretary of State to the Secretary of the Board of Trade? —I do not believe there is any rule. It very much depends upon the clerk who writes the letters for signature, whether he puts "The Secretary," or the name. We write to the Secretary to the Board of Trade, just as we write to the Secretary to the Treasury, the Secretary to the Admiralty, or the Secretary to the Post Office; sometimes we put the name, and sometimes not. In the same way they write to us, sometimes to "The Under Secretary," and sometimes to Mr. Layard or myself.

1451. If you, as Under Secretary, have a communication with Sir Emerson Tennent, as the Secretary to the Board of Trade, and wish to obtain the opinion of the Board of Trade, do you see him, or do you write to him?—I write to him; but you must bear in mind that the secretary is only addressed as a subordinate official. The communication is made to the Lords of the Committee of the Privy Council for Trade. It is not a personal communication between me or the Under Secretary, and the Secretary to the Board of Trade, but it is between Lord Russell and the Lords of the Committee of the Privy Council for Trade.

1452. Upon receiving your answer, that is given to the Secretary of State, is it not?—The answer would come, in the first instance, to one of the Under Secretaries, as the case might be. If it was addressed to the Under Secretary, it would come to me, and I should send it either directly to Mr. Layard, or send it into the department to be registered in the first instance, and then it would go to the Secretary of State.

1453. Does the Secretary of State see any of the permanent officials of the Board of Trade upon these matters?—If he had occasion to see any person, he would communicate directly with the President of the Board of Trade.

1454. Practically that is not the custom, is it? —If you mean to ask whether there is any stated conference, I should answer no.

1455. Are you aware whether, of late, it has ever been the case in cases in which the Foreign Office have wished for the advice or opinion of the Board of Trade, and have consulted that department, that the permanent officials of that department have been brought into contact with the Secretary of State for Foreign Affairs?—It is perfectly impossible for me to answer that question; all I can say is this, that it might or might not be the case. I am not always at the elbow of the Secretary of State to see what he does, but I know, of my own knowledge, that there is a communication between the Secretary of State and the President of the Board of Trade, personally, when any question of emergency arises, which it does very frequently. I know it, not from being present myself, but from seeing the President of the Board of Trade coming to the Secretary of State's room when I may happen to be there, or from knowing that he is there.

1456. I understood you to say that you, as one of the Under Secretaries, are in constant communication with Mr. Layard, as the other Under Secretary?—Yes.

1457. But your communication with the Secretary of the Board of Trade is by writing?— Yes.

1458. Is it not practically the case (I think I gather

gather it from your evidence), that of the questions which come before the Foreign Office, the purely political questions are entertained by your office, and that the commercial questions are referred to the Board of Trade?—They are referred just in the same manner as we refer the legal questions to the law advisers of the Crown, the naval questions to the Admiralty, the army questions to the War Department, and the financial questions to the Treasury.

1459. But, as a fact, the commercial questions are referred to the Board of Trade, are they not?—Yes.

1460. Is it not the case that, in political questions, the Secretary of State is in communication direct with a permanent official of his own department?—Yes, of course; with one or other of the Under Secretaries.

1461. Is not it the case, that upon commercial questions he communicates with a permanent official, who has to give the information either by that permanent official writing to you, and his letters being handed over to the Secretary of State, or by that permanent official communicating with him through the President of the Board of Trade?—Allow me to observe that the permanent official does not act for himself; he is only the mouthpiece, you may say, or the amanuensis of the head of the department. If there is any personal communication between the Secretary of State and the Board of Trade, it is between the Secretary of State and the President of the Board of Trade. I have no personal communication with the President of the Board of Trade, generally speaking; but as I have the honour of knowing the right honourable gentleman who now holds that office very well, on some occasions, in order to expedite business, I have seen him.

1462. Mr. *Henley.*] In point of fact, the Under Secretary, whether the permanent official or otherwise, writing to another Government office, writes in the name and on behalf of the Secretary of State, does he not?—Yes; we do not write in our own name.

1463. The answer he receives from any other department is not the answer of a permanent official, but the answer of the head of the department, who is responsible for that answer?—Yes.

1464. *Chairman.*] That is the case in theory?—Yes; it is not only so in theory, but it is really the case. I can only answer for my own department; I, of course, will not undertake to answer for the practice of any other department. Any matter of routine, such as transmitting a letter, or anything like that, I should do, without troubling the Secretary of State; but if any direction or opinion had to be given, I should act under the immediate order of the Secretary of State, because the paper would have gone up to the Secretary of State, and his orders would be given upon it; I should be merely executing his orders. If it were anything very material, I should send up to him a draft of my letter, and it would have the Secretary of State's approval.

1465. Is it not the case that the Secretary of State must obtain a great deal of valuable information from the permanent officials in his department?—I hope he does.

1466. Then the information that is obtained upon political questions is obtained, is it not, by constant personal communication between the Secretary of State and yourself as a permanent official?—There is a good deal of personal communication and a good deal of written communication between us.

1467. Is there anything approaching to the same personal communication between the Secretary of State and the permanent official who has information to give him upon commercial matters?—Of course not; because that permanent official gives no information of his own upon commercial matters; it is not the information of the permanent official; it is the information of the head of his department.

1468. Do you not suppose that the permanent official of the Board of Trade would be able to give information upon commercial matters to his own chief, in like manner as you would to your chief upon political questions?—I presume that Sir Emerson Tennent gives information to the President of the Board of Trade.

1469. Is not it the case that on one branch of the negotiations, or the business which the Foreign Office has to conduct, the information that comes from permanent officials is conveyed directly to the Secretary of State for Foreign Affairs, and upon another branch indirectly?—It is conveyed from one Cabinet Minister to another Cabinet Minister.

1470. That other Cabinet Minister, not being a permanent official himself, has received it from somebody else, has he not?—Yes; from his permanent official.

1471. Is not it the case, that in the one case the information comes direct from yourself, for instance, to the Secretary of State, and in the other case through the medium of another person, as, for instance, from Sir Emerson Tennent through the President of the Board of Trade?—Of course it does; that is the case in all departments. If information comes from the Admiralty, although it is Mr. Romaine or Lord Clarence Paget who signs the letter, it is nevertheless information conveyed by the Board of Admiralty; that must be done in every department. I should be glad to take this opportunity of saying, that, as a rule, a permanent official or any subordinate official can, or ought, only to act as the mouthpiece of his principal; he has no independent authority to act for himself at all.

1472. I speak not of action, but of information given?—If he gives information, that is action.

1473. I do not imagine that you mean by that to say, that he merely acts as a mouthpiece in receiving suggestions and information from his chief; he also gives information to his chief, does he not?—Between the chief and his subordinate, of course there is unreserved communication, but the chief is not bound to follow out what the subordinate says to him; I should think it a great misfortune if he was bound to do so.

1474. Do you not conceive that political and commercial questions, as regards foreign affairs, are very much connected together?—Of course they are very much connected together.

1475. Do you consider that there is no disadvantage in the Secretary of State for Foreign Affairs being unable to consult those whose business it is to attend to commercial questions, as directly and personally as he is able to consult yourself and the other officials whose business it is to attend to political questions?—He does consult personally, when necessary; he consults the President of the Board of Trade, who is the per-

E. Hammond, Esq.

10 June 1864.

son responsible to Parliament and to the country for supervising the trade of the whole country.

1476. Do you consider it no disadvantage to him that he is unable to consult personally those permanent officials who have attended to those questions?—If he wanted to consult them he would send and ask them to come to him.

1477. Do you consider it no disadvantage that the general custom and rule is, that he does not do that?—It is not the slightest disadvantage in the world; if he wants to have personal communication with any subordinate, permanent or otherwise, in any other office, he sends for him to come and speak to him. There is nothing to prevent his seeing him.

1478. Am I to understand from that, that you think there is no danger of commercial questions not being sufficiently considered, from the fact that the Chief Secretary of State is able to have constant personal communication upon political questions, with permanent officials, but not upon commercial questions?—There is not the slightest danger of their being overlooked. If I understand the drift of all these questions it is this, that the Secretary of State for Foreign Affairs should be going into all the minute details of the commerce of the country; now, that is an impossibility; the pressure upon the Foreign Office is so great, that it is utterly impossible for the Secretary of State to do more than he does do; he cannot attend to the details of commerce; the details of commerce come digested through the Board of Trade into a practical result, with the approval of the President of the Board of Trade.

1479. The question I wished to ask was this; not whether the Secretary of State himself should attend to those minute details, but whether there would not be an advantage in his having personal communication with the permanent official who has attended to those minute details, and has digested them?—There would be no practical difference from the present state of things that I can see. With respect to the permanent official, I may state that I think the principle involved in your question goes to make a permanent official the guiding agent in matters of this kind. I believe that a permanent official is, you may say, not responsible either to Parliament or to the country; of course he has a certain responsibility, but he is not responsible in the ordinary sense of the term.

1480. Do you consider that it is no disadvantage that the Secretary of State should merely receive from his colleague, the President of the Board of Trade, the impression conveyed to his mind by the information given by a gentleman who has attended to the minute details, rather than that he should see him himself?—I presume that the gentleman to whom you refer writes a letter in behalf of the President of the Board of Trade, and submits it for his approval. I do not know the practice of the Board of Trade, but I presume it is so, because it is the case with us. We write a draft of the letter, and that is submitted to the head of the office for his sanction and approval. Therefore, we really get the detailed opinion, so to speak, of the Board of Trade.

1481. Supposing that the Secretary of State for Foreign Affairs merely registered, or merely transmitted, the opinion of the President of the Board of Trade, and did not feel that upon himself rested the responsibility of forming his own opinion upon a commercial question then, of course, you would consider that it would make no difference whether he was in personal communication or not?—If the letter is not sufficiently explicit to enable the Secretary of State for Foreign Affairs to act, we should either apply for further information, or the Secretary of State might see the President of the Board of Trade upon the subject.

1482. Do you consider that there is no inconvenience in having to refer to another department for information upon those matters?—Not the slightest.

1483. What objection would there be to your having a commercial department in your office, so that you could yourself obtain information upon commercial questions, and the Chief Secretary could be in constant communication with the chief of that department?—It would swamp our office entirely; we have more to do now than we can conveniently execute, especially the Under Secretaries.

1484. Supposing that there was a chief of such a department placed in your office, how would it give more work to the present Under Secretaries?—Because the present Under Secretaries would be obliged to keep themselves acquainted with everything that was going on in such a commercial department. I may say, also, that what you alluded to just now in speaking of the absence of one of the Under Secretaries, has happened this very Session. As has been the case lately, the head of the commercial department might be taken ill, and the whole of his work must then fall upon the other Under Secretaries. I have been confined to my house for two months, and thrown all my work, during that time, upon Mr. Layard; therefore the present Under Secretaries would be obliged to keep themselves fully informed upon everything that was going on in that separate department which you imagine; and not only so, but that department having the working out of the details of commerce, the Secretary of State would be responsible for all such details, and he would have to look to them as closely as he would have to look at the political details which he now has to deal with. That is a duty which it would be perfectly impossible for any Secretary of State to undertake. I am sure if you were to call before you Lord Clarendon, Lord Palmerston, Lord Malmesbury, and Lord Russell, every one of them would tell you that the work of the Foreign Office is of that kind, and of that pressure, that the Secretary of State could not undertake anything more without either neglecting the one or the other, or entirely breaking down under it.

1485. With the exception of the substitution of one of the Under Secretaries for another in the case of illness, in which, I suppose, in the long-run, as much assistance would be received from the commercial Under Secretary as would be given to him, in what respect would you, for instance, have more work by having an Under Secretary upon commercial matters with whom you could immediately and personally communicate, instead of being a channel, to some extent, of communication with the Secretary who deals with commercial questions at the Board of Trade?—I should be very sorry indeed, as a public officer, that anything should be going on in my department of which I had not full and perfect cognizance. I should think it my duty, if the department which you imagine was created, to be as conversant

conversant with that department as I am with my present division; I think I should neglect my duty very much indeed if I were not so. You cannot have, in an office like the Foreign Office, such an entire separation between divisions as the question seems to imply.

1486. Can you tell us what details, with regard to trade, there are, which you would feel it necessary to be conversant with, which you are not conversant with now?—If we took no further work upon the Foreign Office on commercial matters, than we do now, there would be no use in creating such a department. If we were to take any additional work, that is to say, if, as I believe has been imagined, we were to take upon ourselves the entire management of the commercial relations of the country without reference to the Board of Trade, it would involve us in the necessity of acquiring a mass of knowledge which we could not acquire concurrently with performing our other duties.

1487. Can you inform the Committee, in general terms, what kind of knowledge you think it would be necessary to have?—For instance, if we were to be called upon, without assistance from the Board of Trade, to deal with any question affecting our manufactures abroad, it would be necessary, for the safe dealing with that question, to have a general knowledge of the bearing of it upon our general commerce, not only foreign, but domestic, because I apprehend that you cannot separate our foreign commerce from our domestic manufactures. To deal with any question of trade advisedly, it is, I imagine, necessary to have a full knowledge of the bearing of that question upon the general commerce of the country, and that is to be gained only by a department which devotes attention to the subject. But as we could not devote our undivided attention to it, we should still be always under the necessity of referring to the Board of Trade. With a professed view of expediting business, you would create three Departments, in fact, to do the work, instead of two. You would have a Department of Commerce in the Foreign Office dabbling in commerce, but unable to deal with important questions bearing upon the general commerce of the country, and under the necessity, therefore, of referring to the Board of Trade: you would not advance yourself in the least by the change.

1488. Am I to gather that you think it would be very unadvisable to have in the Foreign Office a Commercial Department, to be in personal communication with the Chief Secretary of State upon commercial matters?—Yes; we could not work it. I have known the Foreign Office a good number of years now; I know what the Foreign Office can do for its own purposes, and I believe that the Foreign Office is perhaps one of the most efficient offices under Government; but by placing upon us a duty which we were perfectly incompetent to discharge, you would swamp us altogether.

1489. Are you aware whether there is such a department in the French Ministry of Foreign Affairs?—I am perfectly aware that there is such a department in France, and in other countries also, but they do not act without the department which corresponds to the Board of Trade; in everything they act in concert. They have a commercial department in the French Foreign Office, and I believe in the Foreign Offices of some other countries; but in all countries all matters connected with trade are matters of consultation and communication with the Minister of Commerce—if there is a Minister of Commerce—or with the Minister of Finance, or with whatever Minister is substituted for the Commercial Minister. In France they have a Minister of Commerce, and are in constant communication with him.

1490. I suppose you would not be surprised to hear that in those countries all questions with regard to foreign commerce are conducted by this department in the Foreign Office, and that there is a special body of clerks in the Foreign Office, who have communication with what answers to our Board of Trade?—It is a mere departmental question of the distribution of business in the office. Every office must regulate its distribution of business in the manner which is considered best calculated for carrying it on. Foreign Offices abroad distribute their business in one way, and the English Foreign Office distributes it in another. I have had frequent communications from Foreign Ministers in this country, who wanted to know our system of carrying on business. I was talking about the Foreign Office to a gentleman, the other day, whose name I will not mention, one of the persons most qualified among the Foreign Ministers, from his previous life, before he became a Foreign Minister, to form an opinion; and his opinion about the Foreign Office was almost too flattering for me to repeat to this Committee.

1491. I think I understood you to say that there are no clerks in the Foreign Office, whose special business it is to attend to the correspondence with the Board of Trade upon commercial matters?—No, it is distributed through the several departments according to the countries to which it relates; and that is an arrangement that I consider very beneficial to the Foreign Office, and contributing very much to the quick dispatch of business.

1492. Do you consider that it would be an advantage to have special clerks in the Foreign Office to communicate with the Board of Trade?—No, a very great disadvantage.

1493. Mr. *Seymour FitzGerald.*] Why would you consider it a disadvantage as a departmental arrangement?—Because, as a general rule, the constitution of a specific branch for a specific object tends to inconvenience in the arrangements of the office, in the distribution of the clerks and in the removing of the clerks from one part to the other. I think it would also operate disadvantageously in other ways; I do not see how we could separate the commercial from the political branches of our correspondence; the two questions are so much blended together. I think, too, it would be disadvantageous as regards the clerks themselves that they should not, all in their several divisions, be made acquainted with what was going on in the commercial branch.

1494. Have you not now in the Foreign Office a special department for the slave trade?—Yes, there is a special department for the slave trade; but no political question is involved in the slave trade, strictly speaking. Commercial and political questions are often very much blended together, and it would tend to produce great inconvenience and confusion in any department if it were dealing with one question without a knowledge of the political bearing of it, and with another

E. Hammond, Esq.

10 June 1864.

question without a knowledge of the commercial bearing of it.

1495. *Chairman.*] Am I to understand that you consider that no political question was involved in the slave trade, raising as it did the question of the right of search with America?—It is a special subject, and, to a great extent, the correspondence relating to it partakes of the character of nations.

1496. Do you consider that commercial questions are more involved in political questions than slave trade questions were?—Yes, much more.

1497. Are you aware that the other offices, the Treasury, for instance, were in the habit of consulting the Board of Trade, and have now almost entirely ceased to do so?—I cannot say what is the practice of other offices; I am only prepared to speak for own. I know, of my own knowledge, that in some cases the Treasury are in communication with the Board of Trade. I know of two such cases at present.

1498. Do you mean by this that communications are made from the Treasury to the Board of Trade, or from the Board of Trade to the Treasury?—I imagine that the Board of Trade would consult the Treasury upon everything connected with finance.

1499. Are the communications not of this character that the Board of Trade consults the Treasury in consequence of having to give their own opinion, rather than that the Treasury consults them?—I would rather not surmise what the object of any such communications are.

1500. If you have not paid attention to what is done by the other offices, it is, I presume, of no use for me to ask why the Foreign Office should be less self-sufficing than the other offices?—I might answer that by another question. Do the Treasury act, in matters of trade, without consultation with the Board of Trade? I am not aware that they do, and I should be very much surprised to hear that they did.

1501. In case of deputations coming upon matters which are not commercial, such as the slave trade, or the protection of British subjects, you, or some one of the permanent officials, are generally with Lord Russell at the time that he receives them, are you?—No; I only remember once being with Lord Russell at the reception of a deputation from the Chamber of Commerce.

1502. I except deputations upon commercial questions?—That is the only occasion on which I ever remember being present with the Secretary of State to receive a deputation. I believe you were there on that occasion. I will not say positively that I have not been present on other occasions, but I think I have not been.

1503. I understand it is now the wish of the Foreign Office that deputations upon commercial matters should see them as well as the Board of Trade?—I am not aware of any wish to that effect being expressed. We are always very ready to see any deputation that is sent.

1504. I understood that to be the purport of the reply that was sent to the Chambers of Commerce?—It was anything but that; the reply was very ill-expressed, if that was the inference drawn from it. I was very sorry that the reply was not before the House when the letter of the Chamber to us was read; it was merely an accident that it was not delivered in the morning. The answer is this: "I am in the next place to state to you, that the Secretary of State for Foreign Affairs has always been, and will be ready to receive either from mercantile associations or from individual merchants, any communications on commercial matters, which they may desire to address to him directly; and upon all such subjects, the Foreign Office and the Board of Trade fully interchange information and opinions, with a view to arrive at sound and definite conclusions."

1505. What was intended to be conveyed by the expression, "be ready to receive"?—That the Secretary of State would be ready to receive them, if they wished to come. At the same time, I am glad to take the opportunity of saying that in the early part of the Session I understood that it was arranged that a deputation of the Chambers of Commerce should see Mr. Layard and myself upon matters now referred to this Committee, in order that we might talk them over, and see whether we could meet their views, and I was expecting for two months to see that deputation, but it never came; I believe it went afterwards to the Secretary of State. I was very sorry indeed that they did not come to the Under Secretaries, because it was a question, so to speak, of departmental arrangement, and we should have been only too happy to talk the matter over with them, and see if we could do anything, or suggest anything, to meet their views; all we wish to do upon these matters is, to facilitate the public business, and to meet the wishes of everybody as much as we can; we should have been very happy to receive any suggestions.

1506. Sir *Minto Farquhar.*] What was the date of that letter of yours?—It was a letter to the Association of Chambers of Commerce; it was presented to Parliament this year; the date of their letter was the 24th of February, and our reply is dated the 10th of March.

1507. *Chairman.*] Am I to understand, from what you say now, that it is, or that it is not, the desire of the Foreign Office to receive deputations upon commercial questions?—We shall be very happy to see any who choose to come. At the same time I may say that we cannot undertake to act upon their suggestions without taking the opinion of the commercial branch of the Government.

1508. Do you not think that there is some disadvantage in representations being made to two different offices upon the same question. Is not there a fear of those who make them making a different impression upon the two offices?—I see no disadvantage at all. I conclude that if they found a disadvantage, the Chambers of Commerce would not come to the two offices.

1509. Do you not think that if it turned out that the commercial bodies generally preferred going, chiefly and mainly, to that office which had to conduct the negotiations, rather than going to the Board of Trade, the fact of their doing so would render it more necessary to have the information in your own office?—Whether it is on one side of Whitehall or on the other side of Whitehall, I think, signifies nothing. In either case, the Secretary of State would have to consult with some department or another; either the Board of Trade in his own office or the Board of Trade over the way; I see no difference at all. The only difference, perhaps, might be, that he would have first to consult his trade department in his own office, and then to consult the other trade department also.

1510. Am

1510. Am I to understand you as saying that you do not think it makes much difference whether the Secretary of State is put into personal communication with those commercial gentlemen or not?—For the transaction of public business, it does not, nor for the transaction of the business which the gentlemen have in hand. It may be more satisfactory to them to speak to the Secretary of State than to the Board of Trade; but that is a matter for their own opinion.

1511. Is not a great deal of the information upon which the Secretary of State acts obtained by private communications with foreign ministers?—I should prefer that question to be asked of the Secretary of State himself. The question where the Secretary of State obtains his information is a question which I cannot answer.

1512. Do you object to state whether you are ever acquainted with such private information?—Understanding the question to be whether the Secretary of State ever tells me what has passed between him and foreign ministers, my answer is, that he frequently does.

1513. Does the Secretary of State acquaint you with private information obtained from the ministers abroad?—He may, or he may not, as the case may be: it rests entirely in his own discretion; I seldom ask him a question.

1514. Supposing such private communications refer to commercial matters, are they sent officially to the Board of Trade?—That is really a question which I am hardly able to answer; if I were to receive a Minute from the Secretary of State, desiring me to make such and such a communication to the Board of Trade, it would be executed by me without necessarily asking the ground upon which he gave his direction.

1515. Supposing that the Secretary of State has to act upon any political question upon private information, is it not the rule that he will commmunicate with you, or with any other official in his office from whom he derives his information?—There is no rule upon the subject; it is entirely in the discretion of the Secretary of State what he says to me, or what he asks me.

1516. If he had to communicate with the Board of Trade, would he not communicate direct with the President of the Board of Trade?—If the question was not discussed officially between the departments, he might discuss it with the President of the Board of Trade as he might discuss a question with the Prime Minister or with the First Lord of the Admiralty.

1517. Is it not the case, that upon purely political questions, the permanent officials of the Foreign Office receive from the Secretary of State such private information as he thinks fit to give them?—Necessarily.

1518. But upon commercial questions, is it not the case that the permanent officials, who have to do with them, receive that information from the Secretary of State, through his colleague, the President of the Board of Trade?—No; the Secretary of State would talk to me upon commercial as well as on political matters; it does not follow, because he talks to me upon a commercial matter that it is to be a subject of discussion between the Foreign Office and the Board of Trade.

1519. Supposing he did do so, the rule would not be that you would transmit the information you received to the Board of Trade?—I should transmit whatever he told me to transmit, but I should not do it upon my own responsibility.

1520. Do you think there is no disadvantage in the permanent official being acquainted with this private information; in the one case by being in direct communication with the Secretary of State, and in the other case through another person?—If the object to be attained in giving me the information was that it should be acted upon, of course it would come to me in the shape of a direction by the Secretary of State, to make a communication to the Board of Trade. But the Secretary of State may tell me things which pass between him and others, and also things that pass through his own head, which are not intended to be acted upon officially.

1521. With regard to the consuls, I suppose their promotion rests entirely with the Foreign Office, does not it?—It rests entirely with the Secretary of State. There is nothing done in the Foreign Office except by the Secretary of State; no subordinate official has any independent authority.

1522. Do you not think that the consciousness by the consuls, that their promotion rests with the Secretary of State, and not with the Board of Trade, will tend to make them less anxious to send home information upon trade, than they would be if their promotion rested with the Board of Trade, and not with the Foreign Office?—Certainly not. I apprehend there is no want of anxiety on the part of the consuls to do their duty, whatever department they represent. Perhaps the Committee will allow me to put on record the opinion given as to the consular body by the Consular Committee, which sat from the 13th April to the 27th of July 1858. The Honourable Member who was then Under Secretary of State, would bear me out in saying that the Foreign Office challenged complaints from every part of the country. We invited complaints from every part of the country. The Report says: "Your Committee are unwilling to separate without expressing their gratification at the testimony borne to the worth and character of the gentlemen now in the consular establishment of this country. Little disposition has been manifested on the part of corporate bodies, or individuals, to substantiate before your Committee any accusation of misconduct, or mal-administration, although especially invited to do so; but the few charges that have been brought before them have been of use in leading them to general inferences, and to such conclusions as will, they conceive, for the future prevent even the suspicion of such occurrences." There was a very sweeping charge made in this Committee against the consuls, and against the Diplomatic Body; and, I think, as a permanent officer of the Department under whom those consuls serve, I am bound to have that statement recorded here which was voluntarily given by the Committee that sat to inquire into the consular service, with the view of getting at the bottom of the subject.

1523. Do you think that there is no disadvantage in the consuls sending the despatches upon what is, after all, the greatest part of their business, namely, upon trade, to an office which has within its own department no official whose business it is to attend to trade, and which merely transmits such information to another office?—Not the slightest disadvantage in the world. I think, myself, that there is inconvenience in the system which has been allowed to obtain,

E. Hammond, Esq.

10 June 1864.

obtain, of having the consuls corresponding with the Board of Trade directly upon marine affairs. I will honestly say that if I had been Under Secretary a year sooner than I had been, when those instructions went out, I would have done my best to prevent them from going out of the office.

1524. Do you not think that it would be, in every respect, more advantageous for the consuls to be responsible to that office, and to seek their promotion from that office, which has the means of testing the value of their reports upon the principal part of their business?—The consuls have some other duties than merely those connected with trade. They give us general information upon everything that is going on which comes within their observation; as I said a little while ago, they report as to any naval movement, or any movement of troops that may be going on, or anything of that sort; all such things they would still be obliged to correspond with us upon; and it is excessively inconvenient to have a man corresponding with, and receiving instructions from, two different departments. I have always regretted the arrangement.

1525. You do not think there is any disadvantage in the consuls being made responsible to that office, which does not profess to be able to test the value of their reports upon the principal part of their business?—Not the slightest; we look very closely at the conduct of our consuls in everything.

1526. Mr. *Layard*.] Will you state what the duties of a consul are in general; has he not, besides attending to commerce, to protect British subjects, to look after the dockyard in the port where he may be, and, in fact, to attend, generally, to a thousand interests besides those of commerce?—Yes, everything which can interest the British community, which comes under his observation in the port where he resides, he is bound to look after, and report upon to the Secretary of State.

1527. Therefore, his purely commercial reports are merely a portion of his consular duties?—Yes.

1528. *Chairman*.] What are the exact duties of a consul?—According to the strict definition he is there for the protection of trade; that was the original strict definition; but in addition to looking after trade, he has the interest of shipowners to look after.

1529. Do you distinguish between the interests of shipowners and the interests of trade?—I answered the question, as I understood it, in the spirit in which it was put; everything connected with commerce he has to look after, as well as everything connected with the immediate interests of British subjects in those parts; in fact, it is very hard for me to give an exact definition of the various duties of a consul. I can only say, generally, that consuls are bound to look after everything involving the interests of British subjects at the port at which they reside.

1530. May I consider that the chief business of a consul is to look after trading matters?—By the original institution of the consular system it was so; but many things have been engrafted upon it connected with the interests of British subjects generally. The consuls now look after chapels and chaplains; they extend their protection to British subjects while living, and to their property when dead. They are in constant communication with the minister of the country in which they reside, to whom they are obliged to refer all questions connected with trade. If a case arises affecting a British shipowner, or his ship, they must seek redress, in the first instance, from the diplomatic representative of the Crown at the seat of Government; they have no direct communication with any authority, except the local authority.

1531. I suppose you have looked over the evidence which have been laid before the Committee?—I am conversant with it; I have looked through it.

1532. Have you read Mr. Behren's evidence?—Yes.

1533. Do you wish to make any remark upon a statement which he makes, that sometime before the Franco-Belgian Treaty there was a different opinion formed by the Board of Trade and the Foreign Office with regard to the wording of the Treaty of 1851?—I am very glad to have an opportunity of making an observation upon it. Mr. Behrens said that the attention of the Chamber of Commerce, at Bradford, was called, in 1856, to the right of Great Britain to be treated by Belgium on the footing of the most favoured nation. He said that, at that time, Mr. Wickham and the Secretary to the Chamber of Commerce were deputed to the Foreign Office and laid a paper before the Foreign Office, and then, to use his own words, "Mr. Hammond requested them to call again the next morning, because it was of so important a nature that he could not give an answer at once. The next morning the two gentlemen called again, and then they were told by Mr. Hammond that he had tried to pick a hole in the arguments (these were the words that he used), but could not do so, and that instructions should be given to Lord Howard de Walden accordingly." Then he is asked, "Did you, in consequence of having heard that from the Foreign Office, put yourselves in communication with the Board of Trade upon this matter?" His answer is, "No, for a day or two afterwards Mr. Wickham and myself went to Brussels; I do not know whether it was at the request or not, but, at all events, with the permission of Mr. Hammond." I do not think it would be thought necessary for any deputation to ask my permission to go at all. Mr. Behrens goes on, "We called at the Embassy at Brussels, expecting to find Lord Howard de Walden there, who, we thought, would be glad to receive commercial information from us, after having got his instructions from the Foreign Office. We were met there by the secretary, who stated that he had got a letter from the Board of Trade, saying that the Board of Trade took a different view of the terms of the Treaty of 1851, and, therefore, that our views could not be carried out, because they considered that we had no treaty right to be put upon the same footing as France." Mr. Behrens was then asked, "Then you had reason to believe that the Board of Trade took one view upon this question, and the Foreign Office another?" He said, "I had, of course, if I am to take Mr. Hammond as the exponent of the Foreign Office, and the letter which the secretary referred to as the exponent of the Board of Trade." The Committee will be surprised to hear that, during that conversation which was supposed to be held with me, I was at Paris. I was struck rather when my attention was called to the statement, and, probably,

bably, an Honourable Member present was somewhat surprised also, at hearing that I used that expression, "tried to pick a hole in the arguments, but could not do so." It is very unlike me to say that. I referred to a book I have at home, and found that on the 21st of August I went into Paris from Versailles, and remained at Paris till the 26th or 27th of August, on which day I came home and resumed my duties at the Foreign Office. So far, I hope I have satisfied the Committee that that conversation between myself and the deputation did not pass.

1534. Do I rightly understand that you never saw Mr. Wickham and the Secretary of the Chamber of Commerce at all?—I have looked through the correspondence of that year, and I find that the memorial they referred to came into the hands of the Foreign Office on the 23d of August, on which day I was in Paris.

1535. Did you see them at all?—I could not have seen them at all upon that day. The Committee will be perhaps a little more surprised to hear that the memorial was not presented personally at the Foreign Office at all; it was sent up in a letter from Mr. Wickham to the Foreign Office; the letter being dated from Kirklees, on the 22d of August, and received in London on the 23d. On the 30th of August, an acknowledgment was sent to Mr. Wickham, to say that the letter would receive immediate consideration. It was on that same day referred to the Board of Trade, and we got an answer from the Board of Trade on the 19th of September. I was then on duty. That answer was turned into a letter, and forwarded to Mr. Wickham on the 20th of September, and on the same day an instruction, in almost the same terms, was sent to our Minister at Brussels; and, therefore, I think the inference is, that the astonishment need not have been so great on the part of Mr. Wickham and Mr. Behrens on going to the Mission at Brussels, at receiving an answer which they already had in their own pockets. If you wish to have the answer which was sent to the Chamber of Commerce, I can lay it before you.

1536. Was it the case that no information was conveyed to Mr. Wickham and the Bradford Chamber of Commerce, or to either of them, that the Foreign Office took the view of the Treaty of 1861, that it did give the Favoured Nation Clause?—I can only answer for myself; I should be very much surprised to hear that it was; the only correspondence which I am aware of, having reference to the memorial which was received at the Foreign Office on the 23d of August, was the acknowledgment saying that it would be taken into consideration, and the following letter of the 20th of September, telling them the result of the consideration of their memorial, and that letter, if the Committee care to hear it, I will read.

1537. Will you read the letter?—This is our answer; I draughted this answer myself, because I had returned to duty then, and in the margin of this draft is written, "to be sent under flying seal to Mr. Wickham at Brussels to-night;" and the same day instructions were sent to Lord Howard de Walden. The letter is dated the 20th of September.—"Sir: I am directed by the Earl of Clarendon to acquaint you that the statements in the memorial of the Bradford Chamber of Commerce, which was received at this office on the 23d ultimo, respecting the differential duties to which certain articles of British manufacture are subjected in Belgium, have been duly considered by Her Majesty's Government; but I am to point out to you that the third article of the treaty between this country and Belgium, to which you refer, merely provides for the assimilation of the duty upon goods imported into Belgium from the United Kingdom in British and Belgium ships, and has no reference whatever to the amount of duty charged by the Belgium tariff upon British produce as compared with similar produce of other countries. Her Majesty's Government have, therefore, no legal ground for remonstrating with the Belgian Government on account of the terms on which certain French manufactures are admitted into Belgium being more favourable than those extended to similar articles of British manufacture; but Her Majesty's Minister at Brussels will, nevertheless, be instructed to continue his endeavours to induce the Belgian Government to relieve British commerce from the disadvantages under which it now labours in this respect."—(Signed) "*E. Hammond.*"

E. Hammond, Esq. 10 June 1864.

1538. Am I to understand that if the Bradford Chamber of Commerce has the impression that a different view was conveyed to them by the Foreign Office, it is a mistake on their part?—Certainly, in this particular instance.

1539. With regard to this correspondence as regards the commercial treaty between Great Britain and Belgium, you know that the Bradford Chamber of Commerce complains that its letter of 3d November 1860, was not acknowledged by the Foreign Office until January the 3d or 4th, although a second letter had been sent to the Foreign Office in the mean time, and that it was not forwarded to the Board of Trade until January the 5th, 1861; have you any remark to make upon that?—No; Belgium is not in my division; I really cannot give you any explanation as to what the reason was; I have no doubt there was a good and sufficient reason.

1540. I understood you, at the beginning of your evidence, to say that you made yourself thoroughly acquainted with what was carried on by the other Under Secretary?—That would not include matters of that kind; we should not think it necessary that our communications should go quite to that extent.

1541. I find, by this correspondence, that it was thought worth while to send this letter on, on the 5th of January, and there seems to have been some correspondence about it; can you give me any reason why it was not sent sooner?—No; I am very sorry, as a departmental question, that the letter was not acknowledged at once; I think we did apologise for it; it ought to have been acknowledged immediately.

1542. In page 2 of the Belgian papers there is a letter from the Board of Trade, making suggestions with regard to a possible treaty with Belgium, dated December the 31st?—There is.

1543. I need not ask you why there is no suggestion with regard to the representation of the Bradford Chamber of Commerce, because they had not received it; but there is a suggestion with regard to paper and salt; was that letter forwarded to our Foreign Minister, or was any representation made upon it to our Foreign Minister?—Not having the Belgian Department under me, I am unable to tell you; I have no doubt it was so, but I can only go upon our general

E. Hammond, Esq.
10 June 1864.

general practice in saying that it would have been forwarded, or a communication to that effect would have been made; but I really cannot tell you exactly how any particular letter has been disposed of.

1544. You do not know whether it was or was not?—No, I cannot say that it was not; in all probability, I should think it was.

1545. On January the 23d, you will find, in page 8, a letter from the Foreign Office to the Board of Trade, asking whether they would submit a draft of a treaty with Belgium, and on February the 5th, I find a reply from Mr. Bowring, with such draft. Can you tell me why there is no answer to that letter of Mr. Bowring to Lord Wodehouse, of February the 5th, 1861?—I did not prepare these papers for printing, and therefore I cannot tell you. There would not necessarily be an answer. We probably acted upon the letter. We should not think it necessary to answer a letter from the Board of Trade if we carried out their views.

1546. You do not know whether the purport of that letter was communicated by the Foreign Office to the Foreign Minister at Brussels?—I have no doubt it was, but I cannot undertake to say positively.

1547. I asked that question because there appears to be no acknowledgment of it in these papers?—It is possible that it may not be there, for I think the correspondence in these papers is principally between the two offices.

1548. There are a good many letters printed, and it is generally to be discovered by those letters what suggestions from the Board of Trade have gone beyond the Foreign Office, and what have not?—I should say generally, if you asked my opinion, that every suggestion coming from the Board of Trade was sent directly to Brussels, particularly in connexion with the negotiation of that treaty. Everything that could bear upon commerce as against Belgium would have been sent immediately. I am aware of the fact that for very many years before the date of those letters, we were pressing the Belgian Government.

1549. I find that there is a letter from the Foreign Office to the Board of Trade on May the 27th, enclosing a letter from Lord Howard de Walden of May the 20th; you will find it in page 11. That appears to have been the only representation that was made to the Foreign Minister at Brussels, with regard to this treaty since January the 5th. Can you explain why so many months were allowed to elapse without any representations being made through our Minister to the Belgian Government?—I cannot explain it. I suppose it was not thought expedient to make one; it is one of those cases in which the Secretary of State or the Government must decide upon the expediency and seasonableness of making a representation to a foreign Government. If I remember rightly, at that time we had a perfect knowledge that the Belgian Government would not enter into any negotiations with us till they had settled their affairs with France; and it is of no use pressing upon a reluctant Government to enter into a negotiation with you when you are quite sure that they will not do it.

1550. Do you state, as a fact, that you are quite sure that the Belgian Government had given you information before May the 20th that they would not enter into a negotiation with us until they had settled the treaty with France?—I can say that on the 25th of January, Baron de Vrière expressed his readiness to enter upon the negotiation, when the negotiation pending with France was concluded.

1551. Had the Belgian Government informed our Government that they would not enter into such negotiation until the treaty with France was concluded?—I think that comes to exactly the same thing. When they said they would enter into negotiations at a certain time, it was as much as to say that they would not negotiate before.

1552. Were they ever asked to do so?—We were pressing the Belgian Government for years about the disadvantageous footing on which English goods were placed by the differential duties in favour of France, and they always said that they could do nothing until the then existing French treaty had expired.

1553. I dare say you have read the evidence sufficiently to see that there is a strong conviction on the minds of one or two gentlemen who have given evidence, that if our Government had made representations to the Belgian Government between the 3d of November 1860, when they received the suggestion, or I may say, the warning, from the Bradford Chamber of Commerce, and May the 20th 1861, they would have been more likely to have obtained at once from Belgium a treaty similar to what was given to France, than if they had waited till afterwards. Are you aware whether efforts were made at that time to get from the Belgian Government a decided promise that they would give us the same treaty as they gave to France?—It was a promise of very long standing, that directly they were released from their engagements to France, they would put us upon the favoured nation footing. It was a promise that was always given in answer to our complaints. They continually said that they could not do it then, but that they would do it at a future time.

1554. Was the Foreign Office, during those months, at all aware, that there would be the danger of there being a strong party in Belgium, who would not be willing to give the same terms to England as to France?—We knew that the Government would not, and could not, negotiate with us, till they were free from their obligations to France. That was a known fact, and had been known for years.

1555. Was it known that they would not undertake to give the same treaty to us as to France?—They had always promised that they would put us upon the most favoured nation footing.

1556. Was the Foreign Office aware that there would be a strong interest in Belgium against giving a treaty to England?—Lord Howard de Walden reports on the 7th of January 1861, that, "I have already explained to your Lordships that the desire not to cause political agitation at this moment, by arousing the passions and apprehensions of conflicting interests, is the cause of the temporary postponement of the reform of the Custom House Tariff, as well as of projects of law for other important measures which the Government have in contemplation. Baron de Vrière has repeatedly made declarations to me, especially in the spring of 1859, as reported

reported in my despatches of the 28th February, 25th March, and 13th May 1859, that it was not the intention of the Belgian Government to grant in any future treaty, preferential advantage to French imports to the prejudice of those of a similar nature from Great Britain, and I have had no reason to doubt the sincerity of his assurances. I am at a loss to conceive from what authority the Chamber of Commerce have derived the information which has excited their apprehensions, expressed in the letters of the 3d November, as at that moment the instructions of Monsieur Liedts, the Belgian Plenipotentiary, had not been decided upon, and he was still at Brussels."

1557. Those apprehensions turned out afterwards to be quite true, did they not?—The Belgian Government did not act up to its engagement to us, in fact.

1558. Some months after this time, namely, 7th January, the Belgian Government did not appear to be willing to fulfil the promise which they had originally made?—No: but that could not be the fault of the British Government.

1559. Was the Foreign Office aware that it would have been, according to all common calculations, much easier to have pressed and urged that we should have the same treaty as France before the French Treaty was concluded, than afterwards?—We had already the promise that we should have it. I read the passage just now.

1560. At the same time?—We always considered it to mean at the same time. The promise was that—"that it was not the intention of the Belgian Government to grant, in any future treaty, preferential advantage to French imports." That, of course, implied that we should have the benefit at the same time, otherwise it was a preferential advantage.

1561. Do you not think that if there had been a commercial department at the Foreign Office, which had been in communication with the commercial bodies throughout the country, so long a time would not have been allowed to elapse as that between 5th January and 20th May, without warning our Foreign Minister of the danger of the Belgian Government not giving us the same treaty at the same time as to France?—No, I think the existence of such a department would not have made the slightest difference in the world.

1562. I find that, from the 10th July to the 28th October, there were seven letters from the Foreign Office to the Board of Trade, enclosing correspondence, and stating that Earl Russell was in constant communication with M. Van de Weyer; there was no reply from the Board of Trade to those seven letters, apparently?—Very likely they did not call for a reply. We are not in the habit of replying to a department when there is no occasion for it.

1563. Did you see M. Van de Weyer?—Belgium is not in my division.

1564. Were you aware that he was in communication with any of the officials at the Foreign Office?—It is one of those questions that I can hardly answer. I know that, as a Foreign Minister, he saw Earl Russell occasionally; I dare say he saw Mr. Layard. I do not know who comes and goes in the Foreign Office.

1565. I understood you to say that you thought one reason why it was impossible to have a commercial under-secretary in the Foreign Office was, that it would impose so much labour upon you to be acquainted with what that commercial under-secretary did; therefore, if the other under-secretary was in communication with M. Van de Weyer, how was it that you did not know what was going on?—I might be aware of the fact of something going on, but there would be no occasion for me to minutely inquire as to what passed.

1566. Was M. Van de Weyer put into communication with the Board of Trade?—I cannot tell you with certainty; but he may have seen the President of the Board of Trade. The general rule is that a Foreign Minister is not put into communication with other Departments of Government. The general rule is, that the Foreign Minister only communicates through the Foreign Office. If a Foreign Minister communicates with another office, we should take notice of it, unless we put him in communication with it ourselves. We think such communication is very inconvenient.

1567. Do not you think that in such a matter as a Commercial Treaty, upon the details of which a Foreign Minister found it necessary to have communication with one of the Under-Secretaries, it would have been of advantage for him to be in communication with one of the officials of the Board of Trade?—I do not see that any advantage would have resulted from it. I cannot say this of my own knowledge, but I think that the President of the Board of Trade was in constant communication with M. Van de Weyer, as well as Lord Russell, they being the Plenipotentiaries for the negotiation of that treaty. I think Mr. Milner Gibson signed the treaty. In a matter of trade negotiated in this country, the President of the Board of Trade is almost invariably associated in the full power with the Secretary of State.

1568. On page 25 you will find that, on November the 12th, you sent to the Board of Trade the Belgian draft of the Treaty of Commerce; can you say what had been done with the Board of Trade draft of the treaty, which had been forwarded to your office on the 5th of February preceding?—I am not able to say. I have no doubt that it was forwarded.

1569. Do you know whether it was forwarded;—I cannot say positively; as I said, the subject was not in my division, and therefore I cannot say.

1570. Am I to understand by that, that such a matter as the draft of a treaty being forwarded from the Board of Trade, to be transmitted as their suggestion for the basis of the British negotiation with Belgium, was not a matter of that importance that you considered it necessary, as Under Secretary, to be aware of what became of it?—No; the Under Secretary of the division would see to that. If I was in charge at the time, of course I should know; but I cannot pretend to say at this distance of time, with the multiplicity of business that I have to transact, what becomes of any particular paper in the office, even in my own division. So many papers pass through my hands, that it is impossible for me to give the history of every paper. The forwarding of that draft would be little more than the regular business of the department; my opinion would not be called for upon it. We should generally take a Board of Trade draft of a treaty,

E. Hammond, Esq.

10 June 1864.

except in the matter of form, as a thing to be acted upon as a matter of course. I may mention, with reference to the previous question, that M. Van de Weyer does allude in his letter of the 7th of November to conferences with Mr. Milner Gibson and Earl Russell jointly. That answers the question which you put to me. Mr. Milner Gibson, as representing the Board of Trade, and Earl Russell, as representing the Foreign Office, were in communication with M. Van de Weyer.

1571. Am I to understand from you, that M. Van de Weyer was in communication with one of the Under Secretaries of the Foreign Office as well as the Chief Secretary?—I daresay he saw Mr. Layard. I do not think you quite seize the position of the Under Secretaries. The Under Secretary has no direct authority; he acts entirely as the agent, or as a part, so to speak, of his chief.

1572. I do not for a moment suppose that he had authority?—A Foreign Minister very often comes and sees the Under Secretary of State; but it does not imply any divided authority between the Under Secretary and the Secretary of State.

1573. In the case of a negotiation upon details, do you think that a Foreign Minister and the Under Secretary will have conversation upon those details which will facilitate the conclusion of the treaty?—I do not know what may pass between Mr. Layard and M. Van de Weyer. Something may have passed upon the subject; but as a general rule, I should think that those discussions would have taken place with the negotiators.

1574. On November the 12th, I find that there is a letter from the Foreign Office to Sir Emerson Tennent, enclosing a letter of M. Van de Weyer to Earl Russell of the 7th of November, and asking for an opinion about it. There is a reply from the Board of Trade on the 23d of November, and it appears that Earl Russell on the 16th of December, that being five weeks after the receipt of M. Van de Weyer's letter, dated London, the 7th of November, embodies the reply of the Board of Trade in his letter to M. Van de Weyer. Do you think that so much time would have elapsed if there had been no need for communication between the two offices?—The question, as to the time when the Secretary of State acts upon an opinion, is not within my province; you must ask the Secretary of State the cause of the delay. I am not to judge or pronounce an opinion upon the conduct of the Secretary of State.

1575. I see, from Lord Howard de Walden's reply to Earl Russell's letter, that an answer was obtained from Brussels in five days. You do not think that it is within your province to make a remark upon the difference of time between the two cases?—The difference is simply this, that the one was considering, and the other was executing what had been considered; that makes a great difference.

1576. Lord Howard de Walden gives the opinion which the Belgian Government entertained upon Earl Russell's letter in five days, and Earl Russell is able in five weeks to give the opinion of the Board of Trade upon the letter referred to them?—I understand that you are making a charge of delay and negligence on the part of Earl Russell. I must, as Under Secretary of State for Foreign Affairs, ask you to call Earl Russell before you, and not require me to give an explanation of a charge brought against Earl Russell.

1577. I ask whether you consider that the need of having two offices to consult may not have led to this delay?—You must ask Earl Russell whether he considers himself competent himself to decide a commercial question without reference to the Board of Trade. If it is meant to bring a charge of negligence against Earl Russell, I must beg that he should be called, and that I, as Under Secretary of State, should not be required to answer it.

1578. With regard to the Italian correspondence, I think, as far as concerns Italy, that is within your division?—Yes.

1579. On page 2 I find a letter from the Board of Trade to the Foreign Office, dated February the 18th, 1862, in which the Board of Trade requests to be informed if the revision of the Italian tariff had been completed. They express the fear that it might be too late to entertain proposals for tariff modifications, on the ground that it is completed; and they wish to know whether it is or not?—I think they hardly say that. In the first paragraph they express an opinion as to a contingency; it will be "a subject of regret if any revision of the Italian tariff, which may result from negotiations now in progress between the Governments of France and Italy, should be completed without any reference to the special requirements of British trade."

1580. The whole purport of the letter is, as you will see if you read the last two clauses of it, expressing a fear that if the revision was completed without the English Government being aware of it, danger to English interests would happen?—Yes.

1581. Are you aware whether that revision was completed at that time, or not?—No, I believe it is still to be completed.

1582. Was that revision of the tariff which formed the basis of the Treaty between France and Italy, and which is now the tariff as between France and Italy, completed at that time?—There has been no revision of the tariff that I am aware of in the Italian kingdom. Our latest accounts were, that since the ratification of the Treaty, inquiries had been made of the Italian Government whether they were prepared to entertain the question of the revision of the tariff, and the answer was, that they did not propose to do so at present. This is the Despatch from Sir James Hudson, dated 11th of January 1864; there is another Despatch from him of the 16th: "Since the ratification of the Treaty, inquiry has been made of the Italian Government whether they are prepared to entertain the question of the revision of the tariff; the answer was, that they did not propose to introduce any such measure during the present Session of the Chamber, but that it would certainly be necessary in the next; and that the Treaty with France would make it indispensable to introduce numerous modifications of the tariff, but no expectation was held out of important changes."

1583. Are you aware that the Treaty between France and Italy did include some alterations in the previously existing tariff upon the importation of goods into Italy?—I am aware of it. Whatever alterations were made, we, under our Treaty with Italy, have the full benefit of them.

1584. Do

1584. Do you imagine that such a revision of the Italian tariff as was necessary before those alterations could be made, was completed at the time that the Board of Trade wrote you this letter of the 18th February 1862?—I am unable to say what may have passed at Turin or at Paris upon that subject.

1585. You do not know whether it was or was not?—I do not know it of my own knowledge.

1586. In consequence of this letter from the Board of Trade, on the 18th February, expressing a fear that it would be difficult for the Italian Government to modify their tariff after their treaty was concluded with France, did you make any representations to the Italian Government, asking them to inform you what position their tariff negotiation with France was in?—We were in communication with the Italian Government with reference to a treaty with Italy, and the answer we got was, I believe, a promise that we should have the most favoured nations' clause. But about that time, a gentleman came over to this country to communicate with us.

1587. This letter is dated February, 1862; I think that gentleman did not come over until some months afterwards?—He came in May, I think; I really cannot say off-hand, whether we did or did not make such a representation to the Italian Government as you speak of. All I know is, that on the 21st February, we told the Board of Trade that we were prepared "to instruct Her Majesty's Minister at Turin to enter into communication with the Italian Government on the subject, so soon as his Lordship shall receive from the Board of Trade, drafts of the treaties which the Board consider right and proper to be proposed, together with any observations and suggestions which they may desire to offer; and so soon also as he shall have received from the Associated Chambers of Commerce in this country, to whom, by his lordship's directions, I have addressed the letter, of which a copy is enclosed, a statement of their views as to the points which should be pressed on the Italian Government."

1588. I will read the last paragraph in that letter: "My Lords are, of course, unable to form any opinion as to the obstacles which may oppose such attempts" (that is, to anticipate negotiations), "or as to their probable success at the present time; but they cannot express too strongly their apprehension, if, during the revision of foreign tariffs, which appears to be the inevitable consequence of the policy which has been adopted by France, British interests are not carefully watched and strongly represented, that not only an opportunity may be lost, which may not be recovered for years, of securing for them important advantages, but that in some cases they may even sustain positive or relative injury from the changes which may be made in existing international arrangements. To prevent these consequences, it is of the highest importance that all the information which can be obtained connected with negotiations commenced by the principal commercial countries, should reach Her Majesty's Government before they have arrived at a stage which may (as they fear is the case with respect to those between France and the Zollverein and Italy respectively) seriously diminish the prospect of successful representations on the part of this country." Did you, in consequence of receiving this letter, try to ascertain from your minister at Turin whether or no this fear of the Board of Trade was well or ill-founded, that the arrangements of the tariff had, in fact, been completed, and therefore that the opportunity had been lost?—I think, upon the letter you have read, there was no communication. The Board of Trade stated (an abstract proposition of which nobody could doubt the truth), that it was very desirable, during the revision of foreign tariffs (applying it not to Italy alone, but to the Continent generally), to watch over British interests. In reference to Italy we did watch over British interests; we pressed for, and obtained from the Italian Government, the most favoured nation clause.

1589. That was afterwards?—Yes; but it is a part of my answer. I say that there was no negligence on our part; that we did the best we could, which was to obtain the assent of Italy to put us upon the footing of the most favoured nation. There are two powers negotiating together, France and Italy; can any man suppose that the French and Italian negotiators will shape their conduct by any representation which we may make to them with reference to our own interests. They are negotiating for their own interests, and look to their own interests; will they hamper and embarrass their negotiations by bringing in a perfectly different question, which is not raised in their negotiations? If they are satisfied with the rate of duty as between themselves, and are fixing it at 20 or 30 per cent., will France or other powers embarrass their own negotiations by contending, not for their own benefit, but for the benefit of England, their great rival, that the duty should be reduced to 15 per cent.? Of course they will not. Do men do that in common life? Would not two merchants of Leeds and Manchester, who were negotiating together, think it very unreasonable if a Sheffield man were to come in and say, "Whilst you are carrying on this negotiation, do negotiate for my hardware too."

1590. Were you aware that at this time the Italian Government was revising its tariff preparatory to a treaty with France?—I was not aware of it. I assume the contrary, from the fact that the tariff has not been revised except in so far as the negotiation with France is concerned. They might have considered what duties any particular article would bear; but there is nothing to be called a revision of tariff. You might just as well say that Mr. Cobden's original treaty, in which duties were agreed to be modified on either side, was a revision of the British tariff; it was not a revision of the tariff, in the proper sense of the word.

1591. Were you aware, that at this time they were entering into negotiations which might cause alterations in the tariff?—Of course; because it was reported to us.

1592. Then did the Foreign Office think it their duty, or did they not, to ask them, as a friendly government, to inform them what alterations they were making?—I should certainly not have thought it a duty to do so, because I should have thought it an impertinent interference in their negotiations.

1593. Am I to understand that you received no refusal from the Italian Government to communicate such information?—I am not aware whether we asked for the communication, or met with the refusal. It would not be usual, between Governments, to ask for it; and I do not, myself,

E. Hammond, Esq.

10 June 1864.

myself, count so much upon the generosity of governments as to suppose that they would liberally communicate to us the details of their negotiations, to enable us to step in and hamper and embarrass them.

1594. Mr. *Layard.*] Did we not endeavour to obtain a copy of the revised tariff, or the draft treaty, and were we not refused both by the French and Italian Governments?—There was something of the kind, but I cannot speak positively. We obtained it at last.

1595. *Chairman.*] Was it the case, that before the negotiation was opened between France and Italy, a temporary uniform tariff had been applied to the whole of the Kingdom of Italy?—I doubt very much that that had been the case; I thought there had been a different tariff in Naples and a different tariff in Tuscany.

1596. Are you not aware, that there was existing over the Kingdom of Italy, before the French treaty was completed, a temporary tariff, which applied to the whole kingdom?—There may have been; I am unable to say.

1597. You are not aware whether the alterations that were made by the Italian Government in their duties, were alterations made in such temporary uniform tariff?—That is to say, in a tariff which was made for the whole kingdom of Italy; I am not aware of it.

1598. You do not know, then, whether your office sent a copy of such tariff to the Board of Trade?—If we had it we should certainly have sent a copy of it to the Board of Trade. It is very difficult for me to speak from memory upon this point, and it is a question which I really was not prepared to be examined upon.

1599. You cannot tell whether means were taken by the Foreign Office to obtain the opinion of the Board of Trade upon a comparison of this uniform tariff with the former tariffs of parts of the Kingdom of Italy?—No; because, in the first place, I cannot say that I am aware that there was that uniform tariff established; I must first ascertain that.

1600. Are you aware that a new tariff was made by Naples in 1859-60, just before the dethronement of the King of Naples?—I am not prepared to speak to that; I was not expecting to be examined upon points of this kind, and therefore I did not come prepared.

1601. We wished to find what intercourse took place between the Foreign Office and the Board of Trade with regard to the Italian Treaty. We find that a certain intercourse did take place; but we do not find traces of other intercourse which we should have expected, and therefore I ask you this question?—The only answer I can give upon that point is, that I have not the slightest doubt in the world that the Board of Trade were kept fully informed of every matter connected with that negotiation which came within our knowledge. I can answer it positively, because I know the practice of the office; but as to answering whether any particular paper was communicated to the Board of Trade, unless I brought the registers of the office here, I could not do it. I cannot answer the question offhand.

1602. Are you aware that the tariff now existing in the Kingdom of Italy is higher, upon some English goods, in some parts of Italy, than it was before?—I am not able to speak upon these matters.

1603. You are not aware of it?—No; I say I am not prepared to speak on these matters.

1604. At the time when the Foreign Office were informed that a treaty was being made with France, which would, in all probability, settle the tariffs for some time with Italy, did the Foreign Office endeavour to obtain information from the Board of Trade, as to how far the fact of Italy having become a kingdom had, in some respects, injured the interests of British exporters by raising the duty in some parts?—I am not aware; I do not imagine that we should have asked that question.

1605. Do you not think that the time to have made such representations, that the fact of Italy having become a kingdom had, to some extent, injured English interests, was when you had reason to believe that a tariff arrangement was being made between France and Italy which would be a rule for other countries?—I do not think it would have been either useful or advantageous to try to thrust ourselves into a negotiation between France and Italy, with which we had no direct concern. In all probability, if we had tried to meddle with what was under discussion between those two powers, we should not have been very welcome.

1606. Are you not aware that the Italian Government had to deal not only with a foreign government, with which it was conducting a treaty, but had also to deal with its own subjects?—Certainly.

1607. Are you not aware, therefore, that it was not so easy to make constant revisions of a tariff as to make a revision once for all; and, therefore, if a revision was made preparatory to the French treaty, it would be more difficult to make a revision immediately afterwards?—That process is about to be undertaken by the Italian Government, and we have not heard that difficulty started by the Italian Government; on the contrary, they say that they must have a revision in consequence of the treaty.

1608. Am I not right in believing that they say that there will be very considerable difficulty in the revision?—They have stated to us what I have read to the Committee, namely, that it will be "indispensable to introduce numerous modifications of the tariff; but no expectation is held out of important changes."

1609. Then, it is decidedly your opinion that while they were negotiating with France was not the time at which it would have been advisable for our Government to represent that British interests were, in some respects, injured by Italy having become one kingdom?—I think no advantage would have arisen from it; and if no advantage had arisen from it, it would have been very injudicious to press such a point on a reluctant Government. Nothing is so injudicious as to force a foreign Government to a refusal; for you put those who have given the refusal in this position, that they must, for the credit of their own consistency, and for the satisfaction of their subjects, devise reasons for departing from any such refusal, when at last they may consent to negotiate.

1610. You speak of "a reluctant Government"; have you had proof given you that the Italian Government was reluctant?—I supppose that in all these negotiations, the Government you are treating with wants to make the best bargain they can.

1611. Did you attain information from our Minister at Turin, that they would do nothing?—

We

We knew that they would do nothing till they had settled the French Treaty.

1612. When was that known?—From the beginning; I cannot exactly say when; but everything was put off till the settlement of their treaty with France.

1613. When did you make the application to them to be allowed to know what alterations they were making previous to the French Treaty?—I cannot say that we ever made that application at all.

1614. You never made it?—I cannot say that we did.

1615. How was it that they came to inform you that they would do nothing until they had concluded the French Treaty?—Because we were wishing to have a treaty ourselves.

1616. When was it?—I cannot give you the precise date.

1617. Can you give me any idea of the date?—It must have been some time early in 1862, I suppose, by these papers, because I see on January the 31st, 1862, we ask Sir Emerson Tennent what should be done about our treaty with Italy. There was a formal letter, I see, on the 13th of April, from Sir James Hudson, saying that the Italian Government were "desirous of concluding a commercial treaty with Great Britain."

1618. That does not appear to be proof that they would not give you any information until they had concluded the treaty with France?—No; but I think you will find that it was not a question of information; that it was a question of concluding a treaty with us.

1619. My question was this, were you informed by the Italian Government, that they would enter into no negotiations with you, or give you any information with reference to their future tariff, until they had completed the treaty with France?—They said they would conclude a treaty with us when they had settled their affairs with France.

1620. When did they give you the impression that they would not do it until they had concluded a treaty with France?—The impression was conveyed by that statement.

1621. Would it not have been well, after receiving the letter from the Board of Trade of the 18th February, to ascertain whether that impression was well-founded or not?—In the beginning of the year 1863, M. Marliani stated in a private conversation, that the Italian Government was engaged in a tariff negotiation with France, and that until they had made progress towards that arrangement with France, it was not in their power to pursue the negotiation with us.

1622. What date was that?—M. Marliani came here in May 1862.

1623. Was that your first information that they would not enter into negotiations until they had completed the treaty with France?—I really cannot say.

1624. I find in this letter of the Board of Trade of 18th February, a suggestion that the commercial bodies should be communicated with, and on 21st February, there is a letter from the Foreign Office, stating that the Foreign Office will communicate with the Chambers of Commerce. As I have understood from you that the trade matters are conducted by the Board of Trade, I wish to ask why that communication was sent from the Foreign Office and not from the Board of Trade?—I believe, as far as I remember, that we had just had the interview with the deputation from the Chambers of Commerce in February 1862 (I will not be certain about the date); and, as a matter of courtesy to them, we made the communication direct to them ourselves.

1625. If you turn to page 5 of these papers, you will find there a letter again from the Board of Trade, dated 24th April, in reply to your letter of 17th April, stating that it was necessary to have information as to the negotiation, may I ask whether that information had then been asked for?—I cannot give a positive answer without referring; I have no doubt it was asked for; we got it from Paris.

1626. It was a long time afterwards, was it not, that you received it?—No; it was sent to the Board of Trade on the 19th May. On the 7th June we communicated to the Board of Trade a memorandum which had been placed in Lord Russell's hands by the Italian minister and M. Marliani.

1627. Do you not think that if Sir Emerson Tennent had been a commercial Under Secretary at the Foreign Office, the information would have been obtained from Turin some time before that, in reply to the question as to whether we should be allowed to know what was doing between them and France or not?—I do not believe that Sir Emerson Tennent would have had any more power of obtaining information than Mr. Layard and myself.

1628. In page 4, you will see that the Foreign Office writes to the Board of Trade that Signor Marliani is coming to England. When did he come?—We told them that on the 17th of April.

1629. When did he come to England?—He was to leave Italy on the 25th of April; I do not know how long he would be travelling.

1630. Do you know how long he stayed in this country?—I do not know; I never saw Signor Marliani. He was here on the 30th of May, I see.

1631. And on the 7th of June, I suppose, he was here, because on that day you write to the Board of Trade, enclosing a memorandum signed by Signor Marliani and the Marquis D'Azeglio?—Yes.

1632. Does not it appear by this memorandum that Count Marliani really came over here for the purpose of negotiating and arriving at the details of a treaty?—Yes, and he made proposals which the Government were not prepared to accept.

1633. However, on the 7th of June you sent to the Board of Trade a proposition preparatory to a treaty signed by M. Marliani and the Marquis D'Azeglio?—Yes.

1634. Did you get an answer to that memorandum from the Board of Trade?—I do not know; no answer appears in print. I cannot tell you; it is impossible for me to give you an account of everything that passed.

1635. If you run your eye over that memorandum, I think you will see that a suggestion is made for the reduction by us of certain duties upon Italian produce?—Yes.

1636. In order for the Board of Trade to give you an opinion about that, would it not be necessary for them to consult the Treasury?—I will not undertake to answer for the Board of Trade, what they may think it necessary to do; I can only answer for my own department, to the best of my ability.

E. Hammond, Esq.

10 June 1864.

1637. Do you consider it the duty of the Board of Trade to inform your office as to whether reductions can be made in British duties?—The Board of Trade would inform us, I presume, that a reduction could not be made, but it was a point which was self-evident, I believe, that we could not admit the reduction of those duties.

1638. In case you have to form an opinion as to whether it would be expedient for you to consent to the reduction of duties upon goods imported into England, do you consider that the Board of Trade is to guide you in such an opinion, or the Treasury?—If we referred to the Treasury, I presume the Treasury would tell us what to do upon a question of that kind. If we referred the question to the Board of Trade, I presume that the Board of Trade would obtain the information from whatever source they thought proper to seek it from, and inform us of the result.

1639. You do not think there is any advantage in getting the information direct from the Treasury rather than getting it through the Board of Trade?—If the information is equally correct, I do not think it matters either way.

1640. Would there be no time saved by your receiving the information direct from the Treasury?—Many things are involved in it. This was a point regarding the reduction of duties upon wine, I think; so far, it affected the Treasury. There was, also, the question of a reduction of duties upon manufactures. In these cases, it matters very little, I think, if we get correct information, whether we get it from one Government office or from another

1641. The reason I ask this question is, that that appears to be a very important memorandum sent by you to the Board of Trade, and I find no answer to it; it appears very possible that the reason why no answer was given was the delay in obtaining information from one office through another?—I do not see how we, if we had been a self-contained office for dealing with commercial questions, could have decided whether it was desirable to relieve from duties such things as bois à bruler, bois cercles, bois equarre, bois à lattes, bois manches de pelles, bois merrains, bois d'ébénistérie, céréales, fruits secs, and so on. That was a question entirely for the Board of Trade to ascertain from the Chambers of Commerce, I should have thought.

1642. If you observe in the paragraph before, the Marquis D'Azeglio proposes that the duties upon certain Italian goods imported into England should be reduced; would it not have been better for you to have obtained the information direct from the Treasury whether they could be reduced instead of obtaining it through the Board of Trade?—I should presume that the Board of Trade, in the first instance, would be the proper Board to ascertain what bearing the introduction of Italian paper would have upon the paper manufacture of this country; that would be the first object to be ascertained, I think.

1643. Do you not think you could have got that information quicker by applying to the Treasury?—If we had asked the Treasury what bearing the introduction of Italian paper would have upon the paper trade of this country, they must have gone to the Board of Trade to ascertain it. It would have been just the same thing, only inverted.

1644. Was Signor Marliani put in communication with the Board of Trade?—I believe he saw the President of the Board of Trade; and, therefore, he was put in communication with the President of the Board.

1645. You are not aware whether he saw any of the permanent officials of the Board of Trade?—No; the permanent officials, as I have already said, are wholly subordinate; the President, or other head of the department, is the person to be looked to in every department of Government.

1646. If a gentleman was sent over who was not himself the chief negotiator, to make arrangements for the negotiation of a treaty at the Foreign Office, would he not have been put in communication with the permanent officials at the Foreign Office?—No, with the Secretary of State, in the first instance.

1647. Would not the Secretary of State put him in communication with the permanent officials?—He might be put in communication with them; but the negotiation would be conducted by the Secretary of State.

1648. Would not the giving and getting information be reciprocally furnished between you and this gentleman, he being himself the chief negotiator. Signor Marliani was not the negotiator, I believe?—He and the Marquis d'Azeglio were joint negotiators.

1649. Did Signor Marliani come as a negotiator?—He signed this memorandum; it is signed by both Signor Marliani and the Marquis d'Azeglio.

1650. If it had been upon a political question that they had come, would he not, in giving and getting information, have been in communication with you at the Foreign Office?—No, certainly not.

1651. Not upon the details?—Not as a matter of course; he might see the subordinate officers, Mr. Layard and myself; but we probably would not be mixed up at all in the matter; that is the general rule. I do not mean to say that there may not be exceptions occasionally; but I do not think I ever saw Signor Marliani in my life.

1652. On July 14th, I see Mr. Layard writes to Sir Emerson Tennent, mentioning a suggestion of the Bradford Chamber of Commerce, that the Chambers of Commerce should be put in communication with Signor Marliani; do you know the reason why he was not put in communication with any of them?—I do not, indeed.

1653. If you turn to page 5, you will see that in a letter of the Board of Trade of April 24th, there is a draft of a treaty stated to be enclosed; it was described thus: "The enclosed draft of a Treaty of Commerce and Navigation which, in the opinion of this Board, may serve as a basis of negotiation with the Italian Government," was that draft ever sent on to Mr. West, or Sir James Hudson?—I have no doubt that it was at the time, although the instructions sending it on are not printed. Sir James Hudson had it, I know.

1654. Are you aware that the Board of Trade, having sent you a draft treaty on April the 24th 1862, on January the 25th 1863, Mr. West sends his draft treaty, and you forward it to the Board of Trade by the letter of January the 28th, and you receive in reply a letter from the Board of Trade, dated February the 3d, in which they say, "My Lords are unaware of the reasons which have led Earl Russell to substitute for that draft treaty the draft treaty which has been prepared under his Lordship's instructions by Her Majesty's Chargé d'Affaires at Turin." And then

then the Board of Trade give the reasons why they prefer their own draft to Mr. West's draft. I want to ask whether between April the 24th 1862 and February the 23d 1863, the Board of Trade's draft had ever been sent to our Minister at Turin?—My belief is that it was; but, as I say, I have not the papers to refer to. I think that when Mr. West sent that draft he had the other draft in the mission at Turin.

1655. Surely that must be a mistake, because I find on the 7th February 1863, a letter from yourself to Sir Emerson Tennent, in which you say: "It appears to Lord Russell that on political grounds it is very desirable to sign a treaty of commerce with Italy. He, therefore, proposes to send to Turin the draft treaty prepared at the Board of Trade in May last"?—Yes, you are right. There was a reason, although I forget what it was, for not sending it on at the time. I was looking for that particular passage, and I could not find it.

1656. What was the reason?—I cannot remember at the moment; there was some reason.

1657. Do you not think that it would have been very advisable for Mr. West or Sir James Hudson to have been aware of the views of the Board of Trade, which had been furnished to your office so long ago as early in the previous year?—I do not know whether they were aware of them. I will not say that they were not.

1658. The treaty, it appears, was not sent in?—No.

1659. Do you think that Mr. West would himself have sent home a different draft treaty, if he had been aware of the draft of the Board of Trade?—I will not say that he would not. A man sometimes substitutes one draft for another; he thinks his own draft would be more likely to carry out the object in view.

1660. It appears that he had not received it?—He had not received it.

1661. He sent home a draft of a treaty, and you appear not to have been aware that you had a draft in the office at the time?—Yes, we were perfectly aware that there was that draft in the office at the time; I remember the head of the Treaty Department calling my attention to it.

1662. Was not that draft treaty put aside when it was received, and lost sight of entirely, until you got the letter from the Board of Trade, of the 3d of February 1863, saying that they preferred their draft treaty?—No, it was not lost sight of; but it was thought undesirable to send it forward, for what reason I cannot tell now.

1663. Why were the Board of Trade not informed that the draft treaty was not sent forward to Turin?—It was not thought necessary to inform them.

1664. I understood you to say, that in these negotiations you constantly take the opinion of the Board of Trade?—Yes.

1665. Do you consider that it is not necessary for you, after taking their opinion, to inform them whether or no you forward the suggestions you received from them for a draft treaty, for instance, to the Minister at Turin?—No; they had given their opinion upon the question; whether we should act upon the opinion, must rest with the Secretary of State for Foreign Affairs.

1666. I think I asked you, early in your explanation, whether, in case of a difference of opinion between you and the Board of Trade, it was the rule to act upon their opinion, unless you gave them the reason why you did not, and received from them their comments?—I did not intend to convey the impression that that was the rule. If I remember rightly, I said that we did not necessarily wish to involve ourselves in an argument with the Board of Trade or any other department; that it was a question for the Secretary of State to decide as to the expediency of acting upon any suggestion of the Board of Trade when a suggestion was made to him; but that, if he did not act upon it, there was no necessity, that I knew of, for stating to the Board of Trade that he did not act upon it, and therefore entering into an argument with the Board of Trade, such argument resting upon a point of which the Board of Trade could know nothing, namely, political expediency at the moment.

1667. I think I understand you to say that it was the rule to do so?—No, not as you put it now. The rule is to consult the Board of Trade upon everything, but I think I said that the Secretary of State did not consider himself bound to defer implicitly to the suggestions of the Board of Trade.

1668. Can you give any political reason why Sir James Hudson and Mr. West should not have been informed of the views of the Board of Trade as to what should be the character of the treaty between us and Italy, whenever such a treaty was made?—We are not in the habit of sending out speculative instructions of that kind. As the time had not arrived for entering upon that negotiation, it was unnecessary to send a draft of treaty; it would be sent when the time did arrive.

1669. You will find in page 4, that the letter written by the Foreign Office, on the 17th of April, was this: "With reference to my letter of the 21st February last, requesting that you would move the Lords of the Committee of Privy Council for Trade to prepare drafts of treaties of commerce and navigation with the Italian Kingdom, such as the Board may consider right and proper to be proposed, I am directed by Earl Russell to enclose herewith, to be laid before their Lordships, an extract of a despatch from Her Majesty' Minister at Turin, stating that the Italian Government are about to send Count Emanuel Marliani to this country, for the purpose of negotiating a commercial treaty between Great Britain and Italy, and I am accordingly to request that you will move their Lordships to forward to Lord Russell, at their earliest convenience, the drafts which they may have prepared in pursuance of my above-mentioned letter." Then you get those drafts on April the 24th.?—Yes; and then we got Signor Marliani's declaration, that until they had made progress towards an arrangement with France, it was not in their power to commence negotiation with us. What possible use would there have been in sending out a draft treaty in the face of such a communication?

1670. Was the draft treaty ever shown to Signor Marliani?—I cannot say; it might, or it might not have been; but, in the face of that declaration, it was unnecessary to show it to him, or to discuss it with him, because he was not empowered to discuss it.

1671. Was it not possible that at any time the negotiation might begin at Turin, and, therefore, was not it advisable that Mr. West should have

E. Hammond, Esq.

10 June 1864.

before him the details of the treaty, such as were suggested by the Board of Trade, and that he, therefore, should not find it necessary himself to draw out the details as he did in the letter which he sent, dated January the 25th, 1863?—I should say that it would have been excessively inconvenient to let him have a draft treaty to propose to the Italian Government, because in the interval between the time it was sent out, and the commencement of the negotiation, various things might have occurred to induce the Government to change the draft. The proposing of a draft treaty binds the Government to that proposal, to some extent. We do not generally leave a draft treaty with a foreign Government, and bind ourselves at some future period to make that specific treaty with the Government.

1672. I do not ask whether it was advisable that you should have sent instructions to Sir James Hudson to have laid that treaty before the Italian Government, but was not it advisable that Sir James Hudson and Mr. West should have been kept sufficiently *au courant* with the wants of commercial men as to know what should be proposed when an opportunity offered?—It would be much better that they should not be so; they might have involved us in difficulties from which we should have had some trouble in extricating ourselves.

1673. Therefore, the possession of knowledge by them might have been decidedly disadvantageous, in your opinion?—Yes; they might have acted in a particular manner, supposing they were carrying out the views of the Government, and those views might have changed in the interval.

1674. I think that, in your letter of the 28th January, you do not say anything to the Board of Trade about not having forwarded their draft; does not that rather confirm the idea that the existence of the draft was forgotten?—Whatever idea may be entertained about it, I can only state, as a fact, that it was not forgotten, because I had a consultation with the head of the Treaty Department, who had possession of the draft, upon the subject of that draft, when Mr. West's Treaty came before us; and the gentleman who had charge of the matter, is not a man to forget anything; he is one of the most valuable men in the office.

1675. When you received Mr. West's letter, you were then in discussion with regard to the draft that had been given, as I understand?—No, we were not in discussion about the draft; the draft had not been forgotten, but it had not been acted upon.

1676. Was any step at all taken upon that draft, in any way, from the time when it arrived in your office until after you received Mr. West's letter with the new draft?—There was no step required to be taken; we had the draft in our possession, and there it was, ready to be used. If Mr. West had not sent his draft home, we should have taken up the Board of Trade's draft immediately when the time appeared opportune for entering upon negotiation with the Italian Government.

1677. Did you, in July 1862, receive a memorial from the Chamber of Commerce of Dundee with regard to the jute trade?—No doubt we did.

1678. Was that memorial forwarded to Mr. West or to Sir James Hudson?—Whether it was forwarded to Mr. West or not I cannot tell you, but I know that that question of the jute trade was mooted in the negotiations.

1679. That was in 1863; I now speak of 1862?—I cannot tell you whether it was forwarded or not to Mr. West, but it was a matter which would have come up, and did come up directly that the question of negotiation arose.

1680. Are you not aware that it is considered by those interested in the jute trade that it came up too late, after the arrangements had been made with France, and therefore could not be altered?—I cannot undertake to say what may be considered by the persons engaged in the jute trade; but if it is meant to be inferred that we should have got that privilege for the jute trade before, which we failed to get afterwards, that I am prepared to deny. I see nothing in the correspondence which I hold in my hand, at all to lead to the supposition that we should have obtained, by pressing it before, what we failed in obtaining afterwards.

1681. I find, in page 7, that on May the 26th you sent to the Board of Trade notes upon the commercial treaty between France and Italy, which had been obtained from France at that time, and you ask "That their Lordships will furnish him" (Earl Russell) "with any proposals that they wish to be made to the Italian agent now here;" if you look at those notes you will find that the old Italian tariff is altered with regard to linen fabrics, but that there is this expression, "jute not yet determined;" do you not think that, having received a memorial from the Dundee Chamber of Commerce, expressing their uneasiness and anxiety with regard to jute, and getting this information, that jute was not yet determined, that would have been precisely the time to have endeavoured to have made representations with regard to jute?—No, I do not think so, because the negotiation was not between England and Italy, or between England and France; it was between France and Italy, and the respective negotiators were consulting the interest of their own countries and the interest of their own manufactures.

1682. Do you feel quite clear that a Foreign Government, if friendly to us, would have refused to inform us what duty they would levy upon jute, it being clearly understood, that whatever duty they levied upon jute imported from France, they would levy upon jute imported from England?—If it was a question of generosity between two Governments, I am rather sceptical as to the existence of such a feeling.

1683. Are you not aware that there are no interests in Italy concerned in keeping up of the duty upon jute; that there is no manufacture of jute in Italy?—I believe jute enters into the composition of various articles, shirts for instance; I suppose there may be flax interests in Italy which would be adverse to any reduction.

1684. Are you not aware that it is almost impossible to suppose that there could have been any Italian interest in favour of a high duty upon jute?—I am not aware of the fact.

1685. Did you take any steps to ascertain, from the Minister at Turin, or from Mr. West, who gives information upon commercial matters, whether it was the case that there was an interest in Italy concerned in keeping up the duty upon jute; or did you put it as a matter of generosity upon the part of the Italian Government, to give such information?—I am not aware whether we did take steps to obtain that information or not; but

but it is a very unusual thing, in any negotiation between two Governments, for a third to interfere. Mr. Cobden would, I think, have been much surprised if, in negotiating between England and France, he had been called upon to stipulate for the interests of Belgium and Italy.

1686. Do you think that it would have been very unusual, and very unwise to have informed the Italian Government what would have been the advantages resulting from the jute trade with them, if placed upon a reasonable footing at the time when they were fixing the duty upon jute? —I think we should have gone very much out of our place if we had acted in that manner. Perhaps I may say, with reference to questions put to me a little while ago, with respect to our facilities of getting information about the negotiation which was going on between France and Italy, that I see in this letter from the Board of Trade, No. 20, page 16, that when we did obtain the treaties of commerce that were signed, we only obtained them so confidentially, that we were not allowed to communicate them to the Chambers of Commerce, or anybody. The letter says "With reference to your letter of the 16th February, enclosing copies of treaties of commerce and navigation recently signed at Paris between the French and Italian Governments, and to the remark of Lord Cowley, to which Earl Russell calls their attention, that this communication must be considered for the present as confidential." I think that that letter supplies the answer which I was not able to give you just now, that we had no previous knowledge of what those treaties were, and could not have obtained it; it was only after they were signed that we obtained them, and then so confidentially that the Board of Trade had a doubt from our letter, whether they might consult the Chambers of Commerce upon the subject.

1687. You are aware, are you not, that information as to almost all the details of the treaty, which information turned out to be correct, was obtained in the previous year. You will find it in page 7; it was forwarded on the 26th of May 1862?—Yes, it is very possible; but that was not the concluded treaty; that was the general basis of negotiation.

1688. It enters into great detail?—That is very possible; but it was not a treaty then; it was still under discussion between the plenipotentiaries.

1689. Do you not think that that was precisely the sort of information upon which it was desirable to consult the commercial bodies, as to whether their interests would be affected or not? —What the Board of Trade did with the information which we forwarded to them I am unable to say; but it must be borne in mind that in dealing with information obtained confidentially, you must be very careful, for you may commit people very seriously, and repay their confidence by injuring them.

1690. Will you turn to page 21; you will find a letter signed by yourself to the Board of Trade, in which it is stated, "If the draft here alluded to is the one sent home by Mr. West in the beginning of this year, and which is commented upon in your letter of the 3d of February last, Lord Russell understands that the Board of Trade would not be prepared to assent to it as it now stands." Do you think that Earl Russell could have had any doubt at all as to what draft Sir James Hudson was writing about, if Sir James Hudson had been in possession of the Board of Trade's draft, which was in your office?—If he had two drafts, I should think he might well doubt, having both Mr. West's and the other draft before him. If he had not received any decision of the Board of Trade upon Mr. West's draft, he would be in a very considerable doubt, I should say, which was the one approved of. At all events, I know myself that if I had sent an amended draft to Earl Russell, or any other person for consideration, I should hesitate very much to act upon an original instruction until I knew the decision upon my suggestion, that another draft should be substituted for it.

1691. Did Mr. Mallet go out from your office, or from the Board of Trade?—From the Board of Trade.

1692. Did he get his instructions from your office, to try and obtain reductions in favour of jute and other things?—We did not give him instructions; I presume that the Board of Trade gave him instructions. They say this in their letter of the 18th of May 1863: "It now appears from the examination of that tariff which my Lords have been enabled to make, that, with the exception of certain reductions upon a limited number of articles in which the French trade is especially interested, and of the introduction of *ad valorem* duties upon woollen tissues, it is substantially the same as that which has recently been, and still is, generally in force in the Italian kingdom." Perhaps the Committee will not object to know that the general feeling of the commercial bodies in this country, as shown by letters which I have here, was in favour of the Italian tariff, and that, although they would have liked to have had more, they were very well pleased that we should get the most favoured nation clause, which would give us the advantage of that tariff. I have several letters from Chambers of Commerce.

1693. Did you not receive also representations from several Chambers of Commerce, stating that they thought that better terms ought to have been obtained?—We may very possibly have received such representations, because I suppose it would be very difficult to find any terms which would be perfectly satisfactory to all interests; you could never get terms good enough, I think.

1694. Are you not aware that the Manchester trade thought themselves, to some extent, put in a worse position than they were in before with Italy, by this tariff confirming the temporary Italian tariff, which, I think, you were not aware of?—No.

1695. With regard to Spain, if you refer to Mr. Behrens' evidence, at page 6, there is a mention there of a Bill brought into the Spanish Cortes; when did you communicate that Bill to the Board of Trade?—I have no doubt that it was communicated; I cannot tell you the exact date; I have no doubt we could give it.

1696. Were you informed of the decree of the 14th of February 1863?—I have no doubt that we were.

1697. Did you communicate that to the Board of Trade, and when?—No doubt we did communicate it, according to the regular practice.

1698. Are you acquainted with what has taken place with Sweden?—That is in my division.

1699. Did you receive a memorial from the

E. Hammond, Esq.

10 June 1864.

Bedford Chamber of Commerce, on or about the 13th of November, in reference to that tariff?—I will ascertain it. If we did receive it, I can answer for it that it was communicated to the Board of Trade.

1700. Mr. Allhusen says, in page 2, that he has been informed by some Member of the House, that a memorandum, with regard to the communications between the Board of Trade and the Foreign Office, has been sent to the Foreign Office; do you know anything of such a memorandum?—We searched for it and could not find it; if he would give us the date we might do so; it is a vague assertion. I may say, that the character of all the evidence I have seen is, that it is all surmise, speculation, and not facts. It is impossible to deal with surmise and speculation. Let us have facts, and we will deal with them. I think hardly a single fact has been stated, in the whole of the evidence given before the Committee that I have read. As you mention Mr. Allhusen's name, perhaps I may observe on rather an unfair inference which he attempts to set up against the Foreign Office in his memorandum. I wish to remark that Mr. Allhusen would have it inferred from the fact, that a communication was made by the Board of Trade to the Chamber of Commerce on the 13th of December 1861 respecting negotiations at Berlin, that it was only on that day that Lord Augustus Loftus's despatch of the 16th of November was communicated to the Board of Trade; the fact being, that the despatch was received on the 18th of November, and communicated to the Board of Trade on the 21st of November. So much for the inference that Mr. Allhusen wished to be drawn to the prejudice of the Foreign Office. I think what I have said is a satisfactory answer to it.

1701. Mr. *Pender.*] You said that you understood that the Chambers of Commerce were all perfectly satisfied with the Anglo-Italian Treaty?—I did not mean to say that all were; I said some of them were.

1702. Have you any letters from Chambers of Commerce stating that they were satisfied with that treaty?—I have. This is an extract from a memorial from the Dewsbury Chamber of Commerce: "23rd April 1864. The council of the Dewsbury Chamber of Commerce have had under consideration your Lordship's communication of the 17th March 1863, and the copy of the Franco-Italian Treaty of Commerce enclosed therewith. After a careful perusal of the latter document, the Council are gratified to find that the principle of *ad valorem* duties has been in part adopted by the Government of Italy on the importation of woollen fabrics into that country." This is from the Bradford Chamber of Commerce: "24th March, 1863. The council of the Bradford Chamber of Commerce beg to acknowledge the receipt of a circular from the Foreign Office, dated the 17th instant, transmitting a copy of the commercial treaty lately concluded between France and Italy. A careful examination of this document enables the council to inform your Lordship that the terms of this treaty, in so far as they concern woven fabrics of wool or of wool mixed with other materials, are perfectly acceptable to our manufacturers, and that they may safely be introduced in a similar arrangement which this council is happy to learn is about to be entered into with the Government of Italy." This is from the Newcastle-on-Tyne and Gateshead Chamber of Commerce: "24th March 1864. I am instructed by the committee of this Chamber to acknowledge the receipt of the letter which, by direction of Earl Russell, you addressed to this Chamber, under date of the 17th instant, and of the enclosure (a copy of the Commercial Convention between France and Italy) which it contained; and I am further instructed to say that, in the opinion of this Chamber, the tariff appended to the Convention would confer advantages on the manufacturers of this country, provided that, by the existing treaties between Italy and this country, British produce is entitled to all the benefits conferred by what is called the 'most favoured nation clause'; and I am also directed to inquire whether this benefit is secured by existing treaties." At that time we had not the most favoured nation clause, but we have it now. Then comes the memorial from the Batley Chamber of Commerce: "8th April 1864. I have had the pleasure of laying your communication of the 17th ultimo, and a copy of the Commercial Convention and Tariff recently concluded between France and Italy, which accompanied it, before the Council of this Chamber of Commerce. The Tariff has been perused and considered, as far as it affects the trade of this district, and the members of the Council are of opinion that a similar treaty with similar duties, between this country and Italy, would be a great boon to this town and district. The duty on woollens is fixed by the treaty at 15 *s.*, being considerably less than half the present rate. The council would suggest, however, that, in addition to a stipulation that the duties on woollens shall for the present be not more than 15 *s.* per cent., the proposed treaty shall also contain a clause, stipulating that the United Kingdom shall always be on the same footing as the most favoured nation. The council will be obliged by your laying this communication before Earl Russell." This is from the Huddersfield Chamber of Commerce: "Huddersfield, 15th April, 1864. 1st. The tariff rates imposed by the Franco-Italian Treaty on the import of goods into Italy, would not be considered objectionable as between this country and Italy, for the productions of this district, if accompanied by a proper classification, which would include all the varieties of woollen goods produced in this district under one denomination at the duty rate of 10 per cent. *ad valorem*, with the option of paying a specific duty of one franc 60 centimes per kilometre." Then comes the memorial of the Edinburgh Chamber of Commerce: "20th May 1864. The Chamber of Commerce of Edinburgh having had under consideration a copy of the commercial convention and tariff recently concluded between France and Italy, desire, at the request of the Foreign Office, to offer the following observations:—The Chamber have to remark that the articles in the Convention are exceedingly liberal, and are in general such as the commercial community of this country desire to have with every other nation, and the Chamber do not feel called on to suggest any alteration or addition to the clauses of it, in the view of the same being incorporated in a Convention with this country. The Chamber do not feel called on to suggest any alteration in the duties imposed on any of the other articles in the Tariff, and are gratified at the liberality of the export duties, especially

especially that rags are altogether exempt from duty." I think that bears me out in what I stated.

1703. *Chairman.*] Have you got copies of the memorials from the Chambers of Commerce?—After these passages which I have read the memorials went on upon other points.

1704. Mr. *Butler-Johnstone.*] Have you anything from Manchester?—No.

1705. *Chairman.*] Have you copies of the memorials of those Chambers of Commerce who were not satisfied?—I saw none on looking through the papers. This is the memorial from the Leeds Chamber of Commerce: "The Chamber has learned with satisfaction that the Prussian and Italian Governments have each promised that whatever advantages are given to French commerce shall be extended to that of this country. This Chamber would on no account ask Her Majesty's Government to seek for better terms from Prussia or Italy than are given to other countries; but if this promise is to be held as meaning that any treaty made by them is to be applied, as it stands, to British productions, it will only be kept in the letter but not in the spirit, and grave injustice will be done to this country. Her Majesty's Government cannot too carefully guard against following merely in the wake of France in the matter of rates of duty on particular articles. The Chamber is well aware that France stands, in some respects, in a more advantageous position than this country in seeking for commercial treaties. This country has voluntarily, and we think wisely, abolished all protective duties on foreign productions, without waiting for reciprocal action on the part of other countries. It has, therefore, fewer commercial advantages to offer in return for concessions by others, and has to depend mainly on the force of reason and examples. France has, on the other hand, a highly productive tariff, and can meet concession by concession. In some cases this doubtless enables that government to take the initiative more advantageously, though it is hoped that not merely our example and the success which has attended our own legislation on commercial matters, but also the great influence which this country has, is such as to justify us in expecting that Her Majesty's Government will be able to protect British commerce against any attempts to place it at a disadvantage.

1706. Have there been any representations from other Chambers, that their interests were prejudiced by the Anglo-Italian Treaty?—I am not aware; there may have been. All I meant to say was, that on looking through the correspondence I found these, and I thought the Committee would like just to know what was said about the treaty. I have only given extracts from the memorials. I may say, generally, that the rest of the memorials had reference to things which were desirable; but that it did not follow, because they were desirable, they were to be obtained.

1707. Mr. *Kinnaird.*] You have every reason to think that the country is well satisfied with the treaty, have you not?—Yes.

Martis, 14° *die Junii*, 1864.

MEMBERS PRESENT:

Mr. S. Beaumont.	Mr. Gregory.
Mr. Cobden.	Mr. Henley.
Sir M. Farquhar.	Mr. Kinnaird.
Sir S. Fitzgerald.	Mr. Layard.
Mr. W. E. Forster.	Mr. Pender.
Mr. M. Gibson.	Mr. C. Turner.

WILLIAM EDWARD FORSTER, Esq., in the Chair.

EDMUND HAMMOND, Esq., called in; and further Examined.

E. Hammond, Esq.
14 June 1864.

1708. *Chairman.*] You stated, I think, at the last sitting of the Committee, that you did not see Mr. Wickham and the Secretary of the Bradford Chamber of Commerce with regard to the Belgian Treaty on the 23d of August 1856; I had the impression that you thought you had not seen them at all at that time; did you see them in the month of September?—I have now ascertained that I saw Mr. Wickham in the month of September. I do not know Mr. Darlington by sight; but if Mr. Wickham was accompanied by any gentleman, I must have seen them together.

1709. You have no recollection of having given to them the impression that you took the same view with regard to the favoured nation clause that the Bradford Chamber of Commerce did?—I have not the slightest recollection of that.

1710. You have no recollection of having used the expression, "I tried to pick a hole in the argument, but could not do so"?—Not the slightest.

1711. Mr. *Layard.*] Will you be good enough to state what actually did take place with regard to that memorial?—On the 23d of August a letter from Mr. Wickham was received, inclosing that memorial. It was dated Kirklees Park, Mirfield, Yorkshire, 22d August 1856. "My Lord,—I have the honour to transmit to your Lordship a memorial from the Chamber of Commerce, Bradford, on the subject of our treaties with Belgium on mercantile matters, to which I have to request the early and serious attention of your Lordship. The manufacture of worsted goods, carried on to an immense extent in the borough which I have the honour to represent, suffers much from the unjust duties imposed by Belgium on that species of goods from this country, as compared with those charged for similar goods from other countries, and all I am anxious to obtain for my constituents is, that they should be put, as regards Belgium, on the same footing as similar manufacturers from other countries are.—I have, &c. (signed) *H. W. Wickham*, M.P. for Bradford." It is addressed to "The Right Honourable the Earl of Clarendon, K.G." The memorial which accompanied that letter is the memorial referred to by Mr. Behrens, and, I may say, the only memorial between that time and September which we received on the subject. I will not read the whole memorial. The point is this: "That your Memorialists doubt whether France is entitled to such preference, and submit that she is not so entitled, because your Memorialists deny the right of Belgium to grant it after the 10th of August 1852, without the same being immediately extended to England, inasmuch as it would destroy the position and the rights of England acquired by her treaty of 1851, to be placed upon the same footing as the most favoured nation." That memorial was enclosed in a letter received at the Foreign Office, on the 23rd of August. We acknowledged that letter to Mr. Wickham, and, in obedience to Lord Clarendon's order, on the back of the letter, we told him that it should have immediate attention—"Copy to Board of Trade—ask to be favoured with opinion before sending to Lord Howard de Walden." That is the pencil mark; I forgot to bring the draft of our letter that went to the Board of Trade, on the 30th of August, simultaneously with the acknowledgment to Mr. Wickham. On the 11th of September, Mr. Wickham writes again from Kirklees, Mirfield, to this effect:—"My Lord, I am about to attend the Free Trade Congress, at Brussels, on the 22nd instant, which I do at the request of several of my constituents at Bradford. They are anxious that I should also take the opportunity of my visit to that place of seeing our Minister, Lord Howard de Walden, and explaining personally to him the disadvantages under which the Bradford manufacturers labour as regards the introduction of their goods into Belgium, as compared with similar goods from France. Under these circumstances, I take the liberty of writing to your Lordship to ask you to be so good as to give me a letter of introduction to Lord Howard de Walden, and in the event of your Lordship's compliance with this request, to ask further that such letter may be sent to me here, so that I may receive it on or before Wednesday next. I have further to ask that your Lordship will be pleased to favour me and a member of the Bradford Chamber of Commerce with an interview at the Foreign Office, on Friday, the 19th instant,

instant, on the subject of the treaties between this country and Belgium. Should it be inconvenient to your Lordship to receive us, would your Lordship arrange an interview for us with Lord Shelburne or Mr. Hammond. — I have, &c. *H. W. Wickham.*—The Right Honorable The Earl of Clarendon, K.G." On the 16th of September, I wrote to Mr. Wickham to this effect:—" Sir, In reply to your letter of the 11th instant, I am directed by the Earl of Clarendon to inclose to you a dispatch addressed to Lord Howard de Walden, Her Majesty's Minister at Brussels, instructing him to afford you every assistance in his power in furtherance of the objects of your visit to Belgium. Lord Clarendon desires me to add that he shall be unable to see you and another member of the Bradford Chamber of Commerce, on Friday next, as he is absent from town; but, in obedience to His Lordship's directions, I shall be happy to do so at any time on that day, after two o'clock, at which it may suit your convenience to call." This was the letter of introduction written to Lord Howard de Walden, dated the 16th of September also: " My Lord, Mr. Wickham, M.P. for Bradford, has stated to me that he is about to attend the Free Trade Congress at Brussels on the 22d instant, and that he is anxious to have an opportunity of explaining personally to your Lordship the disadvantages under which the Bradford manufacturers labour in regard to the introduction of their goods into Belgium as compared with similar goods from France; and I have accordingly to instruct you to do all in your power to further the objects of Mr. Wickham's visit to Belgium." No doubt that was signed by myself, but unfortunately, as has happened in other cases in our office, there is no signature to the draft. This was Mr. Wickham's letter of the 18th September 1856: " Sir, I have the honour to acknowledge the receipt of, and to thank you for your letter of the 16th instant and its enclosure, and to inform you that I propose to call upon you at the Foreign Office to-morrow, at quarter past 2 o'clock. I shall be accompanied by Mr. Darlington, the Secretary to the Bradford Chamber of Commerce, and the object of our interview will be to have some conversation with you prior to our proceeding to Brussels, on the memorial, which I had lately the honour to forward to Lord Clarendon from the Bradford Chamber of Commerce, on the treaties now existing on commercial matters between this country and Belgium.—I have the honour to be, Sir, your obedient servant, *H. W. Wickham.* Edmund Hammond, Esq." Then, on the 19th of September, the Board of Trade wrote to us in answer to our letters of the 30th of August: " My Lord, I am directed by the Lords of the Committee of Privy Council for Trade to acknowledge the receipt of your letter of the 30th August, transmitting, by direction of the Earl of Clarendon for the opinion of this Board, a copy of a letter from Mr. Wickham, M.P. for Bradford, enclosing a memorial from the Chamber of Commerce at that place on the subject of the duties levied in Belgium upon British manufactures. This question has, as Lord Clarendon is aware, for some time past occupied the attention of this Board and the Foreign Office, and has formed the subject of repeated representations to the Belgian Government; the memorialists are however mistaken in supposing that the present unequal treatment of certain British manufactures in Belgium, as compared with similar manufactures of France, is in any way an infringement of the provisions of the commercial treaty now in force between this country and Belgium. The third article of that treaty to which they refer, merely provides for the assimilation of the duty upon goods imported into Belgium from the United Kingdom in British and Belgian ships, and has no reference whatever to the amount of duty charged by the Belgian tariff upon British produce as compared with similar produce of other countries. My Lords consider that it is desirable that this misapprehension should be pointed out to the memorialists, as, if it be allowed to remain, it must naturally diminish their confidence in the vigilance of Her Majesty's Government in protecting the interests of British trade. Although, however, Her Majesty's Government has no legal ground for remonstrance with the Belgian Government on account of the more favourable terms upon which certain French manufactures are admitted into Belgium than are extended to similar produce of the United Kingdom, they have more than once submitted to the Belgian Government that the perpetration of this inequality is both inequitable as regards the trade of the United Kingdom, and inconsistent with the sound and liberal views which the Government of Belgium have evinced in many of their recent commercial reforms. In reference to this subject, I am to request that you will lay before the Earl of Clarendon the enclosed copy of a letter which this Board has received from the Bradford Chamber of Commerce in reply to a communication which had been made to them with a view of obtaining any information which it might be in the power of the Chamber to supply upon the points referred to in Lord Howard de Walden's Despatch of the 11th April last, transmitted to this department in Lord Wodehouse's letter of the 14th of that month. My Lords addressed at that time a similar communication to the Chamber of Commerce at Leeds; and, in the hope of obtaining from that body a more satisfactory reply than that of the Bradford Chamber, had delayed the transmission of the latter letter until the present time. As, however, no reply has been received from the Leeds Chamber, my Lords conclude that they are not disposed to furnish the required information, and they can only regret that it is not in their power to supply Lord Howard de Walden with any detailed account of the rate of duty, *ad valorem*, levied in Belgium upon this class of British manufactures. I have the honour to be, my Lord, your Lordship's obedient servant, *T. H. Farrer.*"—I did not think it necessary to bring the enclosure. The letter is dated the 19th of September, it was received in the office on the 20th of September; whether it came to my house on the evening of the 19th, or was sent to the office on the morning of the 20th, I cannot say, but, on the 20th of September, I wrote this letter to the Bradford Chamber of Commerce. In the margin I see—" To be sent under flying seal to Mr. Wickham, at Brussels, to-night."

E. Hammond, Esq.

14 June 1864.

1712. *Chairman.*] Was that after you had seen Mr. Wickham and Mr. Darlington?—Yes, after I had seen them on the 19th of September, that is to say, the Board of Trade's letter being dated on the 19th, this letter was dated on the 20th. I cannot say when it was written, my own impression is that it must have been written early in the morning; at all events, I wrote it on

E. Hammond, Esq.

14 June 1864.

the spur of the moment, that there might be no delay, being very anxious that Mr. Wickham, in going to Brussels, should have all the assistance we could give him.

1713. Do you remember having seen Mr. Wickham on two days?—It was stated in the evidence that I had seen him on two days; it is very possible, but I have no recollection of doing so; one of the statements was, as Mr. Behrens graphically described it, that Mr. Wickham and Mr. Darlington went to the Mission at Brussels, and were astounded on receiving from the Secretary the information that the Board of Trade took a different view from the Foreign Office. Now the Despatch and letter were dated the same day and sent by the same mail; the letter is dated 20th of September 1856, it is to the Bradford Chamber of Commerce, and to be sent, as the margin says, "Under flying seal to Mr. Wickham, at Brussels, to-night." "Sir, I am directed by the Earl of Clarendon to acquaint you that the statements in the memorial of the Bradford Chamber of Commerce, which was received at this office on the 23d ultimo, respecting the differential duties to which certain articles of British manufacture are subjected in Belgium, have been duly considered by Her Majesty's Government; but I am to point out to you that the third article of the treaty between this country and Belgium, to which you refer, merely provides for the assimilation of the duty upon goods imported into Belgium from the United Kingdom in British and Belgium ships, and has no reference whatever to the amount of duty charged by the Belgium tariff upon British produce as compared with similar produce of other countries. Her Majesty's Government have, therefore, no legal ground for remonstrating with the Belgian Government on account of the terms on which certain French manufactures are admitted into Belgium being more favourable than those extended to similar articles of British manufacture; but Her Majesty's Minister at Brussels will, nevertheless, be instructed to continue his endeavours to induce the Belgian Government to relieve British commerce from the disadvantages under which it now labours in this respect." This is a note to Lord Howard de Walden: "20th September 1856, Mr. Hammond presents his compliments to Lord Howard de Walden, and begs that he will have the goodness to give the inclosed letter, sent under flying seal for Lord Howard de Walden's perusal, to Mr. Wickham, M.P. for Bradford, who is the bearer of a letter of introduction to Lord Howard de Walden." Then, on the same day, 20th September, we wrote this Despatch to Lord Howard de Walden, it is in my handwriting also. In the margin of this letter is the instruction to the clerk, "To go to-night." "My Lord, with reference to your Lordship's Despatch, No 38, of the 11th of April last, and to the correspondence which I have at various times had with your Lordship on the subject of the differential duties levied in Belgium upon British manufactures, I inclose for your Lordship's information a copy of a further memorial on the subject from the Chamber of Commerce of Bradford;" that memorial being dated 23d August, according to the marginal note, "together with a copy of a letter from the Board of Trade, conveying the opinion of their Lordships on the statements of the memorialists, and also inclosing copy of an answer previously received by the Board of Trade from the same chamber of commerce to an inquiry made by the Board in consequence of your Lordship's Despatch, No. 38." That was the letter from the Board of Trade, dated the 19th of September; the one that I have just read; "Your Lordships will perceive that the Board of Trade are of opinion that the third article of the treaty of the 27th of October 1851, on which the memorialists rely, merely provides for the assimilation of the duty upon goods imported into Belgium from the United Kingdom in British and Belgian ships, and has no reference whatever to the amount of duty charged by the Belgian tariff upon British produce as compared with similar produce of other countries, and that consequently Her Majesty's Government have no local ground of remonstrance with the Belgian Government on account of the terms on which certain French manufactures are admitted into Belgium being more favourable than those extended to similar articles of British manufacture; nevertheless, your Lordship will continue to press upon the Belgian Government that the perpetuation of this inequality in the treatment of the produce of England and France is not only inequitable as regards the trade of the United Kingdom, but also inconsistent with the sound and liberal views which the Government of Belgium have evinced in many of their recent commercial reforms; and you will express the earnest hope of Her Majesty's Government that British commerce in Belgium may be relieved from the disadvantages in this respect under which it now labours."

1714. I suppose the Committee is to understand, that having refreshed your memory by referring to the papers, you now find that you did see Mr. Wickham and Mr. Darlington upon the memorial that had been forwarded?—Yes; I saw them upon that memorial, but they did not present me a memorial. If you remember that was the point I took, that Mr. Behrens stated that Mr. Darlington and Mr. Wickham presented me a memorial, upon which I said I could not give them an opinion at once, but if they would come to me to-morrow morning I would give them an opinion.

1715. Mr. Behrens states, "We have no document to show that, but Mr. Wickham and our secretary were the deputation to the Foreign Office, and laid our paper before the Foreign Office, and Mr. Hammond requested them to call again the next morning because it was of so important a nature that he could not give an answer at once." Am I to understand that your impression from that was, that Mr. Behrens meant to state that the memorial was first brought to the attention of the Foreign Office when Mr. Wickham and Mr. Darlington called?—Certainly.

1716. Then the mistake appears to have arisen from Mr. Behren's meaning that the deputation called with respect to the memorial, but you supposed that he was stating that the memorial was first brought at that time?—It is not a question of supposition; it is no inference of mine; it is Mr. Behren's own statement.

1717. Mr. *Layard.*] Is not Mr. Behrens's statement that "Mr. Wickham and our secretary were the deputation to the Foreign Office, and laid our paper before the Foreign Office, and Mr. Hammond requested them to call again the next morning because it," that is to say, the paper, "was of so important a nature that he could not give

give an answer;" is not that statement contrary to the fact?—It is not correct.

1718. *Chairman.*] Then the mistake appears to have arisen from Mr. Behrens's having given you the impression by stating that he and Mr. Darlington "laid our paper before the Foreign Office," that he presented the memorial for the first time then?—It was not to me, it was to the Committee that he gave the impression. In fact, it is not only an impression, it is a distinct and positive statement.

1719. Did you intend to convey to the Committee the impression that you had not seen Mr. Wickham and Mr. Darlington upon the memorial?—What I stated was, that at the time when that memorial was said to have been presented to me, I was not in England, and therefore it could not have been presented to me.

1720. Therefore, you did not wish to convey to us the impression that you had never seen those gentlemen upon the question?—Not in the least. I was only looking to the statement which I had to answer.

1721. As Vice-President of the Bradford Chamber of Commerce, I have obtained an extract from their Minutes of the 27th October 1856, in which the secretary states, "The Council have just had read to them in the Minutes of the meeting of the 25th August a memorial addressed to Lord Clarendon on the subject of the Belgian tariff. That memorial was forwarded by Mr. Wickham to his Lordship, who has since acknowledged its receipt. On passing through London, *en route* to Brussels, Mr. Wickham, M.P. and the Secretary had an interview with Mr. Hammond, the Under Secretary, at the Foreign Office. He stated that he had carefully gone through the memorial with a view to see if he could pick a hole in it, but that he was unable to do so; that the memorial was then under consideration at the Board of Trade, and their decision would have been sent in a post or two to Lord Howard De Walden, our Ambassador at Brussels;" have you any recollection of having used those words or having intended to give the impression conveyed by those words to those gentlemen?—I cannot see how I could possibly, on the 19th of September, have spoken of a memorial, which was merely presented, or intended to be presented, on the 27th of October.

1722. This is an extract from the minutes of the Bradford Chamber of Commerce, giving their account of what had happened previously to the 27th of October; this extract is to this effect: "The Council have just had read to them the Minutes of the meeting of the 25th of August;" referring to the memorial which was addressed to Lord Clarendon, have you any recollection of having given to those gentlemen the impression that you agreed with their view, as expressed in these minutes of their meeting of the 25th of August?—The memorial was dated the 22d of August; I can certainly have no recollection of anything that was stated to have passed with me on the 22d August; but if Mr. Wickham says distinctly, that when I saw him I used the expression imputed to me, I will not contradict him; and if he will also say that he saw me on the 20th of September, after seeing me first on the 19th, and that I had on the former day received from him for consideration a paper that was not then presented to me, I will not contradict him; but I must say that it seems to me very unlikely, knowing myself (and probably some honourable Members present know my character sufficiently well to confirm me in this), that I should give an off-hand opinion upon a paper as it was put into my hand, and still less likely that I should give an opinion upon a matter which involved not merely a question as to the interpretation of a treaty upon which the opinion of the law officers might have to be taken, but involving also a question of commerce, on which the Board of Trade's opinion had been asked. On the 20th of September, if I saw those gentlemen on that day, I most probably had the answer of the Board of Trade before me; I have told you the substance of my own impression, but if Mr. Wickham says that I used that expression, I will bow to Mr. Wickham, and acquiesce in what he says, because I have no document to prove that I did not use it; only, I think, as it was the first time that I had the pleasure of seeing Mr. Wickham, it is very unlikely that I did use it.

1723. Are you aware that the memorial upon which the deputation of the Bradford Chamber of Commerce saw you, on that day, was the memorial which had been previously sent to Lord Clarendon, about which Mr. Wickham writes, in his letter appointing an interview?—I presume that it was, because Mr. Wickham asked to see me upon that memorial.

1724. Mr. *Henley.*] I gather from what you said that you were not certain whether you had read the letter which you stated had been received from the Board of Trade, conveying their opinion, before you saw Mr. Wickham and the other gentlemen?—I cannot say that I am certain, because very often, in the practice of the office, a letter from a department comes in perhaps at 6 or 7 o'clock in the evening. If I was there, I should open such a letter, and if it was a matter which was pressing, like this, I should have taken it home, and dispatched it at once, without first sending it into the office; it is my constant habit to do that to expedite business. But if I received it on the 19th of September, it might have come in quite late, just before I left the office, or it might have followed me to my house. All I can say is that it was docketed as received in the division on the 20th of September; and both those two letters of the 20th, that to the Bradford Chamber of Commerce, and that to Lord Howard de Walden, were in my own handwriting, which shows that there was a great anxiety on my part to avoid delay. I may be allowed to presume that my anxiety arose from knowing that Mr. Wickham and Mr. Darlington were going immediately to Brussels, and that I was therefore desirous that there might be no delay; and that, whether they went on that day, or whatever the day might be on which they went, they might have their letters at Brussels simultaneously with the instructions which reached Lord Howard de Walden. I speak more from my own habits of doing business than from a distinct recollection of what passed two years ago. Such are my habits, and any gentleman who knows my way of conducting business in the office, knows that such are my habits.

1725. *Chairman.*] This extract from the Minutes of the Bradford Chamber of Commerce states, that the secretary says that you had informed him and Mr. Wickham that "the memorial was then under consideration at the Board of Trade, and their decision would be sent in a post or two to Lord Howard de Walden, our Ambassador at Brussels." Do you recollect having

E. Hammond, Esq.
14 June 1864.

having stated that?—I do not recollect it; something of that kind may have passed, but if I did say it before the answer from the Board of Trade was received, it is very unlikely that I gave a decided opinion upon it, as Mr. Behrens said, and promised that the instruction should be sent to the Minister at Brussels, without having seen the reply from the Board of Trade.

1726. Mr. *Henley.*] If that conversation did pass, the inference would be that you had not then read the answer you received from the Board of Trade, would it not?—It might or might not be so. But as I knew that the question was before the Board of Trade, I think it would have been very wrong in me to have prejudged the opinion of the Board of Trade, to whom the question had been referred.

1727. Mr. *Layard.*] It depends upon whether the interview referred to by Mr. Behrens, was on the 19th or the 20th, does it not?—Yes; it depends upon that. But even supposing that I had seen Mr. Wickham for the second time before I got the Board of Trade's letter, the scene represented as occurring at Brussels could hardly have taken place, for Mr. Wickham, when he went to the Mission, must either have had in his pocket or received in the Mission, when he was there, my letter to the Bradford Chamber of Commerce, seeing that both that and the letter to Lord Howard de Walden were dated the same day.

1728. *Chairman.*] Mr. Behrens says, "We called at the Embassy at Brussels, expecting to find Lord Howard de Walden there, who, we thought, would be glad to receive commercial information from us after having got his instructions from the Foreign Office. We were met there by the secretary, who stated that he had got a letter from the Board of Trade, saying, that the Board of Trade took a different view of the terms of the Treaty of 1851"; was not it the case that you sent the letter to Mr. Wickham to the care of the secretary at Brussels?—Lord Howard de Walden, I see by the correspondence, must have come away on leave just about that time, but the Secretary of Legation was the chargé-d'affaires.

1729. Was not it the case that you sent the letter to Mr. Wickham under his care?—Yes.

1730. Would it not be the case that Mr. Wickham would first receive that letter from you when he called at the secretary's office or at the Embassy?—It would depend upon whether the secretary gave the letter to Mr. Wickham when he came into the room, or sent it to his house; it does not appear from his statement when he received it.

1731. Why do you think that Mr. Behrens was wrong in saying that when he saw the secretary, he was surprised to find that a different opinion was held?—Because the two letters went simultaneously.

1732. How do you gather from Mr. Behren's statement that that was not the case?—If they had received my letter, they could not have been surprised.

1733. Was not it the case that Mr. Behren's surprise was not at being told that the Foreign Office took a different view when he called upon the secretary, but at finding that you, in consequence of the information which you had received from the Board of Trade, took a different view from what had been taken when you saw Mr. Wickham and Mr. Darlington?—They were officially informed of the opinion of the Board of Trade, which, of course, being conveyed to them in that manner, was approved by the Foreign Office.

1734. Mr. *Layard.* When Mr. Behrens said that you requested them to call the next morning, because the memorial was of so important a nature that you could not give an answer at once, you naturally inferred from that, that he meant that that memorial had been, for the first time, laid before you then?—That is the inference drawn from Mr. Behren's evidence. It is very unlikely that I should have made that observation upon a memorial which had been before the office for a month.

Henry Wickham Wickham, Esq., a Member of the House; Examined.

H. W. Wickham, Esq., M.P.

1735. *Chairman.*] I need not ask you whether you are Member for Bradford; you were Member for Bradford in 1856, were you not?—Yes.

1736. In consequence of representations that had been made to you by the Bradford Chamber of Commerce, did you, by appointment, wait, with Mr. Darlington, the Secretary of the Bradford Chamber of Commerce, upon Mr. Hammond, in the month of September 1856, on your way to Brussels, with respect to the memorial which had been previously sent to Lord Clarendon, with regard to the Belgium Treaty?—Yes, that was so.

1737. Can you give us any information with regard to the conversation between you and Mr. Hammond?—I really do not, at this distance of time, recollect the exact words that were used, or the conversation that took place, but I do perfectly well remember Mr. Hammond saying, on the occasion of the second interview, when we called the morning after the first interview, that he could not find any fault, or words to that effect, with the arguments used by the Bradford Chamber of Commerce.

1738. Mr. *Layard.*] Do you remember on what day you went to the Foreign Office?—No; I remember getting the letter which has been referred to at Brussels.

1739. Do you remember whether that letter was given to you by the Secretary of Legation or sent to you?—I think it was given to me by him.

1740. He did not state that there was any difference of opinion between the Board of Trade and the Foreign Office, did he?—No; I had afterwards interviews with Lord Howard de Walden before I left Brussels.

1741. You did not find any unwillingness upon the part of Lord Howard de Walden or the Secretary of Legation, to go into the question, did you?—No, quite the contrary. Lord Howard de Walden corresponded for two or three years afterwards with me upon the subject, and when the alteration took place he wrote to tell me of it. He was continually communicating with me whenever he had anything to say.

1742. Therefore, there was no desire to avoid entering into commercial questions, either on the part of Lord Howard de Walden or the Secretary of Legation at Brussels?—Not at all.

Edmund Hammond, Esq., further Examined.

1743. Mr. *Layard.*] I think, in your last examination, you promised to give the Committee some information upon three points, namely, the date at which the Bradford memorial, with respect to the Swedish Treaty, was sent to the Board of Trade, when the Spanish Decree and Bill about the tariff were sent to the Board of Trade, and with regard to the application of the Sardinian tariff to the Italian kingdom before the Treaty with France?—The Bradford memorial, with regard to the Franco-Swedish Treaty, was received at the Foreign Office on 14th November 1863, and sent to the Board of Trade on the 5th December; but we were already in communication with the Board of Trade upon that subject, and we still are so.

1744. I think it was stated that a Bill and a Decree had been passed by the Spanish Government; will you give an account of when we received information of that Bill and Decree, and what, to the best of your knowledge, is the state now of those measures?—The Queen of Spain's Decree and revised tariff, which were first printed in the "Gazette" of Madrid, were received in London on the 9th December 1862, from Sir John Crampton. The draft of revised tariff was appended to the Decree. It was then a project of the Ministers, which was submitted to the Queen of Spain, upon which her Decree was given; it was not a law, it was a project. That was sent on the same day to the Board of Trade; that is, on the 9th December. The principal modification consisted in a re-adjustment of the valuation of merchandise made in 1849, and it was expected by the Minister of Finance that a considerable reduction in the then rate of duties would be effected, without any departure from the law of 1849. The effect, as regarded the alteration of duties upon iron, was to reduce them from 11 *l.* or 12 *l.* a ton to 4 *l.* a ton, and there was every prospect of British iron competing successfully. What I am going to state now is rather a confirmation of what I said in my last examination. A strong opposition was raised by the ironmasters against this reduction, and deputations from Catalonia, Malaga, and other provinces repaired to Madrid to remonstrate against the enforcement of the Royal Decree. The result appears to have been a modification of the original scheme only to the extent of two alterations as regards refined sugar, and the duty on iron, by one-half, up to the 1st March 1864; that is to say, that the strong opposition raised by the ironmasters, and the other deputations to Madrid only produced that result. The despatch reporting these modifications was received on the 3d of January 1863, and sent to the Board of Trade on the same day. The project of the law for the customs reform was first received on the 12th of January, but it only came in Spanish, a translation being promised by the first opportunity. The translation of the Bill was received on the 27th of January, and sent to the Board of Trade on the 26th of February; but that Bill did not pass into a law. Nothing appears to have been actually done in the country upon the Customs Bill.

1745. Can you give the dates at which those various measures, which were brought before the Spanish Chamber, were sent to the Foreign Office, and the dates at which they were communicated to the Board of Trade?—I have a long list here of all the correspondence upon commercial matters with Spain, from the end of 1862 up to the present time, which I can put in, if necessary.

1746. That list proves, does it not, that no delay took place at Madrid in forwarding to this country every public announcement of any change which had taken place, and that no delay took place in this country in forwarding that information to the Board of Trade?—I can only answer positively, as far as the Foreign Office is concerned. Although I have no reason to suppose that any unreasonable delay ever took place in forwarding any information from Madrid, I cannot positively answer that of my own knowledge, because, with reference to one of these cases, a communication that was published in the "Madrid Gazette," in December, does not seem to have been officially communicated to Sir John Crampton until some months afterwards, when he sent it home. I want to speak as accurately as I can upon a subject of this kind, therefore, I make that reserve.

1747. I think the other day there was some confusion in your mind which arose from the questions put to you by the Honourable Chairman, with reference to the Italian tariff; are you aware whether, before the conclusion of the treaty between Italy and France, there had been a revision of the tariff in Italy?—No, there was no revision properly so called, according to my understanding of what a revision is, that is to say, going through the whole of the tairiff with a view to general alteration.

1748. Will you state to the Committee what has been the state of our tariff relations with Italy from the commencement of the Italian war?—In August 1859, Signor Farini, was appointed Dictator of Parma and Modena; and on the 6th October following, he issued a Decree, in the name of King Victor Emanuel, in which he declared the Sardinian tariff of 9th July 1859, to be in force, in those Duchies, from the 10th of October of that year. On the 8th of October of the same year (1859), the Government of Tuscany, in the name of King Victor Emanuel, issued a Decree, in which it also declared the Sardinian Tariff of 9th July 1859, to be in force in Tuscany from the 20th of October of that year; but this appears to have been done as a temporary measure only, although it was not so stated in the Decree. In November following, a Commission, composed of agents from Piedmont, Central Italy, Parma, Modena, Romagna, and Tuscany, met at Florence, charged to examine the tariff of each of the abovementioned States, and to form a new tariff which might be applied to the whole country then united, at least temporarily, under the sceptre of King Victor Emanuel. The result of the labours of this Commission is not to be found, however, in the correspondence of 1859–60; but in August 1860 a new Sardinian tariff for textile fabrics was issued by the Sardinian Government. In March 1860, the States of Parma, Modena, Tuscany, and Romagna were annexed to the Kingdom of Sardinia. In May 1860 a revolution broke out in Sicily; the king fled to Gaeta, and Garibaldi entered Naples in September

E. Hammond, Esq.

14 June 1864.

tember following. On the 24th of that month Garibaldi issued a Decree, in which he declared the Customs' tariff, which was in force in the remainder of the Kingdom of Italy, was to be observed in the Continental provinces of Southern Italy from the date of that Decree, and a copy of the Sardinian tariff of 9th July 1859 was annexed to that Decree. In October 1860, Naples and Sicily were also annexed to the Kingdom of Sardinia; and on the 26th February 1861, the King of Sardinia was proclaimed King of Italy, which title was recognised by this country on the 1st of April following. On the 17th of January 1863, a commercial treaty was concluded between France and Italy; and on the 6th August following, a similar treaty was concluded between this country and the kingdom of Italy. By a French Decree, dated 20th January 1864, the provisions of the treaty between France and Sardinia were declared to be extended to Great Britain. I was very anxious to state this clearly before the Committee, and I made furthur inquiry at the Board of Trade, and this is the result of that inquiry: "as far as it is possible to give a positive answer to your question, these are the facts, no separate tariff for the whole of Italy has been issued in the sense to which you seem to refer." That was as a general amalgamation. "But on October 24th 1859, the Foreign Office wrote to the Board of Trade, stating that the tariffs of the duchies had been assimilated to that of Sardinia. Again, on the 24th October 1860, the Foreign Office wrote, stating that the Neapolitan Tariff had, with certain (very few) exceptions, been assimilated to the same (Sardinian) tariff. Since that time we have received no further information as regards the consolidation of the Italian Tariff. The Board of Trade was informed by the Foreign Office on the 5th and 21st November 1859, of the establishment of the Commission to which you refer, and I believe that the result of the deliberations of that body was solely to fix the rates of duty on textile manufactures. I only assume this to be the case, as we have no positive information on the subject. The date of the law fixing the duties on textile manufactures was 18th August 1860, so that it could not apply to the Neapolitan dominions."

1749. In your previous examination you were under the impression, were you not, that the question put to you applied to the new revised tariff, applicable to the whole of Italy, and not to an extension of the Sardinian Tariff?—That was my impression. I spoke doubtfully, for I was puzzled by the question.

1750. Will you give the Committee, succinctly, an account of the relations between the Foreign Office and the Board of Trade, showing how the correspondence is carried on?—The Foreign Office communicates to the Board of Trade everything that comes within its walls connected with Foreign commerce, either as regards commerce between this country and Foreign nations, or between Foreign nations themselves, or the internal commerce of Foreign countries. Such information, as far as it reaches us, is communicated as soon as practicable; all our Consular reports are sent to them, they see them immediately. The Consuls send their reports in duplicate to save time; the reports of the secretaries of Legation, the Board of Trade see the orignal, and when they have disposed of them, we print them that they may be laid before Parliament, and circulated amongst the Chambers of Commerce. Of course, I cannot say what becomes of those papers when they get into the Board of Trade, but I apprehend that they are duly examined, and that the Board publishes those notices which are necessary for the general information, and make those communications which are necessary to Chambers of Commerce or individuals. If any doubts arise, and they wish for further information or communication with Foreign Governments, they write to us saying what they wish to know. In all these cases the Secretary of State being equal to, but independent of, the President of the Board of Trade, must exercise his own judgment as to whether it is expedient to send on their communications or not. As a general rule, we take the Board of Trade's view as a matter of course, and either send a copy of the letter of the Board of Trade, which is the idle way of doing it, or turn the letter of the Board of Trade into a Despatch, which is perhaps the most correct way.

1751. Then, supposing that a question is submitted to the Foreign Office upon matters of trade or commerce, you refer that question to the Board of Trade for their opinion?—Yes; if there was a palpable complaint made of wrong done to a British merchant abroad, which was so evident that we thought we wanted no opinion, we should communicate upon it at once with our Minister. That would be a question not of trade generally, but a complaint of wrong done. If we thought it involved a question of law, we might refer it to the Law Officers of the Crown or to the Board of Trade, if we thought we wanted their advice as to its bearing upon particular questions of law or Trade.

1752. There is a distinction between asking the Board of Trade their opinion upon a matter which refers exclusively to trade and acting upon a wrong done to a British subject, even though it were in a matter of trade?—Yes; that would be the only case in which we should act by ourselves; because we are so very careful in the office not to commit ourselves to any precipitate step, that, if there was any doubt in our own mind whether the law officers should be consulted or whether the Board of Trade should be consulted, the decision would always be in favour of consulting either of them.

1753. Is there any distinction between the mode in which the Foreign Office communicates with the Board of Trade and that in which it communicates with the Home Office, the Admiralty, the India Office, the Treasury, and the law officers of the Crown?—Not the slightest. So far as the law officers are concerned, we only ask for an opinion; we do not communicate knowledge to them; but to all the other Departments we communicate all that concerns them, just as we do to the Board of Trade.

1754. Do you think that the correspondence with the Board of Trade is larger than the correspondence with the Home Office, or the Admiralty, or some other Departments?—I should say it is not so large; certainly the receipts are not so large as those from the Colonial Office; and we are in such constant communication with the Admiralty that our receipts from the Admiralty are certainly much larger than the receipts from the Board of Trade.

1755. That is to say, that the Foreign Office is in as constant communication with the Admiralty and the Colonial Office, asking their opinions upon various subjects, as it is with the Board of Trade?—

Trade?—Yes; we ask their opinion. But, generally speaking, I should say that our opinion is asked; there is, however, a general interchange of information and opinions mutually between all the Departments.

1756. In your opinion, is there any stronger reason for the amalgamation of the Board of Trade with the Foreign Office than of any other Department with the Foreign Office?—Certainly not.

1757. All the Public Departments stand upon the same footing, do they not?—Certainly; more especially as regards the legal branch.

1758. I gather from the evidence which has been given before the Committee that there are two plans proposed and advocated; one is, that there should be a separate department in the Foreign Office for treaties of commerce, that being a departmental arrangement, or that there should be a commercial department with an official at the head of it responsible to Parliament; is that what you gather from the evidence?—Yes, that is what I understand to be the proposal.

1759. What is your objection to there being a mere departmental arrangement for trade in the office?—My objection is, in the first place, that I think these separate divisions have a tendency to produce inconvenience in the office with respect to the arrangement and distribution of the clerks. The next objection is, that I think it would be very undesirable that the whole body of the clerks should not during the whole time they are in the office be conversant with and in the habit of dealing with matters of trade. They now, each in their respective departments, know what is going on in regard to trade in the country to which they are attached, and I think that is a very desirable arrangement. Speaking from long experience of a public office, I dislike very much the telling off, as you may call it, of a separate department to do one class of work. The third objection I have is, that our political and commercial relations are so very much blended together that I do not see how we could work those departments as entirely distinct departments. We should get our papers always in confusion. Now, when we want a paper of whatever kind, we go into the division and find the paper, but if we were to go and search for a political paper which had been taken into the commercial branch, we might look for it in the political division, and find that it was locked up in the commercial branch; this is a mere departmental question; the hours of attendance probably in the commercial branch would not be so late as in the political branch; we expect a clerk to be present in the political branch at whatever hour we want him.

1760. I presume that if you had a commercial department in the office, you would have to have clerks in it specially educated for that branch of the office?—If we had it as a distinct department that would be so; but there is the difficulty with regard to promotion, which always stares you in the face in an office of this character; it was a thing very much pressed upon me in the Consular Committee, and the Honourable Members upon that Committee thought it rather strange that when a senior clerk in the consular division was taken away, by death, I think, from the consular division, instead of the junior clerk being put at the head of the department, another person not previously employed in the department was put at the head of it; but you cannot, in any department, capriciously pass over clerks, who by seniority are entitled to promotion, in order to put a man who may be conversant with the affairs of the department over their heads; it would be very unjust, and you might do a very serious injury to a man who was otherwise well deserving. The reason I like the present system is this, that all the clerks in the office, having been constantly in the habit of seeing and dealing with questions connected with trade as they advance in the office, are able to dispose of those questions in their respective divisions, or in whatever division they may be placed; a clerk in the French division is not very much surprised when he goes into the German division; he is accustomed to the general character of business.

1761. The only advantage of having a department for Trade in the office, would be that that department would receive all the despatches coming from abroad relating to trade, and would forward those despatches to the Board of Trade, doing collectively what is now distributed amongst different departments in the office?—That would be the result of it; but I consider that the mischief which I have pointed out would exist.

1762. Do you think it an advantage that there should be one department to receive and register, and keep account of all communications with respect to trade with abroad?—No; from my experience of the office, I should be very reluctant to see it; I think it would be mischievous to the office generally.

1763. If there are any advantages in it, you think that those advantages are more than counterbalanced by the disadvantages?—Much more than counterbalanced by the disadvantages. With reference to the general organization of the office, we must look at the office, not with reference to one particular Department, but with reference to the whole, and see how it can be best organised. Nobody can deal with those questions so well as the people connected with the department.

1764. There would be no special knowledge, then, required for that department?—Not the slightest.

1765. You stated that there were two departments in the Foreign Office, which have special things under their cognisance, the Slave Trade Department and the Treaty Department?—Yes.

1766. The Slave Trade Department is very limited, is it not?—Yes, it is limited in the amount of correspondence; it does not enter into general politics at all; its duties are very much matter of routine business, such as sending warrants; every ship that goes out upon a station, has a set of Slave Trade Warrants sent to it, and every ship coming home returns such warrants. There are a great many of those small things, which render it desirable to have a separate department. At the time when I first went into the office, in the year 1823 or 1824, that division did not exist, and if my own opinion was asked now, I should be very glad if it existed no longer, and was all cast into the office generally.

1767. When there is a treaty to be made affecting the slave trade, that treaty is now prepared and drawn up by the Treaty Department, is it not?—Yes; by the Treaty Department. There is at this present moment a general revision of the slave trade instructions in progress; and the head of the Treaty Department, it being

E. Hammond, Esq.

14 June 1864.

partly a formal matter, is one of the Commissioners for carrying it on.

1768. Therefore, although these distinct departments have been made, yet the business of the office is so connected together that you cannot work one without having recourse to another?—Yes; I am afraid I have not got the instruction here, but it is, that although there is a Treaty Department, it is the duty of the heads of divisions to keep themselves perfectly informed of what is going on in the Treaty Department as regards their respective divisions. The senior clerks ought to be fully informed of what is going on; and so much is that the case, that though the Treaty Department has for its own convenience a separate register of its own, the letters, I believe, which come into that department, are entered in the general diary of the divisions. Though there is a separate department, it is so much connected with the general divisions that the papers are bound up at the end of the year with the general correspondence. In looking for something with reference to evidence to be given here, I was asking the head of the Treaty Department the other day to give me such and such a paper, and he said, "At the end of the year I give up all my papers to be bound up with the general correspondence."

1769. Do you think it possible to have a department for trade in the Foreign Office, with a Parliamentary Under Secretary for its head, or some officer having a seat in Parliament, and responsible to Parliament for trade?—I presume that that department would be irrespective of the Board of Trade, and, if so, I cannot conceive how it could possibly work, unless you brought the whole Board of Trade into the Foreign Office; for, although I am not well informed about trade, I imagine that all our trade hangs very much together; that wool and cotton, and all other goods are closely connected. You could not safely negotiate for an alteration in woollens without considering what bearing it would have upon cotton, and information relating to them ought to be obtained and digested by a department which has the means of collecting from the Chambers of Commerce, or the manufacturers themselves, or other sources, everything bearing upon trade in general so that before the Government commits itself to any negotiation with a foreign power, the effect and bearing which that negotiation may have upon the general commerce of the country may be exactly ascertained.

1770. In fact, you would require to have two Boards of Trade, would you not?—We should have to have a Board of Trade in the Foreign Office dependent upon the Board of Trade in Whitehall.

1771. You could not have any subordinate officer in the Foreign Office who is responsible to Parliament; the Secretary of State is responsible to Parliament?—The Secretary of State must be responsible to Parliament. As I said before, all our subordinate officers are really *bonâ fide* subordinates, and have no authority to speak for themselves in any single thing; they always speak as for the Secretary of State.

1772. Therefore, the Secretary of State would in reality be responsible for the commercial department of the Foreign Office?—Certainly.

1773. And being responsible, he would have to make himself familiar with all the details of that department, would he not?—Yes.

1774. You were asked the other day whether, when I am absent, you undertake the duties connected with my division, and whether, when you are absent, I undertake your duties, and whether, therefore, there would be any difficulty in either you or myself taking the commercial department; do you think that either of us could take the commercial department?—It would, in the first place, involve the necessity of each of us being equally well acquainted with trade with the head of the commercial department; I can only say for myself that my present duties are so overwhelming, that I could not undertake more work than I have to do at present.

1775. Supposing that the officer who is thus to represent the Trade Department of the Foreign Office were to have that knowledge of trade which would make him the useful person that the gentlemen who have given evidence before the Committee think there ought to be at the Foreign Office, neither you nor I could hold that place, even temporarily?—No, I cannot answer for you, but I can answer for myself; I could not hold it.

1776. Supposing such a department did exist in the Foreign Office, do you think that the Secretary of State would be content to receive an opinion from that department upon trade without consulting the Board of Trade?—I should be very much surprised if he did.

1777. Therefore, virtually, you would only add very much to the business, and instead of making it easier to deal with the Foreign Office or the Board of Trade upon commercial questions, you would make it more difficult?—Much more so.

1778. In all probability the correspondence would be lengthened rather than shortened?—Yes, it would be lengthened; we should get into in extricable confusion, I think.

1779. Do you not draw a distinction between the Foreign Office negotiating a treaty abroad, and between the Foreign Office furnishing information to our agents as regards a treaty abroad, with reference to questions involved in that treaty. We can negotiate a treaty without having special knowledge of trade ourselves, can we not?—Of course we can.

1780. That is to say, if we obtain information from the Board of Trade it is then our duty to negotiate the treaty through our agents abroad?—Yes.

1781. A good deal has been stated to the Committee with regard to the negotiation of the French Treaty of Commerce, as if that was an entirely exceptional proceeding. Will you give the Committee a sketch of the manner in which that treaty was originated, and in which it was negotiated and carried on afterwards?—Of course I speak with great submission before Mr. Cobden; but, as far as I am aware of the circumstances, advantage was taken of Mr. Cobden being at Paris, to communicate through him with the French Government, with a view of improving the commercial relations between the two countries. In regard to the first treaty, though I was aware of what was going on, I had no official knowledge of it. I have no doubt that Mr. Milner Gibson was aware of what was going on, and Earl Russell I know was aware of it; but I had no official knowledge of what was going on with regard to the first treaty till the matter was all settled, at least, so far settled that we were able to draw a draft of the treaty, and to prepare the instructions for carrying the treaty out; that is all

all I know about that treaty. The draft of the treaty was drawn in the Foreign Office upon a note which I believe was furnished by Mr. Cobden, and the instructions emanated from the Foreign Office, for the conclusion of that treaty.

1782. It has been stated in evidence that the Foreign Office made over the whole thing to the Board of Trade; one of the witnesses states that he has reason to believe that instead of the Foreign Office assisting the treaty, they did what they could to throw obstacles in the way?—That refers not to the original treaty; it refers to the supplementary treaty.

1783. I asked Mr. Ripley, "You state that the negotiations for the French treaty were carried on entirely between the Board of Trade and the English negotiations in Paris. Is that your belief? Yes; and my belief is founded upon information gained by coming into contact with the various officials when I have come up to London at various times during the progress of the treaty. The Board of Trade, as far as I know, during the whole of the time, communicated directly with the French Government, or with our representatives in Paris; in fact, the whole matter was, I believe, entirely out of the hands of the Foreign Office. They handed over the matter to the Board of Trade to negotiate and complete." Then again, "The Foreign Office had nothing at all to do with it, you think? I believe not; we had no communication with the Foreign Office all the time upon the subject." Then Mr. Behrens says when I ask him, "Did either the Foreign Office or the Board of Trade throw any obstructions in the way of carrying through that treaty? Of course I do not know the communications and the correspondence that passed between them, but I was told that there was some obstruction at that time. That is merely hearsay, is it not? Yes. Did you hear at that time that obstructions were thrown in the way of carrying through that treaty either by the Board of Trade, or by the Foreign Office? I heard so. From whom did you hear it; was it from general report? Yes." Are these statements consistent with the fact?—Perhaps the Committee will bear with me a little, if I enter into some detail upon the matter.

1784. Will you let the Committee know exactly what the action of the Foreign Office, what the action of the Board of Trade, and what the action of the negotiators was with respect to that treaty?—The question of negotiating that supplementary convention, I see by a note which I have, was first raised on the 28th of February 1860, in which I called Lord Russell's attention to the matter. I should say, perhaps, that a short time after the conclusion of the original treaty, we received a great number of representations upon different points connected with the treaty, upon which explanations were wished by the Chambers of Commerce or individual merchants, and upon which we were necessarily obliged to refer to Paris. It was then proposed to the Board of Trade—I think we proposed it to the Board of Trade—that Mr. Mallet, who was well conversant with matters of trade, should go over to Paris to assist Lord Cowley in communication with M. Rouher, to settle all those different points. But before that arrangement was carried into effect, the question came up as to negotiating the supplementary treaty itself. It was then that the Board of Trade sent us a letter containing observations as to what was required for carrying out the original treaty, and upon those observations I drew up a memorandum, which I know was submitted to Mr. Gladstone. I believe Mr. Milner Gibson afterwards saw it, but I am not certain. Upon that memorandum the instructions were ultimately founded which were drawn by myself, for negotiating the supplementary treaty. There was a question how the commission should be composed to negotiate it. We were, of course, all very anxious that Mr. Cobden should undertake the duty, but I believe there was some scruple arising out of Mr. Cobden's health, and from our thinking it unfair to put such an additional labour upon him. That deterred us for some time, but at length there was I believe, some communication between Mr. Milner Gibson and Mr. Cobden, and I have a note of a report to Lord Russell of the 5th of April, "I have seen Mr. Cobden with Mr. Milner Gibson, and he (Mr. Cobden) is quite ready to undertake the business;" that was my report to Lord Russell. I believe I had the pleasure of seeing Mr. Cobden more than once at that time; we were in constant communication with the Board of Trade privately. We submitted the draft instruction to the Board of Trade, and I have here the opinion that was given to me upon it; it was not done officially. The private note which I received from the Board of Trade, was dated the 3d of April: "Mr. Milner Gibson and I have gone very carefully through your proposed letter of instructions, and I have noted down a few alterations for your consideration; you have, however, left very little for us to suggest." In the same manner, with respect to all the details, with respect to the Commissioners who were to be associated with Mr. Cobden, their relative positions, and the relation between Mr. Cobden and the Ambassador, I was in constant communication with the Board of Trade, to the extent even of whether a clerk should be appointed by Mr. Cobden at Paris, or whether he should be sent from the Board of Trade. All those little details were settled between the two Departments. In the instruction there was also provision made for the deputies of the Chambers of Commerce going over to Paris; they were to be put in strict subordination to Mr. Cobden, but to give him information upon anything which, for their own interests, they might wish to place before him. I believe the Board of Trade made that proposal first, and Lord Russell adopted it, and it was acted upon at once. There was also a clause inserted, that, to save time, the Chief Commissioner, Mr. Cobden, should correspond directly with the Board of Trade, and that they should answer him. Of course, the question involving mere matters of tariff and detail, it would have wasted a good deal of time unnecessarily if the communication had all come through the Foreign Office. That is the history of the commencement of the negotiation.

1785. Then, the Treaty of Paris is an illustration of the way in which the Foreign Office carry on the negotiation of a treaty, when, connected with that treaty, is a revision of tariff?—Yes.

1786. That is to say, that the Foreign Office would do all that was required diplomatically, and leave the arrangement of details to persons acquainted with such matters?—Yes. I will continue my account of what took place with regard to this matter. We knew nothing of what was going on at Paris till quite the close of the negotiation, when the draft treaty with the first tariff, which related principally to iron,

E. Hammond, Esq.

14 June 1864.

was sent over for the approval and sanction of the Government. That the tariff and the Convention, were immediately sent by us to the Board of Trade, in order that they might see whether the tariff was such as the Government could adopt. I believe that the Board of Trade had very naturally a considerable difficulty in pronouncing whether the tariff was correct or not. But as a matter of public responsibility to Parliament and the country, the Board of Trade was of course the department which should say to the Foreign Office, "Accept that tariff as it is,' or "We want some modification in it." It was not for us in the Foreign Office to enter into it. We could not enter into those details. We were not in a position to say, "The tariff is right, it may be accepted." But with regard to the Convention, it was different; we were of course bound to look at the details of the Convention. But in all those discussions about the Convention, and partly about the tariff, we were in constant communication with the Board of Trade. I do not say that there was much official communication; I dare say Mr. Milner Gibson will remember how much I saw him upon the subject; sometimes I disturbed him at eight o'clock in the morning going to him across the Park. Mr. Milner Gibson was obliged once, if not oftener, to go to Lord Palmerston about it. There were points which required a good deal of communication; we were in constant communication about it. Having received an official answer from the Board of Trade that the tariff was to be accepted, of course we accepted the tariff. At this time the Minister whom I was in communication with, was Lord Palmerston, Earl Russell being abroad with the Queen, in which case the Prime Minister is in foreign matters the referee of the Under Secretary. Everything that I did was submitted to Lord Palmerston, and, I am happy to say, was approved by Lord Palmerston, and any instructions that he gave me I carried out. But it took us a considerable time to settle. We received the draft convention and tariff on the 18th or 20th of September, and I think it was not finally settled in London till a very early date in October.

1787. There was, therefore, a harmonious working between the Board of Trade and the Foreign Office throughout the whole negociation of that treaty?—Perfectly so.

1788. Sir *Minto Farquhar.*] You stated, did you not, that there was a period, while those negociations were going on, when the Foreign Office was not aware actually of what was doing?—Yes; it was whilst they were working out the details of the tariff, and fixing the rates at which the articles should be charged.

1789. You mean during the period when Mr. Cobden was in Paris?—Yes, whilst the Commissioners were in direct communication with the Board of Trade upon those details.

1790. Mr. *Layard.*] Has any other treaty been concluded of late between this country and Foreign Powers in which there has been a discussion upon the tariff?—We had a Commercial Treaty with Turkey; but that was not a case in which there was a discussion of tariff between the officers here. There is a provision in the treaty that the tariff of duties shall be fixed according to a system they have in Turkey. A committee of merchants appointed on the spot to settle with the Turkish Customs the different rates at which goods shall be charged.

1791. In fact, when the Treaty of Commerce was concluded with Turkey, the tariff was settled by gentlemen practically acquainted with trade upon the spot, was it not?—Yes.

1792. Therefore, if we had another treaty to negotiate in which there were tariff reductions, the Foreign Office would place the tariff in the hands of the Board of Trade, or of persons acquainted with trade, would it not?—Yes; if the same thing occurred again as occurred in reference to the French Treaty, we should at once ask the Board of Trade to send a commissioner or some person perfectly competent to go into all the minute details of tariff values.

1793. The fact is, that, with the exception of those two treaties, we have not, since the conclusion of the French Treaty, had a reduction of tariff to negotiate with any other country, have we?—I am not aware of any.

1794. There appears to be a complaint made by the Chambers of Commerce that persons acquainted with commerce were not sufficiently consulted when those treaties that we have made have been made. Does not that arise from the fact that, in consequence of our treaty with France, we have been precluded from tariff arrangements?—Certainly.

1795. If that had not been the case, we should liberally have consulted the Chambers of Commerce, should we not?—Yes; I presume we should have carried on the business just as we did when we negotiated the French Treaty. If we were negotiating a treaty now, involving tariff arrangements, we should immediately require the Board of Trade to supply to us here, or to the Minister in the country with which we were negotiating, all the minute details connected with tariff arrangements.

1796. In reference to our negotiations with foreign countries, it has been stated that we have been behindhand with nearly all of them. Amongst other statements, there is one which was made by Mr. Behrens, that we came after France in communicating with the Russian Government, which statement, I think, the Honourable Chairman repeated in his speech in Parliament; was that the fact?—I can answer that question upon Lord Napier's authority.

1797. Will you read the despatch from Lord Napier?—The despatch was written with reference to a statement in the "Times" newspaper, purporting to be a report of a speech of Mr. Forster's in the House of Commons on the 15th of April 1864. The statement was this: "In Russia, the tariff was almost prohibitory upon his own goods, Orleans stuff; the present Russian duty was 26 *l.* per cwt. Honourable members would appreciate the oppressive weight of that Duty when they learnt that the 15 per cent. *ad valorem* duty in France amounted to only 4 *l.* 10 *s.* per cwt. It was difficult to imagine a country where it was more the duty of the Government to care for the many consumers, rather than the few manufacturers which Russia possessed. But even Russia was awakening, and last year it was stated that a reduction in the tariff would be made. Those reductions, however, did not assist English goods, and the reason was obvious, they were adopted after being submitted to the French Ambassador. Our Ambassador ought to have been instructed to communicate with the Russian Government at the time." The despatch is dated St. Petersburg, April 25, 1864. "My Lord, I have the honour to submit to your Lordships, herewith, an extract of the "Times" newspaper, containing

containing a passage taken from a speech delivered by Mr. W. E. Forster in the House of Commons on the 15th instant. Mr. Forster remarks that "it was stated last year that a reduction in the Russian Tariff would be made. These reductions, however, did not assist English goods, and the reason was obvious, they were adopted after being submitted to the French Ambassador. Our Ambassador ought to have been instructed to communicate with the Russian Government at the time." The observations of Mr. Forster are founded on some erroneous information. There were some insignificant reductions of the Russian tariff last year, with a view chiefly to equalising the differential duties on goods entering by the land and sea frontiers of the Empire, reported to your Lordships on the subject in my Despatch, No. 585, of 26 August 1863. The changes then introduced were equally beneficial, as far as they went, to French and English goods, both countries being alike interested in importation by sea or nearly so. They were adopted, no doubt, chiefly from a sense that they were just and consistent with the interests of the Russian Government, but they had been repeatedly urged on the attention of the Imperial Cabinet by Her Majesty's Embassy acting under your lordship's instructions. I do not know whether the French Government gave similar instructions to its representative here, but I remember suggesting to the Duke de Montebello to co-operate with me for the object referred to, and requesting your lordship to move the French Government in the same sense. Whatever foreign intervention or representations there were, certainly originated with Her Majesty's Government. I waited on Prince Gortchakoff two or three days since, with the view of ascertaining whether recently or previously the changes in the Russian tariff had ever been adopted after being submitted to the French Ambassador. The Vice-Chancellor informed me in reply that no such submission or consultation had ever taken place, the changes adopted had been resolved on with reference to the interests of Russia solely on national grounds, without any international concert whatever, and he, for his part, would always be disposed to decline the discussion of the tariff, a matter of domestic policy, with foreign powers; he was against treaties and engagements for the reciprocal modification of tariffs. The expressions made use of by the Vice-Chancellor on this occasion were altogether consistent with the language his Excellency has held to me before. I have already more than once submitted to your Lordship my humble opinion that very little is to be gained by arguments and representations addressed to the Russian Government on behalf of free trade and low duties; but whether that view be just or not, I can affirm with confidence that the arguments of the French ambassador have had no exclusive or preponderant influence whatever in prompting any changes in the commercial legislation of Russia. Nor is there any reason to believe that the great alterations made in the year 1857, or that any of the slight modifications since embraced have been in the least degree more beneficial to the trade of France than to that of England; on the contrary, Her Majesty's consul has personally assured me that, on the whole, he thinks that the result of the changes hitherto adopted has been more advantageous to the exportations of Great Britain than to those of the French Empire. Your Lordships will not suspect me of a desire to defend the Russian tariff. Even in its mitigated state, it contains abundant matter for criticism. There are more than 300 articles of importation subject to duty, with a multiplicity of subdivisions, and on some fabrics the specific duty levied may still amount to 60 or 70 per cent. *ad valorem*. The export duties are equally open to objection. It is but fair, however, to the Russian Government to remember that seven years ago an important simplification and reduction of the tariff took place. I select the article referred to by Mr. Forster as his own special manufacture; the article of "Orleans stuff," a thin, woollen stuff, a kind of camlet. In the finer qualities this stuff pays a duty in Russia of 1 *r.* 20 *cops.* per Russian pound, which amounts, as Mr. Forster says, to nearly 26 *l.* per English cwt. In the coarser qualities, the duty is half that amount. The duty previous to 1857 was, however, 33 per cent. higher than at present, and on the coarser qualities of the same stuff it was more than double what it is under the law of 1857. I do not at all despair of further reductions, as the notions of commercial restriction and prohibition gradually yield, throughout the empire, to more enlightened ideas and to the example of other countries. If the progress of Reform, however, be slow, it is not at all owing to inaction on the part of Her Majesty's Government, and the changes which occur are in no way shaped by French influence or intrigue to the prejudice of England. Her Majesty's Government might, perhaps, think it desirable to communicate this despatch to Mr. Forster. It would be interesting to me to know on what grounds Mr. Forster based his statement that the last reductions of the Russian tariff were adopted after being submitted to the Duke of Montebello, and why they are supposed to be specifically favourable to France. The explanations of Mr. Forster might enable me to test the official statements of the Russian authorities."

E. Hammond, Esq.

14 June 1864.

1798. There seems to be prevalent an impression amongst the Chambers of Commerce, that our representatives abroad, whether diplomatic or consular, do not attend to matters of trade, that they think it, in fact, rather beneath them to do so; is that the case?—I am not aware of it. I have no reason to suppose so. If I were asked I should say they attend as much to matters of trade which come before them as to any other matters of business.

1799. Do you not think that I may almost say that our diplomatic and consular agents are most anxious to give every information upon matters of trade?—I have not the least doubt of it.

1800. Has not very valuable information of late years been given by them upon matters of commerce?—I think very valuable.

1801. Mr. Ashworth, in his examination, in answer to Question 912, states: "When the American War broke out, and we saw very clearly that the cotton manufacture was going to be grievously harassed for want of the raw material, communications were made to the Foreign Office, to induce Lord John Russell to write out to the various consuls abroad to ascertain whether or not it was possible to obtain large supplies of cotton from places which had been previously unaccustomed to grow cotton, and what were the hopes and expectations which we might rely upon as to getting cotton from places over which we had some control;" is that statement true?—If

E. Hammond, Esq.

14 June 1864.

Mr. Ashworth had given the date, I should have been able to have spoken more clearly. I have made the best search I could, and about that time I could find no such letter from the Manchester Chamber of Commerce upon the subject at all; but I do find a correspondence with the Manchester Chamber of Commerce, which perhaps the Committee will permit me to read to them.

1802. Mr. *Henley.*] You find no memorial?—I have made a search, but I cannot find any. A search has been made especially about the date of this letter. I believe I gave a rather incorrect direction, at first, but I know that the search came down to this date, and even subsequently to it: the rest of this year has been twice looked through. This is a letter dated the 19th of January, 1861. It is not from the Chamber of Commerce at Manchester, but from the Foreign Office to the Chamber of Commerce:—"Foreign Office, January 19, 1861. "Sir,—The uncertainty which must necessarily exist as to the effect that the present political crisis in the United States may have on the supply of cotton, and the serious results which might ensue if that supply were to fall short, appear to Lord John Russell to suggest the expediency of making timely inquiry as to the possibility of obtaining from other quarters such an amount of cotton as may compensate for any deficiency in the amount usually obtained from the United States. In compliance with the wishes of the Cotton Association of Manchester, the attention of Her Majesty's consuls was some time since called to the facilities which the countries wherein they resided offered for the cultivation of the cotton plant; and much valuable information on this point has been, from time to time, communicated by the Foreign Department to the Cotton Association, and it has been made apparent that, with proper encouragement, a vast supply of cotton might be produced for the British market in many places not hitherto resorted to for that purpose. It would seem, too, that even without more than the ordinary encouragement to industry offered by the prospect of a sure market, no small amount of cotton might at once be obtained; and it occurs to Lord John Russell that it would be of great convenience and advantage to the cotton manufacturers in this country, in anticipation of a deficient supply from the United States, if they could obtain a fair estimate of the amount of supply which might at once be procured from other countries, if it were thought worth while to send and fetch it. Lord John Russell, therefore, desires to place at the disposal of the cotton manufacturers in this country the services of any of Her Majesty's consuls residing in countries which, from the information now in the possession of the Cotton Association, offer a prospect of immediate supply, if it were necessary to have recourse to them. Lord John Russell would not, indeed, think it right that Her Majesty's consuls should be allowed to incur any expenditure of public money on this account, or in any way to pledge the Government to the collectors or producers of cotton within their districts, that the fruit of their labour would surely find a British market. But the consuls might ascertain what amount of cotton might be expected to be forthcoming in their respective districts to meet any sudden demand, or what amount might be brought into the local market if the native dealers had a reasonable assurance of finding customers for it at a given time. The attention of the consuls, Lord John Russell conceives, might usefully be directed to these, as well as to other similar points, whic might be suggested by your association in communication with the General Cotton Association, and also with the Chamber of Commerce of Liverpool. The practical knowledge possessed by the members of these several associations will enable them at once to judge whether any beneficial results would be likely to attend such an inquiry as that which Lord John Russell, if they choose to accept his offer, is prepared to instruct Her Majesty's consuls at once to set on foot. Lord John Russell is aware that, in making this offer, he is departing in some degree from the usual practice; but it appears to his Lordship that the vast amount of the interests at stake, not only as regards the manufacturers themselves, but as regards also a very large proportion of the labouring population of this country, warrants him in informing the parties who, from their position, take a lead in such matters, that he is prepared and anxious to afford them all the assistance, more particularly at the present time, which the department under his superintendence is able to render.—I am, &c. (signed) *E. Hammond.*"

1803. Mr. *Layard.*] What was the answer to that?—The answer was dated 24th January 1861: "My Lords,—I have the honour to acknowledge receipt of your Lordship's communication of the 19th instant, which I had the pleasure of presenting to the members of the Chamber at their annual general meeting held on the 21st instant; and I have been requested to convey to your Lordship the expression of their warmest thanks for this very timely offer of aid on the part of the Foreign Office. I may further state to your Lordship, that certain measures are at present in contemplation by the Board, having for their object to furnish the means of obtaining increased and more regular supplies of cotton for the trade of this district; and at no distant period I hope to be permitted to submit the same to your Lordship's consideration.—I have, &c. (signed) *Edmund Potter*, President."

1804. Did we not send circulars to all our agents all over the world upon this subject?—Yes, in communication with the Cotton Association; I should like to be allowed to say one word in addition: as far as I can trace, we received no further communication from the Manchester Chamber of Commerce; but I may state my conviction that, if they had availed themselves of our offer, we should have very materially assisted the cotton manufacturers of this country. I may state with less hesitation, what I believe, because I think, about a year and a half afterwards, a proposition very much resembling what I should have been prepared, under Earl Russell's sanction, to suggest to the Chamber of Commerce of Manchester was propounded in Manchester (I saw it in a newspaper). The idea which occurred to me at that time, and which, I daresay, Earl Russell would have sanctioned, would have been that the cotton interests should have made a joint-stock purse, and either send to important places agents of their own, or, in places where there was less cotton likely to be collected, employed our consuls to make known generally in the district that every pound of cotton (we knew from our previous reports, obtained for the Cotton Association, that cotton was growing wild in different parts) which was brought to the seat of the consulate should find a purchaser; and then, when a sufficient quantity of cotton was collected

lected together, it might have been sent for and fetched. I verily believe, if that had been done, I do not mean to say that we should have got anything like the supply of cotton we were deprived of, but we should have got a very fair amount of cotton. I believe something like that plan was afterwards propounded at Manchester, and it struck me at the time that there should be some joint-stock purse raised with the view of purchasing cotton in different places.

1805. Your impression is, is it not, that, instead of the Foreign Office being behind the Chamber of Commerce, we were before them?—In that matter my impression is so, decidedly; I can find no letter from the Chamber of Commerce earlier than that which I have read.

1806. Did not the Foreign Office send circulars to all their consular agents abroad, calling upon them to make the fullest reports upon the growth of cotton in their respective districts?—In the autumn of 1857 we sent those circulars, in communication with the Cotton Association.

1807. All those reports were sent to the Cotton Association, were not they?—Every one of them was sent as it came in; and they continue to be sent.

1808. The Foreign Office has been in constant communication with the Cotton Association, has it not?—Yes; it was only the other day that we had an application from the Cotton Association, I think on the 14th of May, to send inquiries to the Consuls; we asked the Cotton Association to frame their own inquiries, which they have now done, and I believe they have been issued from the Consular Department.

1809. There is an impression on the part of some of the witnesses, that a great deal of good might have been done abroad by communicating to Foreign Governments the advantages which England has derived from her free-trade policy; have any such communications been made to Foreign Governments?—Two have been made, and another we hope, with the assistance of the Board of Trade, will very shortly be made. I have a Paper upon that point, which I should like to put before the Committee; this was a circular sent to certain of our ministers abroad in 1851; it does not seem to have been sent to all; it is dated 11th February 1851:—"My Lord, I transmit to your Lordship two printed copies of a statement which has been prepared by the Board of Trade, and I have to instruct your Lordship to communicate one copy of this statement to the —— Government, as affording a practical proof that a reduction of import duties is not always attended with a corresponding diminution of revenue; but, on the contrary, it is generally followed by an increased consumption, which adds to the comforts and enjoyment of the people at large, while it affords at the lower duty nearly the same amount of revenue which was raised upon the smaller consumption by means of the preceding higher duty. Your Lordship will retain the other copy of this statement in the archives of your mission.—I am, &c."—I will hand in the statement which accompanied that letter.—(*The same was handed in.*—Vide *Appendix.*)

1810. Was another circular afterwards sent?—Yes; in 1860 another circular was sent, to the same effect:—"Foreign Office, 7th April 1860. I transmit herewith copies of a Paper which has been drawn up by the Board of Trade, showing the practical results of the policy of free-trade which has been adopted in this country. That policy, the commencement of which dates from 1842, has been carried out to its full extent by the recent changes which have been made in our commercial legislation, and Her Majesty's Government think that the moment is not inopportune for pointing out to other Governments the advantages which have been derived in this country from the introduction of a more liberal system, and which they are convinced would equally follow the introduction of such a system in other countries. I have therefore to instruct you to communicate the above-mentioned Paper to the Government, and to request the attention of that Government to the facts which it contains; you will also communicate this Paper, or an abstract of it, to any influential persons who may take an interest in financial and commercial questions."—I will hand in the statement which accompanied that letter.—(*The same was handed in.*—Vide *Appendix.*)

E. Hammond, Esq.

14 June 1864.

1811. To whom was that circular sent?—I believe it was sent to all Her Majesty's Ministers abroad.

1812. Another circular has been in preparation, has it not?—We asked the Board of Trade the other day if they could, at the present time, give us a similar statement to be circulated.

1813. Have not circulars been sent to all the Secretaries of Embassy and Legation abroad, calling upon them to make annual reports upon matters of trade; and have not similar circulars been sent to all the heads of missions, calling upon them to send to the Foreign Office, at once, all decrees altering tariffs, or making any change affecting matters of trade and navigation; and have not circulars also been sent to the heads of missions, calling upon them to direct the attachés to make reports upon matters of trade and commerce?—Yes; I have the circulars here which were sent. The first was signed by Lord Clarendon on the 24th of February 1857; the second was on the 24th of January 1860; that was signed by Lord Russell; the third was also signed by Lord Russell on the 31st of March 1860, and the fourth, also signed by Lord Russell, on the 23d of May of this year. The circular with respect to furnishing statistical information, as soon as it can be obtained, is dated the 25th of April 1863; I will hand in these circulars (*handing in the same.*—Vide *Appendix*). There was a question raised the other day as to the principle upon which the reports of the Secretaries of Legation were to be framed with respect to their dealing with details. The object is best stated in the circular issued on the 31st of March 1860: "The object for which Secretaries of Embassy and Legation are required to make periodical reports is not so much to obtain by that means the latest statistical information, but to impose upon the secretaries the duty of keeping their attention constantly alive to all matters connected with the industry, commerce, and resources of the country in which they reside, and of reporting either generally, upon the whole, or specifically upon any branch of them."

1814. Mr. *Seymour FitzGerald.*] The circular with respect to the statistical information was issued to the heads of missions, was it not?—All those circulars were addressed to the heads of missions.

1815. Mr. *Layard.*] Are not those who enter the

E. Hammond, Esq.

14 June 1864.

the Diplomatic Service obliged to go through an examination, part of which consists in works on political economy?—Yes; I will hand in a copy of our regulations for the examination of attachés in the Diplomatic Service.—(*The same was handed in.*—Vide *Appendix.*)

1816. Do not the Consuls send home regularly reports upon all commercial movements in their immediate districts?—It is their duty to do so; I believe they do, generally.

1817. It has been stated in evidence here, that although those reports are sent home they are very often not published until two or three years after their receipt; are you aware that such is the case?—I can answer that from the time we have undertaken the publication of them at the Foreign Office, our rule is that everything that comes in between the laying of the Papers before Parliament in one year at the end of the Session and the end of the following Session is always laid before Parliament. The Consuls themselves may be in arrear, but as far as the Foreign Office is concerned the reports are published as soon as they can be.

1818. There has been a statement that during the time when Lord Malmesbury was at the Foreign Office, a letter with regard to the Belgian Tariff remained unanswered for three months; will you explain the reason of that?—I have taken the dates down, and it seems, on looking cursorily through the papers, that the correspondence originated with a letter from the Foreign Office to Mr. Wickham, dated 16th November 1858. I have not referred to that letter, but I got that date from the answer of the Bradford Chamber of Commerce, which was received on the 25th January 1859, when they sent an apology for not sooner noticing the letter of the 16th of November.

1819. Therefore, the Bradford Chamber of Commerce were two months before they answered the Foreign Office?—Yes. We received that letter on the 25th of January, and sent it to the Board of Trade on the 27th of January 1859. It was answered by the Board of Trade on the 2d of March 1859. Then it became necessary to refer it to the Queen's Advocate. It was referred on the 11th of March 1859 to the Queen's Advocate; it was reported on by the Queen's Advocate on the 7th of April 1859, and the Chamber of Commerce received their answer on the 11th of April 1859.

1820. Therefore, there was no delay which was not absolutely necessary in order to go into the question in that case?—None whatever.

1821. Have you thought it right to consult some of the gentlemen in the Foreign Office with regard to a separate Department for Trade, and have you their opinions upon the subject?—Yes.

1822. Will you state to the Committee what they are?—Yes.

1823. Mr. *Seymour FitzGerald.*] Were they the senior clerks whom you consulted?—Yes. These opinions arose out of the letter dated the 9th of April of this year, from the Bradford Chamber of Commerce, which I believe was circulated generally to Members of Parliament.

1824. *Chairman.*] Will you hand in the Paper to which you refer?—I will.—(*The same was handed in.*—Vide *Appendix.*) The printed paper was sent to the Foreign Office, I believe, under a blank cover from the Bradford Chamber of Commerce; it is dated the 9th of April, and headed, "English Government and Foreign Commerce." I do not know who sent it.

1825. It was a circular to Members of Parliament, was it not?—Yes. We sometimes consult the senior clerks, and take their opinions. We think it is desirable to have their independent opinions. I will read Mr. Spring Rice's opinion. He says:—"The proposal of the Bradford Chamber of Commerce seems to be founded on a misconception of the actual state of things. There is no 'divided responsibility.' The Secretary of State for Foreign Affairs, the only legitimate channel of communication with Foreign Countries, has consulted the opinion of the Board of Trade, the Department supposed to be cognisant of commercial details, on all points connected with Trade and Navigation, and it is on the reports of the Board of Trade that instructions are eventually framed. The memorial speaks of the Board of Trade as 'responsible for the whole commercial interests of the country,' and considers that it is inconsistent with this position that they should not correspond directly with agents abroad; if, however, the Board receive, as they do, full information through the Foreign Office, and if their recommendations are carried out, their responsibility has nothing to do with the form of representation to Foreign Government or the proper moment for such representation, with which points the Foreign Secretary is alone competent to deal; on the other hand, the Foreign Office, unless entirely reconstituted, is not competent to decide on commercial details. I am not aware of any case where the two Departments have failed in cordial co-operation; and, as regards Spain and Portugal, the only countries referred to with which I have to deal, there has been full concert as to the steps to be taken." I will now read the opinion of Mr. Alston—"This is a proposal for a Committee of Inquiry as to the expediency of altering the double machinery and divided responsibility of the Departments now intrusted with the duty of protecting England's commercial interests. It is stated that the Chambers of Commerce do not complain of any want of courtesy, but of a great want of efficiency on the part of the Government in making use of the information given to it, viz., by the Chambers, and in not making use of it at the proper time and in the proper place. The only cases in which this is specifically charged is in regard to Italy and Sweden, though the commercial policy of several other countries is passed in review, with the object it is presumed of indicating the necessity of greater activity; no allusion is made either to the United States or to China, Japan, and Siam, and I would therefore merely observe, as far as this division is concerned, that I am not aware of any want of efficiency or of activity in pressing upon the Governments of those countries any matters affecting British commercial interests, which may be brought to the notice of the Secretary of State, either directly by individuals or Chambers of Commerce, or indirectly through the Board of Trade. As far as my experience goes, this office, though in full and constant communication with the Board of Trade, is always ready to receive, to consider, and to act upon representations addressed to the Secretary of State upon commercial matters, and I do not see how any greater activity could be insured by an alteration of the existing machinery. All papers received at this office on commercial subjects are, as a matter of course

course, at once referred to the Board of Trade, and I much fear if any attempt were made to consolidate the existing machinery, that is to say, to throw this correspondence exclusively on the Foreign Office (for to hand it over exclusively to the Board of Trade would be entirely out of the question), the result would be, instead of adding to the efficiency of this Department, to imperil our power of continuing to perform useful service in those respects, by depriving us of the advice and assistance which the Board of Trade now gives us." This is the opinion of Mr. Staveley, of the French Department: "It appears to me that the views of the Bradford Chamber as regards the functions of the Foreign Office and of the Board of Trade in regard to commercial matters, and the working of such questions, are altogether erroneous, and that their statement of those views is in itself very contradictory, for while it is alleged that the Board of Trade possesses no power of action, and that a simultaneous and joint action of the two departments is necessary for the due discharge of the commercial business which comes before them, it is also stated that sometimes both take action at the same time, the one being ignorant of the other's proceedings, &c. As a matter of fact, I can only say that, as far as my experience goes, and speaking especially with reference to my own department, I do not consider there is the slightest ground for the allegation, that the Board of Trade is kept in ignorance by the Foreign Office of any information of a purely commercial nature which comes before it; and there is still less reason for stating that the Foreign Office 'take action' on any such matters of which the Board of Trade is ignorant, as previous reference to, or communication with the Board of Trade is, as I believe, the invariable rule before any representation on commercial matters is made by Her Majesty's representatives to Foreign Governments. In fact, the Board of Trade is the department to which the Foreign Office look for an opinion, at any rate on any commercial question which it may appear desirable to open or to follow out with any foreign government; and where the initiative is taken by Her Majesty's Government, the representation most commonly originates with that department; and on all commercial questions with foreign governments there has ever been, as I believe, the freest and most harmonious communication with the Board of Trade. It appears hardly necessary to observe, however, that the Secretary of State for Foreign Affairs must be the judge after all of the time at which, or the mode in which communications to a foreign government on commercial matters can best be made; seeing the close connection there must always be between political and commercial questions and interests, and I cannot understand how the interests of the commercial portion of the community can be better served than by the existing arrangement, seeing that both departments are always ready to receive the representations of commercial bodies, and to confer together as to the best means of carrying out such suggestions as may be for the general good." Then, the last opinion I wish to read is that of a gentleman, whom probably many Honourable Members of this Committee know, Mr. Bergne, the treaty-writer. He says, "The plan suggested by the Bradford Chamber of Commerce would be tantamount to transferring to the Foreign Office all those functions of the Board of Trade which concern the commercial relations between Great Britain and foreign countries. In such case it would be necessary to organise a district commercial department at the Foreign Office. That such a plan might, to a certain extent, by severing commercial from political matters (a severance which, however, could not be complete, because the two things are frequently mixed up), accelerate the course of action in such matters, it is impossible to deny; but it would probably lead to evils and difficulties greater than those which it was designed to remedy. Who is to be the chief of such a department, responsible to Parliament and to the country for its proceedings; surely not the Secretary of State for Foreign Affairs, who is already overburthened with the duties of his office as it is now constituted, and who, therefore, could not be expected to take upon himself, in addition, a very considerable and important part of the duties of the President of the Board of Trade; but, if not the Secretary of State for Foreign Affairs, it must be some other Minister, for it is evident that the control of such a Department could hardly be left to a subordinate permanent officer, however able, who would have no opportunity of explaining and defending in Parliament measures which would be taken, in point of fact, mainly upon his recommendation. Thus it would, after all, seem necessary to fall back upon a President of the Board of Trade or Minister of Commerce, call him by which name you will; and whether he sits at the Board of Trade or at the Foreign Office, does not seem very material."

E. Hammond, Esq.

14 June 1864.

1826. Mr. *Layard.*] Will you be good enough to state to what Governments of Europe we have sent a circular about the reduction of duties upon rags?—I should like to read a memorandum upon that subject, because I think it is rather a justification of the Foreign Office. This is a memorandum which was drawn up on the 28th of May 1863, showing what steps had been taken by Her Majesty's Government:—"On the 12th March 1860, Lord John Russell stated in the House of Commons, in reply to a question from Mr. Puller, whether it was the intention of the French Government to impose any duty on the export of rags from France, when the existing prohibition should be removed; that Her Majesty's Government had heard from the British Ambassador at Paris that it was pretty certain there would be a duty on the export of rags; but his Lordship added, that he had not been able to ascertain what the amount would be, although it was hoped that it would not be large. In reply to a further question from Mr. Puller, whether any steps had been taken or would be taken by Her Majesty's Government for obtaining a free exportation of rags from those countries in which the export was then either prohibited or restricted by heavy duties, namely, Belgium, Holland, Germany, Spain, and Portugal, Lord John Russell replied that Her Majesty's Government would take steps to obtain, if possible, a free export of rags from these countries; and the following is an account of the steps taken by Her Majesty's Government up to the end of the year 1861, to induce those and other Governments to allow the export of rags on more favourable terms than they had hitherto done. With respect to France, previous to Mr. Puller's inquiry, Lord Cowley had been instructed to ask the Minister of Commerce, without

E. Hammond, Esq.

14 June 1864.

out making any formal proposal to him upon the subject, whether the French Government would be inclined to substitute for the prohibition which then existed, of the export of rags from France, an *ad valorem* rate of duty on the export of that commodity; and Lord Cowley stated in reply that a project of law for the removal of the prohibition of the export of rags would be presented to the Legislative Body in the course of the Session, which was then sitting. This project of law was shortly afterwards adopted by the Council of State, and laid before the Legislative Assembly; but it does not appear to have passed into a law, for in May of the following year, Mr. Grey, then Her Majesty's Chargé d'Affaires at Paris, upon being instructed to send home a statement of duty levied upon the export of rags, replied, 'With regard to the duties, I presume the inquiry refers to those which will come into operation on the 1st of June next (1861), through the Belgian Treaty,' 'otherwise the exportation of rags being as yet prohibited, no export duty is at present levied upon them.' No special mention of the export of rags is made in the Belgian Treaty. In the case of Belgium, in April 1860, Lord Howard de Walden was instructed to urge the Belgian Government to remove the prohibition on the export of rags, and he was directed, in the event of his being unable to obtain entire freedom of trade, to endeavour to induce that government to replace the prohibition, 'by a duty so moderate as not to obstruct exportation.' Upon receipt of these instructions, Lord Howard brought the subject under the notice of the Belgian Minister for Foreign Affairs, who, at a subsequent interview, informed him, that the question of the alteration of the law prohibiting the export of rags had been brought before the Council of Ministers, who recognised that there existed grounds for 'doing something' in the matter, but that the Minister of Finance was not prepared to come to any decision until the result of the negotiations on the same subject between England and France should be known. Then we come to Holland. Lord Napier was, in April 1860, instructed to call the attention of the Dutch Government to the high rate of duty on the export of rags, and to urge strongly upon them the advantages likely to result to the commercial intercourse between the two countries, if the trade in rags was promoted by the imposition of a duty less in amount. The Dutch Government, in their reply, acknowledged the inexpediency of levying such duties, but contended by an appeal to preceding legislation on the subject, that there was little prospect of obtaining the abrogation of the impost complained of in the States General. It appeared, however, from a statement of the Minister of Foreign Affairs, that the export duty on rags in Holland was lower than that which was enforced either in the German Customs Union, France, or Belgium. With respect to Prussia, the Prussian Government, in reply to the representations of Lord Bloomfield, respecting the high rate of export duty imposed on rags, stated, that the subject had been frequently under the consideration of the different States of the Zollverein, but that they had not been able to agree upon the matter; they further stated, that they would not cease to make efforts to bring about a modification of the tariff. These are the facts with regard to Austria: in October 1860 Count Rechberg, the Austrian Minister for Foreign Affairs, informed Mr. Fane that the Austrian Government were prepared, in fulfilment of the wishes expressed by the British Government, to diminish the rates of duty levied upon rags exported from the Austrian dominions, and he proposed that "an instrument, which might assume the form of a Commercial Convention, should be exchanged between the government of Austria and that of Her Majesty, with a view to carry out the contemplated reduction of duties." Lord A. Loftus was instructed to accept the proposal, and to state that Her Majesty's Government were inclined to think that it should be embodied in the general treaty of commerce which they would shortly propose, but that, "should the negotiation of the treaty be long protracted, a short convention relative to rags, though not in the exact terms suggested by Count Rechberg, might be arranged between the two Governments." No steps, however, of any importance, were taken in this matter until July 1861, when Lord Bloomfield was instructed "to ascertain from the Austrian Government whether they would be willing to conclude a convention stipulating for a reduction of the Austrian export duty upon rags, in return for a stipulation on the part of Great Britain, that a differential duty on Austrian paper imported into the United Kingdom should not be reimposed during the continuance of such convention." To this proposal Count Rechberg replied that "great difficulties would certainly be raised in the Reichsrath, and suggested, with a view to obviate them, the introduction into the proposed Convention of an article "that would ensure to trade between Austria and England the advantages conceded to France by the late treaty with that country, or those enjoyed by the most favoured nations; or something, in fact, that would have the appearance of a concession to Austria." Her Majesty's Government declined to agree to these suggestions, and considered that the proposed stipulation respecting the non-imposition of duty on the importation of Austrian paper as a proper equivalent for the contemplated reduction of the Austrian duty on the export of rags; but they expressed their willingness "to conclude a convention containing a reciprocal most favoured nation article in addition to the article already proposed respecting rags and paper." Lord Bloomfield was instructed to make this proposal to the Austrian Government.—Spain: The exportation of rags from Spain being prohibited, Sir A. Buchanan was instructed in April 1860 to endeavour to induce the Spanish Government to remove the prohibition, and to replace it by a duty, so as not to obstruct exportation; but no answer appears to have been given by the Spanish Government to his representations.—Russia: The Russian Government, in reply to the request which Sir J. Crampton was instructed to make for a reduction of the export duty on rags, stated that they were "unable at present to accede to the wishes of Her Majesty's Government." As will be seen from the foregoing, Her Majesty's Government have taken steps to induce the Governments of France, Belgium, Holland, Prussia, Austria, Spain, and Russia, to grant some concession in favour of the export of rags, but hitherto without much success. In France, where the export of rags was prohibited, the Government, owing to the representations of Her Majesty's

Majesty's Government, brought before the Chambers a Bill for the removal of the prohibition, but it does not appear to have passed into a law. It has been ascertained, however, that after the conclusion of the Commercial Treaty between France and Belgium, a new Tariff was promulgated, which allowed the export of rags upon the payment of a certain specified duty. In the case of Belgium the Government declined to come to any decision until the result of the negotiations between England and France should be known. The Dutch Government acknowledges the inexpediency of levying such duties, but state their inability to induce the States General to reduce them. The Prussian Government stated that the States of Zollverein could not come to an agreement in regard to the reduction of the duty, but that they would continue to make efforts to bring about a modification of the tariff. The Austrian Government consented to the principle of a reduction of the export duty, and a long correspondence ensued as to the mode of carrying it into effect, which resulted in Her Majesty's Government proposing to conclude a Convention upon the subject. The Spanish Government made no reply to the request of Her Majesty's Minister for the removal of the prohibition to export rags. The Russian Government refused to make any reduction in the export duty on rags." On the 11th of January of this year, the Board of Trade called upon us to make representations to Foreign Governments upon the same point, sending a memorandum upon that subject. I will hand in their letter and memorandum (*handing in the same.*—Vide *Appendix*). We wrote on the 21st of January 1864, to one Ministry in the States which were immediately connected with the Zollverein, Berlin, Hanover, Dresden, Wurtemburg, and Frankfort. This was our letter: "I transmit herewith to your Excellency a copy of a letter from the Board of Trade forwarding a memorandum on the subject of the duties levied on the export of rags from foreign countries, and urging that advantage may be taken of the Conference on the Zollverein Tariff about to be held at Berlin, to obtain a reduction of the duty in question in the States of the Zollverein. I have to instruct you to communicate copies of this memorandum to the Governments to which you are accredited, and to urge them to instruct their representatives at the Conference to support the adoption of a more liberal policy than has hitherto prevailed in the Zollverein with regard to the exportation of materials for paper making." On the 13th of February 1864, we wrote to our Ministers in Spain, in Austria, in Russia, in Portugal, in Belgium, in Holland, and in Denmark, this letter:—"Sir,—Her Majesty's Government have instructed Her Majesty's representatives in the several German States, to urge upon the Governments of those States the adoption of a more liberal policy in regard to the exportation of rags and other materials for paper making. I enclose a copy of the letter from the Board of Trade, and of the memorandum enclosed in it, and I have to instruct you to bring the general question of the duties levied on the export of rags before the Government to which you are accredited, and to press upon that Government the adoption in the States of which it is composed, of a liberal policy in regard to this article of import trade." On the same day we wrote to Lord Cowley sending copies of that circular, saying, "I transmit to your Excellency herewith, for your information, a copy of a letter from the Board of Trade enclosing a memorandum on the subject of the duty imposed on the exportation of rags from various foreign countries. I also enclose a copy of an instruction which, in compliance with a suggestion of the Board of Trade, I have addressed to Her Majesty's representatives in the States of the Zollverein, directing them to urge upon those States the adoption of a more liberal policy in regard to the export of materials for paper making. I further enclose a copy of a similar instruction to the representatives of other Courts, and I have to instruct your Excellency to ask the attention of the French Government to this matter, and also to invite them, if they should see no objection to doing so, to support the representations of Her Majesty's Government to the Zollverein, and other States in this matter."

E. Hammond, Esq.

14 June 1864.

1827. Therefore, in fact, every effort has been made by the Foreign Office to induce foreign Governments to make a reduction in the export duty upon rags, has it not?—Yes.

1828. Have you read the memorial addressed by the Manchester Chamber of Commerce to Lord Palmerston?—I have.

1829. Are the statements of that memorial consistent with the true state of the case?—I should say certainly not.

1830. Mr. *Cobden.*] I think I understand you to say, and it is also stated in some of those papers which you have read from some of your junior members of the Foreign Office, that you take no steps with reference to commercial matters abroad, except after you have consulted the Board of Trade?—I said in my evidence a little while ago that we might act at once upon a case of palpable and evident grievance which did not seem to require communication with the Board of Trade; but, generally speaking, if there is any doubt, even in a case of that kind, we should communicate either with the law officers or the Board of Trade; but with respect to a communication of a more general nature, having for its object to modify a tariff, or to obtain facilities for commerce, or with respect to a representation made by a foreign minister on a commercial matter, such communications are invariably, I may say, acted upon in strict consultation with the Board of Trade; I cannot speak to every paper of that kind that comes into the office, but that is the general rule. There may be a paper now and then which has not been sent to the Board of Trade, but what I have stated is the general rule and practice of the office.

1831. I understand you to say that you did not think that the Foreign Secretary would ever act, except after consulting the Board of Trade, upon a commercial question?—Certainly, with the exception which I stated, he would act in no commercial question which involved a discussion with a foreign government, except upon a mere matter of complaint, or something of the sort, without consulting the Board of Trade.

1832. I understand you to say that the rule at the Foreign Office with reference to commercial questions is analogous to that with reference to certain other subjects; for instance, that you have constant communications with the Admiralty upon naval questions?—Yes.

1833. And you put the connection between the Foreign Office, and the Board of Trade in the same

E. Hammond, Esq.

14 June 1864.

same category as that between the Foreign Office and the Admiralty, do you not?—Yes.

1834. Is there not a distinction between the two cases; in the case of the Admiralty, with which I believe, if I am well informed, you have probably even more communication than with the Board of Trade, is it not the fact that the communications which you have with the Admiralty generally assume the form of direct instructions to the Admiralty to act in a certain way under certain given circumstances?—I should say that we receive more letters from the Admiralty than from the Board of Trade.

1835. Are not your communications with the Admiralty in the form of instructions generally?—Occasionally we ask their opinion.

1836. Do you ever take directions, for instance, upon a matter of policy from the Admiralty?—No; the Secretary of State conveys the Queen's pleasure to the Admiralty.

1837. Is there not this difference between your connection with the Board of Trade and with the Admiralty, that you write in all cases for information, I might almost say for instruction, from the Board of Trade?—We certainly do so; we expect that the Board of Trade will give us guiding knowledge upon all matters relating to foreign commerce, just in the same manner as we expect the law officers of the Crown to give us guiding knowledge upon all matters of law.

1838. I understand that you apply to the law advisers only in a case affecting international law, or a matter in which a legal question arises, but that in all your negotiations with foreign powers, in all your communications abroad with reference to commerce, you consult, as a matter of course, the Board of Trade before you take any step?—Yes, and very frequently the law officers of the Crown.

1839. That is only in a particular class of cases, is it not?—Yes; with reference to treaties.

1840. I understand you to say, that you have eight senior clerks?—Yes.

1841. You say that those eight senior clerks, each manage a separate division of the office, that one of them "superintends the correspondence with Her Majesty's Consuls, with the exception of those in China, Japan, and Siam; another superintends the slave trade correspondence; and the remaining six, the political and commercial correspondence of their respective divisions." Do you see an insuperable difficulty in setting apart a senior clerk, or having a department at the Foreign Office, which should be sufficiently informed upon commercial questions to enable you to correspond with foreign countries, without taking instructions by correspondence from the Board of Trade?—I should say that it would be very objectionable; indeed, I do not think we could collect sufficient information in that way to enable us safely to act without reference to the Board of Trade. Even in foreign countries, where they have a commercial division in the Foreign Office, such as you suppose, they invariably deal with all matters of trade, either if there is a Minister of Commerce, in concert with that Minister of Commerce, or if there is no Minister of Commerce, in concert with the department which represents it, whether it is the Finance Department or whatever it may be: that is the general rule. I have inquired into the practice of foreign countries, and I find that there is hardly a country in Europe which has not a department which the Foreign Office consults in regard to matters of trade. Even though in the distribution of the work at the Foreign Office there should be a department for commerce, it would be a mere departmental arrangement. We think it well to divide our work in one way, and foreign offices abroad think it well to divide their work in another way.

1842. You have one clerk who superintends the Slave Trade correspondence; I do not exactly understand upon what ground you justified that departure from your ordinary rule, which you refuse to depart from in the case of the commercial interests of this country?—I said, if I may remind you, that I regret that arrangement; I do not like the arrangement. I would much rather it was as it was when I first came into the office; the Slave Trade correspondence was then distributed through the several divisions of the office. I should be very reluctant to do anything in the office which might tend further to limit the information of the clerks generally; I like them to be informed of everything that is going on.

1843. I understood you to give as a reason why you could set apart one department for the Slave Trade correspondence, that it did not involve political questions?—It does not involve the current political questions of the day, such as are involved in commercial questions; commercial and political questions are very much blended together.

1844. Have you not had grave questions arising out of this Slave Trade correspondence, both with the United States and with France?—Yes, but they were exclusively Slave Trade questions; there were not two questions blended together.

1845. I understand you to say that you would not like to see a department entirely created for commerce, which I will call a Free-trade department, by the side of the Slave-trade department, because you would withdraw the commercial knowledge from the clerks as a whole, and thereby deprive them of the information which they now obtain; what is the benefit of that knowledge, if you never take a single step without consulting the Board of Trade?—I do not see what we should gain by having such a department, because, as far as communication with the Board of Trade goes, it would be just the same.

1846. Let me call your attention to what the class of questions must be with which you would have to deal in our commercial relations with foreign countries; of course you do not expect to enter into treaties with many foreign countries, by which you will simultaneously make any alteration in our tariff, because, as our tariff is now, in a free trade sense, completely reformed, you can no longer do anything of that kind: but looking at the fact that the bulk of the communications with Foreign Governments with relation to trade must be with reference to questions of detail, or to satisfy the public mind that you are doing something to promulgate those sound principles of trade which we have now adopted, could not those communications be carried on by having some one in the Foreign Office having the necessary knowledge to communicate through the Secretary of State for Foreign Affairs with the Foreign Governments, and with our own ministers and ambassadors abroad, without going

across Downing-street to another office whenever a step is taken in these comparatively trivial matters?—As Under Secretary of State for Foreign Affairs I should be very reluctant to sanction such a principle; I should be afraid to do it.

1847. Will you tell me what you are afraid of in the case of such comparatively insignificant matters?—We might involve ourselves in a difficulty; I can give an illustration if such a difficulty might arise. There was a case the other day which was a matter, apparently, of a very palpable and self-evident character; it was a question of some complaint against the way in which certain sewing-machines were dealt with in France. It seemed to be such a simple question that we thought we might dispose of it ourselves, and we had some correspondence with the French Government upon the subject, but we did not prevail with them, and the parties were not satisfied; at last we asked the opinion of the Board of Trade; and we then found that the same principle was involved in that question as was involved in another question which was also in discussion, namely, a question about petroleum. A good deal of correspondence took place, when I was absent from the office from illness, but the result has been that, after a long correspondence, we have been obliged to take the opinion of the law officers of the Crown upon it; that shows the danger of our dealing with such questions without going at once to the Board of Trade, or the department whose duty it is to advise upon them.

1848. You have stated that you have seen the Foreign Office a good number of years, that you know what the Foreign Office can do for its own purpose, and that you believe that the Foreign Office is, perhaps, one of the most efficient offices under Government, but by placing upon you a duty that you were perfectly incompetent to discharge you would be swamped altogether; do you still continue of opinion that you could not incorporate with your department a branch where commercial subjects could be attended to?—I am decidedly of that opinion.

1849. You are aware that whilst commercial men, Chambers of Commerce, and so on, may fail altogether to present to us any technical mode of effecting a change in the departments, they are very much dissatisfied with the way in which this double action of the Board of Trade and the Foreign Office works?—It appears to be so.

1850. You are aware that they are dissatisfied?—Yes, but without any real or sufficient reason.

1851. Is not that dissatisfaction in itself an argument why an attempt should be made to remedy what is felt to be a grievance?—I think it would be very undesirable to purchase the remedy of a supposed grievance, by injuring the working of a very efficient public office.

1852. You would consider it a very good reason for effecting some change if it were practicable; you do not consider that you are to be altogether totally regardless and independent of public opinion in such matters?—I should always wish to consult public opinion, as much as I could, but I would not sacrifice the Foreign Office to it; I think nobody knows so well what the Foreign Office can do as those who are engaged in conducting the business.

1853. Is not there another view of that question, and may it not be that those who have been for 40 years accustomed to the routine of public business are very averse to changing it?—I am very glad you have asked me that question, because the fact is, that we have no such obligatory routine in the office; we are always ready to change when a change can be effected with advantage. In my experience of the Foreign Office, the clerks, with the assistance of the Under-Secretaries and the permission of the Secretary of State, have been constantly changing the working of the department. We should make a change if we saw occasion for it. We have the office now upon a very excellent working footing, and, therefore, there is less room for any change; but if I saw any advantage likely to result from any alteration in the system of carrying on the office, or if a senior clerk saw any advantage likely to result from an alteration in the system of carrying on the office, and satisfied the Under Secretaries that such would be the result, it would at once be adopted; we are not bound or wedded to any rules whatever, except in so far as we consider the efficiency of the office is concerned.

1854. Has it ever occurred to you that you might have the functions of the Board of Trade, so far as regards those communications with foreign countries upon matters of trade, carried on in your own department without any increase of labour at all?—I have never looked at it as a question of labour. I looked upon it as a question of expediency with regard to the general working of the Department. I think it would be excessively undesirable to import any part of the business of the Board of Trade into the Foreign Office.

1855. At the present moment all commercial questions requiring communications with foreign countries pass through your hands, is not that so?—Yes.

1856. You do not allow the Board of Trade to communicate abroad, do you?—No.

1857. You think it necessary that you should communicate with the Board of Trade upon all foreign commercial questions, do you not?—I may say generally we keep them fully informed upon those questions.

1858. Does not the having to correspond by letter with the Board of Trade upon every question that you have to deal with in commercial matters, give you more trouble than if you could bring into your office a clerk, or clerks, from the Board of Trade who would give you the same knowledge which they afford to their chief, for I suppose that you are not ignorant of the fact that it is not the successive Presidents of the Board of Trade with whom the knowledge of the Board of Trade is deposited, but with the permanent officers there?—Yes, with the permanent officers.

1859. Would you not have less labour instead of more, if you had on your side of Downing-street one or two of the gentlemen from the Board of Trade, who really furnish all this information which you deal with, after you have written to them for it?—Generally speaking, I am not very fond of verbal communications; I like to have a thing down upon paper, because there it is to be referred to. Verbal communications are very often forgotten in a year or two, or even in a short time after they are made; but it is very desirable in a matter of the least importance, and nobody can tell in our office what matter may not assume importance in the course of

E. Hammond, Esq.

14 June 1864.

of a discussion, that we should have all that passes upon record.

1860. Seeing that you have insuperable objections to adding a small commercial branch to your department; turning to the other view of the question, have you insuperable objections to the Board of Trade communicating abroad upon trivial matters of detail connected with trade?—Equally insuperable; in the first place, we should depart from the rule universally observed throughout Europe; I will not say, that there is no exception in the case of any foreign Government, because I am not sure that there may not be one. But as a general rule throughout Europe, every communication made to a foreign Government upon matters of trade, is made through the department of the Secretary of State for Foreign Affairs, whatever the denomination of it may be; the Ministers of Commerce do not communicate with foreign Governments.

1861. Our commerce is much larger than that of foreign countries, and you have admitted that in the case of the commercial treaty with France, that rule was, to a certain extent, departed from?—It was departed from for the sake of convenience and expedition, but it was departed from merely in a matter of sheer detail, as to whether certain articles should bear certain imposts, or whether they should be rated in a particular way; whether cottons, for instance, according to their different numbers, should bear this or that duty; and whether iron, according to its different qualities, should bear this or that duty. The Board of Trade, at the same time, were in communication with the various commercial bodies, whose deputies were in communication with you in Paris. In that case, we were anxious to expedite the matter, and therefore we did not adhere to the routine which you appear to suppose we constantly adhere to; it is an illustration of our principle, that there is no fixed rule, but that on the emergency of the moment we will make a rule for the time.

1862. You stated that when the question was, whether there should be a commercial treaty with France at all, that was a subject which was referred to the Foreign Office, and the Board of Trade took no action in the matter; but that when it was decided that the treaty should be entered into, and it became merely a question of details, the whole matter was handed over to the Board of Trade?—You speak of the supplementary convention; we were bound by treaty to make that supplementary convention; the instructions to the Commissioners were drawn in the Foreign Office; the general instructions which formed the basis of all their proceedings emanated from the Foreign Office. I drew them myself; they stand in record in my own handwriting. Those instructions were, when the draft was drawn, seen by the President of the Board of Trade, and seen by the Chancellor of the Exchequer, and of course by the Secretary of State. They were adopted almost without any alteration; therefore we may fairly say that they emanated from the Foreign Office. They were founded upon a long memorandum previously drawn up by me upon a letter from the Board of Trade.

1863. The principle of the treaty having been affirmed, and the treaty itself having been signed by the Plenipotentiaries, then the business of arranging the details of the French and English tariffs was left to the Commissioners in Paris, of whom I was one, and we were instructed to correspond with the Board of Trade?—For the purpose, as is stated in the instructions, of saving time. But I should say that the conventions to which the tariffs were annexed were not signed till the tariffs themselves were settled.

1864. Seeing that you can have no more commercial treaties with any foreign Government after that, all your communications must either have reference to details, or to the propagandism, I may say, of free-trade principles; why could not that which was found so convenient in the case of the Commercial Treaty with France, namely, the direct correspondence of the Board of Trade with your agents abroad, be allowed, under some provision, to be repeated in future cases?—I apprehend that if there was another tariff arrangement, as there was in the case of the French Treaty, we should, as I have said already, apply to the Board of Trade for the assistance of a qualified person. We constantly apply to the Board of Trade, if there is occasion to do so, to send a qualified person to inquire into a commercial matter in agitation, and to assist our ministers. And if a question should arise arranging the details of a tariff, we should apply to them to send an expert over, but only for that particular occasion. The person so sent would not be put in communication with the Minister of Commerce, or if he were put in communication with the Minister of Commerce, or any person in his department, it would always be in strict subordination to the diplomatic representatives of the Crown there; he would be merely acting as a clerk for the time being to the Diplomatic Minister.

1865. The Government sent out to Paris with me, as the Assistant Commissioner, Mr. Mallet, of the Board of Trade?—Yes.

1866. Since the treaty has been arranged, a very great number of small questions have arisen in the working of the treaty with France; and reference has frequently been made to me; I have invariably sent the parties to Mr. Mallet at the Board of Trade; I presume that in all such cases Mr. Mallet can only communicate with the French Government through the Foreign Office?—I am not aware that Mr. Mallet communicates with the French Government at all; if he does, it is very irregular.

1867. I presume that Mr. Mallet, when he has seen a manufacturer here who has some grievance with reference to the operation of the treaty, and has heard his case, has no means of communicating with France except through the Foreign Office?—Allow me to say, that although I admit Mr. Mallet's great abilities and qualifications, I do not recognise him either as the organ of the Board of Trade, or as the organ of the British Government; under any circumstances, he can only act through the President of the Board of Trade.

1868. I will follow you step by step; Mr. Mallet having heard the grievance of a manufacturer upon some small matter of detail in the working of the treaty with France, could not go to the President of the Board of Trade, and through him communicate with any one at Paris; but the President of the Board of Trade having heard the case of this grievance must come over to you in the Foreign Office; that is so, is it not?—Yes, that is so.

1869. You

1869. You have mentioned the case just now of a sewing machine; that is a question of a disputed patent right, is it not?—No, I think the question there was not a question of patent right; the question there arose about the examination of the machine by an expert, or something of that kind; you are aware of the transaction; I cannot exactly state the facts, but it seemed a very simple question. As far as I remember that case, it was that some firm complained that they had sent over some sewing machines to Boulogne, and that they were challenged as not being of British manufacture, but as being of American manufacture, and were detained at Boulogne a very long time, so that they became deteriorated; the question arose upon an application to the French Government for compensation to the party; it seemed a very simple case to us in the first instance, and we thought we might deal with it at once; we had no idea that it was connected with the petroleum question.

1870. Other questions have arisen, of mere detail, connected with the copyright of designs, law, and other matters, and you still adhere to the opinion that in all those cases the matter must pass from the President of the Board of Trade into your hands, and that no communication should be made upon any matter of detail between the Board of Trade and Paris?—I certainly consider that the Secretary of State for Foreign Affairs is the only organ of Her Majesty's Government in communicating with Foreign Governments.

1871. Then you place the commercial world in this dilemma: you say you decline having any one in your department who is competent to deal with commercial questions, and you also object to any one in the Board of Trade who does comprehend these questions, communicating directly with any authorities at the Embassy at Paris, or elsewhere?—I certainly do; but there is no difficulty, that I can see, in a communication being made from the Board of Trade to us. I apprehend that the whole trade of the country hangs so much together, that it is necessary in dealing with foreign commercial questions, that you should do so with full knowledge of their bearing on the general trade of the country. Such knowledge the Board of Trade possesses, and it is better that it should impart it to the Foreign Office, rather than leave the Foreign Office to act upon the limited and imperfect knowledge which it might obtain for itself.

1872. You lay down an absolute rule, I had almost called it an irrational rule, that in the case of all complaints, however trivial, with reference to the working of the Treaty of Paris, or the detail of our commercial arrangements with any other country, you refuse to authorise a competent clerk or secretary to be in the Foreign Office to receive a merchant, and understand him, and communicate directly through his own chief abroad. And, at the same time, you maintain that it is quite as convenient for the merchant or manufacturer to go to the Board of Trade to see Mr. Mallet, and then for Mr. Mallet to communicate with the President of the Board of Trade, and for the President of the Board of Trade to communicate by letter across the street with you, and for you to communicate with the Secretary of State for Foreign Affairs, and for him to communicate with Lord Cowley at Paris. Do you think that such a complicated system as that can be satisfactory to the commercial world, unless you show better reasons than you have hitherto given against any change?—I do not think there is that complication which you have represented; it seems to me to be a process much less complicated than you imagine. I see no difficulty in it. Though Mr. Mallet may have seen the person complaining, he could not himself act without the sanction of his official chief.

1873. Mr. Mallet was sent to me as Assistant Commissioner in Paris, I only knew him then, I did not know him before, but I found him a gentleman exceedingly well informed upon commercial matters, I might say deeply versed in those sound principles of trade which we profess to have adopted in this country. Do you not think that as you are to have constant applications on trivial matters connected with our commerce with foreign countries, it would be an advantage to have a person as well informed as Mr. Mallet is, in direct communication with that Department which has to correspond abroad upon the commercial questions which are brought under its notice. I do not speak of Mr. Mallet as an individual, I only speak of him as the gentleman who was sent out to Paris to me, where I made his acquaintance?—I think that goes upon the assumption that the Secretary of State for Foreign Affairs is to take the word of his clerk, without investigating the matter himself. I consider that nothing would be more objectionable than to establish a system which would make a subordinate office the ruling spirit of the Foreign Office in commercial matters. The Secretary of State not having time to acquaint himself with the details of such question, would be placed according to your suggestion in dependence on the clerk. I think there could be nothing more objectionable than a system which would make the Secretary of State wholly dependent on a subordinate officer, be he an Under Secretary of State or be he a clerk, who would rule, as it were, the office.

1874. Would you not rather say, to represent the office; because, I take it, that the gentlemen sent out to represent the Government in a matter of such importance as the arrangement of the details of the Commercial Treaty certainly was, would be considered a very safe adviser for the Secretary of State in that particular branch to which he had given great attention?—I think that a Secretary of State responsible to Parliament would ill discharge his duty if he allowed matters to go on without getting to the bottom of them himself. I think that the House of Commons would saddle the whole responsibility upon the Secretary of State.

1875. I understood you to set out by stating that the Secretary of State for Foreign Affairs acts implicitly upon the knowledge and information of the Board of Trade in commercial questions?—He does not necessarily do so; he exercises his own judgment. In addition to that, the opinion of the Board of Trade, upon which he acts, is not the judgment of a clerk, but of a Cabinet Minister, who equally with the Secretary of State, is responsible to Parliament and the country. It is the opinion of a Cabinet Minister having access to details.

1876. The President of the Board of Trade, as a rule, is a Cabinet Minister, is he not?—Yes.

E. Hammond, Esq.

14 June 1864.

1877. Would not that be an additional reason why that Department might be left to communicate with a department in the foreign embassies, upon mere questions of detail connected with trade?—I do not know whether you mean that the Board of Trade should instruct a department in our embassies upon matters of trade, or that it should communicate directly with the Governments of foreign countries.

1878. Are not all communications from your department to foreign countries sent to your foreign Minister?—Not always: sometimes they are, and sometimes to the representative of the foreign country in London.

1879. As a rule?—There is no fixed rule upon the subject; very often the French or some other Ambassador writes directly to us, and we answer him directly.

1880. Would it not be competent for the President of the Board of Trade to see the French Ambassador in London in the same way as the Secretary of State does?—His doing so generally would be objectionable, because the Secretary of State for Foreign Affairs is the representative of the Crown in dealings with foreign countries, and it would be very inconvenient to have two representatives of the Crown discussing separately the same question. It has been found so inconvenient to have foreign Ministers going to other departments, that a circular has been sent to them more than once, begging them to abstain from doing so; in fact, until the time of the Exhibition, the application to see a dockyard used to be made through the Foreign Office, but we relaxed the rule in that particular, and foreign Ministers may now apply directly to the Admiralty: however, that may sometimes be attended with inconvenience, because they may let in unwittingly a person to see things which he ought not to be admitted to see.

1881. I think I understood you to say that Lord Clarendon had adopted the innovation of requiring the secretaries of legation abroad to send home reports upon the commerce of foreign countries periodically?—Yes.

1882. Seeing that you have given to that extent certain duties of a commercial character to a secretary of legation abroad, would there be an insuperable difficulty in your allowing communications to be made to an Ambassador or Minister abroad from the Board of Trade through the first Secretary, upon commercial questions?—Yes, because when you refer to the circular, you will see that we do not take the Secretary away from his dependence upon the Minister; we require him to send his Report through the Minister; we do not relieve the Secretary from strict subordination to the Minister. The real reason of requiring the Reports was, that from the position in which the secretaries of legations are, they, when their chief is present, have not very much to do, and we thought it was very desirable to give them something to occupy their minds, and to test their abilities; that was the origin of that circular.

1883. You are aware, are you not, that amongst the commercial bodies in this country there is, and has been for many years, a very high opinion of the intelligence within the Board of Trade upon all commercial questions?—I should think so; the President of the Board of Trade can speak more of his own Department than I can, but I have every reason to suppose that there are some very able men in the Board of Trade.

1884. Are you aware that there is considerable discontent felt amongst the chambers of commerce and commercial men, who communicate with the Board of Trade, upon matters of business, on account of their feeling that, in their communications there, they are not dealing directly with those who are to represent their case abroad?—It would seem so from the evidence before the Committee; but I can only say that I think it is a very unreasonable discontent.

1885. Do you think it is unreasonable that commercial men should complain of a system by which there is great delay caused in the realisation of their objects, in reference to these questions of detail in foreign countries?—That involves an assumption that there would be less delay if the business was wholly managed by the Board of Trade.

1886. Do you think it possible that there can be a double action between the Board of Trade and the Foreign Office, such as you have described, upon commercial questions, without necessarily causing delay?—There is no delay to be spoken of; there need not be.

1887. Are you aware, also, that there is a conviction on the minds of the commercial classes that their case is not so fully represented to the parties through whom their communications with foreign countries must be made, as if they had themselves direct communications with those parties; I refer to the parties at home, who have charge of the commercial communications with foreign countries?—I cannot answer for the impression that there may be among commercial men. As to whether it is the case in reality, that is a question which I should wish the President of the Board of Trade to answer, because it is a question involving the Board of Trade; I presume that the Board of Trade having received a representation, impart it faithfully to the Foreign Office, with the benefit also of their opinion upon it.

1888. Take, as an illustration your own case, if you had a matter to communicate to a party, upon which you were better informed than the party to whom you were going to communicate it, would you not feel more satisfaction in coming into direct contact with the party to whom you wished to impart your wishes, or state your grievance, than if you knew that your statement had to go through the hands of a third party?—In the practical working of the thing, I do not think there would be much advantage gained, because if the commercial men only came to us, we should have to refer to the Board of Trade, and the Board of Trade would have to send their answer back to us.

1889. In order to illustrate the nature of the complaint, I may put it thus: the complaint is, that the party who has to act, is ignorant, and the party to whom the representation is communicated being well informed and intelligent, has not the power to act?—I contend that, do what you like with the Foreign Office, you could not obviate the necessity of its referring to the Board of Trade, unless you blended the two offices together, and made the Secretary of State for Foreign Affairs also the President of the Board of Trade. That is the groundwhich I take, and it is a ground which I think the President of the Board of

of Trade will admit, because it is necessary, I apprehend, in all commercial questions, that you should have general and complete knowledge. I do not see how the Foreign Office, except it had the Board of Trade actually thrown into it, could possess the general and complete knowledge which would enable it to deal safely with commercial questions, in which the commercial men of the country are interested. We might be dealing with one question, without knowing that in dealing with that question we were interfering and clashing very much with another.

1890. What difficulty or inconvenience do you apprehend, in allowing the President of the Board of Trade to communicate directly with the Embassy at Paris, assuming it to be a regulation that this communication from the Board of Trade passes into the hands of the First Secretary of the Embassy, to execute a little Ministerial commission?—It is an old saying, that "a man cannot serve two masters," and an ambassador would be placed in great embarrassment if he had to serve both the President of the Board of Trade and the Secretary of State for Foreign Affairs.

1891. You take into consideration the fact that the President of the Board of Trade is a Cabinet Minister?—You might as well say, why should not the First Lord of the Admiralty, in regard to a naval matter, or the Home Secretary, in a case of extradition, or a lunatic sent from France, they equally being Cabinet Ministers, equally communicate directly with our Ministers abroad.

1892. An admiral is in communication with our Ambassadors when he is upon a foreign station, is he not?—I speak of the Admiralty Department.

1893. Mr. *Layard.*] Is there no distinction between the Admiralty Department and an admiral abroad?—An admiral abroad, of course, communicates with our Ministers abroad; but a British Minister, or diplomatist, whatever rank he may hold, has no authority, as a general rule, to give any order to an admiral or other naval officer. If an Ambassador was to give an order to an admiral, unless by previous arrangement between the Foreign Office and the Admiralty, of which I can only remember one or two instances occurring in my long experience, and if the Admiralty were to become aware that the Minister had given that order, the Admiralty would very properly call our attention to the irregularity, and we should notice it to the Ambassador.

1894. Mr. *Cobden.*] Do you think that there would be any serious disadvantage to the diplomatic service, in a political sense, if the Board of Trade were put in communication with the embassies abroad in matters of detail, upon commercial questions?—It might happen that there would be contradictory instructions emanating from the two Departments. Politics and commerce are so much blended together that you might often have contradictory instructions issued on the same point. The parties receiving double instructions, emanating from equal authorities, would be very much puzzled how to deal with those contradictory instructions.

1895. Seeing that the commercial community feels aggrieved at the present organization of these two departments, and seeing that the House of Commons has appointed this Committee, which is a *primâ facie* proof that they accept the complaint as deserving of attention, do you see no way of remedying it either by an alteration of the Board of Trade, or the Foreign Office; in fact by effecting any alteration to meet the wishes of the commercial community?—I think no change could be made that would benefit the commercial world in the way which they anticipate; that is my opinion.

1896. No successful change?—No.

1897. I have put to you two alternatives, the one of giving more commercial knowledge to the Foreign Office, and the other of giving a sort of semi-diplomatic power to the Board of Trade; do you think both those propositions so objectionable that you have no preference for the one over the other?—I think that they are both useless and objectionable.

1898. Mr. *Seymour Fitzgerald.*] With reference to the French Treaty, I understood you to say that the Commissioners corresponded directly with the Board of Trade in order to settle all questions of detail?—Yes, of tariff values.

1899. Upon questions also, I suppose, of the classification, and other matters of detail, that would arise out of the tariff settlement?—Yes.

1900. Questions have been put to you with regard to the difficulties arising out of the action of the treaty with reference to points of detail, and you have expressed a strong opinion against the Board of Trade dealing with them directly in communication with our Ministers abroad?—Yes.

1901. In what respect can you draw a distinction between the details that were to be settled at Paris directly by the Board of Trade, and those details which were felt to be grievances, which were to be regulated by the Foreign Office?—In the first place, what was done in the case of the French Treaty, was a mere assent of the Foreign Office to a departure from the usual practice; in the next place, there is a wide difference between such an immense movement as was involved in settling the Tariff, and supplementary Treaty, and dealing with a mere isolated case. We can deal with a mere isolated case in communication with the Board of Trade, but it would involve a good deal of delay if we dealt with the, I do not know how many different points, a thousand and more, which were involved in the Tariff. The departure from the usual practice was resorted to, as the instruction said, merely to save delay in the case of the French Treaty.

1902. If there were that difference it would be a difference in favour of permitting the Board of Trade to deal with the isolated matters rather than leaving it to deal with the general arrangement of a treaty, would it not?—We, being in communication with the Board of Trade upon those particular points, are very competent to deal with them.

1903. I assume that the points of detail are felt to be matters of grievance, and are brought to their notice by the commercial men, or by the Chambers of Commerce?—I do not think very many of those cases have occurred.

1904. I wish to direct attention to the principle?—Whatever the principle may be, I should prefer being a practical man to deal with the thing practically. Practically these cases are of such rare occurrence that there can be no occasion to break down the rule, which confines to the Secretary of State for Foreign Affairs all communication with foreign countries.

E. Hammond, Esq.

14 June 1864.

1905. Is not the system at once broken through by the permission which you gave at the time of the French Treaty to the Board of Trade to deal with these matters of detail?—That was an exceptional case, as I have said before. If a great object is to be attained, we, at the Foreign Office will not bind ourselves to observe a rule, however salutary it may be in ordinary cases.

1906. In what respect was that an exceptional case, and why should not the Board of Trade correspond directly with our agents abroad upon matters of detail connected with tariffs in the case of other countries, as they did with great advantage in the case of France?—In the first place, the Board of Trade did not correspond with our diplomatic agents. Mr. Cobden, though holding a diplomatic full power to sign a treaty, and the gentlemen who accompanied him to Paris, went there for a special purpose connected with trade; it was a special matter to settle this tariff.

1907 That makes the case rather stronger, as it appears to me; because, who did Mr. Cobden and his colleagues represent, the Board of Trade, or the Foreign Office?—They represented the Government.

1908. What department of the Government?—They represented the Foreign Office.

1909. Then the Board of Trade did communicate directly with the representatives of the Foreign Office?—Yes; but there is a wide difference between our ordinary diplomatic establishment and the diplomatic commission upon which those gentlemen went. I think you cannot identify this special mission upon a special subject with our ordinary diplomatic missions which are in communication with the Secretary of State for Foreign Affairs. I am not aware that Mr. Cobden was at all in communication with the Secretary of State for Foreign Affairs with reference to the details of the Tariff.

1910. Does not, in your opinion, the case of the French Treaty, in which the Board of Trade were in direct communication with the parties who were negotiating the details of the French Treaty, establish this, that in cases where matters of detail are principally concerned, there are occasions where it is a great advantage to have direct communication between the department representing the commercial interests of this country, and those engaged in diplomatic transactions abroad?—I must answer that question with reference to what Mr. Cobden has just now incidentally stated. If that rule were to be enforced in England upon the grounds which Mr. Cobden has stated, the same rule should be enforced in France. But although Mr. Rouher, the Minister of Commerce, was acting in regard to the negotiation of the tariff, in the same capacity as Mr. Cobden, and settling it without special instruction in regard to each item from the Minister for Foreign Affairs, yet as far as my information goes, the Minister of Commerce is not now allowed to correspond with a foreign Government upon any matter, however trivial, in reference to commerce, except through the Minister for Foreign Affairs.

1911. Then your objection to the adoption of such a practice in this country is, that it is not the practice adopted by foreign countries?—No; I was giving an explanation in regard to what Mr. Cobden said just now. He deduced from the fact that he at that time was, as you may say, acting under the orders of the Board of Trade, the inference that it was a sound practice for all time. I say that although at that time in France a similar practice was adopted by the French, they have reverted to their old practice at the present time. The relations between the Minister for Foreign Affairs in France and the Minister of Commerce in France, and the Foreign Office in England and the Minister of Commerce in England, as far as I can make out, are as nearly as possible the same. I asked Lord Cowley the other day, as to the practice in France, and he told me that they require that every transaction connected with commerce with a foreign country, should pass through the Foreign Office. That is the general rule there, as it is the general rule with us.

1912. There has been a modification of that general rule, has there not?—Both countries modified it upon the special occasion of the French Treaty, but it was not a modification, which, as far as my information goes, was persisted in in France, and it has not been persisted in in this country.

1913. The question was put to you, why should not the Board of Trade correspond directly upon questions concerning the commerce of the country with our diplomatic agents abroad, and you give the answer, "No man can serve two masters;" does not that proverb rather arise from this, that it is supposed that the interests of those two masters might conflict?—The views of the two masters might conflict; that is to say, the Board of Trade might give an instruction without reference to, and in ignorance of, a state of general politics prevailing at the time, which might clash with instructions given by the Secretary of State, in reference to that state of things.

1914. Do you suppose that the Minister of Commerce in this country would be entirely ignorant of political questions abroad which might affect commercial questions?—He would not be entirely ignorant; but there might be matters within the knowledge of the Secretary of State which the President of the Board of Trade might not be aware of.

1915. Do you think that a state of things might not be prevented by communication between the Departments, or by representations made by foreign agents abroad in such an exceptional case as that?—You must know as well as I do that the Secretary of State for Foreign Affairs must constantly be in possession of information which would not properly be matter of communication between him and the Board of Trade.

1916. Therefore, you express the strongest opinion against any arrangement by which there should be direct communication between the Board of Trade and our Ministers abroad?—I have the strongest opinion against any such arrangement.

1917. Do you take the same objection with reference to direct communication between the Consuls and the Board of Trade?—I think it would be attended with inconvenience; that is my impression; and I have always regretted that I had not been Under Secretary of State a year, and therefore felt my own place more when the mercantile marine instructions went from the Board of Trade, otherwise I should have done my best to prevent their being so sent; I should have done my best to keep them in the Foreign Office.

1918. Your

1918. Your objection to having direct communication between the Board of Trade and our Ministers abroad is, that there might be political questions at the time pending between the two countries, which might give rise to a kind of conflict of jurisdiction between the two Departments?—Yes.

1919. But in the case of Consuls from whom we only derive information, and who have nothing to do with reference to direct political action in the country in which they are placed, how could the same objection arise?—Because although the consuls were certainly sent abroad originally for the protection of trade, they have a good many other duties to perform besides the protection of trade. They have to look after the general interests of British subjects in the place of their residence, they have to look after the chapel generally, and the protection of British subjects in matters of Police, and to look after British interests in matters of intestacy and things of that kind, which are not within the province of the Board of Trade, but which involve a great number of questions deeply interesting to parties concerned, and which naturally come within the province of the Foreign Office; perhaps I may explain to the Committee that the direct action of a consul in arguing and discussing matters of trade is nil; the local authorities at the place at which a consul is established, have no influence, or at any rate no direct guiding or ruling influence over the general decisions of the Government, which all emanate from the seat of Government where our diplomatic representatives are established; therefore, the only practical effect of the consuls corresponding directly with the Board of Trade upon commercial matters, would be, so far as I am aware, that instead of sending their consular reports to the Foreign Office, they would send them to the Board of Trade, since no instructions which could be issued to consuls upon matters of that kind would have any guiding influence upon the general relations between the country in which the consul was established, and the country at home.

1920. I gather from that answer that you do not see that great advantage would be obtained, rather than that you have any positive objection to such an arrangement being made?—I have the same objection which I have stated in the case of the Foreign Ministers, namely, that of having an officer corresponding with two Departments. I think it is always an inconvenient arrangement for an officer to take his orders from two Departments. The two Departments might see a question in a different light.

1921. I am speaking of information given by the consuls to the Board of Trade, or information that the Board of Trade wishes disseminated at the post where the Consul is placed; why should not the correspondence go directly between the Department and the Consul, and how would your objection arise, that the two Departments might see it in a different light, seeing that the object is one which you yourself say directly concerns the Board of Trade, and only indirectly, in the way of information, concerns the Foreign Office?—I said that the only thing would be, that a Consul might send his commercial reports to the Board of Trade; but if a Consul has to take any action in the foreign country, I claim for the Foreign Office, as a matter of absolute necessity, that the order to take action should emanate from us, because we must judge of the propriety of taking action in any case with reference to general considerations connected with our political relations with the foreign country.

1922. In cases where there is not political action concerned at all, you could not, as a matter of principle, object to a direct communication between the Board of Trade and a consul?—The difficulty is to draw a line, and to say that any question, which the consul might be required to raise, might not eventually involve political action; there would be such a state of confusion in the unfortunate consul's mind as to whether in any particular point he was subordinate to the Board of Trade, or to the Foreign Office, that a man would be driven wild; he would not know what to do.

1923. Is not the position this, that the Foreign Office will take no action without the advice of the Board of Trade, that the opinion of the Board of Trade must be formed upon the information given to them, and that instead of obtaining that information directly for themselves, they obtain it from a department that is unable to act without their counsel or advice?—I understand the question as applying to communications founded upon general questions of commercial policy. The Board of Trade obtain their information from other quarters besides the Foreign Office. We want the Board of Trade to obtain information for us from the whole commercial community, we cannot obtain it for ourselves.

1924. With reference to what is passing in foreign countries generally, by far the larger part of the information which the Board of Trade has to obtain, is obtained directly through the Foreign Office and its agents, is it not?—Certainly; but the Board of Trade must test all that information with reference to the general commercial interests of the country, and I apprehend that the Board of Trade would not blindly adopt any representation from any Chamber of Commerce, or any communication received from abroad, without looking at it in a general point of view, as to its general bearing upon the trade of the country.

1925. Would they not test the information they received direct from our diplomatic or consular agents abroad in the same way?—I presume they would.

1926. Would not the information be the same?—Only that if the result of the testing should be an instruction on the part of the Board of Trade, you would have our representatives abroad acting under two departments; that I conceive to be a great inconvenience. I cannot conceive anything so perplexing or likely to produce confusion in our communications with foreign countries, as having two departments giving instructions to the same agent; I think it would be a very inconvenient arrangement; it is a matter of opinion; I see great objection to it myself; the commercial world do not see an objection; but perhaps the best judge of a matter of that kind is the department which is brought into direct communication with our representatives abroad.

1927. Your real objection is, that occasions would arise when you think that the Board of Trade might give instructions direct to our diplomatic agents abroad, which ought more properly to go through the Foreign Office?—Unquestionably, I think so; if a rule was generally

E. Hammond, Esq.

14 June 1864.

generally laid down, that upon all occasions the Board of Trade might communicate their views directly to Ministers abroad, the utmost possible inconvenience would arise to the general interests of the country.

1928. You say in all cases; do you make the same objection to there being a direct communication between the Board of Trade and our diplomatic and consular agents upon those points upon which information is required?—I think there would be very great inconvenience in dividing the correspondence with our diplomatic and consular agents abroad between two departments of the Government.

1929. Mr. *Henley.*] The diplomatic agents abroad represent the Crown, do they not?—Yes, the Crown or the Government.

1930. The consuls are subordinate in their respective countries to the Ambassador or Minister, are they not?—Certainly.

1931. According to the constitution of our country, the communications to the diplomatic agents purport to be communications from the Crown?—Yes.

1932. According to our Constitution those communications must be through the Secretary of State?—Yes.

1933. Therefore, whatever the reasons might be, supposing they were to prevail, for permitting any other department to communicate directly with the representatives of the Crown in foreign countries, I suppose it would be necessary to create that department into a secretaryship of State, according to the present practice of our Constitution?—The rule is that the Secretary of State is the only person authorised to signify the Queen's pleasure. We signify the Queen's pleasure to the Admiralty, and other departments.

1934. The communications to diplomatic agents abroad, from this country, purport to be the communications of the Crown, do they not?—Yes.

1935. And therefore, necessarily, by the constitution of this country, they are signed by the Secretary of State, who is responsible for them?—They are signed by the Secretary of State, or by his direction.

1936. The case which has been alluded to in Paris was to this effect, that a certain part of that duty, for a special purpose, was delegated to particular persons?—Yes.

1937. If I understand you rightly, you considered that that is an exception by no means bearing on the general rule with regard to all these communications?—Certainly; it was so much an exception that a special paragraph was inserted in the instruction to that effect.

1938. Therefore it was, *pro hac vice*, a delegated authority to another department to do what, under ordinary circumstances, you would have done yourselves?—Yes.

1939. Mr. *Cobden.*] It was understood at the time that the exception was made to economise time and labour, was it not?—Yes, it was; the matter was pressing, and had been very much delayed, from no fault of the British Government, but from the delay of the French Foreign Office in preparing for negotiating the Supplementary Treaty. Strictly speaking, it ought to have been negotiated immediately after the other treaty, but it was not until the month of August, I believe, that the French said that they were ready to go into it; the treaty ought to have been signed by the 1st of October.

1940. That was the real motive for giving those exceptional powers to the Commissioners in Paris, to enable them to correspond with the Board of Trade, and thereby to save time?—Yes; we were pressed for time.

1941. Are not commercial men and the commercial community always pressed for time, and would not the same rule apply in all cases to them as applied in the case of the French Treaty. You would economise their time and labour by allowing them to be brought into more direct communication with the foreign Ministers through the Board of Trade?—But then, unless you threw the whole Board of Trade into the Foreign Office, or the Foreign Office into the Board of Trade, you would not obviate the necessity of going to both. It is perfectly impossible, if you have two offices, to say, You shall act so far in one office and so far in another. You must do the whole business of the same kind in one office.

1942. *Chairman.*] I understood you to say just now you thought that, in order for the Board of Trade to correspond with the consuls, they would have to have the power of a Secretary of State. If that be necessary, how comes it that the Board of Trade at present correspond with the consuls upon questions respecting the mercantile marine?—I am not quite sure whether it is not under a special Act of Parliament; there is the Mercantile Marine Act, by which a great number of things were put under the Board of Trade. I know the arrangement was the result of that Act, for the Board of Trade sent a long commentary upon the Mercantile Marine Act to our consuls.

1943. Mr. *Layard.*] Practically, the only advantage gained if our consuls were to correspond directly with the Board of Trade and not with the Foreign Office, would be that there would be a few hours saved, would it not?—There would be a little time saved certainly, but nothing to speak of.

1944. The difference would be between the Board of Trade receiving them by one post, perhaps, over night, and our sending them next morning to the Board of Trade, the Board of Trade would receive them four or five hours sooner?—Yes.

1945. And all the disadvantages and risks you describe would be incurred merely to save four or five hours?—Yes.

1946. Mr. *Seymour Fitzgerald.*] Is it your opinion that if a consular agent abroad was corresponding directly with the Board of Trade, instead of the Political Department, that is to say, the Foreign Office, he would not be likely to show greater zeal in, and attend more completely to, commercial matters than he does at the present time?—That is not my opinion.

1947. Sir *Minto Farquhar.*] All the diplomatic agents abroad have their appointments from the Minister of State for Foreign Affairs, sanctioned by the Queen, have they not?—Yes, and the consuls also; the Queen's pleasure is taken about the consuls in the same manner as about the diplomatic agents.

1948. Do you not think that if the Board of Trade were allowed to correspond directly with those different Ministers, and did not communicate previously to the Foreign Office, some inconvenience might arise from the Foreign Office not knowing what were the communications

tions made to those Ministers by the Board of Trade?—Certainly; we ought to know everything that our agents abroad do.

1949. Supposing the Board of Trade to have communicated with any of those Ministers, and not to be satisfied with the conduct of that particular matter of trade upon which they had communicated with them, would not the Minister be subject to a reprimand from the Board of Trade without the knowledge of the Foreign Office?—Yes; and the Foreign Office might not, perhaps, have concurred in the propriety of the reprimand, if they had known it.

1950. In fact, those gentlemen might be perplexed by the orders which they might receive from two different directions?—Yes; that is just the point which I spoke of when I referred to the inconvenience of serving two masters. You might have contradictory instructions issued, and the consuls would not know which to obey.

1951. Gentlemen connected with the Chambers of Commerce are decidedly under the impression that at present great delay arises from having to communicate with two officers; are you not of opinion, as far as your judgment goes, that that fear is exaggerated?—Yes. I judge from what I have seen of the evidence taken before the Committee, that they have that impression; but it is a groundless impression, and, as far as the Foreign Office is concerned, there is no further delay occurring than what is necessary to assure ourselves of the propriety of acting upon any representation which may be sent to us from the Board of Trade. A rule which I have always tried to impress upon the clerks, is to have their boxes clear on the Saturday night, if possible. It was the rule which I adopted when I was a clerk in the office; my box used to be clear on the Saturday night; and I have always told the clerks to follow that practice, if they can. It constantly happens in the Foreign Office that a paper arrives at three or four o'clock in the afternoon, and it is out of the Foreign Office and disposed of in half-an-hour.

Veneris, 17° *die Junii*, 1864.

MEMBERS PRESENT:

Mr. Bazley.
Mr. S. Beaumont.
Mr. Cobden.
Sir M. Farquhar.
Mr. S. Fitzgerald.
Mr. W. E. Forster.
Mr. M. Gibson.
Mr. Gregory.
Mr. Kinnaird.
Mr. Layard.
Sir S. Northcote.
Mr. Pender.
Mr. Charles Turner.

WILLIAM EDWARD FORSTER, Esq., IN THE CHAIR.

JAMES BOOTH, Esq., called in; and Examined.

J. Booth, Esq.
17 June 1864.

1952. *Chairman.*] YOU are the Chief Secretary, I believe, to the Board of Trade?—I am the Senior Secretary to the Board of Trade.

1953. How long have you been there?—About fourteen years.

1954. Were you in the Board of Trade before you became secretary?—No; I was Counsel to the Speaker down to the time when I became secretary.

1955. Then your first connection with the Board of Trade was on your being appointed secretary?—Yes, in the year 1850.

1956. Were you the senior secretary when you were first appointed?—I was the junior secretary, Mr. Porter was then the senior secretary.

1957. On becoming senior secretary did your business at the Board of Trade change, or was it merely that you became senior secretary from the fact that the other secretary was appointed after you?—Simply from that fact.

1958. Will you be good enough to inform the Committee, first, with regard to the Board of Trade itself, what is the relation in which the President stands to the Vice-President?—The Vice-President of the Board of Trade has, strictly, no duties as Vice-President. By arrangement between himself and the President, he assists the President in the discharge of his duties; the Vice-President also usually takes, without salary, the office of Paymaster of the Forces. The Committee are perhaps aware that there is, in practice, no such thing as a Board of Trade or a Committee of Council for Trade and Foreign Plantations. At the commencement of each reign an Order in Council is passed, constituting the Committee for the consideration of all matters relating to Trade and Foreign Plantations, and naming certain high functionaries in Church and State as the members constituting that Committee: the Archbishop of Canterbury, the Lord Chancellor, the First Lord of the Treasury, all the Secretaries of State, the Chancellor of the Exchequer, and some others. Then two individuals are also named, one of whom is to be the President of this Committee, and in his absence the other.

1959. Does the Committee ever meet, in point of fact?—It never meets; it is entirely a fiction; and by the same fiction that there is a Committee for Trade, the President is never absent; therefore the duties of the Vice-President, strictly speaking, never arise.

1960. Am I to understand that there is no special function given to the Vice-President as distinguished from the President of the Board of Trade?—Not any; by arrangement between them it is settled what duties shall be discharged by the one, and what by the other.

1961. The relation in which they stand is, I suppose, this, that the Vice-President acts as President in case of the absence or illness of the President, and that, in case of their being in different Houses of Parliament, the Board of Trade is represented by each of them in the House in which he is?—That is so.

1962. Will you tell the Committee generally what are, at present, the functions of the Board of Trade?—The functions of the Board of Trade are of a very multifarious character, the greater part of them being duties assigned to them by various Acts of Parliament; the two main branches of those duties being connected with the supervision of Railways and the supervision of what we compendiously call the Marine Department, which is a very extensive department, embracing, perhaps, one-half of the work of the Board of Trade; in addition to that there are duties of a minor character assigned by other Acts of Parliament.

1963. I presume that I am right in supposing that now the main business of the Board of Trade is administrative rather than consultative?—I think so.

1964. Will you shortly enumerate the different administrative functions of the Board of Trade?—In the Railway Department, among our duties, are the inspection of all new lines of railway before they are allowed to be opened for passenger traffic; the approval of bye-laws for the working of the railway, and the approval of the arrangements for cheap trains; the inquiry into all accidents attended with serious damage; the regulation of level-crossings; the approval of deviations from authorised works; the appointment of arbitrators and the settlement of disputes, with respect to various matters referred to them by the Local Acts. Incident to this branch of their duties, the Houses of Parliament call for a report from this department upon all Railway

way Bills; this is a duty of a very onerous character. In the Mercantile Marine, the following are among the executive duties of the Board of Trade: the exercise of what was formerly the Admiralty jurisdiction for the protection of tidal waters; the preparation of provisional orders relating to piers and harbours; the same relating to pilots; the issuing of pilotage certificates to masters and mates, and the consideration of changes in pilotage districts; the consideration of bye-laws of the pilotage authoties, and the consideration of applications to the Public Works Loan Commissioners for loans for the improvement of harbours and docks, and the preparation of reports to Parliament upon all Bills relating to harbours, docks, piers, and of the works affecting tidal waters. There is also the control of the three great departments for the construction and regulation of lights and beacons, namely, the Trinity House, the Dublin Ballast Board, and the Northern Lights Commissioners; the giving of assistance in constructing lighthouses in the Colonies, and in foreign countries; the superintendence of the Vote for the relief of British subjects abroad; the collection and distribution of the wages and effects of deceased seamen; the administration of the Merchant Seamen's Fund Winding-up Act; the collection and distribution of wreck on the coasts of the United Kingdom; the superintendence of the investigations into collisions and accidents at sea; and of inquiries by Local Marine Boards, and by Naval Courts abroad, into the misconduct of the masters and mates of vessels; the superintendence of lifeboats and mortar apparatus round the coasts of the kingdom; the consideration of the granting of rewards for saving life on the coast of the United Kingdom; rewards for services rendered by foreigners to British ships and seamen; the organization and superintendence of the Naval Reserve, assisting the Admiralty in that respect.

1965. That is to say, so far as it affects merchant sailors?—Yes; it is a very large branch of duty. In the discharge of this duty we derive much assistance from the office of the Registrar General of Seamen, a large office under the Marine Department of the Board of Trade, with duties of a very extensive character. They are more especially concerned in the collection and record of information relating to the Mercantile Marine. We have also the management of certain harbours, Ramsgate, Holyhead, and Portpatrick. I think that I have now enumerated most of the duties in the Marine Department of the Board of Trade, except the Meteorologic Office, which is also considered a branch of the Marine Department.

1966. What is the next administrative duty?—The next that I would mention is the superintendence of the Office for the Registration of Joint Stock Companies, and various duties imposed upon us by the Companies' Act of 1862; and the superintendence of the Office for the Registration of Designs. We discharge duties also under the Metropolitan Waterworks Act of 1852, under the Telegraphs Act, and under the Alkali Works Act. We have duties also under the Act for the Legalization of Art-Unions, and under the Fisheries Convention Act. We have also to advise the Crown concerning the grant of Royal charters.

1967. Are you not now getting into your consultative functions?—I think these may be considered administrative functions. If we advise the Crown as to whether a charter should or should not be granted, and settle its terms, it is very much in the nature of an executive duty on the part of the Board of Trade. I was about to mention one that might be called a consultative duty. The Colonial Office is in the habit of referring for our consideration Colonial Acts relating to trade and to matters relating to shipping, asking us the question whether we see any reason why the Act should not receive the confirmation of the Crown.

1968. Was not there a Committee of the Board of Trade for that object, perhaps with still greater power of interference than is now possessed by the Board of Trade, appointed some time ago but no longer in existence?—The Board of Trade is called "The Committee for the consideration of all matters relating to Trade and Foreign Plantations." Formerly the Colonies were under the Board of Trade, and, until a very recent period, all the Acts of the Colonial Authorities requiring the confirmation of the Queen in Council were referred to the Board of Trade, and became the subject of Minutes of the President of the Board of Trade. That has now ceased to be the case, and the Colonial Office merely refers to the Board of Trade certain of the Colonial Acts relating to matters of trade, asking their opinion as to whether there is any reason why they should not receive the sanction of the Crown.

1969. Was not there, a few years ago, a function given to the Board of Trade with regard to the Colonies that is not now in existence?—It was not a function recently given: it was a practice that Colonial Acts should, in form, be confirmed by a Minute of the President of the Board of Trade; a remnant, I suppose, of the old system of matters relating to Foreign Plantations being referred to the Board of Trade.

1970. Is that confirmation now necessary?—No; it does not now take place. I think what I have stated nearly exhausts the list of our functions; we have also had the preparation of legislative measures connected with those various subjects which, during the last 15 years, have been of a very extensive and laborious character. The Board of Trade is also expected to originate or to watch over all legislative measures connected with trade or affecting commercial interests, except questions of customs or excise, and questions relating to banking and currency, which are undertaken by the Treasury.

1971. Is it a new thing that that exception is made with the Treasury, or has it been the case for some time?—In former times matters relating to customs and excise were much more commonly referred for the consideration of the Board of Trade than they are at present. Now the practice is, so far as it comes under my cognisance, for the Treasury to take upon itself to determine all questions relating to customs and excise legislation, and also to banking and currency.

1972. Which of those different matters that come under the superintendence of the Board of Trade are referred to you as one of the two secretaries?—In the first place, the whole of the Railway Department is immediately under my care, and in the Commercial or General Department matters relating to Companies. Colonial Acts and charters are also referred to me, and all questions not included in the several divisions of the office. For the Marine Department, there is a special secretary, Mr. Farrer, who, conjointly with myself, discharges the duties of that depart-

J. Booth, Esq.

17 June 1864.

ment; the rest of the office is undertaken by Sir Emerson Tennent.

1973. When you speak of Mr. Farrer as acting conjointly with yourself, as you are his senior I suppose you may say that it is under you?—Yes, it is under me, although he acts with independent authority when he sees no difficulty in dealing with the question referred to him.

1974. And the rest of the business goes to the other secretary, including, I suppose, all that may be called the consultative business of the Board of Trade?—I am not sure whether I understand what is meant by the phrase "consultative business."

1975. Including all that part of the business of the Board of Trade which consists in their giving commercial information to other departments of Government?—Yes. I omitted, in the enumeration of the duties of the Board of Trade, one rather important branch, the Statistical Department, which is a department for the collection and publication of statistics relating to trade and to foreign tariffs. That is a branch which may be considered rather of a consultative character; that is to say, it collects information which puts it in a condition to be able at least to give information to other departments of Government, such as the Treasury or the Foreign Office.

1976. That is rather a depository of information, is it not?—It is a depository of information.

1977. Is that under your side of the Board of Trade, or Sir Emerson Tennent's side?—It is under what is considered the commercial side.

1978. Then the particular subject of our reference, namely, the relation between the Foreign Office and the Board of Trade, does not come under you so much as under Sir Emerson Tennent?—No.

1979. I suppose that in the absence or illness of the other Secretary you take his place, do you not?—I do.

1980. Would you be kind enough to tell the Committee how communications between yourself and the other Secretary, in case you wish to interchange information, are carried on?—By personal communication between us.

1981. In going over the various duties which the Board of Trade had to perform, I do not think you mentioned the communication of the Board of Trade with the consuls?—No; I did not mention the consuls, but I mentioned two subjects, in which we derive material assistance from the consuls abroad; the one is the administration or distribution of the vote for the relief of distressed British subjects abroad. The relief is administered by the consuls, under instructions from the Board of Trade, and they keep an account of all the expenditure, and repay themselves by drawing a bill upon the accountant to the Board of Trade.

1982. That, I suppose, comes under Mr. Farrer's immediate superintendence, with reference to you in case of need?—That is so; it is more immediately under the accountant to the Board of Trade.

1983. Can you tell the Committee how that correspondence is carried on; does it go direct to the consuls, or does it go from you to the Foreign Office for them to communicate to the consuls, or does it go under what may be called flying seal from you through the Foreign Office to the consuls?—It goes generally direct from us to the consul; the consul is recognised in the Merchant Shipping Act as our officer, for the discharge of duties of that nature. It very often happens, however, that in a case of this kind, viz., where assistance is rendered to a British ship, or to British seamen in distress by a foreign vessel, the consul, instead of writing particulars of the services so rendered directly to us, sends them to the Foreign Office, and they come through the Foreign Office to us. It would be more convenient in those cases, if the consuls always communicated directly with the Board of Trade.

1984. It was suggested in Mr. Hammond's examination on the last sitting of the Committee, that there would be a difficulty in the Board of Trade communicating direct with the consuls, because they are the representatives of the Crown in foreign countries, and therefore, in order that you should communicate, it would be necessary to turn your department into a Secretaryship of State; how is that difficulty got over in your present communication with the consuls?—I was not aware of the existence of any such difficulty. We have for the last 10 years been in the habit of corresponding directly with the consuls, and no case of difficulty has occurred, except in one or two instances where a consul has appealed from interference of ours to the Foreign Office.

1985. I think I understood you to say that there was a special Act of Parliament which put you in communication with the consuls upon this matter?—That is so.

1986. Have you got that Act with you?—No; I have not got the Act here; I can refer to one or two sections in the Act, in which those duties are recognised. The Act is the Merchant Shipping Act of 1854; the 17th and 18th Victoria, chapter 104. Under section 12, the consul is to send to the Board of Trade such returns or reports upon any matter relating to British merchant shipping or seamen as the Board of Trade requires. Then under 210, he is to account to the Board of Trade for monies received by him for seamen's wages. The consul is employed by us in the collection of the wages and effects of seamen who die abroad.

1987. A question was asked by the Right Honourable Member for Oxfordshire, on the last sitting of the Committee, in which he stated that the consuls in the first place being subordinate to the ambassadors or ministers, and the diplomatic agents being the representatives of the Crown, the Constitution required that the communications from the Government at home to the diplomatic agents, should purport to be communications from the Crown. He also stated that your office, not being a Secretary of State's office, he did not see how communications could be made by you in the form of communications from the Crown; do you imagine that the difficulty is met in this particular case by a special Act of Parliament, and if it was not for that special Act of Parliament there would be a difficulty, or that it would be impossible to do it?—It is undoubtedly met by an Act of Parliament in the present instance; but I see no difficulty whatever in the Foreign Office, whose officers the consuls are, authorising them to communicate directly with the Board of Trade upon matters relating to trade.

1988. Do you find any practical evil arise from the consuls being in communication with your

your office rather than the Foreign Office upon those matters; is there any danger of any collision between the directions which the consuls receive from the Foreign Office upon other matters, and those which they receive from you upon those matter of which you have the superintendence?—None, whatever. I think that the duties that the consuls perform towards the Foreign Office and towards ourselves, do not at all clash the one with the other.

1989. No case has occurred within your knowledge in which there has been any collision?—Not any.

1990. Are you aware that there is a good deal of feeling amongst mercantile men throughout the country, that there would be an advantage in having to deal directly upon foreign commercial subjects with the office which has to conduct the negotiations?—I have heard that there is such a feeling.

1991. I suppose you have read the evidence that has been given to the Committee?—I have read a good deal of it.

1992. You are aware, I suppose, that a suggestion has been made that there should be a commercial department in the Foreign Office?—Yes.

1993. And that the existence of that commercial department in the Foreign Office should render it unnecessary for the Foreign Office to consult the Board of Trade upon any commercial matters?—I understand that there has been a suggestion to that effect.

1994. The objection has been made to such suggestion that any commercial department in the Foreign Office would not be, generally speaking, so well informed upon trade as it at present is in the Board of Trade. In what respect do you consider that that department of the Board of Trade, which gives advice to the Foreign Office upon commercial matters, is informed upon trade by other departments within the Board of Trade itself?—I cannot answer that question so well as Sir Emerson Tennent can. In the exercise of the duties which are imposed upon the Board of Trade it necessarily acquires a great deal of information, and becomes in a position to be able to advise other departments upon matters akin to those which come under the consideration of the Board of Trade in the discharge of their duties.

1995. Do you consider that there is any information obtained in that particular branch of the Board of Trade, which comes within your own cognizance, which would be of especial use to such a department as I have been alluding to, either in the railway branch or in that branch which comes under the charge of Mr. Farrer and yourself?—I am not aware that there is, but unless I know the question upon which it is supposed that the Foreign Office desires to inform itself, I can hardly answer the question.

1996. With regard to this suggestion which has been made, that there should be a commercial department in the Foreign Office, or rather that there should be a transfer of the Foreign Commercial Department from the Board of Trade to the Foreign Office, have you any opinion to give respecting it?—I think, so far as the functions of the Board of Trade are purely consultative, such a transfer might perhaps be made. I am not aware that the President of the Board of Trade, in the exercise of the general functions which he has to discharge, is put in a position to form a better opinion upon questions of the nature referred to, coming under the consideration of the Foreign Office, than the Secretary of State for Foreign Affairs would, himself, be able to form.

1997. Am I to understand that, by that answer, you mean to say that, so far as your experience goes, you do not think that there would be any disadvantage in such a transfer?—I do not see any disadvantage in it, or any difficulty, and it would have the advantage of enabling the Foreign Office to conduct its ordinary correspondence, when foreign tariffs or restrictions on foreign trade were complained of, without referring such matters to the Board of Trade.

1998. Although you are not generally the secretary who has that part of the business to conduct, I suppose, during the long time that you have been in the Board of Trade, you have very frequently had to do it in the absence of the other Secretary?—I have.

1999. I think you stated that each of these three Departments, the Colonial Office, the India Office, and the Treasury consult the Board of Trade; but, I think, you also stated that that consultation would go through Sir Emerson Tennent rather than through you?—I have not stated that the India Office or the Treasury consult the Board of Trade. We have a good deal of correspondence with the India Office in matters connected with our Marine Department, but it is not what I should call of a consultative character.

2000. Is that rather a correspondence between two administrative offices upon questions in which their administration may be said to intersect one another, than a correspondence of one office with another, asking for information?— That is so.

2001. But, supposing that the Treasury wishes for an opinion as to how far any measure, with regard to customs, would affect trade, would they not ask for the information from the Board of Trade?—They might do so.

2002. But they are not much in the habit of doing so, are they?—I can hardly answer that question, because those letters would not necessarily come under my consideration.

2003. Can you answer this question; supposing the Foreign Commercial Department of the Board of Trade was transferred to the Foreign Office, would there still remain so many occasions upon which other officers would have to consult the Board of Trade, that the Board of Trade would still be, more than almost any other department of Government, a consultative department?—I am not aware that that would be so. We should no doubt still be consulted in those matters on which we had special information.

2004. Another suggestion, too, has been made in the course of this examination, that the Board of Trade should be put in communication with foreign ministers and consuls upon matters affecting trade; what is your opinion with regard to that?—I should think there might be inconvenience attending such an arrangement, if it extend to foreign ministers.

2005. What inconvenience do you apprehend?—I think that the correspondence with foreign nations should be conducted by one department only.

2006. Do you think that there is, or is not, an advantage in all matters with regard to trade being under a special department like the Board of

J. Booth, Esq.

17 June 1864.

of Trade, and thereby giving the protection, I may say, to the trading interests, which would follow from one department having for its special business to look after that?—I think there is a certain convenience in some one department of the State undertaking a general superintendence of trade in order that parties may know to whom to address their complaints, if they have any to make, or whom to look to for the improvement of the legislation relating to commerce.

2007. Am I to gather from your answer, that you are, or are not, of opinion that it is advisable that the Board of Trade should remain a consultative office for other departments upon commercial matters?—I think upon all matters upon which the exercise of our especial functions enables us to give good information, and possibly advice, it is desirable that we should be consulted, just as we consult other departments; we consult the Customs, the Admiralty, and the Home Office, upon matters under our consideration, upon which we think we can get a better opinion from them than we can form ourselves; but I question the advantage of keeping up a merely consultative department.

2008. Is not there this difference that, whereas you, in performing your administrative duties, would consult any other department upon any question upon which you wished to obtain information, you are at present consulted by other departments previous to any administration, for advice and counsel, as to how measures should be undertaken?—I do not see the difference, but so little of those matters comes under my own consideration that I feel some difficulty in answering the question.

2009. Mr. *Seymour Fitzgerald.*] You stated with reference to the consuls, that in some instances there had been cases where consuls had appealed from a decision of the Board of Trade to the Foreign Office?—I have so stated.

2010. Upon what subjects have those appeals been made to the Foreign Office?—One that I had particularly in my mind was a case where a seaman had lodged a sum of money with a consul in one of the French ports, and this money had been purloined by a clerk in the office of that consul, and the consul was displeased at the mode in which we made inquiry as to what had become of that money, and wrote to complain to the Foreign Office.

2011. Considering himself a servant of the Foreign Office, and not the servant of the Board of Trade?—Exactly so.

2012. He objected to the way in which you made inquiry as to that particular circumstance?—Precisely so; he probably thought we intended to make him responsible.

2013. You have been asked a question with reference to the transfer of the foreign commercial department of the Board of Trade to the Foreign Office?—We have, strictly speaking, no foreign commercial department at the Board of Trade.

2014. The phrase was used in a question to which you replied. When that question was asked you, what did you understand by the term "foreign commercial department"?—I am afraid I answered inconsiderately. I must have meant one or more of our clerks especially conversant with questions relating to foreign trade.

2015. *Chairman.*] What I meant to ask you was this: do you think that there would be a disadvantage in those officials of the Board of Trade who obtain information, which they communicate to the Foreign Office, upon matters connected with commerce, being in the Foreign Office rather than in the Board of Trade?—I see no inconvenience in it.

2016. Mr. *Seymour Fitzgerald.*] Are there not a great many questions with which the Foreign Office has to deal with reference to foreign tariffs and the interests of English trade in various branches, which they could not efficiently deal with without at the same time having in their hands a collection of statistics and other matters of that kind, with reference to English trade, which are now collected by the Board of Trade?—I should assume that all the information in our statistical office would be open to the use of the Foreign Office, or to the use of a commercial department in the Foreign Office, as it is to the commercial department in the Board of Trade.

2017. Then, in such a case, there would be the same necessity of reference, from this new department that would be created in the Foreign Office, to the Board of Trade, for statistical information, or information affecting trade at home that exists now?—It would be of a different kind; the communication with the statistical department would then be made by an officer in the Foreign Office, as it is now made by an officer in the Board of Trade; and instead of informing the President of the Board of Trade, in order that he may answer the question of the Foreign Office, the officer would convey his information to the head of the Foreign Office, with a view to his dealing directly with any question under his consideration.

2018. *Chairman.*] Is it not the case, that the Statistical Department is in a different building from the Board of Trade, and that although nominally under the Board of Trade, it is a department in itself?—It is so in practice.

2019. Mr. *Seymour Fitzgerald.*] Would not then this new department, which would be created in the Foreign Office, be in such a position that it would require to have all the information, both with reference to foreign tariffs and to the condition of English trade; in fact, all the information affecting English trade at home that is now collected by the Board of Trade?—I presume that the Statistical Department would remain as it is at present; the officer, assuming that there is one, at the Foreign Office, to assist the Foreign Secretary upon questions of this nature, would obtain his information from the Statistical Office, precisely as he does at present; but instead of conveying it to to the President of the Board of Trade, to be sent through him to the Foreign Office, he would communicate it direct to the head of the Foreign Office.

2020. Do you apprehend that all the commercial men in England, who required information as regards foreign tariffs or arrangements in foreign countries affecting English trade, would apply to the Board of Trade or to the Foreign Office?—They would apply probably to the Statistical Department. If they applied to either the Board of Trade or the Foreign Office, they would be referred to the Statistical Department for information, or the information would be obtained from the Statistical Office and sent to them.

2021. Mr *Layard.*] To what Statistical Department do you mean to say that they would be referred?—To the Statistical Department which

at

at present is nominally under the Board of Trade.

2022. Mr. *Seymour Fitzgerald.*] Is this new department, which you consider might be formed with advantage in the Foreign Office, merely to be a department for the purpose of conducting negotiations?—For the purpose of collecting the information which the Foreign Secretary requires, in order to enable him to conduct negotiations, and also to deal with the various questions from time to time brought under his notice by the trading community, relating to foreign trade.

2023. That would be information with reference to the condition of trade at home, would it not?—No, not at all necessarily with reference to that; rather with reference to foreign tariffs and restrictions on trade in foreign countries.

2024. Would it not be requisite for the foreign secretary, and is it not now daily necessary for the foreign seretary, in conducting negotiations with reference to foreign tariffs, to obtain from you the most precise information as to the condition of the various trades which would be affected by an alteration in those tariffs?—He could not obtain from us any information that he could not obtain through the officer whom I am supposing, by his applying to the Statistical Department.

2025. Then it will still be necessary for the Foreign Office, even in case such a commercial department is formed within it, to have reference to the Statistical Department of the Board of Trade, in order to enable that Department satisfactorily to perform its functions?—Clearly.

2026. You stated that in reference to the Mercantile Marine Act, you could not say that there had been any collision of authority between the Board of Trade and the Foreign Office, as far as you know?—Yes.

2027. If the Consuls and Ministers abroad communicated directly with the Board of Trade, with a view of giving every information affecting trade, do you see any reason why in such a case, there should be any danger of collision any more than in the case of the Mercantile Marine Act?—I see no such danger.

2028. You see no danger, as far as that is concerned, in establishing communications between Ministers abroad and the Board of Trade?—In establishing communication between Consuls abroad and the Board of Trade, with a view to the collection of commercial information, I can see no difficulty or danger.

2029. I do not apply my question to a case of negotiation, but in the case of information either to be given by a Minister abroad to the Board of Trade, or by the Board of Trade to a Minister, can you see any objection in having direct communication between the Ministers and the Board of Trade?—None whatever, if it is simply with a view to the collection of information.

2030. In the case of a negotiation going on with reference to the modification of a foreign tariff, do you see any reason why there should not be direct communication between the Board of Trade and the minister, with the view of giving the fullest information to that minister, and the earliest information to that minister, to enable him satisfactorily to conduct his negotiations?—I see no objection to that at all.

2031. Then your objection to direct communication between ministers abroad and the Board of Trade is limited solely to considerations as to the propriety of initiating a negotiation, or as to the particular method and mode in which it is to be carried on?—I fear my former answer has been misunderstood. What I objected to was, the Board of Trade communicating with a foreign minister, not our own minister abroad, but with the minister of a foreign power; I said that ought to be conducted through the Foreign Office.

2032. You do not, then, see any objection to the establishment of a direct communication between the Board of Trade and our agents abroad, whether consular or diplomatic, with a view of giving and receiving information upon all subjects affecting English commerce?—I see no objection whatever.

2033. Mr. *Bazley.*] Do you publish annually reports addressed to the House of Commons, of the whole of the transactions of the Board of Trade?—No, we are not in the habit of publishing reports.

2034. Could not there be annually published a resumé of the state of our foreign commercial relations, as to the negotiations for new treaties and for the extension of commerce?—Such a report might, no doubt, be prepared if it were thought useful to do so.

2035. The labours of the officers of the Board of Trade are very great during the year; would it not be very useful to the community at large to have a brief historical record of all the transactions that have occurred in all the departments of the Board of Trade?—I am not sure that there would be any advantage that would at all correspond with the trouble and expense of such a report.

2036. Sir *Stafford Northcote.*] In what year was it that you became connected with the Board of Trade?—In the year 1850.

2037. At that time a very considerable proportion of the reforms which have lately been made in our tariff and in our system of navigation laws had been completed, had they not?—That is so; in the case of the navigation laws especially.

2038. Is it within your knowledge, from what you have seen of the records of the department, and from what you have observed in your early years of connexion with it, that the business of the Board of Trade proper, as distinguished from those departments which have of late years been added to it, has been materially diminished?—Very materially.

2039. At the time when the Navigation Acts were in force, was not it the case that continual references were made to the Board of Trade upon questions as to whether certain voyages were legal or illegal, and whether certain transactions were fraudulent or proper?—I understand that that was the case very much.

2040. Is it within your knowledge that it was frequently necessary for the Board of Trade to consult with other departments for the preparation of clauses in Acts of Parliament to meet particular difficulties which arose; all those are now, I suppose, very nearly at an end?—That is almost at an end.

2041. The great reduction in the number of articles in the tariff must also necessarily have caused a great diminution in that part of the business of the Board of Trade, which related to the condition of the home trade, has it not?—That is so.

2042. I suppose there are now very few letters to the Board of Trade from persons in this country,

J. Booth, Esq.
17 June 1864.

complaining of the rates of duty, and requesting that steps should be taken to alter them?—I think communications of that kind are now comparatively rare; but they do not come immediately under my own cognizance.

2043. With regard to the Colonial Acts generally, have they been brought under the notice of the Board of Trade since you have been connected with it?—Yes; when I first became connected with the Board of Trade, it was the practice for each Colonial Act to be confirmed upon a Minute of the President of the Board of Trade.

2044. That was the case with every Colonial Act?—Every Colonial Act.

2045. Were they examined in detail by the Board of Trade at that time?—Yes, to some extent.

2046. What is the arragement with regard to them now. Colonial Acts are not sent to the Board of Trade now, are they?—Colonial Acts relating to trade or navigation are commonly sent with a request that the Colonial Secretary may be informed whether there is any objection to their being confirmed.

2047. By whom are other Colonial Acts examined?—Some are sent to the Treasury, and, I presume, some to the Home Office; but I am not sure about that.

2048. Are you aware that a great many are now passed by the Colonial Land and Emigration Commissioners?—I am not aware what share the Emigration Commissioners take in the consideration of Colonial Acts.

2049. Was there any formal withdrawal of the Colonial Acts, relating to general matters, from the cognizance of the Board of Trade?—I think it was done by a letter from the Colonial Office proposing the change.

2050. You do not remember the reason given for the withdrawal?—The President's Minute was deemed unnecessary; it was considered a superfluous multiplication of work.

2051. Are you at all aware whether complaints used to be made on the part of the Colonies that delay took place in consequence of those communications between the Colonial Office and the Board of Trade?—I am not aware of such complaints having been made.

2052. It is not now the practice, is it, to hold weekly or semi-weekly Boards at the Board of Trade?—It is not the practice.

2053. Has it ever, since you have been connected with the office, been the practice to hold Boards?—No; there is in fact no Board of Trade in practice, as I have already explained.

2054. Is it within your knowledge that it was formerly the practice of the President and Vice-President of the Board of Trade and the Joint Secretaries of the Board of Trade, to hold a Board twice, or oftener, in the week, and there pass all the papers that came before the Board?—I have heard of such a practice; it would be quite impossible to get through the work if we were to adopt a practice similar to that at present.

2055. At the time that that practice existed, it would be the case, would it not, that all the officers of the Board of Trade would be generally cognizant of all the information that came before the Board of Trade; that is to say, it would all pass before them at the Board, and each person would get a general knowledge of what was going on in each department?—Supposing they were discussed at the Board, that would be the case.

2056. That is not at all the case now; and, therefore, as I understand, business may be brought before one department without the other department knowing anything about it?—That is so.

2057. It must frequently happen in the conduct of commercial negotiations, that information is wanted from the Mercantile Marine Department of the Board of Trade; in such a case how is that information applied for?—The convenient practice would be to refer any papers of that kind to the Secretary, or the Assistant-Secretary of the Marine Department for his consideration.

2058. Is that frequently done?—Yes.

2059. Is the Secretary, or the Assistant-Secretary for the Marine Department, thereby made cognisant of all the proceedings that are taking place with reference to the negotiations in connection with which that information is sought?—It would be necessary, in order to write his Minute upon the paper, that he should inform himself, to some extent, of the previous proceedings.

2060. Of the previous proceedings connected with that particular part of the subject, but not of all the proceedings connected with the negotiation, I suppose?—No; of so much as would enable him to answer the question that was raised in the paper under consideration.

2061. Supposing that a commercial treaty was being negotiated, which involved questions of tariff, and also questions of dues upon shipping, the questions would be referred to the Mercantile Marine Department as to the dues upon shipping without requiring that department to look at all into the questions of tariff reforms?—Yes, that might be so, or it might be referred generally to each of the secretaries to see what he had to say upon the whole subject.

2062. Which would be the usual practice; would it be the usual practice to send him the whole of the correspondence connected with the negotiations, or only so much as bore upon a particular point?—The more usual practice would be to call his attention to the matter connected with his own department, and request him to read it and offer suggestions upon it.

2063. Supposing that the Foreign Office communicates now to the Board of Trade a correspondence with regard to a particular treaty, that correspondence goes to the Secretary for the commercial side of the Board of Trade, does it not?—In the first instance it would go to him.

2064. If he finds that it is necessary that he should have some information from the Mercantile Marine Department, what course does he pursue?—If it were entirely connected with the Marine Department, he would refer it to the other Secretary in order that he might answer the question to the Foreign Office.

2065. If it were a mixed question, partly referring to that and partly referring to other questions, what would he do?—I think he would desire the Marine Secretary to make a Minute upon that part which related to his own department, and he would then, himself, embody the whole of the information in his reply to the Foreign Office.

2066. Supposing that the department which now sits at the Board of Trade, and is called the Commercial Department there, were transferred to the Foreign Office, would there be any more

difficulty

difficulty in the Foreign Office putting those questions or making those references to the Marine Department of the Board of Trade, than there is in the Secretary for the Commercial Department of the Board of Trade making these references?—No; the difference would be, that the Foreign Office letter would go direct to the Marine Department, instead of through the Commercial Secretary.

2067. Does not it amount to this, that there must, in all these negotiations be consultations, from time to time, between different offices, and that the only question is how much of the information it should be necessary for the Foreign Office to seek out of itself?—Exactly so.

2068. At present, in consequence of not having a distinctly organised commercial department, the Foreign Office is obliged to apply to the Board of Trade for a great deal more information than it would be if it had a distinctly organised commercial department, is it not?—That is so.

2069. Suppposing it had a distinctly organised commercial department, it would still be obliged, from time to time, to apply to the Board of Trade for information, but you do not see any difficulty in making such application?—I see no difficulty at all.

2070. Mr. *Seymour Fitzgerald.*] But the application for such information from the Foreign Office would, of course, be addressed to the Secretary of the Board of Trade, or to the President?—It would.

2071. In practice, how are such communications made; are they made to the President of the Board of Trade, or are they made to the Secretary?—They are very commonly made to the Secretary; but in matters connected with the Marine Department, it is usual to head the letter sent from the Marine Department with a request that letters in reply may be addressed to the Marine Secretary.

2072. Is the head of the Marine Department subordinate to you and Sir Emerson Tennent, or has he an independent position of his own?—He is, in some respects, co-ordinate. He was, formerly, the Assistant Secretary in the Marine Department. He is no longer called the Assistant Secretary, but the Marine Secretary, though no doubt it may be considered that his duties are discharged in subordination to the Senior Secretary.

2073. If he is subordinate to you, do you see no objection to having communications between one department of the State and a subordinate officer of another department?—The communication, supposing it made officially, would be addressed to the office, and would be referred to the Marine Secretary.

2074. Mr. *Layard.*] When a communication is addressed from the Foreign Office to the Secretary of the Board of Trade, it is not addressed to the Secretary as secretary, but to the Secretary as the organ of the President of the Board of Trade, is it not?—It is addressed to the Secretary, and, coming from the Foreign Office, it would ordinarily be referred to Sir Emerson Tennent, it being probable that the matter to which it relates is in his department.

2075. If we write to Sir Emerson Tennent or to yourself, we do not address Sir Emerson Tennent or Mr. Booth; but we address the President of the Board of Trade through Sir Emerson Tennent or yourself, do we not?—You address your letters to the Secretary, and desire him to bring certain matters under the consideration of the Lords of the Committee of Council for Trade.

2076. Therefore, the communication is not between the Foreign Office and Sir Emerson Tennent or yourself, but between the Foreign Office and the President direct, or through Sir Emerson Tennent and yourself?—Yes.

2077. *Chairman.*] In the published correspondence between the two offices, with regard to the Belgian and Italian treaties, in every case the letters are addressed in this way—"Mr. Layard to Sir Emerson Tennent," or "Sir Emerson Tennent to Mr. Layard." How are the letters actually addressed?—Indifferently; sometimes in the one way and sometimes in the other. The better mode of addressing is, "To the Secretary." The letter is opened in the registry room, and it is thence referred to the department to which it belongs.

2078. Sir *Stafford Northcote.*] Those are questions as to matters of form, but is not it the case that whatever may be the address of a letter, whether it is addressed to the secretary by his title, or to the secretary by name, or to the Lords of the Committee of Privy Council, every letter is opened and immediately handed over to the secretary of the proper department?—That is so.

2079. Therefore, if the Foreign Office in such a case as I have been supposing, were to desire information from the Secretary of the Mercantile Marine Department, it would not be necessary for them to address their letter specially to the Secretary of the Mercantile Marine Department, they might address it to the Lords of the Committee of Privy Council for Trade, and it would still be answered by the secretary for the proper Department, would it not?—It would.

2080. With regard to the Statistical Office, has there been any material alteration in the duties of the Statistical Office since you have been connected with the Board of Trade?—That department has very considerably increased since I have been at the Board of Trade.

2081. Do you know whether it has taken upon itself duties which were formally performed by other offices?—I am not aware that it has done so.

2082. Do you remember the proceedings of a Committee of inquiry of which you were a member, in the year 1854, which inquired into the condition of the Board of Trade?—I remember the Committee of 1853.

2083. Do you remember that in their report, attention was called to the position of the Statistical Department, and that it was suggested that steps should be taken to organise the collection and publication of the statistical information of all the different departments of the Government, and that it should be published upon a uniform plan, harmonised as far as possible, with the assistance of the Statistical Department of the Board of Trade; and that the idea that is sketched out in that report was, that there should be a Statistical Office, not necessarily connected particularly with the Board of Trade, but extending a general supervision over all the statistical information that comes into the hands of the Government?—There was a recommendation to that effect.

2084. Do not you think that it would be a very useful thing if such a plan could be carried into effect, and if the Statistical Department could be made, to a certain extent, an indepen-

J. Booth, Esq.

17 June 1864.

dent department, having communications with all the different departments in which statistical information is collected?—If its functions were to be extended in the way that you suggest, I think that it might be usefully made an independent department.

2085. If that were done, would it not be perfectly possible for the Commercial Department, supposing one were sitting at the Foreign Office, to communicate with the chief of that Statistical Department, and to get from him all the information that was required for the guidance of the Foreign Office in the conduct of its commercial business?—Undoubtedly, it might do so; that may be done as the Statistical Department is now constituted.

2086. Does it seem to you that there is any necessary connexion between the Statistical Department and the Board of Trade, more than between the Statistical Department and other departments of Government which have the collection of information?—No.

2087. It is only as a matter of convenience that it is attached to the Board of Trade; might it not just as well be attached to the Treasury, or to one of the Secretary of State's officers, or be made independent altogether?—It might be so.

2088. With regard to the information which is collected at the Board of Trade through the statistical officer, a good deal of it relates to foreign trade, does it not?—A good deal of it.

2089. How does the Board of Trade become possessed of that information?—Through the Foreign Office.

2090. Sir *Minto Farquhar.*] The object of this inquiry is more especially in reference to communications between the Foreign Office and the Board of Trade, and complaints have been made by the Chambers of Commerce that those communications are not so rapid as they ought to be; can you bring to mind any occasion when the Foreign Office has failed to take immediate action upon any communication from the Board of Trade?—Those are matters that do not come under my cognisance; I think the Committee would get much better information from Sir Emerson Tennent upon that point.

2091. Mr. *Layard.*] You have expressed an opinion with regard to the establishment in the Foreign Office of a Department for Trade; will you be good enough to explain exactly what you mean by a department for Trade in the Foreign Office?—I mean to say that the Foreign Office might be assisted by a gentleman in the position of an assistant-secretary or a chief clerk, who would perform at the Foreign Office very much the same functions that Mr. Mallet now performs at the Board of Trade.

2092. Do you mean that there should be a department for trade in the Foreign Office, with an under-secretary at its head?—I have not either expressed or formed an opinion as to the exact constitution of the department, if it is to be called a department, which is to assist the Foreign Secretary. I think that there might usefully be one or two officers whose business it would be to perform towards the head of the Foreign Office very much the same functions that Mr. Mallet now performs towards the President of the Board of Trade.

2093. Then you would have a permanent under-secretary, not a Parliamentary under-secretary?—A permanent under-secretary or chief clerk; an officer of such position that he would be entitled to communicate directly with the head of the Foreign Office.

2094. Would you have such a machinery in that department as would enable the Foreign Secretary to form an opinion in matters of trade, or to take action in questions of treaties of commerce or navigation without consulting the Board of Trade?—Yes.

2095. Then I presume that the Secretary of State would be responsible to Parliament for what action he took in such matters?—Exactly so.

2096. Therefore the Secretary of State for Foreign Affairs would be as responsible to Parliament for matters of foreign commerce and trade as he is now for matters connected with his political duties?—He would be responsible for communications with Foreign Governments on matters of trade.

2097. Are you at all aware of the business of the Foreign Office?—I am not at all intimately acquainted with the business of the Foreign Office.

2098. Do you think that any Secretary of State for Foreign Affairs could take upon himself to be responsible to Parliament for the details of commercial matters?—I think he ought to be responsible for forming a judgment upon such questions as would come under his consideration connected with commerce; and with such assistance as I have suggested, I think there would be no difficulty in his doing so.

2099. Do you think that an Under-Secretary of State in the Foreign Office, at the head of the Department for Trade, could have all the information that it would be necessary for such an officer to have in order to enable him to give an opinion of any worth, or any weight, to the Secretary of State?—Just as he can do it to the President of the Board of Trade he could do it to the Secretary of State.

2100. Therefore, you would have in the Foreign Office all that machinery which you now have in the Board of Trade, and which enables the Secretary there to give a competent and trustworthy opinion to the President of the Board of Trade?—The machinery which I have suggested has been such an officer as Mr. Mallet, with, perhaps, the assistance of one or two clerks; I have not contemplated more than that.

2101. Mr. Mallet now has access to, and is informed upon, all that passes in the Board of Trade?—Yes; he has the opportunity of being so informed.

2102. I understand you to say that in the case of your absence from illness, either Sir Emerson Tennent or Mr. Mallet are compelled to take your place?—Sir Emerson Tennent would take my place in the event of my absence from illness.

2103. Supposing that Sir Emerson Tennent were taken ill, or were absent from any other cause, would Mr. Mallet take your place?—Mr. Farrer would then be the person next in authority.

2104. What position does Mr. Mallet hold in the Board of Trade?—He is the assistant in the Commercial Department.

2105. I think you stated that we ought to have a gentleman in the Foreign Office in the position of Mr. Mallet?—Yes; that you might usefully have such an officer.

2106. I understand that Mr. Mallet is only the assistant-secretary, and that he is incompetent to take

take the leading part in the Board of Trade?—I have not stated that he is incompetent.

2107. I do not mean incompetent from want of knowledge; I mean from his position as assistant: if you and Sir Emerson Tennant were away, would Mr. Mallet be competent to take your duties or Sir Emerson Tennent's?—Many of my duties he would hardly be competent to undertake; those, for instance, in the Railway Department, and some of those in the Marine Department. What I have suggested is, that you should have an officer who would perform towards the Foreign Secretary the same functions as Mr. Mallet performs towards the President of the Board of Trade, and I have suggested that he should be in the position of assistant-secretary or of a chief clerk, but that he should, at all events, be in such a position as would entitle him to communicate directly with the Foreign Secretary.

2108. Do you know who at the Foreign Office communicate with the Foreign Secretary, the under-secretaries or the chief clerks?—I do not. I think it desirable that the officer I am speaking of should be in a position in which the rules of the office would admit of his communicating directly with the Foreign Secretary.

2109. The rules of the Foreign Office being that only the under-secretaries communicate with the Secretary of State, this commercial gentleman should therefore, according to your view, be an under-secretary?— Supposing that it were thought fit that he should be in the position of a chief clerk, it would then, in my view, be necessary that the Foreign Office should make a rule that he should be allowed to communicate with the Foreign Secretary.

2110. Will you be good enough to state to the Committee what you understand by questions of foreign trade or foreign commerce?—Commerce with foreign nations.

2111. Do you include under that denomination all those questions which arise with foreign nations connected with shipping dues, merchant seamen, harbour dues, lighthouse dues, and many other questions which are matters of discussion between the British Government and Foreign Governments?—Yes, I include those among questions relating to foreign trade.

2112. Then are you of opinion that this officer, who is to be at the head of this department, is to be in a position to give advice and information to the Secretary of State upon all questions relating to treaties of commerce, shipping dues, harbour dues, lighthouses, and, in fact, all matters that come under the general denomination of the commercial relations between England and foreign nations?—Upon many of these subjects he would, I think, be able to give the required information; upon some it would still be necessary to resort to the Board of Trade. I have said, or intended to say, in the course of my examination, that the Board of Trade, in the exercise of the duties imposed upon it, obtains information, and becomes in a position to be able to give valuable information to the Foreign Office, and to other departments, upon matters akin to those with which it is conversant, and that the Foreign Office may very usefully consult the Board of Trade with reference to those matters.

2113. Do you draw any distinction between the various questions connected with foreign commerce upon which this gentleman who is to be at the Foreign Office is to give information and advice to the Secretary of State?—I understood that the question had reference particularly to correspondence as to complaints concerning tariffs, and restrictions on foreign commerce, and the negotiation of treaties of commerce with foreign nations. Upon questions of this kind I think the Foreign Office ought to be able to conduct its own correspondence without previous reference to the Board of Trade, and with such assistance as has been suggested, I think it would be able to do so.

2114. Then you exclude all matters relating to navigation, shipping, harbour dues, and lighthouses, do you not, from this advice and information, which this new officer in the Foreign Office is to give to the Secretary of State?—By no means; I suggested that the new officer should give to the Secretary of State the kind of advice that Mr. Mallet now gives to the President of the Board of Trade.

2115. Does Mr. Mallet now give advice to the President of the Board of Trade upon questions of shipping dues, lighthouse dues, harbour dues, and all the other matters which come under the general denomination of "commercial relations with foreign countries"?—He does not deal with those questions, so far as they come under the executive duties of the Board of Trade, but he is very conversant with questions of this kind, and assists the President in considering any treaty questions relating to these matters.

2116. I understand that Mr. Mallet only gives information upon questions with regard to foreign treaties of commerce and tariffs?—That is a large part of his duties.

2117. What are the others?—You could more conveniently learn that from Mr. Mallet himself than from me.

2118. As regards questions relating to navigation, shipping dues, harbour dues, and other questions, the Foreign Office would still consult the Board of Trade?—It might be necessary for it to do so on some of these points occasionally; but for conducting such correspondence as has been referred to, it would in general, I think, not be necessary.

2119. You think that we ought to consult the Board of Trade upon those matters?—Yes, when necessary.

2120. Therefore you would not recommend that we should have a gentleman at the Foreign Office to give us information upon those points?—Not necessarily upon all; but such as would be required for conducting the ordinary correspondence of the office relating to foreign trade.

2121. Do not the larger number of questions with foreign nations relate to those very points, navigation laws, lighthouse dues, harbour dues, and the like?—A very considerable number do relate to subjects of that kind; and with reference to some of those subjects, the Foreign Office can usefully apply for information and, perhaps, advice to the Board of Trade.

2122. Why should not the same thing be done as regards commercial treaties and tariffs as regards those difficult and complicated questions?—Because they are of constant occurrence, and the functions of the Board of Trade do not give it any special knowledge with reference to those questions. The President of the Board of Trade has no more knowledge of those questions than the head of the Foreign Office.

2123. Are not questions of foreign trade intimately connected with questions of domestic trade?—I do not know that they are.

2124. Could a gentleman give an opinion upon a question

J. Booth, Esq.

17 June 1864.

a question of foreign trade without being acquainted with the state of trade in England?—It would depend upon what the question was.

2125. You say that the Board of Trade is the great depository of information; that was your expression, was it not?—I said that an office connected with the Board of Trade, namely, the Statistical Office, was charged with the collection of statistics relating to trade and foreign tariffs.

2126. The Statistical Office is under the Board of Trade, is it not?—It is.

2127. Therefore, it being under the Board of Trade (when I speak of the Board of Trade I include the Statistical Office), would you propose to put the Statistical Office under the Foreign Office?—I should place the information in the Statistical Office entirely at the disposal of the Foreign Office, and I should suppose that an officer such as has been suggested would communicate freely with the Statistical Office; in fact, as freely as he now does sitting in a room at the Board of Trade.

2128. What difference would there be between a gentleman sitting in a room at the Board of Trade, and the same gentleman sitting in a room at the Foreign Office, for the purpose of advising the Secretary of State, if he had to apply to the Statistical Office in either case?—The difference would be that it would not then be necessary for the Foreign Office to communicate in a formal manner with the President of the Board of Trade on matters forming part of its ordinary duties.

2129. That is the practical inconvenience of this communication between the Foreign Office and the Board of Trade?—It has been said (but upon that question I give no opinion) that it has led to considerable delays.

2130. Are you able to mention any case of delay which has come under your notice?—No; none has come under my notice.

2131. Is it not within your knowledge that the communication between the Foreign Office and the Board of Trade is carried on most expeditiously?—I have no reason to suppose the contrary.

2132. With regard to the Merchant Shipping Act, is not it a completely exceptional Act as regards placing the consuls under the Board of Trade?—I am not sure that I understand what is meant by its being an exceptional Act. It is found very convenient in the discharge of certain duties imposed upon the Board of Trade by the Merchant Shipping Act, that they should have the assistance of the consuls abroad.

2133. That is to say, the consuls were placed in communication with the Board of Trade by a special Act of Parliament?—It does so happen that that Act of Parliament recognises the consuls as the persons by whom those duties are to be discharged.

2134. Is not the Merchant Shipping Act connected altogether with questions between ourselves and British subjects?—Yes, no doubt; it is an Act for the Registration of Shipping and for the Regulation of the Mercantile Marine, and for questions relating to those subjects.

2135. That is to say, the matter relates entirely to questions between ourselves and British subjects?—Yes.

2136. Is there not a difference between questions exclusively between British subjects and Her Majesty's Government, and questions between British subjects and foreign Governments?—No doubt there is a difference.

2137. Would not there be a great difference between authorising consuls, on the one hand, to communicate directly with the Board of Trade upon matters between them (the consuls) and foreign authorities; and, on the other hand, authorising them to communicate with the Board of Trade upon questions exclusively connected with British subjects?—There would be a difference in the matters upon which they were to communicate.

2138. Would there not be a difference in principle?—I do not see that there would be a difference in principle.

2139. Do you think that there is no difference in principle between matters between British subjects and our Government alone with which we, as a Government, have to deal exclusively, and matters between our Government and foreign subjects with which we have to deal in connexion with foreign Governments?—No doubt that may be so, but the communication that has been suggested between the consuls abroad and the Board of Trade, was with a view to collecting information with reference to matters connected with trade, and not with reference to matters particularly affecting foreign subjects.

2140. Therefore, all that you would wish the foreign consuls to communicate to the Board of Trade is all their commercial returns and their commercial reports?—I have no wish upon the subject. All that I understood to be suggested by the question of the Honourable Member was, whether there was any difficulty in the consuls in the foreign countries communicating directly with the Board of Trade, as to matters of trade.

2141. Are not the consuls' reports upon trade and matters of shipping, and other things of that kind, at once sent by the Foreign Office to the Board of Trade?—I understand so.

2142. Therefore, the only practical advantage of putting the consuls in direct communication with the Board of Trade would be that you would gain a few hours?—I have not spoken as to the advantage; I have been asked as to the inconvenience of the arrangement.

2143. Would there be any great advantage in that arrangement?—I think it very likely, supposing that the Board of Trade is charged with the collection of information concerning foreign tariffs, that it would get it more effectually and more expeditiously if it could communicate directly with the consuls abroad.

2144. Do you think that the advantage of this direct communication would counterbalance the disadvantage of placing the consuls under two different masters?—The consuls are already, to some extent, under two different masters; the two duties would be exactly analogous.

2145. They are only under two different masters, so far as regards their duties under the Merchant Shipping Act, are they?—They are so under the Merchant Shipping Act.

2146. That is an exceptional position altogether, is it not?—It is exceptional, seeing that it is only in that respect that the Board of Trade does communicate with the consuls.

2147. Therefore, you do not think that there would be any disadvantage in putting the consuls under two offices?—I do not think that any disadvantage would result from the Board of Trade being allowed to obtain, directly from the consuls, such information as they require upon matters relating to trade.

2148. In what way, except in the gaining of a few hours, would that affect the communication between the Board of Trade and the consuls?—

At

At present, the Board of Trade does not suggest to the consuls upon what points it would desire to have information collected by them; it receives the information which is sent to it by the Foreign Office, and makes such use of it as it thinks fit.

2149. Could not you suggest to the Foreign Office what information you wished to obtain from the consuls?—That could be done.

2150. Why is it not done?—It has sometimes been done, but I think that, by direct communication with the Board of Trade, the information would be obtained more effectually; but this is not within my own department.

2151. Supposing you sent us a letter in the morning, asking for a particular communication from a consul, that letter would be sent off to the consul in the evening, and therefore practically no time would be gained in the matter, would it?—I know that in the matters that come under my own cognizance, in the communications that we have with the consuls in reference to their accounts, for instance, if it were necessary for us to get all our information from the consul through the Foreign Office, the task would be endless.

2152. In certain cases, where there is a convenience in the arrangement, the Foreign Office have no objection to your being in direct communication with the consuls, have they?—No; I believe not.

2153. There are certain cases, are there not, in which we have found it convenient, for instance, in the case you have mentioned in matters of accounts, to put the consuls in direct communication with the Board of Trade?—Yes, there is great convenience attending that arrangement, and I am not aware of any inconvenience resulting from it. If the Board of Trade were dissatisfied with a consul, no doubt it would treat the Foreign Office as being the master of that consul, and complain to the Foreign Office and not to the consul.

2154. Do you not think we might run the chance of very great inconvenience by a consul making a report, and introducing into that report political opinions or information which might give great offence to the country in which the consul was residing, if those reports were sent to the Board of Trade, and made use of by the Board of Trade without going through the Foreign Office?—I think those matters might be left to the discretion of the Board of Trade.

2155. You would undertake, upon your own discretion, to publish the report without consulting the Foreign Office?—I have not said anything of the kind.

2156. Would you do so, or not?—I have not formed an opinion. I had in view obtaining information for practical purposes.

2157. Surely when you come to give a decided opinion as to the consuls being placed in direct communication with the Board of Trade, you ought to be prepared to give an opinion as to how you would deal with their reports when they were sent to you?—I have said it would be useful for the purpose of collecting information with respect to foreign trade. The use to be made of that information is another matter altogether.

2158. Supposing you were to get the report of a consul in which strong political opinions were expressed with regard to free trade, and such things, would you think it right to consult the Foreign Office before publishing that report?—Probably we should not think it proper to publish the report at all; I should certainly, in the case supposed, not do so without consultation with the Foreign Office.

2159. Did I rightly understand you to state that the Secretary of State for India did not consult the Board of Trade at any time?—What I stated was, that I was not aware that the India Office was in the habit of consulting the Board of Trade in the sense in which I understood the question to be put by the Honourable Chairman, but that they had a great deal of communication with the Board of Trade with reference to matters that come under our cognizance in the department of the Mercantile Marine.

2160. Supposing that an important question of tariff were to be raised in India which affected this country, would not the Secretary of State for India consult the Board of Trade on that point?—I do not know; I am not aware of its being the practice.

2161. You are not aware whether the President of the Board of Trade is in personal communication with the Secretary of State for India?—No; I have no reason to suppose that he is, or that he is not.

2162. In the negotiation of the French and Turkish Treaties, has there been any practical inconvenience in the relative position of the Foreign Office and the Board of Trade?—That is a question that I am not able to answer. The negotiation of the details of the French Treaty was conducted in an exceptional manner.

2163. I understood you to say that the Secretary of State for Foreign Affairs would have to be responsible in his place in Parliament for matters connected with commercial treaties and tariffs if the proposed change were introduced?—Yes.

2164. That the information that he could give to Parliament, and for which he would be responsible, should be information given to him, or advice given to him by that officer, whom you propose to add to the Foreign Office?—The Secretary of State is responsible for getting such information as will enable him to form a sound opinion upon whatever question comes under his consideration.

2165. But he, and not the President of the Board of Trade, would have to be responsible for those questions to Parliament?—I understand that the Foreign Secretary is at present responsible for any conclusion that he comes to after consulting with the Board of Trade.

2166. Is the Foreign Secretary now responsible for the negotiation of a treaty, or for the facts and principles upon which that treaty is founded?—That is a question which I am hardly competent to answer.

2167. I suppose you make a distinction between the negotiation of a treaty and the negotiation of a tariff?—No; I do not know that I should make any distinction.

2168. I mean to say this: the Foreign Office having received the information and the advice from the Board of Trade, could negotiate upon general principles, a treaty with some foreign power; but when you come to go through a tariff for the purpose of revision or alteration of the tariff dues, then the Foreign Minister could be no longer responsible for those details?—I think the Foreign Minister is always responsible for the conclusion at which he arrives, after obtaining such information as he finds it necessary to obtain.

2169. Are you aware that in the case of the negotiation of the French Treaty of Commerce, the negotiation of the treaty itself was carried on by the Foreign Office, but that the details of the tariff were confided by the Foreign Office to Mr. Cobden

J. Booth, Esq.

17 June 1864.

Cobden and another gentleman, specially competent to deal with those matters?—I am perfectly aware of it.

2170. In that case there was no difficulty, and the treaty was successfully carried through, was it not?—It was.

2171. Do I understand you to say, that even supposing this gentlemen is to be the Commercial Under Secretary to the Foreign Office, the Foreign Office is to communicate directly with the subordinate officers of the Board of Trade, without the communication passing through the hands of the President of the Board of Trade?—I think that, supposing there were an officer such as has been suggested, he might very usefully be in personal communication with the officers of the Board of Trade, particularly with the officers of the Statistical Department, in order to obtain such information as would enable him to give proper assistance and advice to the Foreign Secretary.

2172. Do you mean to say that Earl Russell might send for Sir Emerson Tennant, or yourself, to the Foreign Office, to consult you?—If Earl Russell thought proper to do so, no doubt he would do so. But what I spoke of was communication between the subordinate officers, with a view to obtain information.

2173. Do you think it advisable that the Foreign Office should pursue the same system with the India Office, and with the Admiralty, and with the War Office, and other departments?—I have not suggested that the Foreign Office should take that course.

2174. What distinction do you make between those departments and the Board of Trade?—There is no reason why an officer of one department should not communicate unofficially, by letter or by personal intercourse, with an officer of another department. In fact, it is very commonly done. I have a great deal of communication with the officers of various departments.

2175. What I ask is, whether you propose that Earl Russell should send for Sir Emerson Tennant, or yourself, to consult you, in order to act upon the information and advice given by you?—I propose nothing of the kind.

2176. What do you propose then?—I propose nothing.

2177. I understood you to say that you saw no objection in Earl Russell sending for Sir Emerson Tennent and yourself, if he wished to consult you?—Yes, I see no objection to his doing so; but I have not proposed that he should do so.

2178. Do you not think that it would be exceedingly inconvenient for the transaction of public business if the head of one department were to send for the subordinate officers of other departments?—No. I can conceive cases where it would be very convenient. I have known more than one instance in which the President of the Board of Trade has sent for a Customs' officer to give him practical information on some question under consideration.

2179. Supposing that any advice that you give to the President of the Board of Trade is acted upon, and Parliament takes cognisance of what he has done and condemns him, do you consider yourself or the President of the Board of Trade responsible?—Supposing the Foreign Minister sent for me and acted upon my advice, in that case I should consider that the Foreign Minister was responsible.

2180. Supposing that the President of the Board of Trade acts upon advice given by one of his officers, is he responsible, or the officer who gives the advice?—He, undoubtedly.

2181. Do you think that Earl Russell, or the Foreign Minister, could act upon advice given by you to him, and throw the responsibility upon the President of the Board of Trade?—No, I do not think that the Foreign Secretary could throw the responsibility upon the President of the Board of Trade; the responsibility would be his own, if he acted upon my advice.

2182. Do you think that the Foreign Minister would take upon himself the responsibility of acting in a matter of trade upon the advice of an officer in the Board of Trade, when he was to be responsible to the country for doing it?—That is entirely a matter for his own consideration.

2183. Do you think it probable, speaking from your own experience of public business, that any Minister would do so?—Upon that point I cannot form an opinion.

2184. Were you ever sent for by Earl Russell, or Sir Charles Wood, or any head of a department?—I have been sent for by Sir Charles Wood, when Chancellor of the Exchequer, by the present Chancellor of the Exchequer, and by the heads of other departments.

2185. I speak of the Secretaries of State, particularly?—I have never been sent for by the Foreign Secretary of State. By the Home Secretary, I have.

2186. Would Mr. Milner Gibson send for either of the Under Secretaries from the Foreign Office to act upon advice given by him?—I think that Mr. Milner Gibson has occasionally sent for one of the Under Secretaries of State at the Foreign Office.

2187. Then you do not desire more than at present exists?—No; I desire nothing.

2188. Why do you give an opinion if you desire nothing?—I have given an opinion upon the points upon which I have been asked questions.

2189. You condemn the present system, do you not?—I have not condemned the present system.

2190. Then, I rightly understand you to say that you do not object to the present system?—I have urged no objections to the present system. Being required to attend this Committee, and being asked my opinion as to the working of the present system, I have given it.

2191. I understood you to have expressed an opinion that it would be a great improvement if there were a department of the Foreign Office devoted to commerce, with an officer at its head?—I have not stated that I thought it would be a great improvement.

2192. What have you stated?—I have stated that I thought it would be advantageous, particularly with a view to the consideration of foreign tariffs, and obtaining facilities for foreign trade, if the Foreign Secretary had at hand an officer capable of giving him such information and advice as Mr. Mallet is capable of giving to the President of the Board of Trade.

2193. Whilst holding that opinion, you state that, at the present time, the Secretary of State for Foreign Affairs could send for Mr. Mallet, if he liked, and ask for his advice?—Yes; he could.

2194. Would it not be better for the Minister to take the advice of a gentleman in the Board of Trade who has all the machinery at his disposal in the Board of Trade, than that of a gentleman in the Foreign Office who could not have that machinery at his disposal without going to the Board of Trade for it?—No; I think that the opportunity of freely communicating with the Foreign Secretary, and offering suggestions for the despatch of the matter under consideration,

tion, would have, in itself, considerable advantages, which would more than compensate for the extra trouble of the officer's occasionally having to go across to another department in order to obtain the information for which he had occasion.

2195. Then it is merely a question of the distance across the street?—I should not have thought so. There is, besides, this difference, that the Foreign Minister, in the one case, would be responsible for the clerk, or assistant secretary, or whatever he may be called, by whom he is assisted, and not in the other.

2196. You mean to say that the Foreign Secretary would be responsible to Parliament?—Yes.

2197. *Chairman.*] In regard to the last question, is not the Foreign Minister, at present, responsible for all negotiations that are conducted with foreign powers?—I understand so.

2198. Either upon great questions or upon questions of detail?—That is my understanding of his functions.

2199. Am I to understand, from your answers, that you think there would be an advantage in his having, in his own office, and, consequently, in constant personal communication with him, a gentleman who was able to give him information in regard to the details of commercial negotiations?—I incline to think that that would be useful.

2200. You think that there would be an advantage in his being in personal communication with a gentleman in his own office which is not at present possessed, while he is obliged to obtain that communication through another office?—Yes.

2201. Sir *Stafford Northcote.*] I understand you to say that you consider that the Secretary of State might send for an officer in the Board of Trade, if he thought it desirable, to ask information from him, but would there be any corresponding power or liberty on the part of an officer of the Board of Trade to ask an interview with the Secretary of State in order to lay matters before him which he thought it desirable for him to attend to?—That, certainly, would not be the case.

2202. If he were an officer in the Foreign Office he would have that power, would he not?—Yes.

2203. Mr. *Layard.*] Do you think that, in the Foreign Office, one of the Under Secretaries may call upon the Secretary of State to take his opinion upon any matter?—I have no information as to the organization of the Foreign Office which would enable me to answer that question. I think the Under Secretaries ought to be allowed to offer suggestions to the Secretary of State.

2204. *Chairman.*] Is it not the case that the Statistical Department is in a separate building from the Board of Trade, and that it is merely connected with the Board of Trade by a nominal subordination?—It is in a separate building; but the chief of the Statistical Department is entirely subject to the President of the Board of Trade.

2205. In case of any information being required by any other department from the Statistical Department of the Board of Trade, does that request go immediately to the Statistical Department?—That would depend very much upon the office that was in want of the information. It might be either addressed to the Secretary of the Board of Trade, in which case it would be forwarded to the Chief of the Statistical Department, or it might be addressed direct to the chief of the Statistical Department.

2206. Would there be the slightest inconvenience as regards the other business of the Board of Trade if all such requests for information possessed by the Statistical Department were to go direct to the Statistical Department?—I am not aware of any inconvenience which the other divisions of the Board of Trade would suffer from that arrangement.

2207. Mr. *Seymour Fitzgerald.*] I think you stated that the Board of Trade was consulted, not only by the Foreign Office but very often both by the Colonial Office and the Home Office?—I am not aware of having stated that it was often consulted by the Home Office; I said that we had occasionally consulted the Home Office.

2208. The Colonial Office consults you, does not it?—The Colonial Office consults us.

2239. You have suggested the formation of a department in the Foreign Office, where there should be a gentleman to assist the Foreign Secretary with reference to all questions connected the foreign trade; do you think that it would be advisable or useful in any way that there should be a similar department formed in the Colonial Office?—No.

2210. Why not?—The Colonial Office does not require such assistance. The points upon which the Colonial Office is in the habit of consulting the Board of Trade are for the greater part points upon which the Colonial Secretary can form quite as good an opinion as the President of the Board of Trade.

2211. Why, then, is he consulted?—In the greater number of cases, because it has been the practice to do so.

2212. Then practically there is no necessity, in your opinion, for the Colonial Minister to consult the Board of Trade?—Occasionally the Board of Trade, from the exercise of the functions with which it is charged, is in a condition to be able to give useful assistance and suggestions to the Colonial Minister, particularly with reference to the organisation of departments in a colony, with duties analogous to those discharged by us under the Merchant Shipping and Railway Acts. Upon points of that kind, the Board of Trade is able sometimes to offer very useful suggestions to the Colonial Minister.

2213. I understood you to say that the Colonial Office was often under the necessity of consulting the Board of Trade with reference to colonial enactments which might or might not injuriously affect British interests, with a view to seeing whether those enactments should receive the Royal assent or not?—I think I did not say that they were under the necessity of consulting them; I said that it was the practice to consult them.

2214. Can the Colonial Minister form an opinion as to how far a colonial enactment will affect British trade, without having recourse to the department which deals with questions of trade?—Yes; I think that the Colonial Minister can form quite as good an opinion upon the greater number of questions upon which he consults the Board of Trade with reference to colonial Acts, as the President of the Board of Trade can form. There are certain matters upon which the Colonial Office is in the habit of asking for our advice and assistance, namely, the construction and management of lighthouses abroad, in which, from the knowledge that we obtain in the exercise of our own functions, and from having professional officers at our own command, we are able to give very useful assistance.

2215. Supposing that there were enactments

J. Booth, Esq.
17 June 1864.

necessary in Canada to enable the Canadian Government to carry out the provisions of a reciprocity treaty with the United States, those enactments might, under certain circumstances, affect British commercial interests in this country to a considerable degree, might they not?—Yes.

2216. Is not that a question which the Colonial Minister would necessarily refer to the Board of Trade?—He would refer it to the Board of Trade; I am not sure that the Colonial Minister would not be able himself to form as good an opinion upon a question of that kind as the President of the Board of Trade.

2217. Mr. *Layard.*] Do you understand, therefore, that if this Commercial Department is to be transferred to the Foreign Office, the Colonial Office, and the other departments which may or may not have been in the habit of consulting the Board of Trade, should then consult the Foreign Office?—By no means; they would have to consult the Board of Trade upon all questions upon which they think that the Board of Trade can give useful information.

2218. Supposing that the Commercial Department were transferred to the Foreign Office, the Colonial Office would have to consult the Foreign Office, would it not, upon commercial questions?—The suggested transfer of one officer from the Board of Trade to the Foreign Office would not put it out of the power of the Board of Trade to give the Colonial Office very much the same advice and assistance as it has been in the habit of giving hitherto.

2219. You would have, then, officers who would give similar information in both departments, the Foreign Office and the Board of Trade?—I am not aware that it would be necessary for the Colonial Office to obtain from the Foreign Office, assisted as the Foreign Office might be with such an officer as has been suggested, any assistance with reference to the Acts which come under the consideration of the Colonial Office.

2220. I refer, of course, to matters connected with trade?—Trade is a very large word; if the question had relation to the registration or measurement of ships; if it had relation to lights, or other matters that form part of the executive duties of the Board of Trade, the Colonial Minister would usefully consult the Board of Trade; I do not think he would ever feel it necessary to consult the Foreign Office on any matter relating to trade. We, ourselves, although provided with a sufficient staff for the consideration of all ordinary matters relating to shipping, often find it useful to consult the Commissioners of Customs on various questions, on account of the great practical familiarity of their officers with such subjects.

2221. Sir *Stafford Northcote.*] Are you aware that it has sometimes happened that Colonial Acts having been referred tothe Board of Trade, the Board of Trade have examined those Acts very minutely, and have reported upon them with reference to their bearing upon trade, and have expressed a wish that the Acts should be disallowed, but that the Colonial Office have set the whole matter aside, upon grounds of Colonial policy generally, and the superior importance of recognising the right of the Colonies to legislate for themselves?—That has often been the case.

2222. Does not that seem to show that the reference of special business of that kind to a department which takes narrow views, and does not take in the great questions of policy, involves a great waste of time; because the Board of Trade may occupy itself in discussing the details of an Act which after all will be passed, whether the details are found to be satisfactory or not?—That would often be the case.

2223. Does not that seem, therefore, to show that it would be better, as far as possible, that these matters should be settled, from first to last, by the department which has the cognisance of the whole of the policy?—I think it is very desirable.

2224. Might not that apply also to the case of a commercial treaty; might it not very well happen, that if matters are referred to the Board of Trade by the Foreign Office, the Board of Trade may spend a good deal of time in discussing questions of detail which afterwards may be found to have been time lost, because there were question of Imperial policy or foreign policy which rendered it necessary to set aside all that work?—That might well be the case.

2225. You were asked just now whether, if such an addition as you proposed or contemplated were made to the Foreign Office, it would not throw a great deal of work upon the Foreign Secretary in Parliament; would it not be possible to meet that difficulty by appointing an additional Parliamentary Under Secretary at the Foreign Office, for the special conduct of this business?—I should think that would be an arrangement well worthy of consideration.

2226. If that arrangement were made, the Under Secretary would be in a position of authority which would enable him to correspond with persons abroad, and to take the conduct of the Parliamentary business, would he not?—That would be so.

2227. You were asked whether the addition of this business to the Foreign Office would not entail a considerable addition to the expense: would it not be the case that if additions were made on the one side to the establishment of the Foreign Office, reductions might on the other side be made in the establishment of the Board of Trade?—It would be so.

2228. With regard to the establishment of an additional Parliamentary office, such as I have suggested, do you think it would be possible, if this business were removed from the Board of Trade, to dispense with the office of the Vice-President of the Board of Trade?—As far as the discharge of the duties of the Board of Trade is concerned, I think that the office of Vice-President of the Board of Trade might very conveniently be dispensed with.

2229. The Board of Trade is no longer what it used to be, a department in which a Board met for the purposes of consultation?—It is not.

2230. It is becoming a purely executive department?—That is so.

2231. If the business upon which it is consulted by the Foreign Offie were removed from it to the Foreign Office, it would be still less a consultative department than at present, would it not?—It would be so; it is hardly at all, properly speaking, a consultative department, except with reference to questions sent to it by the Foreign Office.

2232. Do you see any advantage in the existence, in a department which is mainly executive, of two officers who are so nearly co-ordinate as the President and the Vice-President of the Board of Trade are?—I see no advantage in it.

2233. Mr. *Layard.*] When you say that there would be a Parliamentary Under Secretary, do you mean to say that the Under Secretary should be

be responsible to Parliament for any questions of commerce and trade which come within the department of the Foreign Office? — What exactly is the responsibility of an Under Secretary I am not able to say. He is subordinate to the Secretary.

2234. Are you not aware that an Under Secretary has no responsibity at all, but that he is only the mouthpiece of the Secretary of State?—I should have thought that he was the mouthpiece of the Secretary of State, and responsible for giving effect to the instructions of his chief.

2235. Therefore this gentleman, if he was in Parliament, would be the mouthpiece of the Secretary of State?—Yes.

2236. The Secretary of State would be responsible for what he might say or do?—Yes.

2237. Therefore he could not carry on an independent correspondence with Ministers abroad, or make independent statements in the House of Commons?—I should think not.

J. Booth, Esq.

17 June 1864.

2238. *Chairman,*] Do you see any advantage in your office being on a different footing from other great departments, as being a Board rather than a secretaryship?—It is not a Board really.

2239. Do you see any advantage in its being nominally a Board of Trade in place of being a Secretaryship for Commerce?—I see no advantage.

2240. I think I gather from your answers that you are of opinion that it is advisable that the Board of Trade should be confined to its administrative functions, and that its intercourse with other departments should be limited to occasions when they wish to obtain information which it possesses, in consequence of its fulfilment of its administrative functions?—That is my view of the matter; I do not think that a Board or a Department ought to exist for the purpose of getting up subjects in order to be able to give advice to other departments.

Sir James Emerson Tennent, called in; and Examined.

Sir *J. E. Tennent.*

2241. *Chairman.*] How long have you been in the Board of Trade?—Since 1852.

2442. Did you hold any position there before you held your present position?—I have held office in other departments, but not in the Board Trade.

2243. What is your position in the Board of Trade?—I am Joint Secretary in charge of the General Department, the Commercial Department, and I have likewise other functions connected with branches under several Acts of Parliament of which we have the administration.

2244. Mr. Booth has stated to the Committee what part of the business of the Board of Trade comes specially under him; will you tell the Committee what specially comes under you?—The most prominent portion of our functions is in connection with the Foreign Office. We are the consultative department in matters of foreign treaties, and likewise in matters of foreign tariffs, and in all questions arising out of the construction of those treaties. We are likewise consulted by the Colonial Office in reference to all Colonial ordinances which affect trade, and complaints from individuals or from bodies representing merchants, generally pass through the Board of Trade on their way to those departments from which they seek redress.

2245. I think, independently of fulfilling that function, in so far as the Board of Trade exercises any control over what may be called the separate offices of statistics, and the registration of designs and of joint stock companies, it exercises this control through you, does it not?—They are nominally under my department; but, practically, those offices have such a competent knowledge of their own business, and discharge it so effectually, that a question seldom arises which calls for the exercise of any jurisdiction on our part.

2246. When you were describing the communication which you hold with the Foreign Office you confined it, I think, to matters connected with tariffs and treaties; do they not also communicate with you upon matters relating to the navigation laws of other countries?—That comes under the head of treaties. The treaties upon which we are generally consulted are those of navigation and commerce.

2247. Will you be good enough to describe the exact mode in which communication between the Foreign Office and the Board of Trade takes place?—It being, as I have stated, consultative, the reception of communications from the Foreign Office is dependent upon their discretion in matters upon which they require our opinion; but in matters of information we receive from time to time, from the Foreign Office, such despatches as they have received bearing upon commerce, and such reports as reach them, either from the consuls or the diplomatic agents abroad.

2248. Then their communications with you are divided into two classes; those in which they ask your opinion upon special measures, and those in which, according to the regulations between you, they give you certain information?—Yes.

2249. With regard to the last division, what information are you in the habit of obtaining from them regularly?—In the first place, as regards the diplomatic body, we are in the habit of receiving from the Foreign Office the reports which are made by the Secretaries of Legation, from time to time, when those reports happen to affect commerce; and, as regards the diplomatic body, we have communicated to us from the Foreign Office such despatches, or portions of despatches, as refer to trade. From the Foreign Office we likewise receive the annual reports which the consuls make upon the state of trade in their various consulates.

2250. With regard to the other branch, in which the Foreign Office communicate with you at their discretion upon special measures, how is that communication conducted?—As to time, it is *pro re natâ*, and it is at their own discretion as to substance. A communication is immediately dealt with by us, and, with as much rapidity as we can bring the information we possess to bear upon it, our reply is communicated to them.

2251. You speak of communications from the Foreign Office to you upon matters of foreign trade; do you originate yourselves communications to the Foreign Office upon matters of foreign trade?—It sometimes arises in the course of reading the information sent to us, either from

Sir *J. E. Tennent.*

17 June 1864.

the diplomatic body or from the consuls, that we discover points to which, of our own accord, it may appear to be necessary to call the attention of the Foreign Office; and on such occasions we do not hesitate to originate the suggestion to them, but that does not occur very frequently.

2252. Then the communications which take place are much more generally originated by the Foreign Office than by you?—Certainly.

2253. How are those communications made; are they made with you, as Secretary to the Board of Trade?—The communications arrive addressed to the Secretary of the Board of Trade—not, I think, nominally, either to Mr. Booth or myself; on their arrival they are opened by the proper officer, who, according to the nature of the communication, sends them either to my colleague or to myself; upon them a minute is made as to the nature of the communication, and a suggestion as to the nature of the proposed reply; that is submitted for the approval of the President of the Board of Trade, and, being initialed by him, a letter is drafted, in substance embodying that memorandum; that, again, being approved by the President of the Board of Trade, is sent to the Foreign Office.

2254. Do those communications come from one of the Under-Secretaries of State in the Foreign Office?—Yes.

2255. Mr. *Layard.*] They are in the name of the Secretary of State, are they not?—Yes; always by the authority of the Secretary of State.

2256. *Chairman.*] This communication is carried on almost entirely by writing, is it not?—Almost entirely by writing; but occasions occur in which it becomes necessary, to facilitate the despatch of business or the quickness of the reply, for a personal communication to pass between the Secretary of the Board of Trade and the Under-Secretary of State.

2257. Does such a communication often occur?—Not often.

2258. Had you any personal communications with the Under-Secretaries during the long negotiations with regard to the Belgian treaty?—Yes, I think we had.

2259. Did that often occur?—Perhaps not often; the communication was chiefly conducted by writing.

2260. Do you remember whether you had any such personal communications with reference to the late Italian treaty?—No; I think we had not any personal communication with the Under-Secretaries.

2261. Do the communications which are made by mercantile bodies or chambers of commerce, with regard to foreign commerce, come generally to the Board of Trade, or do they go to the Foreign Office?—I think formerly they chiefly came to us, and we communicated with the Foreign Office; but of late years I think the action has rather changed, and they go almost as frequently to the Foreign Office, if they do not go to both.

2262. In cases in which they go to both, is there any arrangement between you and the Foreign Office, which secures your seeing them together, or your taking care that the same answer should be given to them by the two offices?—As to seeing them together, there is no such arrangement; but I think, in general, the answer of the Foreign Office is given after consultation with us, so that that insures an identity of reply.

2263. When those deputations from commercial bodies come to see the President of the Board of Trade, are you, or some gentleman holding your position, generally present?—When deputations come upon matters falling within my department, I generally attend with the President of the Board of Trade; and in the same way my colleague attends those deputations which refer to matters coming within his jurisdiction.

2264. Do you understand that it is the rule, as between the two offices, that the Foreign Office should not see mercantile deputations without informing you of their having done so, and without consulting you as to the answer that they shall give?—That entirely depends upon the nature of the business. If the Foreign Office feels quite competent to deal with it of itself, it does so; but if the business be of a nature that renders a communication or consultation with the Board of Trade desirable, that communication is made.

2265. Then, in fact, whether a communication is made to the Board of Trade or not depends upon the opinion of the Foreign Office as to whether the nature of the business is such as to require a communication to be made?—Yes; it entirely depends upon the nature of the business, and the discretion of the Foreign Office.

2266. When the Foreign Office communicates with commercial bodies, do they always inform you of their having made such communication?—Not unless it is necessary to consult us upon the subject upon which the communication is made.

2267. There, again, their doing so would depend upon whether they thought it advisable or not?—Yes.

2268. There is no rule which would necessitate their doing so?—No. I should add, perhaps, to that statement, that in almost all cases in which we receive deputations from commercial bodies, in relation to foreign commerce, it is essential that we should communicate to the Foreign Office, and we do so.

2269. Mr. *Layard.*] I suppose the distinction is between questions of policy and questions of fact?—Yes.

2270. If it is a question of policy, the Under Secretary decides it himself; but if it is a question of fact relating to commerce he consults the Board of Trade, does he not?—Yes.

2271. *Chairman.*] The decision as to whether it be entirely a question of policy, or a question of policy and of fact, rests with the discretion of the Foreign Minister, does it not?—Yes.

2272. In cases of individual applications of merchants with regard to foreign trade, that is to say, individual cases of complaint or grievance, do they generally come to you, or do they go to the Foreign Office?—I cannot tell in what proportion they come to us, or go direct to the Foreign Office; but we seldom are without such complaints at the Board of Trade of individual grievances, either arising from a misconception of tariffs or a misconstruction of treaties.

2273. When such grievances are brought to you, what course do you adopt?—We communicate immediately with the Foreign Office, giving them full particulars, in order that they may obtain the report of the consul or diplomatic agent at the place where the circumstance occurred.

2274. Do you embody that complaint in a letter to the Foreign Office?—We either do that, or we make a communication, stating the nature of the complaint that has reached us.

2275. Do you ever refer a complainant personally

ally to the Foreign Office?—I think we have very seldom done so.

2276. Have you had any instances of complainants going first to the Foreign Office?—Yes.

2277. In that case does the Foreign Office decide with regard to the complaint, without consulting you?—That will depend upon the nature of it. If it be a question of fact, upon which they can get the report of a Minister abroad, or a consul, they do so; if it be a question of construction or opinion, in all probability, they refer it to the Board of Trade.

2278. In that case, again, the question as to whether they shall do so or not rests entirely with their discretion?—Entirely with themselves.

2279. You sometimes put yourselves in direct communication with merchants, for the purpose of yourselves obtaining information, do you not?—Very frequently. We correspond very commonly upon all matters requiring information with the chambers of commerce; and upon questions upon which we can get direct information from merchants or manufacturers, we never fail to put ourselves in communication with them.

2280. You do not, I suppose, consider it necessary to forward those answers to the Foreign Office; they are for your own information?—We might either forward the answer or the substance of it.

2281. Does the communication with the consuls, upon matters connected with the Mercantile Marine Act, come at all under your notice?—No; that is in the department of Mr. Booth.

2282. Are you aware that complaints have been made by mercantile men and by chambers of commerce, on account of what they consider to be the disadvantages of having to communicate with two offices?—We have received many representations and deputations from chambers of commerce and others upon that subject.

2283. Are you aware that one ground upon which they make that complaint is that they consider that the necessity of having to complain to one office through another causes delay in the redress of their complaints?—I am aware of that complaint, but I am not sure that it is altogether logically founded. I think that, under almost any circumstances, they would have to address themselves both to us and to the Foreign Office, because on the nature of the complaint the Board of Trade, as the depository of the information upon which the decision turns, will require to be well informed, but on the application of that information to the individual case it is necessary to apply to the Foreign Office. I do not believe, therefore, that it would be practicable in all cases to avoid the double application. But, on the other hand, when the application is of the ordinary kind, my impression is that those deputations should go direct to the Foreign Office; and for this reason—that we are only the consultative and advising body of the Foreign Office, and with them lies the responsibility for the action.

2284. I think I understood you to say that the Foreign Office sent to you all the information that they received from their agents abroad, whether ministers or consuls, upon commercial matters?—They send us all that they consider concerns our department.

2285. Do you consider that there is anything in the present arrangement between the Board of Trade and the Foreign Office, with regard to commercial matters, that may cause delay which could be obviated?—I think, as a general rule, one might say that the merchants themselves have earlier information upon matters which are passing in foreign countries affecting their own interests than we have from the Foreign Office; and I am not quite sure that any means of acceleration that could be given to the Foreign Office would ever remove that inequality. I think an individual merchant, acting upon the spur of his own interest, will possess himself of information through private channels earlier than the diplomatic channels will convey it.

2286. That reply rather tends, does it not, to show that individual merchants could, under any circumstances, obtain the information quicker than any Government department?—I think so.

2287. Do you or do you not consider that the present arrangements for the Foreign Office giving you information could be in any way improved, or do you consider that there is no unnecessary delay at present?—I can only speak of the delay; as to the necessity for it, or the causes of it connected with the Foreign Office, I am not prepared to speak; I only know that the information does not, in the generality of cases, reach us as early as it reaches other quarters.

2288. Mr. *Layard.*] Do you mean to say that it is communicated by the Foreign Office to other quarters sooner than to the Board of Trade?—No; I mean that other quarters, by their own means of communication, obtain it quicker than we obtain it through the Foreign Office. I may say that communications have constantly been made to us, with reference to the proposed changes of tariffs, and other matters of which we had no official cognizance at the moment, though we may have heard of them through the newspapers.

2289. *Chairman.*] Do you imagine that it is a necessary accompaniment of a Government office that information with reference to changes of tariff should come to individual merchants before it comes to the Government?—Certainly not; I only speak of the effect of it, namely, that the information is more rapidly obtained by individuals than by the department.

2290. Is it the fact that you are sometimes informed of changes of tariff by individual merchants before you hear of them from the Foreign Office?—Yes; frequently.

2291. Have you any reason to believe that the Foreign Office could inform you of those changes of tariff more quickly than they do?—That depends upon the quickness with which the Foreign Office have received the intelligence themselves, and of that I cannot speak.

2292. If there be delay, you imagine that it does not arise from the Foreign Office in London delaying to send you the communication which it receives from abroad, but from the Foreign Office not receiving it from abroad as quickly as it might have done?—I apprehend that that is the case.

2293. Does the Foreign Office send you the information with reference to commercial matters in a complete form?—That is one point upon which we occasionally find difficulty. The Foreign Office sends to the Board of Trade, as I have stated, either the despatches or portions of the despatches which, as referring to trade, ought in their opinion to be communicated to us. But it frequently occurs that when we come to deal with those questions, we find we have not got the whole of the information, some parts of which

Sir *J. E. Tennent.*

17 June 1864.

could have been sent to us at an earlier period, and we are obliged to apply for it. When we do apply for it, we obtain the omitted portions.

2294. Am I to understand from that, that the Foreign Office has in its own possession information which it only sends to you piecemeal, or that the Foreign Office only obtains it piecemeal?—Both; the information arrives in despatches, and it happens occasionally that the whole of it is not communicated to us until, on coming to deal with the later despatches, we discover the omission of the earlier ones.

2295. Do I rightly understand by that, that you sometimes receive despatches with reference to trade, which refer to previous despatches which you have not received?—Yes.

2296. I understand that sometimes you receive despatches not when they arrive, but you only receive them when the business may be said to be complete, and the whole series of despatches has arrived?—Yes, it often occurs that the Foreign Office send to the Board of Trade for an opinion upon certain matters which have been subjects of discussion, and along with the request for that opinion, they send us the previous correspondence in a body.

2297. Would not the fact of their waiting until the correspondence is complete in itself account for the individual merchants being more speedily informed than you are?—You are coupling what I am saying now with what I said before about tariffs; what I now allude to applies to various subjects.

2298. What you now allude to applies to the Foreign Office asking for your advice upon measures in contemplation?—Yes; or perhaps upon questions raised abroad and still under consideration.

2299. You say, you sometimes find a difficulty in giving that advice, because you have not got all the facts before you, some of the earlier communications not having been forwarded?—Yes; but on applying for them they are supplied.

2300. When you get all that the Foreign Office possesses, do you generally find that you have complete information, or do you think that more could have been furnished?—It sometimes occurs that further information would have been desirable which is not furnished; but I am not in a condition to know whether the Foreign Office has itself obtained that information or not.

2301. Supposing that you yourself were endeavouring to obtain that information from a foreign minister, I suppose, upon the first conviction that it was wanting, you would apply to him for it; do you apply through the Foreign Office for it?—We apply always through the Foreign Office. If your question applies to the propriety of a more direct communication with the bodies who supply that information, either diplomatic or consular, I can conceive it quite possible that the information might be obtained both earlier and more complete if we were in more direct communication with those parties.

2302. I suppose you mean our diplomatic officers abroad?—I mean our officers abroad.

2303. Is it the custom for the Foreign Office to confine their communications upon commercial matters to official despatches, or do they also send you private notes which they receive from the ministers abroad upon commercial matters?—Personal notes passing between a minister in his personal capacity and the Secretary of State for Foreign Affairs are not sent to us; but we frequently receive communications which, though official, are marked "confidential."

2304. Do you, or do you not, suppose that all the information which is obtained by the Foreign Office upon commercial matters, from private sources, is communicated to you?—I think, in the negotiation of commercial matters, political considerations are so mixed up with commercial objects that the one materially affects the progress of the other; and, I think, frequently, that those considerations are not communicated to us (certainly not officially), as being the cause of delay.

2305. Do you, or do you not, imagine that every fact, and all the information which the Foreign Office obtains from its ministers abroad, with regard to commercial matters, is as much in your possession as it is in the possession of the Foreign Office?—I am sure it is in the contemplation of the Foreign Office that it should be so; if omissions take place, it is not from design.

2306. Practically, do you think it is so or not?—Practically, I should say it is so.

2307. Mr. *Layard.*] The Secretary of State for Foreign Affairs may communicate private information to the President of the Board of Trade which you would not know of, may he not?—Yes, certainly; that I should add to the opinion I formerly gave, that although the official communications which may daily pass upon commercial matters may not be communicated to the Board of Trade, I have no reason to doubt that they are communicated privately between the Secretary of State and the President of the Board of Trade.

2308. *Chairman.*] You say you have no reason to doubt that; have you reason to think so?—I should think so.

2309. You have stated that a commercial question is closely connected with political considerations; are you always informed of the political questions upon which any commercial question depends?—We are not always informed of that, because the nature of those political causes or considerations may be such that it would be imprudent for the Foreign Office to make them officially known to us.

2310. Do you imagine that your want of that knowledge is no disadvantage to you in forming an opinion upon which you can guide the Foreign Office?—No; I do not know that it is. The opinion that we are bound to give to the Foreign Office is, as to the propriety of certain measures; but it is for the Foreign Office themselves to consider what is the favourable moment for entering into negotiations with that view. There may be reasons, in the nature of obstructions, which would make it inexpedient for them to communicate to us officially the reasons which weigh with them, and which produces delay.

2311. It has been stated to the Committee, that it is the rule of the Foreign Office always to consult your office before treaties affecting commerce are concluded with foreign nations. Has that always been the case?—I think that would require considerable qualification.

2312. For instance, upon the treaty which has been alluded to to-day, namely, the reciprocity Treaty with the United States, were you consulted?—No.

2313. Mr. *Layard.*] What Treaty are you referring to?—The Treaty of 1854; the Canadian Treaty.

2314. *Chairman.*]

2314. *Chairman.*] Was your first official information, with regard to that Treaty, that it had been practically concluded?—I should think so; we certainly were not consulted beforehand.

2315. Mr. *Layard.*] That was not a treaty which affected this country, was it?—Yes; it very materially affected this country indirectly, inasmuch as it placed British produce in Canada at a disadvantage, as compared with United States' produce.

2316. It was a colonial question belonging to Canada?—Yes; it was a colonial question managed Imperially.

2317. *Chairman.*] Was not it a treaty which put British produce at a disadvantage in Canada with regard to produce from the United States?—On certain articles it did. The articles may be few, and the amount may be unimportant, but the principle was bad.

2318. Then, do I rightly understand that upon that Treaty, and upon the principle involved in that Treaty, you were not consulted before it had been practically concluded?—We were not.

2319. I thought that had been precisely the kind of question upon which the Board of Trade were consulted?—I am not aware of the circumstances which prevented our being consulted; but we were not consulted.

2320. With regard to the Treaty with Japan; were you consulted upon that before it was practically concluded?—If you mean the first Treaty with Japan, Sir James Stevens', we were not.

2321. With regard to the most important of all, namely, the French Treaty, were you consulted upon that before the Treaty was concluded?—Not before the Treaty was concluded.

2322. How was it with regard to the Russian Treaty?—That is some years ago; the Board of Trade were consulted upon it, in all its stages; and the practice is, in reference to treaties in general, to consult the Board of Trade; in fact, in almost the majority of instances the draft is prepared by the Board of Trade. If it is not prepared by the Board of Trade, it is submitted to us in the process of negotiation, and before final acceptance.

2323. Are you always informed by the Foreign Office of any of the reasons why they will not carry out your suggestions with reference to foreign commerce, especially with regard to foreign tariffs?—I remember no case in which the Foreign Office have differed with us upon a substantive matter of our recommendation; consequently, if any delay arose, it was from political considerations. Those have frequently been communicated to us, but there are many instances in which they have not been communicated to us.

2324. We find in these papers, which I suppose you have read, containing the correspondence with reference to the Italian Treaty, that a draft of that Treaty was sent by you in 1862 to the Foreign Office, and we find no communication from the Foreign Office to you, with regard to that draft until after they had received another draft from Mr. West, in the beginning of the year 1863. Did the Foreign Office give you any reason why they did not communicate with you, or why they did not send on your suggested draft treaty?—As far as I remember, I think we were not communicated with; but I believe that you have summoned Mr. Mallett, and as he is personally acquainted with the matter, I think it is more desirable that he should answer this question.

2325 That would apply to Belgium also, would it not?—Yes.

2326. You are of course aware that Signor Marliani came over from Italy with reference to the projected commercial treaty between this country and Italy, in the course of the year 1862?—Yes.

2327. Did he ever come to your office?—We had a communication from the Foreign Office, to tell us that he would be put in communication with us, but he never came; our inference was, that from some political considerations the progress of the business had been suspended.

2328. Mr. *Layard.*] Did not Mr. Milner Gibson see him constantly at the Foreign Office?—I believe the President of the Board of Trade saw him at the Foreign Office.

2329. *Chairman.*] You said that it was your inference that the progress of the business had been suspended; you were not informed that there were political reasons for the suspension of those negotiations?—No.

2330. You are aware, I suppose, that there has been a suggestion made by those commercial gentlemen who have been examined before us, who think that there is a disadvantage in having to apply to one office through the other; that there should be a commercial department at the Foreign Office. What is your opinion with regard to that suggestion?—When that idea was suggested some months ago, there was something attractive in the proposal; but on due consideration of it, I am quite satisfied in my own mind that it never would work well.

2331. That suggestion has been made under two forms: one, that such department should be under the supervision of a permanent Under-Secretary of the same position as Mr. Hammond, and the other, that it should be under a political Under-Secretary of the same position as Mr. Layard. Am I to understand that you think that there are objections to both those forms?—My objection would apply to both.

2332. First, with regard to the objection to a permanent commercial Under-Secretary, what is your chief objection to that?—I cannot see that the information which we acquire at the Board of Trade, and which we communicate for the guidance of the Foreign Office, could be obtained more efficiently by such an establishment as it is proposed to create in the Foreign Office. I am quite satisfied, too, that our own establishment would still have to be continued, notwithstanding the creation of that department in the Foreign Office, and the consequence would be that we should have two departments doing precisely the same work. If the experiment in the Foreign Office was successful, one of them would be superfluous; if it was not successful, it would be no improvement upon the present state of things, and there would be a great risk of antagonism and difference of opinion.

2333. When you say that it would be necessary for your office to be continued, do you mean to say that you would require to acquire the same information with regard to foreign commerce that you at present have to acquire?—I do; I believe that foreign, domestic, and colonial commerce are so mutually interdependent, that it is impossible, with advantage, to separate the consideration of any one branch from that of the others; therefore, if the two other departments were left to us, namely,

Sir *J. E. Tennent.*

17 June 1864.

namely, the Department of Domestic and Colonial Commerce, I think we should be still obliged to get all the information which we now collect with reference to foreign commerce, as affecting questions with respect to domestic and colonial commerce; consequently both departments must be maintained.

2334. Do I rightly understand you to say that you think that, supposing the new commercial officer at the Board of Trade was a permanent Under-Secretary, the Chief Secretary having still to answer questions in Parliament and to conduct negotiations, would have to consult two offices in place of consulting one?—For the proper discharge of his duty, he would; but besides that, I believe that it would be such an addition to the labours of the Secretary of State to master the consideration upon which he would arrive at results upon commercial questions, that it would be almost incompatible with the discharge of his other functions.

2335. That objection would not apply, would it, to a Parliamentary Under-Secretary who would answer questions relating to foreign commerce, and those questions only?—No; but there would be this disadvantage in the case of a Parliamentary Under-Secretary—that his office would change with every change of Government, and every new Parliamentary Under-Secretary would have to commence his education; and I believe the labour which is required, in order to master commercial questions in their entirety, is so great, that by the time that the new Secretary would have acquired it his turn would have come to change office again.

2336. Mr. *Layard.*] In addition to that, the Secretary of State would be responsible still, would he not?—Yes.

2337. And, therefore, being responsible, if he were a conscientious man, he would consider it his duty to inform himself upon those subjects, would he not?—Certainly. I may state, in illustration of the labour which I believe would be added either to the Secretary of State or to the Under-Secretary, that there are few departments in which the volume of results bears so small a proportion to the labour of obtaining them, as in the Board of Trade. The quantity of correspondence and the number of documents that must be read, to arrive at a result which is conveyed in a single sentence, either affirmative or negative, is such as would be scarcely credited, except by a person who would undergo the labour.

2338. *Chairman.*] Am I to understand by this answer that you think there is any foundation for the complaint made by commercial men, that they would prefer their representations being conveyed to the Board of Trade rather than to the Foreign Office?—My impression is that their representations should be conveyed to the Foreign Office. The Foreign Office is, in reality, responsible, for in such instances we are only an advising body, and the commercial men have no more right to communicate with us than they have to communicate with the law officers of the Crown, in a parallel case in which a legal question is involved. Their representations should be made directly to the Foreign Office.

2339. Mr. *Layard.*] You refer to questions affecting foreign commerce?—Yes.

2340. *Chairman.*] I understand you to say that you think it would be well if the commercial bodies felt that the Foreign Office was the office that was responsible to them, but that the practice should continue of the Foreign Office resorting to your office for information as to how to meet their complaints; is that your opinion?—Yes. I should like to add an observation to my former answer. Your questions have applied to the probable case of a foreign department of commerce being created in the Foreign Office, still, however, leaving the Board of Trade to the exercise of its functions. But another shape in which I have heard that proposition put to-day is, that the foreign functions of the Board of Trade should be given to the Foreign Office, and the colonial functions to the Colonial Office; in fact, that the Board of Trade should be dismembered. Upon that proposition, which I have heard to-day, I should observe that I believe the information that the Board of Trade in its collective capacity brings together is infinitely more complete and valuable than could be obtained by any sectional departments collecting each for themselves similar information. That depends upon what I have already alluded to, namely, the interdependency of every branch of trade, foreign, colonial, and domestic. I believe, therefore, that if it was to be collected sectionally, the value of the information which the Board of Trade now possesses collectively would be very much deteriorated; and not only that, but I think that if each department was to act upon the advice of its own commercial branch, you would make the policy of those several departments antagonistic by-and-by. Each would look at its own subjects in a partial manner: political subjects would be regarded in the case of the Foreign Office, and colonial subjects in the case of the Colonial Office; whereas the effect of the Board of Trade at present is to harmonise the policy of all, by as far as possible inculcating upon all a commercial instead of a departmental policy.

2341. Is it the case that the India Office consults you upon commercial matters?—It is not.

2342. Does not the India Office consult you, for instance, upon such a question as levying a tariff upon Manchester cottons?—No; the India Office has never consulted us; the reason for that I ascribe to this, that in the original constitution of the Government of India, it was an independent company, acting for its own profit. It therefore dealt with its own commercial questions as it were, irrespective of whether those were in accordance or antagonistic to the Imperial interests. They had their own department for trade, and their own statistical department, and they never consulted us. But when the East India Company ceased, and its functions were handed over to the Secretary of State for India, the Board of Trade thought it necessary to apply to the Secretary of State for India, to remind him of the change that had taken place; that India had now become a dependency of the Crown, and to say that as the Board of Trade was in the habit of advising all the other colonial dependencies upon matters of commerce, we should be happy to give them any information which we possessed in the same way. To that letter we received an answer some years ago, to say that when our advice was wanted, we should be applied to.

2343. Do you consider that there is any disadvantage in the India Office not consultiug you upon matters of tariff?—I scarcely remember a period when the tariffs of India have not been a subject of complaint, as being antagonistic to the interests of England.

2344. The

2344. The Colonial Office does consult you, does not it?—The Colonial Office does consult us upon the propriety of giving the Queen's sanction to ordinances affecting trade, and also upon matters of Colonial duties, and other commercial questions.

2345. For instance, the cotton manufacturers of Lancashire complain almost as much of the Canadian duty upon cotton goods as they do of the duty levied by the Indian Government; has the Board of Trade protested against such duty?—Uniformly.

2346. Do you consider that there has been any advantage in their being able to make that protest?—I think the Board of Trade, in some instances, even with reference to Canada, has had the advantage of its opinion being acted upon. But, in others, the Colonial Legislatures have been allowed to take their own course, irrespective of the opinions expressed by the Board of Trade.

2347. Does the Treasury consult you invariably upon such of its measures as affect the trade of the country?—Seldom or never; I can scarcely remember an instance in which the Treasury has consulted the Board of Trade since I have held my present office.

2348. It was the case, was it not, that the Treasury consulted you with regard to the sugar duties recently?—Yes; I think it was rather the Foreign Office that consulted us with regard to that. There was an international convention that took place at Paris, which Mr. Mallet attended, upon the subject of sugar duties. I am not sure whether it was the Treasury or the Foreign Office which consulted us in that instance.

2349. By your former reply, of course, you do not mean to say that the Chancellor of the Exchequer does not communicate with the President of the Board of Trade as his colleague in the Cabinet?—What passes in the Cabinet, I cannot tell; but official communications are never made to us by the Treasury.

2350. The official information possessed by the Board of Trade is not, to your knowledge, brought to bear upon those questions entertained by the Treasury?—No.

2351. I think you stated that you were not informed of the French Treaty until it was practically concluded. Was not your office informed of the probability of such a treaty being entered into, and of its being based upon a very considerable reduction of the duties levied upon foreign goods?—I am not aware that we had any official cognisance of the French Treaty, notwithstanding that there was a rate of duty fixed in it, until the treaty had taken such a shape as to be in a condition to be laid before Parliament.

2352. If you had been informed of it at an earlier stage, would you have made representations that communications somewhat similar to those we made to France, should have been made at the same time to other countries, with respect to a reduction of duties?—I think so. We were about to give an immense advantage to France in respect of her wine; and I think, if time had permitted, we might have had representations made to Spain and Italy; we might have made use of it to obtain better terms for our manufactures.

2353. Do you think that your Board, as being specially concerned with trade, would, if you had had time, have suggested that the opportunity should be made use of to apply to Spain and Portugal?—I should not fail myself to have suggested it to the President of the Board of Trade.

2354. Is there any disadvantage in the working of your office as compared with other offices, in the fact that your office is not a Secretaryship of State, but a Board?—The practical disadvantage at which we feel ourselves placed is, that when our strongest convictions are conveyed in the shape of advice to other departments, we have no influence in seeing that they are carried out; they may be set aside or disregarded at the option of those departments.

2355. Do you think that that arises because, according to the etiquette of other departments, an office at the head of which is a Secretary of State, is in a superior position to an office under a Board?—I cannot trace it to a mere technical reason of that kind; but certainly the status of the Board of Trade, as compared with that of other departments which are represented in the Cabinet, is not upon an equality with them.

2356. Are you aware whether in other countries the Ministry of Commerce, answering to our Board of Trade, is not put upon an equality with the Department of Foreign Affairs, and with the Department of the Colonies?—I believe it is so in France; and looking to the importance of the interests committed to the President of the Board of Trade, I think he is eminently entitled to occupy a similar position.

2357. I think you have given a decided opinion that you would consider it a disadvantage to attempt to transfer the department which looks after foreign commerce in your office to the Foreign Office; do you think that a similar objection would apply to a suggestion which has been sometimes made, that the Vice-President of the Board of Trade should be himself an Under-Secretary in the Foreign Office for commercial matters?—I can conceive that there would be considerable advantages in that, but coupled with some inconveniences. I can well appreciate the importance of having the business of the two departments simultaneously known to a man connected with each; I believe that it would lead to a more thorough knowledge of the wants and wishes of the Board of Trade, and to a more rapid realization of them as regards the Foreign Office. But, on the other hand, I believe that the Vice-President in such a position would find himself anomalously placed as regards the President of the Board of Trade; he would become the depository of information of the most important kind, of which the President of the Board of Trade would not have the advantage of being equally possessed.

2358. Your objection to that would be, that his position, as a subordinate officer to the President, would be almost untenable, would it not?—I should think so.

2359. Do you know whether, in the communications that are made to you by the Foreign Office, the Foreign Office puts those communications under the care of any special clerk or not?—I should think the contrary; if you mean to inquire whether I think that there is any special clerk in the Foreign Office who has charge of questions affecting commerce as communicated to the Board of Trade, I do not think there is.

2360. Mr. Hammond, whose evidence I dare say you have seen, has stated that there is not, and

Sir *J. E. Tennent.*

17 June 1864.

and that he thinks there would be great objections to there being, such a clerk; have you, or have you not, formed any opinion, as an officer of the Board of Trade, as to whether it would be an advantage to you, in your communications, that the Foreign Office should have such a clerk?—Of course I speak with diffidence, not knowing the precise machinery that exists in the Foreign Office; but I can conceive that it would be an advantage if there were a clerk charged, not with administrative, but with ministerial functions; not to conduct the correspondence with the Board of Trade, but to see that that correspondence is quickly carried on. I think it might prevent delays, and lead to replies being more quickly despatched.

2361. Mr. *Layard.*] Have you any such clerk in the Board of Trade to see that the correspondence with the Foreign Office is carried on promptly?—No; I should say that Mr. Mallet represents the kind of person I would have there, with this difference, that Mr. Mallet's functions with me are deliberative as well as ministerial.

2362. *Chairman.*] You mean to say that you think it would tend to a more prompt communication between the two offices if there was any gentleman at the Foreign Office who had the same care over that correspondence as Mr. Mallet has as a part of his duties?—I think so.

2363. To take an illustration: would you or would you not think that it would have been difficult for the draft treaty, which you forwarded in the beginning of 1862, to have been so long without any remark being made by the Foreign Office, if there had been such a clerk there?—I cannot answer that question, because I do not know what the explanation of the condition of things was, or whether it was capable of being communicated.

2364. Sir *Minto Farquhar.*] That draft had reference to the Italian treaty, had it not?—Yes.

2365. *Chairman.*] It has been stated by one or two of the witnesses that there is a special reason for this inquiry, as to the efficiency of the organization of the two offices, on account of the great increase which has lately taken place in trade; do you think that a reasonable statement?—I think it is very probable that the present uneasiness of action of the two offices arises from the prodigious increase of trade in this country, which, within 10 years, may be said to have trebled, both in exports and imports. I think that the same machinery which was quite capable of carrying on the trade whilst its bounds were smaller, has been found insufficient now, when its dimensions have become so enlarged.

2366. I gather, that although you do not think that the suggestion of a commercial department in the Foreign Office is one in which advantages outweigh disadvantages, you are not of opinion that the present organization is all that it should be?—I think that the present organization, in its conception, is one which ought to be maintained; but I think that it requires more momentum. I think in the first place, as regards the Board of Trade, that the Board of Trade should have more influence, I should perhaps use the word power, to enforce its own opinions; that they should become matters of Cabinet and Imperial policy, instead of being merely suggestions for departmental action. I think also that the suggestion which you have thrown out of having a clerk in the Foreign Office, in the capacity that you have described, would be an advantage. I cannot but feel that probably more complete and more prompt information would be obtained, if our communication with the consuls, and probably even with the diplomatic body itself, on special occasions, were made more direct.

2367. Supposing that there was such a communication, how would you think that it ought to be conducted?—I think it must be conducted through the Foreign Office. I think that they ought to be aware of every communication that passed between either their diplomatic agents or consuls, and the Board of Trade, and that communication might take place under flying seal.

2368. Do you think that by so communicating you would avoid the possibility of any collision between the instructions from your office and those from the Foreign Office, because the Foreign Office would always warn you in case of danger of such collision?—Yes, I think so. I think that such communications as the witnesses have alluded to would pass through the Foreign Office, subject to their approval.

2369. Are not there a great number of individual cases of detail in which British subjects apply to you for your influence with the Foreign Office, to see that their complaints are attended to?—There are, and I think myself that it would be a pity to destroy the feeling which exists among the manufacturing and commercial classes in this country, that there is an independent department to whom, in cases of complaint, they can resort, with an assurance of sympathy; a department with no individual interests of its own to look to. I think they resort to us in cases of complaint with regard to the Foreign Office, and likewise upon matters connected with the Customs; and if the Board of Trade was dismembered, I think the commercial community would soon find the want of a commercial tribunal, or rather public body, to resort to in such instances.

2370. Are not those cases generally cases that would admit of immediate settlement between you and the foreign ministers abroad?—I speak of questions not connected merely with foreign policy, but questions affecting the Treasury; and other departmental questions connected with the Foreign Office, I think might be disposed of as has been suggested, by the communication to the diplomatic or consular agents abroad passing through the Foreign Office, with its full cognizance, and subject to its approbation.

2371. Some of the witnesses who have been called before us, have expressed a fear that the consuls and foreign ministers do not attend to trade quite so much as they would do, if they were brought into more immediate personal connexion with the office whose business it is to look after trade; do you think that there is any ground for that fear?—I am not prepared to give any individual instances in illustration of it, but I cannot but feel that if we were in direct communication with the consuls, and had opportunities of making them aware of our wishes and wants, they would be more fully and promptly met and supplied than they are now. I cannot but likewise feel that if the consuls were aware of the appreciation which their reports meet with when they come to the Board of Trade, if we had the means of communicating that fact, a great stimulus would be supplied. Some years ago a proposition was made that we should have the means of expressing our views upon them; but it was not favourably

favourably received, and it was never acted upon.

2372. Is it your suggestion that you should be put in communication with the consuls abroad, or that the consuls should be put under your office?—I should say, merely that we should be put in communication with them. It is quite true that, at present, the Board of Trade is asked its opinion upon the appointment of every new consulate or vice-consulate; the appointment appears to be made upon considerations of trade alone, but as soon as it is made, all communication with the department having the management of trade ceases. I should be quite content with the extent of communication I have shadowed out, without looking to have the consuls placed entirely under the Board of Trade.

2373. Am I to understand that your suggestions are that there should be a clerk in the Foreign Office who should have the care over the correspondence with your office?—Yes.

2374. And that your office should be put into immediate communication with the consuls and the foreign ministers upon matters of commerce?—Yes.

2375. Sir *Minto Farquhar.*] Still I understood you to say that you thought you should still communicate through the Foreign Office under flying seal?—Yes, under flying seal through the Foreign Office.

2376. *Chairman.*] I understand also that you think that there would be an advantage in the Board of Trade being put in an equal position with the offices at the head of which is a Secretary of State?—The advantage I see in that is, that the power ought to be imparted to the Board of Trade, to give greater force to its own recommendations.

2377. Mr. *Layard.*] Have there not been occasions when the communications between our agents abroad and the Board of Trade have been carried on under flying seal. I think in the case of Mr. Ward that occurred?—That is not within my knowledge; it is very likely.

2378. At no time has there been any objection raised by the Foreign Office against it?—No.

2379. Sir *Stafford Northcote.*] I understood you to say that you objected to the idea of the creation of a Commercial Department at the Foreign Office for this, amongst other reasons, that it would add very much to the labours of the Secretary of State; and that, even if there were a Parliamentary Under-Secretary of State, it would still be necessary for a conscientious Secretary of State to inform himself upon the general subjects of that department. I also understood you to say, that you thought that the complaints of merchants ought to be sent directly to the Foreign Office. Have I correctly apprehended you upon those two points?—It would depend very much upon the nature of their complaints. My reference to direct applications from complainants to the Foreign Office referred to the cases of which the Honourable Chairman was speaking of deputations from chambers of commerce affecting policy; in such cases, I think, they ought to go to the Foreign Office, because they are responsible for the action, and we only for the advice.

2380. Do you not think it would be the duty of a conscientious Secretary of State to receive those representations, and to make himself aware of the subject to which they relate?—That is a very small portion of the business; the complaint itself contains generally a statement of the facts, and the listening to that goes far to assist the Secretary of State in coming to a conclusion. But when it is proposed to create in the Foreign Office a department which should advise and report to the Secretary of State upon commercial questions, I think that the labour of qualifying a Secretary of State to receive those reports, and the reading of the papers upon which they were founded, would, in my opinion, be so immense as to be incompatible with the discharge of his political functions.

2381. Do not you think it very desirable that the Secretary of State, in order to judge of particular complaints, should have a general knowledge of the course of trade, and of the matters bearing upon the complaints which are made?—Undoubtedly; but I take it for granted that in deciding upon any question in the Foreign Office, the Secretary of State for Foreign Affairs would be compelled to undergo the same process as the President of the Board of Trade has to undergo in order to make up his mind. That process is this: when I have occasion to lay a case before him, I bring all the papers with my opinions upon them, and it is his duty to read the papers, and to see that his opinion concurs with mine; that is what I mean when I say that a conscientious Secretary of State would be obliged to go through an immense amount of labour.

2382. If that conscientious Secretary of State is to form a fair judgment upon the complaints which are made to him, would it not be necessary that he should go through an immense deal of labour to inform himself, not only of the precise point brought before him, but of collateral points?—Yes; I do not confine my observation to complaints alone, but it has been proposed here to create a department in the Foreign Office to collect information, and come to decisions upon all questions of foreign policy, and not upon complaints alone.

2383. Would not that involve the necessity of the Foreign Secretary making himself master of a considerable amount of information bearing upon the course of trade, in order to enable him properly to appreciate and deal with the various complaints or representations that might occasionally be made?—No doubt there must be a large amount of general information required; but, in cases of individual complaints, the facts almost suggest their own solution.

2384. To what sort of cases do you refer; to cases in which an individual, A. B., has met with some ill-treatment, or to cases in which the chambers of commerce desire that particular steps should be taken in order to relieve trade from restrictions?—My remarks especially apply to the first instance, namely, an individual complaint. With reference to the second case, the Secretary of State, in making up his mind upon the course of policy suggested by the chambers of commerce, has now the assistance of the Board of Trade, who have thoroughly considered all those matters; but under the plan proposed here, he would be obliged to form his own opinion.

2385. After having received the advice from the Board of Trade, he is the responsible person to act, is he not?—Yes; but we are responsible for that advice.

2386. Do you think that he would not consider it necessary to make himself master of the facts upon which the advice was given?—No more than he

Sir *J. E. Tennent.*

17 June 1864.

he would feel himself obliged to form his opinion upon the facts on which the law officers give their advice in a legal question.

2387. You think that he is to be merely ministerial, and to carry out the opinions of the Board of Trade?—The Board of Trade, as at present constituted, has to suggest the advice, not to decide.

2388. Who has to decide?—The Foreign Secretary.

2389. Then the Foreign Secretary must make himself master of all the considerations bearing upon the subject, must he not?—No; he takes those from the Board of Trade, whose business it is to master them. If necessary, he can also take the advice of the law officers of the Crown.

2390. If he is to take his conclusions from the Board of Trade, where is his responsibility?—His responsibility is for the action.

2391. You mean that he would be responsible, if he did not do what the Board of Trade desired him to do?—Yes, provided that just cause could not be shown for the delay or omission; but I said that I was not aware of a single instance in which the Foreign Office had differed from the policy recommended by the Board of Trade, though they may find obstructions in carrying that policy into effect.

2392. What is to be the position of this officer who is to give greater momentum to the recommendations of the Board of Trade; is he to make himself master of all those commercial questions?—No; I say that he is not to have deliberative functions, but he is to be a clerk who will see when the representations come in from the Board of Trade to the Foreign Office, and will watch the period in which they are replied to. I think that would prevent omissions and delays.

2393. He is not himself to advise the answers which should be given?—Certainly not.

2394. He is to suggest to some officer, whose business it is to prepare the reply, that a certain length of time has elapsed?—His business would be to keep a record of the correspondence between the Foreign Office and the Board of Trade, and to observe when inquiries have come and when they have been answered, and to act as a kind of remembrancer, to remind the department that certain communications are to be answered and certain steps taken.

2395. He would be very little more than a registrar?—Very little more.

2396. Do you suppose that there is no machinery of the sort in the Foreign Office now?—I prefaced what I said by stating that I am not aware whether there is or not; but I conceive that there would be great advantage in the creation of it, if it does not exist at present.

2397. You are generally familiar with the mode in which public offices carry on their work; is not it usual to have such a system of registration as will keep before the minds of the officers charged with the correspondence, the general state of all the correspondence?—I am not aware how things are managed in the Foreign Office; I know how the matter is managed in my own office. My private secretary keeps me informed of those things; the time at which letters arrive, and when they ought to be answered.

2398. If that were done in the Foreign Office, would that meet what you desire?—No; it would correct the tendency to delay, but it would by no means meet the exigency of the case.

2399. What more would you desire?—I should like to have direct communication with the sources of information.

2400. All that you want the clerk for is, that he should do what your private secretary does?—Yes, something of that kind.

2401. That reduces it to a very small matter, does it not?—Very small.

2402. There was one other point that you mentioned; you say that you have no communication now with the Indian Government; was not it formerly the case that the Board of Trade used to communicate with the Board of Control?—Yes, we did; and then there was this difference, that the Board of Control had the power of enforcing the advice which it communicated to the Board of Directors. We have no power of doing that.

2403. Sir *Minto Farquhar.*] Did that system work well, according to your notion, when the Board of Control had the power to enforce its advice?—Yes.

2404. It expedited matters?—Yes, I think so; I, myself, served as Secretary to the Board of Control for several years, and I know of several cases in which an objection of the Court of Directors to carry out the policy recommended by the Board of Control was overruled, and that policy was enforced.

2405. Mr. *Layard.*] I believe that the Board of Trade and the Foreign Office have always worked most harmoniously together?—Perfectly.

2406. There has never been any difference between us, has there?—None.

2407. During the time that Signor Marliani was in England, are you aware that there were frequent communications at the Foreign Office between Earl Russell, Mr. Milner Gibson, and Signor Marliani?—So I have heard.

2408. The Belgian Treaty was negotiated almost entirely personally between Mr. Milner Gibson, M. Van de Weyer, and Earl Russell, was not it?—Yes, I think Lord Donoughmore took part in it at the time.

2409. They were in personal communication, were they not?—Yes.

2410. *Chairman.*] When you say that you had heard of personal communications taking place at the Foreign Office between Earl Russell, Signor Marliani, and Mr. Milner Gibson, do you mean to say that you were informed that that was the case by Mr. Milner Gibson?—I cannot tell by whom I was informed, but I know that there were interviews which took place.

Martis, 21° *die Junii*, 1864.

MEMBERS PRESENT:

Mr. Pender.	Mr. S. Fitzgerald.
Mr. S. Beaumont.	Mr. Charles Turner.
Mr. Butler-Johnstone.	Sir Stafford Northcote.
Mr. Layard.	Sir M. Farquhar.
Mr. Milner Gibson.	Mr. Bazley.
Mr. Cobden.	Mr. Kinnaird.

WILLIAM EDWARD FORSTER, Esq., in the Chair.

Sir James Emerson Tennent, called in; and further Examined.

2411. Mr. *Layard.*] There is an impression among the commercial bodies in this country to which you allude in your evidence, that they are sometimes referred from one office to another, say from the Foreign Office to the Board of Trade, and backwards and forwards, and that they do not know which Department to go to. Do you think that that may arise in a certain degree from a want of not exactly understanding the duties which belong to each office?—I think that some time ago our relative functions were not so well understood as they are now. At present I understand the Chambers of Commerce have a perfect conception of the consultative functions of the Board of Trade and of the executive functions of the Foreign Office as being quite distinct.

2412. But it is a fact that those complaints still exist, because they have been laid before this Committee?—I believe they do exist still; but I think that the distinction between the two offices is perceived now more clearly than it was some short time ago.

2413. You understand the distinction, I presume, to be this: that abstract questions of policy are left to the discretion of the Board of Trade, while the action to be taken upon them is in the discretion of the Foreign Office?—Yes.

2414. Therefore, if the commercial bodies clearly understood the respective positions of the two offices there would be no cause for the complaint, as to their being referred from one office to the other?—I think not; but my belief is that the necessity for visiting both offices would still remain; because, although they might impress the propriety of action on the Foreign Office, knowing that the Foreign Office would consult the Board of Trade they would go to the one to set the Department in motion, but they would come to the other with a view to impress them with full information as to what was required.

2415. If, for instance, there came to Lord Russell a deputation asking him to put forward a certain article in the tariff, Lord Russell would tell the deputation that he could not answer the particular question, it being a question for the Board of Trade to decide?—That supplies an illustration of what I have been endeavouring to point out. Lord Russell would, in all probability, express his readiness to take action, provided the peculiar matter had the previous sanction of the Board of Trade.

2416. And, on the other hand, if a deputation went to you and asked you to press a certain commercial question on a Foreign Government, you would say you would have to communicate with the Foreign Office before giving them any answer?—I should.

2417. There would be no conflicting action between the two offices?—No, none.

2418. *Chairman.*] But still, it would leave things in this position, would it not, that they would go to the Board of Trade to obtain from them an opinion as to whether the information they had received should be acted upon, and then they would go to the Foreign Office to get the action realised?—Quite so.

2419. Mr. *Layard.*] Do I understand you to say that you do not see any way in which that state of things could be altered?—In reply to a former question, I have already stated my opinion that the double application would still have to continue to a certain extent.

2420. Mr. *Turner.*] But, still, that is felt by commercial men to be a great grievance, is it not? I do not know that it ought to be so felt.

2421. But is it not your experience that it is so felt?—They have so stated to us, but my previous reply goes to show that I do not see how, logically speaking, they will be able to divest themselves of that necessity.

2422. The different Chambers of Commerce, and parties in the country, go to the Foreign Office in the first instance, assuming that they are the parties with whom they ought to communicate, and then they are sent to the Board of Trade; are you not aware that the commercial community feel it is a very unsatisfactory thing that they should be so sent, first to one office, and then to another, to explain the business that they have in hand?—I rather think that the Honourable Member has inverted the ordinary course of action; the course which is most commonly taken, is to go to the Board of Trade in the first instance, and, having explained to the Board of Trade the nature of the proposition that they have to make, they get an assurance from us of our readiness to communicate with the Foreign Office upon the point; and if they go to the Foreign Office, it is for the purpose of impressing on them the propriety of the action which they have already ascertained the Board of Trade would recommend.

2423. *Chairman.*] Do you think that it would

Sir *J. E. Tennent.*

21 June 1864.

be more likely to further the objects they have in view if they were to come to your office first?—I think that it is likely that it would, because the more strongly they can impress the Board of Trade with the propriety of what they are about to recommend to the Foreign Office, the more likely they are to have the matter attended to when the Foreign Office takes the opinion of the Board of Trade.

2424. Mr. *Turner.*] But still it rests with the Foreign Office at last?—It does.

2425. Therefore, parties would feel generally that it is a matter of great importance that they should impress the Board of Trade with the importance to the commercial community of that which they desire to have carried out?—Yes.

2426. Mr. *Layard.*] The same kind of action would take place, would it not, with regard to all the public departments of the State?—Yes.

2427. In the case of a colonial matter, the parties would be referred to the Foreign Office first?—Yes.

2428. You suggest that there might be a registrar at the Foreign Office, whose duty it should be to see that the correspondence was regularly carried on between the two offices?—Yes.

2429. That refers to a departmental arrangement?—Yes. I will add why I think this necessary. The arrangement occurred to me in consequence of reading the evidence of Mr. Hammond, from which it appears that there is no individual officer in the Foreign Department whose functions are specially confined to matters of trade; but that with reference to each country the chief clerk under whose care the correspondence relating to that country is placed, takes charge of commercial along with political questions. It occurred to me, therefore, that delay might arise in collecting, from the officers in charge of the correspondence with these countries, the information required, and that that delay might be obviated if there were one clerk whose business it was, when a communication had been received from the Board of Trade requiring a reply, to see that the reply was promptly given.

2430. Are you of opinion that it would be desirable to have such an appointment, supposing it to be the view of all persons connected with the Foreign Office that it would injure the general efficiency of the office?—Then it would become a choice of evils, between which I do not feel myself competent to decide.

2431. It would be merely a departmental question?—Entirely.

2432. You are aware of the system of regulation observed in the Foreign Office: that a diary is kept in every division, in which are regularly entered all letters received or sent, with dates, and a short notice of the subject of them, and that, as soon as practicable, after the papers are bound in volumes, another such register is made in the Librarian's Department, with an index, as far as the staff of the Department admits of its being kept up; do you think that that is a good system?—I should think so.

2433. Have you the same system in the Board of Trade?—Not identically the same system.

2434. Should you not think that the fact of a diary being kept in the several divisions, where also the current papers are kept, affords greater facility for obtaining current papers than if they were to be at once deposited in the special register room, at the other end, as it might be, of the office?—Of that I cannot judge; our own registers are all kept in two divisions.

2435. Mr. *Butler-Johnstone.*] Would the duty of the new department, you suggest, be merely to register the official correspondence of other departments?—It would be more, as I stated on the former occasion, in the light of a remembrancer, for the purpose of enabling it to be seen that the correspondence was properly maintained.

Louis Mallet, Esq., called in; and Examined.

L. Mallet, Esq.

2436. *Chairman.*] How long have you been in the Board of Trade?—Seventeen years; I went there in the year 1847.

2437. You were in the public service before that time, I think?—Yes; I had been in the public service some years previous to that time.

2438. What was your first position at the Board of Trade?—I went in the first place as a clerk in the Statistical Department.

2439. Were you not private secretary to one or two Presidents?—I was at one time in the Commercial Department, and shortly afterwards I became private secretary to Mr. Labouchere, then President.

2440. And were you also secretary to either of the other Presidents?—At a later period, in 1855, I was secretary to Lord Stanley of Alderley.

2441. What is your precise present position at the Board of Trade?—I am called assistant for commercial business, and my duty is to assist Sir Emerson Tennent in that branch of the business which falls within his division.

2442. You have been at Paris two or three times, have you not, on questions connected with commercial matters?—I was Assistant Commissioner with Mr. Cobden, in a Commission which was appointed to carry into effect the French treaty in 1860. Since that time I have been several times in Paris; I can hardly call them missions, but I went there to assist Lord Cowley in making representations to the French Government on small matters of trade that had arisen between the two Governments; and last year, conjointly with Mr. Ogilvie of the Customs, I was a delegate at an International Conference on the Sugar Duties, which was held in Paris.

2443. Were you also sent by the Government to Berlin and Turin, on similar commissions?—I was sent to Berlin in the year 1862, to report on the position of the negotiations which were then going on between the two Governments with a view to a commercial treaty, and I was sent to Turin last year for a similar purpose.

2444. Will you be good enough to describe to the Committee the system of business as regards the relation of the Board of Trade to the Foreign Office?—I have been connected with the business in which I am now engaged for about 16 years, more or less, that is to say, a great part of the business has passed through my hands during the whole of that period. For a considerable time,

and

and until last year in fact, the business of the department, so far as the subordinate officers were concerned, was divided between another gentleman and myself, and it has only been within the last year that it has wholly passed through my hands. The Foreign Office division of the business has been in my hands in subordination to Sir Emerson Tennent for the last 10 years, ever since his appointment to the office of Secretary. As regards the Foreign Office business, the Foreign Office letters are brought in the morning to the registrar; the clerk whose duty it is to open those letters enters them in a register and affixes a minute paper to them, and they are then sent to the principal clerk or assistant in charge of the branch of business to which they relate; that assistant or clerk reads the papers, and makes a minute upon them, and according to his own discretion, he either advises what shall be done, or merely writes a short summary of the purport of each paper; it is considered to be competent to him, however, to give an opinion as to what should be done with each paper, and it depends upon the importance of it how far he exercises his discretion in that way.

2445. You are the chief clerk?—Yes; Sir Emerson Tennent reads the paper, makes his minute upon it and sends it to the President; the President then makes his minute and sends the paper back to Sir Emerson Tennent, who either executes the instruction he receives or sends it to me to execute, as the case may be.

2446. Then we are to understand that the communications between the Foreign Office and your division of the office pass through you and through Sir Emerson Tennent?—Yes, all those which have no reference to the executive functions of the Board of Trade.

2447. And through no one else?—No.

2448. Supposing him and yourself to be present?—Yes.

2449. Has there been any change in the relation of the Board of Trade to the Foreign Office during the last 10 years while you have been in the position you hold?—There has been a considerable change in several respects; perhaps "considerable" is too strong a word to use, but there has been a change in the practice.

2450. In what has that change consisted?—During the earlier part of my connection with the Board of Trade, the Board of Trade certainly took a greater share in commercial negotiations than it has done in recent years. It was the practice during Lord Palmerston's administration at the Foreign Office, so far as my own knowledge is concerned, whenever negotiations for a commercial treaty were commenced, that were to be carried on in London, to refer the negotiator to the Board of Trade for communication with the President on the details of the negotiation. I might mention the case of the Belgium treaty in 1851 and the Peruvian treaty in 1850, and also a negotiation with Greece in 1851 or 1852, on all which occasions the Minister came to the Board of Trade and negotiated personally with the President; of late years that has not not been the practice; all such negotiations, so far as I am informed, have been carried on at the Foreign Office; the Board of Trade have been more or less in communication with them on the subject, but they have been carried on in the Foreign Office instead of in the Board of Trade.

2451. Then the practical change you have observed has been that the Board of Trade has taken rather a less active part in what may be called foreign commercial business?—Decidedly.

2452. And has that change been contemporaneous with an increase of the executive duties of the Board of Trade?—It has, and that has arisen, in my opinion, to a considerable extent, from the great addition to the executive functions thrown upon the Board of Trade of late years.

2453. Is that by the increase of railway business and mercantile marine business?—Yes, more especially the Merchant Shipping Acts and the Railway Acts.

2454. You are aware, I suppose, that complaints have been made by Chambers of Commerce and by mercantile gentlemen throughout the country against the present organization and relation between you and the Foreign Office?—I have heard of a great many complaints.

2455. One of those complaints is grounded, you are aware, on the supposition that such information as you are expected to give to the public with reference to foreign commerce is supplied too slowly to you by the Foreign Office; do you think there is any ground for that complaint?—I think that information on questions which it is important to communicate to the public, the earliest intimation reaches us very often too late for useful publication.

2456. What information do you consider you ought to give to the public on commercial matters?—We consider that we ought always to make public any law or regulation of a public kind, and any public Act of a foreign Government which effects a change in the commercial laws of a foreign country affecting British trade.

2457. Do you get that information from any other source than the Foreign Office?—No; that is to say, strictly speaking, we do not consider ourselves justified in making public the information which we receive from any other source but the Foreign Office. The Foreign Office has, on being asked the question, expressed a wish that as a rule we should not make public any information which may reach us in any other way except through them; and as a rule we observe that principle. I cannot say that we have not deviated from it on certain occasions. If we see in the French "Moniteur," or in any official paper that we are in the habit of taking in, which is in fact the official organ of a foreign Government, decrees or other information which we consider important with reference to trade, and which ought at once to be communicated, we do occasionally insert notices in the "London Gazette" of such decrees as will give the public that information which we think they ought to possess.

2458. Is the Committee to understand your opinion to be that no information with regard to the proceedings of foreign Governments that have not already been published abroad, should be given by you unless it has been first obtained from the Foreign Office?—Certainly not; we should never make public any information not of a complete kind, or which was not a law of a foreign Government, or a public Act. We should not publish, for instance, information obtained from a Foreign Minister that it was intended by a foreign Government to make a change in their laws.

2459. You speak of publishing what you see in the "Moniteur;" are we to understand from that that you obtain information from the "Moniteur" earlier

L. Mallet, Esq.
21 June 1864.

earlier than it is communicated to you by the Foreign Office?—Frequently.

2460. That would be an illustration of the suggestion that the Foreign Office is slow in giving you information?—No doubt; it is one of the strongest points; and what I say with regard to the French "Moniteur" equally applies to other countries. It applies to the Belgian "Moniteur," for instance. In these two cases, and with regard to the French "Moniteur" more particularly (which is a paper that we are in the daily habit of reading and examining), we frequently find notices of laws promulgated by the French Government which have not reached us through the Foreign Office, and which do not reach us sometimes till several days later. Those decrees, as a rule, we have till lately inserted in the "Gazette," without waiting for a communication from the Foreign Office; but latterly the Foreign Office have expressed an opinion against that course, and we have been rather hesitating as to the course to be pursued in future. I may mention one fact which will satisfy the Committee as to the substantial grounds that exist for the opinion which I have expressed with reference to the tardiness of the communications which we receive from the Foreign Office. The Committee is aware that there is a Return, prepared annually for Parliament, containing all changes that have been made in foreign tariffs during the year, and there is another Return prepared by the Statistical Department of the Board of Trade, and I am informed by the gentlemen who prepare that Return, that so little can they rely upon the promptness and completeness of the information that is furnished to them through the Foreign Office, that they never think of referring to those documents for the purpose of compiling their Return, but that they compile their return from the "Annales du Commerce," a publication which is prepared by the officers of the French Minister of Commerce, and which professes to give a review of all the most important commercial transactions of the previous year; and also from the "Moniteur," and other official papers, and any other authentic and reliable sources that the officers of the department think they may safely use for the purpose of preparing their Return.

2461. Have you read Mr. Behrens's evidence?—Yes.

2462. Is the "Annales du Commerce" the publication that he alludes to in his evidence?—I believe it is.

2463. Then are we to understand that the arrangement between you and the Foreign Office is that you shall only give even this public information upon the receipt of it from them, but that occasionally, when you obtain earlier information from other sources, you do in fact publish it?—Yes.

2464. But it is not your duty to do so?—The duty is a matter of discretion. I scarcely know what the Board of Trade would consider to be its duty in such a matter.

2465. Your department is not expected to obtain yourselves that information, but you are expected to obtain it from the Foreign Office?—Certainly.

2466. Do you find it at all necessary to test the accuracy of the information that is given to you by the Foreign Office upon these matters, by reading the "Moniteur" or the "Annales du Commerce," or any other foreign publications?—I think that the information that reaches us through the Foreign Office may generally be relied upon; when a Minister sends us a despatch, he generally sends us the body of the decree, or the information is in such a shape as to be perfectly conclusive and satisfactory. Of course it may happen occasionally that there is some question on which we require further information; but, as a rule, the information reaches us in such a shape that we can entirely rely upon it.

2467. What do you do with this information when you get it?—Publish it in the "Gazette."

2468. How long have you done so?—I think it has been the practice to publish this sort of information in the "Gazette" about 10 years, not before that time; I know that the practice did not exist when I first went to the Board of Trade. At first it was not the practice to publish this information in the "Gazette."

2469. Are you aware whether similar notices are published in the "Moniteur" in France?—In the "Moniteur" they are published regularly. As to foreign changes, they are not; in cases of international Acts, as, for instance, if France concludes a treaty with Belgium, that treaty and the laws to give it effect would be published in the "Moniteur;" but I do not think that the "Moniteur" would contain a law proclaimed by the English or Belgian Governments, for instance.

2470. Is it your opinion that the "Gazette" is the best mode of publication?—The "Gazette" is a publication which seems to me very ill adapted for the purpose in one respect, and that is that it only appears twice a week; it is only published on Tuesdays and Fridays, except on special occasions, and consequently when we receive notice of a law which we think it important to make public, if it reaches us on the Monday evening late or on Tuesday morning, we are obliged to wait until the following Friday before we can put a notice of it in the "Gazette." That is a great inconvenience, and it is one great cause of delay in the publication of these notices, and there is no doubt that the double action of the two departments increases the delay.

2471. Do you think you would be able to get this information that you are expected to give to the public, and that you would be able to give it to the public quicker if your department were in communication with the consuls and with our Ministers abroad?—I think that if our Ministers abroad were to send their communications direct to the Board of Trade, it is obvious that much time would be gained; under the present system, for instance, supposing a despatch reaches the Foreign Office, containing a fresh law, on a Monday afternoon; that despatch is sent to the Board of Trade that very day, and reaches us on the Tuesday, but too late to insert it in the "Gazette" of that day; it therefore cannot appear before Friday; whereas, if that despatch had been sent to the Board of Trade direct we should have received it on the Monday, and it would have appeared in the "Gazette" of Tuesday.

2472. Do you feel also that you would be more sure of obtaining full information if the communications were made to you direct?—I think that, on many occasions, we should; for instance, it very often occurs that we do not receive official information with regard to changes in the laws of foreign countries, of which we are cognizant from private sources; I think that if the Board of Trade were in direct communication with the Ministers abroad, the Board of Trade being cognizant of the fact that those laws were in progress or were in effect,

we

we should certainly have the means of obtaining information more readily and more completely than we do under the present system. I may mention that the French Government during the last year has been engaged in legislating with regard to the sugar duties; that is a question of peculiar interest to the Board of Trade at present, in consequence of the International Conference which was held last year in Paris. I do not think that, until a very recent date, any information as to those changes in the law has reached us through the Foreign Office, and if the Board of Trade had been in communication with the British Embassy in Paris, we should certainly have received much fuller information than that which we have received.

2473. Your late answers apply to the communication of information which you publish; I suppose you also receive many communications from the Foreign Office, upon commercial matters, respecting which you are consulted, and asked for your opinion?—No doubt we do.

2474. What is the mode in which those communications come to you?—Those communications usually come to us in the shape of a letter from the Secretary of State, transmitting certain papers, and requesting the opinion of the Board of Trade upon them.

2475. It has been stated in the course of the evidence, that it is supposed that you do not always receive sufficient information upon which to base your opinion; do you think there is any ground for that supposition?—I think it has happened in cases within my knowledge, that the opinion of the Board of Trade has been asked on certain questions by the Foreign Office; of course I can only speak with reference to cases in which the permanent officials have been called on to give advice; the President may possess information that the permanent officials do not possess, and he very often does; I merely speak as to the attitude of the permanent officials when they are called on by the President to give an opinion on papers referred to him by the Secretary of State; certainly, in that limited sense, it is constantly felt both by Sir Emerson Tennent and myself, that we do not possess sufficient information on questions referred to us to enable us to give the President a conclusive or a satisfactory opinion on the papers submitted to him.

2476. Do you think that that is because the Foreign Office does not get the necessary information, or because they do not give it to you?—That is a question that I really cannot answer; I am wholly unacquainted with the communications which pass between the Foreign Office and their agents in foreign countries; I can merely speak with reference to the information that reaches the Board of Trade.

2477. You are in the habit of getting a great deal of information, are you not, on matters affecting foreign trade from merchants and commercial bodies at home?—We are in the habit of receiving a good deal of information from private merchants and commercial bodies in England. It has been the practice for the Board of Trade, in recent years, to consult Chambers of Commerce and other commercial bodies on all commercial questions from time to time; and they have always, with the greatest readiness and cordiality, afforded to the Board of Trade every information it has been in their power to give, with reference to trade with foreign countries, and very much valuable information has reached us in that way.

2478. Is it your opinion, that either by their coming to your office and giving you information, or by your seeking information from them, your office is fully informed with regard to the wishes and interests of merchants at home?—I think so: I think that if it is not informed on every point in that respect it is the fault of the Board of Trade; there is no reason why we should not be informed, it has every means of obtaining all information that it is possible to obtain from commercial bodies and individuals at home, as to their wishes and opinions, with reference to any particular branch of foreign trade.

2479. You are aware, are you not, that one complaint made by merchants is that when they give you information they do not receive an equal amount of information from you, as to the state of things abroad. Do you think there is any foundation for that complaint?—So far as the Board of Trade is concerned, I think there is very great foundation for it indeed; speaking from my own experience, I may say that it constantly happens to me, when merchants come to me for information as to what is going in foreign countries, or as to whether I have heard anything which can in any way confirm information that they have received from private sources, I am wholly unable to give them that sort of information that they expect to obtain; whether or not that information may be within the knowledge of the President is a matter to which of course I cannot speak. I can merely speak as to the information possessed by the permanent officials, and confining my answer to that point, I answer that it is constantly the case that we do not possess that kind of information as to what is passing in foreign countries that they expect to receive when they come to us.

2480. If your office were allowed direct communication with our Ministers abroad, do you not think there would be less probability that the complaint which they made of not having sufficient information afforded to them would be well founded?—I think so.

2481. Mr. *Layard.*] When you speak of Ministers abroad, you mean our Ministers abroad?—Yes; the British Ministers abroad.

2482. *Chairman.*] Are you aware whether the information that is obtained by the Foreign Office by means of private correspondence with our Ministers abroad, or by private communication with Foreign Ministers in London, is sent to your office?—I cannot recollect any case in which information of a private kind which has been communicated by the Foreign Office to the Board of Trade has been communicated to the permanent officials: there may have been an occasional case of that kind, but as a rule I should say certainly not.

2483. Then the permanent officials at the Board of Trade have not the advantage of being aware of the private information which has been communicated to the Foreign Office on commercial questions?—I cannot say what amount of private information there may be, or whether it exists at all; I can only speak to the fact that it is only on very rare occasions that private information obtained by the Foreign Office from their own agents is communicated to the permanent officials of the Board of Trade.

2484. With regard to Foreign Ministers in London, is your office in communication with them?—There may be private intercourse between the President and Foreign Ministers; of

L. Mallet, Esq.
21 June 1864.

that I know nothing; but as regards the Department of the Board of Trade it is very rare; it occasionally happens that members of foreign missions come to the Board of Trade for information; I myself occasionally receive letters from Secretaries of Legations, and from Ministers who ask a question on a matter of trade, or who wish for immediate information; but that is a thing of very rare occurrence.

2485. They come to you, but do you go to them at all?—Very rarely; we have occasionally written to an Embassy to ask if they possess a copy of a certain work or publication or law, but those communications are very exceptional and very rare.

2486. Do you think it would be attended with advantage if you had freer means of communication with them?—I think there might be occasions on which it would be of great advantage that we should have freer and more systematic communication with Foreign Ministers in London.

2487. You have been at Paris and at Berlin once or twice, and in those visits I suppose you must have been brought more or less in contact with the Ministers of State of foreign countries with reference to commercial matters?—I have.

2488. Did you find that those Ministers were generally very well informed not only on the principles of those questions, but also with reference to details?—I found some of them exceedingly well informed, and others very imperfectly informed indeed; in the case of M. Router, of Paris, with whom I had most to do, I found that his knowledge of all details of trade was of a very remarkable kind indeed.

2489. Have you been brought in contact with M. Van de Weyer?—Yes, I have often communicated with M. Van de Weyer on matters of business; I had a great deal of negotiation with him with reference to the Belgian treaty in 1851; he was in constant communication with the Board of Trade, and a great deal of intercourse took place between us.

2490. But not in the negotiations which took place in 1861 and 1862?—Personally, I did not see him in the course of those negotiations.

2491. Did the knowledge which you gained of him give you the idea that he was well acquainted with the details of trade?—He gave me the impression with regard to the particular matter then in hand, that he had certainly mastered the details of it with very remarkable skill and power.

2492. A long negotiation with regard to the last Belgian treaty of which we have the correspondence here so far as it was conducted in England, was conducted entirely at the Foreign Office, was it not?—I cannot say.

2493. Supposing M. Van de Weyer to be well informed as to the details, is it not the case that there would be no one at the Foreign Office who could be expected to have the same information that he had with regard to those details?—I can only judge as to that from Mr. Hammond's evidence, which I read the other day, and he appeared in his evidence to say that it was not considered to fall within the province of the Foreign Office to be intimately acquainted with the details of these commercial questions.

2494. Mr. *Layard.*] When those communications, to which reference has been made, took place personally between M. Van de Weyer and Lord Russell, was not Mr. Milner Gibson always present?—I believe so. I was merely speaking with reference to communications between foreign Ministers and the Department of the Board of Trade; I believe that the President was always present at the conferences which were held at the Foreign Office.

2495. I presume you are of opinion that the President of the Board of Trade is well informed with reference to details?—No doubt.

2496. *Chairman.*] I suppose M. Van de Weyer never sought an interview with the permanent officials of the Board of Trade, with reference to that treaty?—I cannot answer that question. He had no communication with me.

2497. I think I gather from your answers, that you feel that it is difficult for you, in some cases, to give a complete and satisfactory opinion on questions on which your opinion is asked by the Foreign Office, in consequence of the want of sufficient information?—Yes. Cases not unfrequently arise in which the permanent officials of the Board of Trade find great difficlty in giving an opinion because of the absence of that full information which it might be possible for them to acquire by means of a free communication with foreign Ministers and consuls.

2498. Did you find that to be the case with reference to the Italian treaty, with regard to which we have the correspondence here?—I did.

2499. I suppose you have seen the correspondence which has been laid before the Committee between your office and the Foreign Office with reference to the Italian treaty?—I have.

2500. I find in a letter of the Board of Trade of 18th February 1862, that your office appears then to have been unaware of the position of our Government in relation to the Italian question as regards that treaty, and also of the results of Sir John Bowring's mission in 1860; and I find that so long afterwards as 30th June 1863, there is another letter from your office to the Foreign Office, at the end of which you appear still to be in doubt as to what is the intention of the Italian Government. Is it the fact that you felt yourselves really without information as to their intentions during most of that time?—As regards my own case, certainly; so far as I am aware, the other permanent officials of the Board of Trade never clearly understood the basis on which the Italian Government would be prepared to negotiate. The Italian Government on one occasion (as appears from the correspondence) made a proposal to the British Government for a reduction of some of the duties in the British tariff; that looked as if they would only be prepared to make further concessions to the British Government in return for reductions which they desired to have made in the British tariff over and above what had been made to France. That was the question which the Board of Trade had to consider. They had to consider whether it was possible to obtain from Italy anything more than what had been given to France, or whether it was necessary for the British Government to be satisfied with the most favoured nation treatment. That was the principal question that the Board of Trade had to consider.

2501. When did you go to Turin?—I went there about the beginning of June, or the end of May; I think it was the end of May 1863.

2502. By which office were you sent to Turin?—I was sent, so far as I understood, by the Foreign Office; I was paid by the Foreign Office, and I received instructions to go from the Foreign Office;

Office; not instructions of a formal kind, but a private intimation.

2503. Mr. *Layard.*] You were sent by the Board of Trade at the request of the Foreign Office, were you not?—I understood that the mode in which it was done was this: that the Foreign Office wrote to the Board of Trade to request that my services might be placed at their disposal; the Board of Trade were pleased to say that that should be so; and I was then sent as I understood by the Foreign Office.

2504. Has the Foreign Office power to send one of the staff of the Board of Trade abroad, without consulting the President?—No; I was under the impression that the Foreign Minister might request the President of the Board of Trade to place under his orders, for a particular mission, one of his own officers, and that I was accordingly so placed; that was my impression.

2505. Virtually your orders would come from the head of your department, the President, would they not?—That I hardly know; it never occurred to me to investigate that point closely as a matter of official arrangement.

2506. Sir *Stafford Northcote.*] With whom did you correspond?—I had no official correspondence on the subject.

2507. Mr. *S. Fitzgerald.*] From whom did you receive your instructions, or were no instructions given to you?—I was sent out for a particular purpose; in fact, my instructions were contained in a letter to the Board of Trade from the Foreign Office, suggesting the purpose for which I was to be sent out; I had no distinct official instructions, except verbally. I was told that I was sent out to endeavour to do what was suggested in that letter.

2508. Mr. *Butler-Johnstone.*] With whom did you communicate on your return?—With the President of the Board of Trade.

2509. Mr. *Layard.*] I had the pleasure of seeing you once or twice I think, had I not?—Yes; I went to the Foreign Office also; I had forgotten that.

2510. *Chairman.*] When you arrived at Turin did you find that you soon obtained the information you were previously in want of?—When I arrived at Turin, I immediately discovered that the Italian Government were not prepared to make any further concessions whatever, beyond those which had been given to France, and that it was hopeless to expect that they would do more, at that time, than give to Great Britain the most favoured-nation treatment.

2511. Would the result of your mission to Turin, give you the impression that if your office had been in direct communication with Sir James Hudson, or with his staff at Turin, you would have known the intentions of the Italian Government better, and at a much earlier time?—My own impression, which rests on my own knowledge alone, as I know nothing of the private communications passing between the Governments, is that if the Board of Trade had been in direct communication with Sir James Hudson in that negotiation, the Board of Trade, or the permanent staff at all events, would have known at an earlier period the exact position taken by the Italian Government, and the basis on which they were prepared to negotiate.

2512. I find that in a letter from the Board of Trade to the Foreign Office, dated February 1862, which is almost the first letter in this correspondence, your office expresses its apprehension, that if during the revision of foreign tariffs, which appears to be the inevitable consequence of the policy which has been adopted by France, British interests are not carefully watched and strongly represented, an opportunity may be lost which may not be recovered for years; and you give the idea that the time for making representations, is while the Italian Government is in communication with France; and I find again, in your letter of 3d February 1863, in which you give your reasons for preferring the tariff which you had sent in several months before to the tariff forwarded by Mr. West, you again express this fear; did you find, or had you reason to believe when you arrived at Turin, that that fear had been well founded?—That is a question to which I am not able to give a decided answer. I have no means of knowing whether if representations of a specific kind had been made at an earlier period, they would have been attended with a better result. I merely know that at the time when I went to Turin, the Italian Government were evidently unwilling and unprepared to do what was desired; and it was impossible at that time to induce them to do it; whether at an earlier period they would have been induced to do it or not I cannot say; but looking at the thing abstractedly, there would no doubt be a greater probability of obtaining reductions in the tariff, before negotiations between two foreign Governments for a treaty, involving a complete revision of their respective tariffs, than at the close of those negotiations, when the tariffs had been arranged, and when the duties which had been fixed had become more or less known.

2513. The duty upon jute was one of the questions as to which you were requested by the Government to make representations to the Italian Government, was it not?—It was.

2514. The complaint which was made by the manufacturers in England was that jute was put in a worse position than linen, was it not, and that the duty upon jute was greater *ad valorem* than the duty upon linen?—The complaint, so far as I recollect it, of the jute manufacturers, with regard to the Italian tariff, was, that jute was taxed relatively higher than linen.

2515. When you made those representations, were you informed by the Italian Government that they could not comply with your requisition, because they must consider the interests of the jute manufacturers in Italy; or did they say that they could not comply with it, because they could not at that time re-open the revision of their tariff?—I think the grounds of their refusal, so far as I am acquainted with them, rested principally on the argument that the Chamber was very hostile already to the reductions that had been made in favour of France; and that any further change, however unimportant, as affecting that particular industry, would, nevertheless, be seized on as a sort of rallying point by all the commercial classes interested in protection, and endanger the passage of the French tariff.

2516. Mr. *Layard.*] Had the Italian Government revised their tariff at that time?—At the time when I went to Turin, the tariff annexed to the treaty with France had been completed.

2517. But that was only a change in the tariff with the specific object of carrying out the French treaty?—I hardly know what you can call a revision of a tariff. It does not neces-

sarily involve a change in all the articles in the tariff. It was so far a revision of the Italian tariff, that the Italian tariff was recast in some particulars; a considerable number of changes were made, but the general character of the tariff was unaffected by them.

2518. Did the Italian Government state to the British Government that they were going to revise their tariff?—That was subsequent to the treaty.

2519. Did they not inform the British Government that they were going to revise their tariff, and is it not the fact that that revision has not yet taken place?—I was told that it was their intention, when they had concluded their treaties with the principal countries, to recast their tariff in many particulars, and, in point of fact, to revise it, and that when that operation took place, they would be happy to receive communications.

2520. Then the words "revision of the tariff," did not apply to alterations under the French treaty, but to a general revision of their tariff when they could deal with all nations?—Yes.

2521. *Chairman.*] With regard to that question, is it not the case that the treaty between France and Italy applied to almost every article of export from or import into Italy?—So far as I am informed, the tariff annexed to the Italian treaty did not include one important article of export, namely, rags; but, with that exception, I am not aware that there was any other; in fact, it was the isolated nature of that exception that raised a great doubt in the first instance, whether the export duty on rags had not been abolished altogether.

2522. Am I right in supposing that, in order that that treaty should be concluded, it was necessary that the Italian Government should go through the whole of its tariff?—No doubt they went through the whole of their tariff item by item; the general principle of the negotiations between France and Italy was that Italy should not let her duties go below the level of the new French tariff, and, therefore, whenever they found that their tariff was much lower than the French tariff, they left their duties untouched. Whenever a case arose in which the Italian duties were higher than the French duties, or when the French Government attached importance to their being greatly reduced, those duties were reduced by the Italian Government.

2523. In your letter of the 18th February 1862, you express your apprehension that, during the revision of the foreign tariffs, which appear to be the consequence of the French policy, British interests may not be carefully watched; was it such alterations as were necessary for the Italians to make to conclude that treaty that was meant in that letter by the term "revision"?—No doubt that was so, as far as my knowledge goes.

2524. Mr. *Layard.*] What do you suppose the Italian Government meant when they talked of the revision of their tariff as a matter to be dealt with at a subsequent period?—I think they meant a general revision, or a further revision; I think they revised their tariff in order to make their treaty with France; and I think they intended, and I hope they still intend, to revise their tariff with a view to rectify inequalities and inconsistencies, and to make it a still more liberal tariff than it now is; I think that in both cases the word "revision" may be used, and that it is very applicable.

2525. *Chairman.*] When you were informed by the Italian Government that they could not comply with the representations of our Government, because of the feeling in the Italian Chamber, did you understand that to relate to the particular interest of jute, or to the general question of a commercial arrangement with France?—I do not think their objection rested on the ground that there was any interest in Italy which would have been injuriously affected by a low duty on jute, for there is no such thing as a jute manufactory in Italy; it was on the general question of reduction.

2526. Mr. *Layard.*] Did not the jute manufacturers come into competition with the linen manufacturers?—To a certain extent they did; but that objection certainly was never put forward by the Italian Minister in his communications to me; the argument that was used was, that they would not make further reductions to England without some corresponding concession being made on the part of the British Government at that time.

2527. *Chairman.*] Is it not the fact that the tariff in the Franco-Belgian treaty was, generally speaking, the basis of the tariff in the Franco-Italian treaty?—The Franco-Belgian treaty contained two tariffs, one the French tariff on imports from Belgium, and the other the Belgian tariff on imports from France.

2528. Did not the Italian Government take, as the basis of their duties levied upon French goods, the duties levied by Belgium upon French goods, generally speaking?—I think not; the principle of the Italian Government, in their tariff, was to leave untouched their tariff on all items in which the duty was lower than it was in the French tariff; in cases where they were higher, or where the French Government had special interest in getting further reductions, they reduced them considerably below the level.

2529. Was it not the case that the duties levied upon French linen were left as they were before the treaty was concluded?—I believe they were, speaking generally.

2530. And that they were lower than the duties levied by the Belgian Government upon French linens?—I believe so.

2531. Was it not the case that the duties levied upon jute goods were the same as the duties levied by Belgium upon French jute goods?—I believe not; I believe that the duties levied by Italy on French jute are the same duties as are levied in France on Italian and English jute; I believe that what the Italian Government did was, to take the French tariff as regards jute, and incorporate it in their own.

2532. I see that in the particulars of the proposed tariff between France and Italy, forwarded by the Foreign Office to you in 1862, the duties upon linen are said to be in the new tariff a certain rate which is now the rate; but it is stated that the rate upon jute is not yet determined; are you aware of that?—I am.

2533. Do you not suppose that if the Italian Government had been informed at the time they were concluding their tariff with France of the position of the jute trade, they would, in all probability, have put jute upon the same terms as linen?—That I cannot say; I think there is a great probability that if a representation had been made at that time it might have been successful; it certainly would have been a favourable moment to make such a representation, but whether

whether or not they would have acted upon it, I cannot say.

2534. At any rate you never heard, during the whole course of your communication with them, of any jute interest in Italy?—No; that objection was never raised to my knowledge.

2535. You were also at Berlin; what was the object of your visit to Berlin?—I was sent to Berlin to report on the disposition of the Berlin Government with reference to the negotiation of a commercial treaty with this country.

2536. When you got there, did you find the negotiation concluded, so far as the arrangement of details with regard to the tariff was concerned?—Do you mean the negotiation with France?

2537. Yes?—Very nearly; there were a few minor items unsettled; but it was practically completed.

2538. Were you informed that it was too late to make suggestions with regard to alterations?—I was told that the Prussian Government could not, at that time, entertain the suggestion of tariff reductions in a treaty with this country.

2539. Mr. *Layard.*] When you say that they could not at that time entertain the suggestion, do you mean the Committee to infer that, at a previous time, they could have done so?—No intimation to that effect was given to me; I will leave out, if you please, the words "at that time;" I merely meant by what I said to refer to that particular time, not being informed as to any former period.

2540. *Chairman.*] With regard to the Italian Treaty, you have informed the Committee that you consider there was some want of information to guide the Board of Trade in giving their advice to the Foreign Office; do you consider that that was an exceptional case, or do you find that it is not unfrequent that you do not obtain sufficient information?—The same kind of difficulty has arisen in other cases that have come to my knowledge, and I think it is a result which is scarcely to be avoided under the present system.

2541. Do any other instances occur to you?—I could mention other cases in which the same difficulty has arisen, but I am not aware how far I should be justified in doing so without the distinct authority of the President of the Board of Trade; several of the negotiations on which these questions have arisen are still pending, and I have been informed that the Government has not thought it desirable that the correspondence relating to those negotiations should be at the present time submitted to the Committee; and that being so, I am not in a position to give the substance of them, and I could not read the documents themselves without the distinct authority of the President of the Board of Trade.

2542. I will go back to a treaty which was concluded long ago; were you in the Board of Trade at the time of the conclusion of the Reciprocity Treaty between the United States and Canada?—I was.

2543. Sir Emerson Tennent has informed me that he believes the Board of Trade was not consulted with regard to that treaty; do you think he is right as to that?—The Board of Trade was not consulted with regard to that treaty until the whole of the principles and details had been settled.

2544. Mr. *Kinnaird.*] Can you tell us what was the date of the treaty to which you refer?—I think it was in 1854 or 1855.

2545. *Chairman.*] Did not that treaty levy differential duties on British imports into Canada as against imports into Canada from the United States?—It rather exempted certain imports from the United States from all duty as against similar British produce.

2546. Then the result was, that favour was given to United States imports as against British imports?—Certainly.

2547. Mr. *Cobden.*] That was with reference to raw produce, was it not?—Yes, it was with reference to raw produce entirely.

2548. *Chairman.*] Was it not, therefore, a departure from the principles of free trade, and a departure from those principles to our disadvantage?—There is no doubt that it was a departure from the strict principles of free trade which had been adopted by the British Government; it was defended on the ground, that although it was a departure in theory it could scarcely be called a departure practically; but it has been found nevertheless that it has given rise to difficult and troublesome questions in which the same principle has been involved.

2549. Then, if it be the case that the Board of Trade is consulted by other departments of the Government because it is supposed to be best acquainted with the principles of free trade, was not that precisely a case in which, in your judgment, the Board of Trade ought to have been consulted?—It appears to me to have been pre-eminently a case in which the Board of Trade ought to have been consulted: it was a case in which a great principle was concerned, and if the Board of Trade is to exist at all, it was, I think, a case in which they ought to have been consulted, otherwise there would be no use in the existence of such a department.

2550. Did you hear Sir Emerson Tennent state that the Board of Trade was not consulted with regard to the French treaty before it was concluded?—I must remark that in all these cases I speak of the Board of Trade as a department; of what may have passed between the President and the Government, of course I know nothing; but as to the Department, it certainly was not informed either in the case of the Reciprocity Treaty, or in the case of the French treaty, until those Acts had been completed.

2551. Are you of the same opinion as that expressed by Sir Emerson Tennent, that if our Government had communicated with Spain and Portugal at the time they communicated to France their intention of reducing the duties on wines, for example, it would have been more probable than it is now that we might have obtained a reduction of the Spanish and Portuguese tariffs?—As a question of personal opinion, I should say so; but I have no knowledge as to the feelings and intentions of the Spanish or Portuguese Governments. I should have been inclined, however, to think that they would have been more disposed to make concessions at that time than at a later date.

2552. Is the Committee to understand that an opportunity was given to the permanent officials of the Board of Trade, whose business it is to make themselves acquainted with the trading interests of the country, to express such an opinion to the Board of Trade, and through them to the Government?—Not until after the conclusion of the treaty; such communications were made to them, but they were made subsequently.

L. Mallet, Esq.

21 June 1864.

2553. They were made subsequently to the conclusion of the treaty with France?—Yes.

2554. And subsequently to our Government having decided to give other countries what had been given to France?—I cannot say whether suggestions may have been made before final action had been taken; I am not informed, as they would be private suggestions.

2555. With regard to the Italian treaty, did you see Signor Marliani when he was in London?—No, I never saw him.

2556. Do you remember a memorandum being sent by the Foreign Office to your office on the 7th of June 1862, signed by Signor D'Azeglio and Signor Marliani?—I do.

2557. That memorandum suggests that there should be a reduction of the duties levied in England upon certain Italian produce?—Yes.

2558. And the Foreign Office asked your office what reply should be given with reference to those points; did you feel that you could not give such a reply without consulting the Treasury?—Certainly; the Board of Trade never expresses an opinion as to the expediency of a reduction of duties in the British tariff without the authority of the Treasury.

2559. And was the Treasury consulted in consequence?—The Treasury was immediately written to by the Board of Trade, who asked to be informed whether they considered that those propositions could be entertained.

2560. I find no allusion in this correspondence to any reply, was there none made?—A reply was received, but at a much later date; it was not received until after Signor Marliani had returned to Italy, and, therefore, no action was taken upon that reply.

2561. Then, in this case, three offices were at work. The Foreign Office instead of communicating direct with the Treasury sent you a letter which you sent on to the Treasury, and you were so long in getting a reply that Signor Marliani had returned to Italy before you got it?—That was the case.

2562. What communications has your office with the Treasury now?—They are of a very limited character indeed; they are confined principally to mere formal communications. It is the practice of merchants whenever they meet with any difficulty in their transactions with the British Custom House to complain to the Board of Trade; they apply to them to represent their interests as against the Revenue Department; the Board of Trade on receiving such applications are in the habit, in some cases, where further information appears to be required, of referring to the Custom House in the first instance for a report before going to the Treasury; on receiving that report, if it be satisfactory to the Board of Trade, and if it convinces them that the merchant applying has no case, no further action is taken; but if, on the other hand, the answer of the Custom House is not considered satisfactory, a representation is then made to the Treasury requesting them to consider the case, and to remedy any injustice that may be found to exist.

2563. Does the Treasury consult your office now on tariff changes?—Never. It has come to my knowledge privately that a communication of that sort has been made by the Chancellor of the Exchequer to the President of the Board of Trade on several occasions, but officially within the last ten years I do not recollect any case in which on the eve of a tariff change in this country, the Treasury has consulted the Board of Trade. Mr. Gladstone effected a large change in the British tariff within that period, both in 1853 and 1854, and at the time of the French treaty in 1860; but on none of these occasions, to my knowledge, was the Board of Trade consulted, either with reference to details, or with reference to principles.

2564. It appears, from debates that have taken place in the House as to the constitution of the Board of Trade, that at one time the Treasury used to consult the Board of Trade on matters affecting trade, in like manner as the Foreign Office now consults you on foreign commercial matters?—I believe that to have been the case. That is the tradition of the Board of Trade. I was not in the Board of Trade during the revision of the tariff under Sir Robert Peel; but I believe that was the case. Mr. Gladstone was at that time President, and Mr. Macgregor was the Secretary, and had a very large share in those changes.

2565. Do you suppose that the Treasury do not consult you, not in consequence of their not feeling a necessity for obtaining information, but because they obtain the information in their own office?—I believe so.

2566. Was not your office consulted by the Treasury, or by the Chancellor of the Exchequer, with reference to the sugar duties a year or two ago?—Last year a question arose as to the British Government taking part in an International Conference which was held at Paris, with a view of arriving at a common understanding with regard to a drawback in the four great refining countries, England, France, Holland, and Belgium; and at that time the Chancellor of the Exchequer consulted the Board of Trade as to the expediency of taking part in that Conference.

2567. Did you not receive information with regard to that from the Foreign Office?—I think not. I think the information reached the President privately, but I do not think that we had any official information. We had a communication from the Foreign Office, I know; but whether the information reached us from the Foreign Office or from the Chancellor of the Exchequer, I cannot speak positively.

2568. You were not, in the usual way in which, with regard to matters affecting trade, you receive information, informed of this Conference by the Foreign Office?—I think not.

2569. Were you sent over to Paris to assist at that Conference?—I was.

2570. How was the Conference constituted; who did you find there, and representing what countries?—We met representatives or delegates from Holland and Belgium, and the French Government was represented by delegates appointed for the purpose. The Conference sat under the presidency of the French Director of Indirect Taxes, both Customs and Excise. It was composed in this manner: the French delegates consisted of the Director of Indirect Taxes, of the Director of the Commercial Department in the Foreign Office in Paris, and of another gentleman, the Director of the Foreign Trade Department in the Ministry of Commerce. The Dutch representatives consisted of two special delegates connected with the Finance Department at Amsterdam, who were sent for the purpose: and associated with them was the Secretary of Legation of the Dutch Mission at Paris. The same arrangement was made with regard to the Belgian

gian delegates; they had two gentlemen sent from Brussels connected with the Finance Department, and the Secretary of Legation was associated with them in the Conference.

2571. Are we to understand that the Foreign Office of France was represented by the head of the Foreign Commercial Department in the Foreign Office, and that the Foreign Offices of Holland and Belgium were represented in each case by their Secretaries of Legation?—Yes.

2572. Who represented our Foreign Office?—Our Foreign Office was not departmentally represented at all. The only delegates were Mr. Ogilvie, the Surveyor General of Customs, and myself.

2573. Did you experience in that Conference any disadvantage from the Foreign Office of England not being represented, whereas the foreign offices of other countries were represented?—I think it would have been better if the special delegates had had the countenance and assistance of a Diplomatic Agent of the British Government. I do not know, however, that practically any inconvenience resulted from our Foreign Office not being represented. It was more, perhaps, a matter of form than a matter of great practical advantage with regard to the particular negotiation, but I think that this advantage would have resulted from it: that if the Secretary of the English Legation at Paris had been a member of that Conference, he would have acquired a good deal of information on the subject, and would have been in a position, from his permanent connection with Paris, to afford useful information to the British Government on all questions with respect to sugar that subsequently arose.

2574. Are we to understand from that answer that the Dutch and the Belgian missions at Paris, having been represented at the Conference, would be able to continue to give information to their Governments with greater ease than our own, which was not represented?—I think so.

2575. Was your office, to your knowledge, consulted by the Chancellor of the Exchequer this year with regard to the sugar duties?—No; not officially.

2576. Do you not consider that the alteration in the duties this year was rather more a trade question than a question of finance?—I should think that the question of the sugar duties, which was settled this year, was pre-eminently a trade question, because it was not a question in which any great revenue interest was involved. The changes were not made with any view of increasing the revenue; they were made more particularly with reference to the principle on which those duties should be levied. The question at issue was, whether the principle of graduated duties should be maintained, or whether *ad valorem* duties, pure and simple, should be adopted; or whether there should be one uniform rate of duty upon all raw sugars. That was pre-eminently a trade question, both of a practical and theoretical kind, and therefore I think that was a case in which, if a trade department existed, it ought to have been consulted.

2577. Are we to understand that on questions of great importance the Treasury or the Colonial Office do not consult your office, in the same manner as the Foreign Office does with regard to foreign commercial questions?—I think I may say that three-fourths of our correspondence is with the Foreign Office. That has been for the largest branch of our business. Our official correspondence with the Treasury is of a very formal character. I can hardly recollect a case in which any communication that we have made to the Treasury as to a complaint by a merchant against the Customs has led to any result. It is a mere matter of form. We have sent on the letter that has been addressed to us, and that letter has or has not been acknowledged, but I never recollect a case in which the Treasury, on the representation of the Board of Trade, has set aside a decision of their Custom-house officers. The intervention, therefore, of the Board of Trade has been useless. The correspondence, as a whole, with the Treasury is of the most limited kind. With regard to the Colonial Office the case is somewhat different. There it is a recognised rule that all Colonial Acts affecting trade or shipping are sent to the Board of Trade for their consideration or for their opinion; but I may say that even with regard to these Acts the practice of the Board of Trade has not been consistent. On some occasions, within my knowledge, it has been held by the Board of Trade that such Acts as were sent without a special request for an opinion, did not necessarily call for a reply, and therefore the Board of Trade has not always considered itself bound to express an opinion on every Trade Act; but the Board of Trade expresses an opinion whenever an occasion for it arises, to the Colonial Office. I may, however, state that it rarely happens that the expression of that opinion is attended with any particular result. In one or two cases in which the opinion of the Board of Trade has been expressed their opinion has been over-ruled by the colonial minister on grounds of general policy. He looks at the question politically as well as commercially, and it has come to my knowledge that on one or two important occasions, when the opinion of the Board of Trade has been strongly expressed, it has been over-ruled by the colonial minister on grounds of large Imperial policy, and on political considerations.

2578. Sir Emerson Tennent has stated that the Indian Office never consult the Board of Trade. Do you confirm that statement?—I do not think that any case has arisen since the constitution of the present Indian Office in which that office has consulted the Board of Trade on any question of Indian trade. They have written once or twice asking special questions as to a particular branch of trade or manufacture, as to which they wanted special information, but that was an exception which goes to prove the rule. There may, perhaps, have been six letters in six years.

2579. Your office has not, within your knowledge, been asked the effect on British trade of duties laid on British goods by the Indian Government?—No; never.

2580. Are you aware that the Board of Control used to consult the Board of Trade?—I believe they did occasionally; but I have referred to the correspondence during the 10 years from 1840 to 1850, and I have a list of letters received and written. In 1840 three letters were received, and five were written; in 1841 three letters were written, that is by the Board of Control to the Board of Trade. In 1842 four letters were received, and three were written. The largest amount of correspondence was in 1845, when there were 10 letters received and four written: so that it was a very small correspondence even then, but small as it was, it was larger and more

L. Mallet, Esq.

21 June 1864.

interesting than it has been since the Indian Office has been created.

2581. Do you consider that the fact, that you are not consulted by the Indian Office at all, and that you are consulted but seldom, and not on important questions by the Colonial Office and the Treasury, has had the effect of making the Department of the Board of Trade consider themselves to be less and less a consultative body?—I think that this fact, with other causes, has contributed to that impression; it is a case in which it is very difficult to distinguish between cause and effect. That impression certainly has gained ground in the Board of Trade during my connection with it. The kind of view taken by the Board of Trade has been considerably modified during that time. Different Presidents have entertained very different views as to the functions of the Board of Trade in that respect. One President, Mr. Cardwell, had a very distinct view as to the functions of the Board of Trade. He entertained the opinion that, as a rule, it was scarcely desirable that the President of the Board of Trade should act as adviser to an Executive Department, except on matters which came especially under the cognisance of the Board of Trade, in their necessary connection with their executive duties; and on one or two occasions of an important kind, which I have in my memory, Mr. Cardwell declined to advise the Foreign Office when his opinion was asked, on the ground that he did not consider it was within his province, or that he was able satisfactorily to advise the Foreign Office, with reference to a question of trade, which was referred for his opinion. I presume that that was from a feeling, either that he did not possess special or better information than the Foreign Office, and he subsequently acted on several occasions on that principle; in cases where he did give an opinion, that was the general impression imparted to the Department under his administration, and its course of action was much shaped with reference to that theory.

2582. Do you consider that the impression that the Board of Trade is getting more and more an executive body, is, to some extent, affecting its relations with the Foreign Office?—I think it has at different periods of its history, materially affected its relations with other departments; since the conclusion of the French treaty, there has been a much more active correspondence between the Foreign Office and the Board of Trade; and the consultative functions of the Board of Trade have been to a certain degree extended, but still the main feeling in the department has operated during the whole of this period very materially, I think, in weakening the Board of Trade as a consultative department. I may add to that, that during the period of my connection with the department, two inquiries have been held by the Treasury into the constitution of the Board of Trade, and with reference to its internal organization; the first of those commissions was held in the year 1853, and the second in the year 1863. The effect of the report of the commission of 1853, was certainly very much in accordance with the view which Mr. Cardwell held of the diminishing importance of the Board of Trade as a consultative office; and the arrangements that were contemplated by that report, were evidently made with reference to a progressive diminution of the Board of Trade as a consultative office; one of the arrangements prescribed by that report, was that the office of commercial secretary, then and now held by Sir Emerson Tennent, should, on his retirement, be abolished, and that the duties should be discharged by an assistant secretary, on whom should also be thrown the duties which are now discharged by the head of the Statistical Department, which is now presided over by an independent officer. It was clear, therefore, that the commission was under the impression, that in future the duties of the commercial secretary would be diminished in extent and importance, and that he would be able to perform those duties with a smaller rate of remuneration, and be able in addition to undertake duties which did not then devolve upon him, namely, the duty of superintending the Statistical Department. It is therefore pretty clear that the view of the commission as to the progressive diminution of the importance of the Board of Trade, was very much in accordance with Mr. Cardwell's view.

2583. You say that there was also a commission last year?—There was another commission last year.

2584. The result of that inquiry has not been laid before Parliament, I think?—I am not sure whether it has or not; I have not seen it, and I do not think it has; but I can state, if the Committee desire it, the general results of the inquiry as regards the Board of Trade.

2585. What was the report of the Commission that sat last year?—It was found that during the interval since the last inquiry, the functions of the Department in certain directions had very largely increased, and many Acts of Parliament had passed in the meantime throwing new duties upon the Board of Trade, so that it was necessary to enlarge the staff; other changes had also occurred which rendered that which was suitable to the staff in 1853 unsuitable to the staff as it now exists, and it was necessary therefore to revise the office in order to meet those changes. The result as regards this particular question was, that instead of recommending a continuance of the system recommended by the Commissioners in 1853, namely, that instead of one chief secretary with three assistants, one for marine, one for railway, and one for commercial business, there should be henceforward two principal secretaries, and no assistant secretaries, and that those two secretaries should divide the whole work of the Department between them. That arrangement, although differing from the arrangement that was proposed by the Commissioners in 1853, is so far in accordance with it as regards this point that it evidently also contemplates that the two joint secretaries shall divide between them the executive functions of the Department, and that no one shall be set apart for consultative purposes. It therefore evidently rests upon the supposition that the consultative functions of the commercial secretary will not be so important as to make it necessary for him to devote his whole time, or the principal part of his time to them.

2586. Who drew up that report?—The second commission consisted of Mr. Hamilton, the Assistant Secretary to the Treasury, Mr. Booth, of the Board of Trade, and Mr. Arbuthnot, of the Treasury.

2587. Mr. *Kinnaird.*] At whose instigation was that inquiry instituted?—The President of the Board of Trade suggested to the Chancellor of the Exchequer that many things required revision.

2588. *Chairman.*]

2588. *Chairman.*] I gather from your answers that you do not think that the present arrangement between the Board of Trade and the Foreign Office is perfect; will you briefly state wherein you consider the evils consist?—I think the Board of Trade, as at present constituted, is not able to conduct that branch of its business with satisfactory efficiency.

2589. Will you state to the Committee generally, the grounds upon which you base that opinion?—In the first place, as I have already stated, I think that the information which reaches us, reaches us irregularly, and in some cases tardily; in the next place, I think there is a certain amount of confusion with regard to the distinct responsibility resting on each Department, which gives rise occasionally to great practical evil; and I do not see at present how the President of the Board of Trade can take upon himself any distinct or complete responsibility, except so far as giving his opinion on a particular point referred to him by the Secretary of State; he cannot hold himself responsible for the result of that opinion under the present system, so far as my knowledge extends; I am merely speaking with reference to the information which goes through the Department officially, and as to that I do not think it is of a kind to enable the President of the Board of Trade to consider himself responsible for more than the opinion he gives at a particular time on a particular question; I think that is the difficulty arising from the present system. The President of the Board of Trade does not receive his information with that degree of regularity, completeness and promptness, that is desirable, and he is not able to follow up the results of his opinions with such closeness and completeness as is necessary if he is to be responsible. That, however is a question as to which the President of the Board of Trade is much better able to speak than I am: I, of course, can merely speak from an outside point of view.

2590. Do you mean by that to say that there is disadvantage in the fact that those gentlemen, like yourself and Sir Emerson Tennent, whose business it is to collect all possible commercial information, and to make themselves acquainted with all the details of commercial questions, are only able to communicate that information to the President of the Board of Trade, who again has to communicate it to the Foreign Office before it is brought into action?—I think that every additional stage that has to be performed, and which is required in any transaction, is a disadvantage; the more direct all communication is the better. It may be inevitable, but in itself it is a great disadvantage.

2591. You are aware, of course, that in order to meet this evil, it has been suggested that there should be a commercial department in the Foreign Office?—I have heard that suggestion made.

2592. It would have the advantage, would it not, of putting the permanent officials, whose business it is to obtain information with regard to foreign commerce in direct communication with the ministers responsible for foreign negotiations?—It would have that advantage, and I think it would be a very great advantage.

2593. Are you aware whether, in continental countries, there is such a department?—Such is the case, I know, in France, in Berlin, and in Italy, the three capitals to which I have gone upon missions.

2594. Is it the case that there is only a foreign commercial department in the Foreign Office, or is there also a foreign department in what answers to our Board of Trade?—I believe that in all these cases there is in their foreign office a commercial department, and in their Ministère du Commerce there is a department of foreign trade, both of those departments being presided over by what they call directors, who are men capable of giving sound advice to the minister, and of communicating instructions to the agents under him.

2595. Do you know what the relation is between the commercial department in their foreign office and the foreign department in their commercial office?—I have always found, when I have been directed by the Minister under whom I have been acting to communicate with these departments, that I have been placed in communication, both with the head of the commercial department in the Foreign Office and with the head of the foreign trade department in the office of the Ministère du Commerce, and I have found that the division of work between them is generally somewhat of this kind, that the director of the commercial department in the Foreign Office communicates with me more particularly on questions connected with any concessions that his Government would wish England to make to them, and questions of a diplomatic kind; whereas, the director of the foreign trade department in the Ministère du Commerce would be consulted by, and would confer with me with reference to any proposed reductions in the tariff of his own country. I think that the necessity for a foreign trade department in the Ministère du Commerce in these countries very much results from the fact that these countries have still elaborate protection as to tariffs, and that every question of reduction is one that has to be debated as much as it used to be formerly debated when protection was in force in this country; and when the questions before the Board of Trade were as to what degree of protection was necessary to be given to any industry, it was necessary to have a department whose function it should be to consider such questions; and it is in that point of view, I think, more particularly, so far as my experience goes, that the function of the foreign trade department in the Ministère du Commerce exists.

2596. I suppose, also, it is the case, is it not, that the department in these countries which answers to the Board of Trade has a great deal more business connected with the internal management of the country; it is at the same time a Board of Public Works in each case, is it not?—I am only acquainted accurately with the French Ministère du Commerce.

2597. From the fact that in France people look to the Government for much more action than they do in England, I suppose that this department in France is one of great importance?—It is a department of the greatest importance; it is placed in every respect, I believe, on a level with all the other great departments of the State; the Minister of Commerce receives the same salary, and is in every way co-equal with the other leading ministers; and I may mention, as an illustration of the great importance of the Minister of Commerce, that M. Rouher was translated directly from the office of Ministère du Commerce to the office of Ministre d'Etat, or Prime Minister of France.

2598. Are

L. Mallet, Esq.

21 June 1864.

2598. Are you aware what the arrangement is in the United States?—In the United States, I believe that the Secretary of the Treasury in fact performs the purely consultative duties which are attached to the office of President of the Board of Trade in this country. I believe that there is no Board of Trade in the United States, and that the Secretary to the Treasury transacts all that class of commercial business on which the Board of Trade is now consulted.

2599. What is your opinion as to the suggestion of having a Commercial Department in the Foreign Office under a Parliamentary or permanent under secretary?—In the first place I think it would be perfectly idle to contemplate the appointment of such a department, unless it were constituted in such a way as would give it an equal degree of weight with the commercial public, and the same authority with the Government as is now possessed by the Board of Trade. How far that could be done by the appointment of a commercial under secretary, either political or permanent (and I think he must be political), I do not know; one thing which appears to me to be essential, in order satisfactorily to conduct this branch of public business, is that there should be, whether in the Cabinet or not, at all events some political member of the Government possessing the confidence of the Government, who should direct, guide, and follow the whole of the commercial questions which arise in the course of our foreign trade; who should direct that policy under the guidance of the Government, but that there should be some minister whose function it should be to guide, direct, and control it with such powers and means of information as would enable him to accept such responsibility, and enable him to be in fact the guiding spirit of our commercial policy abroad. Whether such a result would or would not be obtained by appointing a political under-secretary for trade in the Foreign Office, is a question upon which I do not feel myself competent to offer an opinion. It seems to me possible that a political under secretary for trade might exercise those duties with efficiency and advantage.

2600. Would there not be a difficulty in clothing him with that power, and giving him that authority, and at the same time making him subordinate to the Chief Secretary for Foreign Affairs?—I do not know how far the duties of such an officer in Parliament might clash with the responsibility of a foreign minister; it is possible that there might be some Parliamentary difficulty there, but I am not aware that there would be any departmental difficulty in it.

2601. Is the Committee to understand it to be your opinion that if the permanent officials, whose business it is to concern themselves with foreign commerce, were now in the Foreign Office under a Parliamentary under secretary, unless such Parliamentary under secretary had the same power in the Government that the President of the Board of Trade has now, the advantage of the permanent officials being brought in direct communication with foreign ministers would be outweighed by the disadvantages of the want of such power?—I think that any advantage that might be gained by bringing those officials who are more especially conversant with commercial business in more direct communication with foreign ministers, and with the agents of the Governments abroad, would be very seriously impaired and neutralised by any diminished power that might be possessed by a political under secretary in the Foreign Office for trade, relatively to the power now possessed by the President of the Board of Trade.

2602. Are there law officers connected with the Board of Trade?—One of the Secretaries of the Board of Trade, ever since I have been connected with the department, has always been a lawyer, and during the greater part of my connection with the Board of Trade, we have had a legal assistant attached to the office as permanent adviser on all legal questions.

2603. Mr. *Kinnaird.*] Is he a paid officer?—He is a permanent paid officer, with a fixed salary, and he is in daily attendance.

2604. *Chairman.*] Then, generally speaking, when you wish for a legal opinion, you are able to obtain it in your own office, and you have no occasion to consult the Attorney or Solicitor-General?—Very rarely; formerly, it was the practice to consult the law officers of the Crown. I remember several cases in which the Board of Trade took the opinion of the law officers of the Crown on questions of treaty and other matters that came before them; at present, that is very rarely done.

2605. You think there is an advantage in having, within your own office, the means of obtaining legal advice?—I think there is the greatest possible advantage in having permanently connected with us a lawyer who is able to give a sound opinion on any legal questions that may be submitted to him by the Board; and that is a thing of daily occurrence.

2606. Are you aware whether the Foreign Office has within the department lawyers who give opinions, or that it has to consult the Attorney and Solicitor General on all questions of law that come before it?—So far as I am informed, there is no lawyer permanently connected with the Foreign Office. The Queen's Advocate is constantly consulted by them, as well as the law officers of the Crown.

2607. If such be the case, would you consider that from it would arise a disadvantage if the Commercial Department were established entirely in the Foreign Office?—I think it would be impossible for the Commercial Department in the Foreign Office finally to decide, or satisfactorily to advise, upon many questions connected with trade which must necessarily come before them, without having at their command, and ready and available, legal knowledge. Whether such information could always be obtained readily from their present legal advisers, in the ordinary course of business, I am hardly prepared to say.

2608. Another suggestion that has been made to the Committee is that in place of transferring those officials whose business it is to concern themselves with foreign commerce from the Board of Trade to the Foreign Office, the Board of Trade should be put into more direct communication with the consuls and with the diplomatic body. What is your opinion with reference to that suggestion?—I think that if any arrangement could be made by which the President of the Board of Trade could be placed in direct communication with foreign ministers and consuls abroad, and generally with those agents of Her Majesty's Government who have to give effect to the commercial instructions of the Government abroad, and if, on the other hand, from his position he was able to carry that sort of weight with

with reference to his recommendations that the Minister of Commerce in France would carry in his recommendations to his colleagues in the Cabinet, I think that this branch of business might be conducted under such an arrangement with benefit and efficiency.

2609. Do you mean, by the latter part of your answer, to say that in your opinion the Board of Trade ought to be put more entirely on an equality with the other great departments?—I think that under the present system the usefulness of the Board of Trade as a consultative department is very much affected by its very subordinate position. As an illustration of what I mean, I may refer to a case in which the Colonial Office consulted the Board of Trade. The Board of Trade gave a decided opinion on the question submitted to them, which was one of commercial policy. The Colonial Minister informed us that on general and large considerations of policy, he considered that it was necessary to set aside our view, and to act in an opposite sense. In that case the opinion of the Board of Trade went for nothing; it was useful as enabling the Colonial Minister to weigh in his own mind the different considerations which affected his decision, and to decide on the balance of the whole what course to adopt; so far it may have been useful for him to have received that opinion from the Board of Trade; but I should presume (and this I say with the most complete deference to those who possess more knowledge on the subject than I do) that in the event of a difference between two Secretaries of State, or a conflict of policy; supposing the Colonial Minister had objected on colonial grounds, the Foreign Minister advocating that particular policy on the ground of the interest of our foreign relations; supposing such a conflict of opinion to arise between two Secretaries of State, I presume that the ultimate decision would in such case rest with the Cabinet, and it would not rest with either the one Minister or the other finally to dispose of the question. I think that if that is so (and I am merely speaking hypothetically) the Board of Trade is not so advantageously placed in advising another department as it would be if it were more on a footing with the other great departments of the State.

2610. You think, then, that there would be an advantage in all the trading interests of the country being under one minister, who would fulfil the same duties as the President of the Board of Trade, but who would have a power more approaching that of the Minister of Commerce in Foreign Countries?—I can conceive that advantage would result from the existence of a department whose special business it was to take cognizance of all commercial questions; but I think, with reference to the present practice, that unless the function of the Board of Trade were considerably revived as against the other Departments of the State except the Foreign Office, no great advantage would result from its continued existence as a department of advice. Although the Treasury may, and does, consult the Board of Trade, and although the Colonial Secretary may do so, I think the results arising from that consultation would be hardly sufficient to justify the existence of a Department of Trade alone. The business connected with the Foreign Office is still very large, and very important, and it must be done by one Department or the other; and consequently, so long as that business remains with the Board of Trade, I think that by such an arrangement as has been suggested, giving the President of the Board of Trade greater power and means of direct communication with those agents of the Government who must give effect to their policy, the business might be conducted by the Board of Trade with efficiency.

2611. Then you think that if the present theory be adhered to there ought to be a practical change by the Board of Trade being put into direct communication with the diplomatic body?—With regard to this branch of public business, which involves constant watching of occasions for representation, which involves day by day, I may say certainly, week to week, correspondence with the agents abroad, who alone can watch the times and occasions for representations, I think that kind of administration (for it is an administration) can never be conducted with real efficiency and vigour in the present indirect method. That, however, is nothing more than my individual personal opinion.

2612. A suggestion has been made that it would tend to the improvement of your present relations with the Foreign Office if the commercial business in the Foreign Office were put under some clerk whose special business it should be to attend to it; what is your opinion with reference to that suggestion?—If it is meant that such a clerk is to advise the Foreign Ministers and is in any way to be substituted for the Board of Trade, I should think it quite out of question; I cannot imagine that such an arrangement could be satisfactory to the commercial public, or that it would in any way be attended with useful results. I think that if you are to have a department which is to advise the Foreign Office, it should be a department which carries with it a considerable amount of weight.

2613. My question did not refer to the appointment of a clerk who should be an adviser of the Foreign Office, but had reference simply to the correspondence between you and the Foreign Office being put under his care?—That is a matter so entirely, as it seems to me, of departmental arrangement, that without knowing a great deal more of the Foreign Office than I do, I could not give any opinion how such a thing would work. I can conceive that an officer specially charged with the duty of attending to the Board of Trade correspondence might go to the different heads of Departments, collect their answers and work the thing with a certain degree of rapidity and harmony; but I am not prepared to give any opinion worth having upon that point.

2614. Are the communications of yourself and Sir Emerson Tennent with the Foreign Office always in writing?—Yes, almost invariably.

2615. In your opinion would there be an advantage in having some gentleman at the Foreign Office with whom you could personally communicate?—I think that if such an officer were able to communicate with the officials of the Board of Trade, in such a way as to give them a distinct opinion, and to consult with them on the real substance of the matter to be dealt with, such an arrangement would be productive of the greatest possible advantage; but if that officer is merely to be able to give assistance in the mechanical part of the work, such as seeing that a letter is answered at the proper date, or that a despatch is sent off at the proper time, the advantage would be very small and

L. Mallet, Esq.

21 June 1864.

would be purely of a mechanical kind, not affecting the real efficiency of the conduct of the business.

2616. Sir *Stafford Northcote.*] You have stated that in your opinion the interests of trade suffer from what you call the subordinate position of the Board of Trade; will you be good enough to explain in what respect you consider the Board of Trade to be in a subordinate position?—The term "subordinate" is not perhaps the right one to use, but commonly the Board of Trade is not an office of equal importance in the State with that of the Secretaries of State.

2617. Can you suggest any means by which it could be made an office of equal importance with that of the Secretaries of State?—I do not see why it should not be made a Secretaryship of State

2618. Do you suppose that if the President of the Board of Trade were called a Secretary of State, and if he had a salary equal to that of other Secretaries of State, that would put the Board of Trade in a different relation to the other offices with regard to the functions it has to discharge, in common with them from that in which the Board of Trade is now?—I think it would have the effect certainly of giving greater power to the department; it would give greater weight to its recommendations; in one respect it certainly would have that effect. It has happened three times to my knowledge that the President of the Board of Trade has not even been in the Cabinet. Mr. Cardwell, Lord Stanley of Alderley, and Lord Donoughmore, during a great part of the time they were connected with the department, were not in the Cabinet, and that I think must obviously have placed them at great disadvantage.

2619. As regards all the executive business of the Board of Trade, is that department in a subordinate position to that of any other department?—As regards its executive functions, it is absolute, so far as I am informed.

2620. Then there is nothing to be desired as regards its executive functions; your objection refers to its relations to the other departments with regard to what are called its consultative functions?—Entirely.

2621. Is it not necessary that a department which is merely a consultative department, should be in a position which may be called subordinate, or in an inferior position to those departments which are of an executive character?—I think not necessarily so. I will take the case of the Treasury and the Customs; the Customs is an executive office, but the Customs may, of course, consult the Treasury and execute its instructions.

2622. Do you mean to say with regard to the Treasury and the Customs, that the one is an executive office and the other is not?—No; they are both executive offices, but the Customs has often to take the opinion of the Treasury, and, in that sense, the Treasury becomes, upon that particular occasion, a consultative office.

2623. When it takes the opinion of the Treasury, does it, in fact, take the direction or the pleasure of the Treasury, which is its superior?—It assumes that form, no doubt.

2624. Is there any analogy, then, between the Treasury, which is a superior department to the Customs, that being a subordinate branch of the Treasury, and the relation subsisting between the Secretary of State for Foreign Affairs, and the President of the Board of Trade?—What I mean is this: that if the Board of Trade was placed in the same position, as regards foreign trade, to the Foreign Office, that the Customs is to the Treasury; that is, if the Board of Trade for those functions was subordinate for the Foreign Office, receiving their instructions, and obliged to execute their orders, the Board of Trade might then carry on those negotiations, under the instructions of the Foreign Office, with great advantage.

2625. Then the remedy you propose is, that it should be placed in the same relation to the Foreign Office as the Customs now is placed to the Treasury?—I think that would remedy the evil to which I have referred to a very great extent. It amounts, as you perceive, to having a commercial department in the Foreign Office.

2626. Then, I would ask, what is the distinction between the proposal to which I understand you to object; that of having a commercial department in the Foreign Office, and the relation which you propose to establish between the two offices?—I think I have been misunderstood. What I meant to say was, that I thought it was an arrangement which might work satisfactorily, and be productive of great advantage.

2627. Did you not say a little while ago that you considered that trade would lose more by not having a Cabinet Minister to promote its interests than it would gain by the suggested transfer to the Foreign Office?—I think not; I think that if my answer is read you will see that what I said was this, that I thought the advantage that would be gained by bringing the permanent officials charged with the duty in direct communication with the agents of the Government on commercial matters would be very much neutralised if the political Under Secretary possessed less weight or authority in advising the Government, or less weight with the commercial public than the Minister who was at present held chargeable with those duties, but I did not draw a comparison between those advantages. I think it would be a disadvantage if the authority now possessed by the President of the Board of Trade were impaired, and an officer were entrusted with those functions who did not possess authority. On the other hand, I think it would be a great advantage if the Government officials were in direct communications with foreign agents and Governments.

2628. Would you prefer that there should be a commercial department in the Foreign Office, or that the President of the Board of Trade should be placed in direct communication with the Consuls abroad, and either with our own Ministers abroad, or with foreign Ministers in this country?—I may state generally that I think the question of which department is to be entrusted with those functions is a very subordinate one. I do not attach any very great importance to that question. I think the important thing is to see that one or other department is able to do the work satisfactorily. I think it might be done by either department, and, as far as my opinion goes, I should not care much which department was entrusted with the duty. As a general rule I have a great dislike to a system which is defective in theory; in the present case you have a theory which is complete in itself, which is, that there shall be no such thing as a purely consultative department, whose business it shall be to collect information, and to be able to give advice to the executive department if asked for it, without having the means of enforcing its opinion on the executive department;

department; each department should have certain executive duties, and consult the other executive departments on that branch of executive duty with which it is entrusted; that is a distinct theory which is acted upon in the United States; it is a theory which in fact is practically acted upon in this country now so far as the Board of Trade is concerned except with reference to the Foreign Office. I admit that the Treasury occasionally consult us, and that the Colonial Office also consult us, but I do not think it would be justifiable to keep up such a department as the Board of Trade in order to assist the Treasury and the Colonial Office as it now does; if that was all that the Board of Trade did, that would not justify its existing any longer as regards its consultative functions. The only way to restore the theory is to put the Board of Trade, as regards the Foreign Office, in such a position that the Foreign Office should do as much of the work that is now divided between the two departments as the Treasury does with reference to the work that is now divided between the Treasury and the Board of Trade. When the Board of Trade has to deal with a strong executive office, that office does its own work, and never comes to the Board of Trade, except with reference to matters with which it finds it cannot deal; it then comes to the Board of Trade for its opinion and assistance: if it is able to deal with its own business, it does deal with it; and on many of the most important occasions within the last 10 years, some of which have been already referred to, the Board of Trade has not been consulted at all; in fact, I should infer that whenever a strong executive department has got a subject which it thinks important, and on which it has set its heart, it rather abstains from consulting the Board of Trade, for fear it should take a contrary view of the matter.

2629. Will it not necessarily be the case that all executive departments will have occasion, from time to time, to consult each other on matters lying within the functions of the department which is consulted; for example, the War Office must sometimes consult the Admiralty?—That must be so.

2630. But that is a very distinct matter from the maintenance of an office which is to be consultative, and nothing else?—No doubt it is totally distinct.

2631. The executive office must, after all, take into consideration a good many other matters besides those upon which it seeks the advice of the consultative department, must it not?—No doubt.

2632. For instance, in the case you referred to just now, of the action of the Colonial Office, it is absolutely necessary that the Colonial Secretary should take into his view other considerations than those which are suggested to him by the Board of Trade?—Necessarily and inevitably.

2633. Does not the fact, that an office like that of the Board of Trade is called on to give an *ex parte* opinion on one portion of a subject, place that office in a very embarrassing and false position?—I think exceedingly so. I have often found that it is excessively difficult to offer any advice to the President from feeling that the information before me is of a very incomplete kind, and can only affect a particular branch of a very large question. I think it is almost impossible to make that sort of disconnection between political and commercial considerations with reference to some questions, which would render it very useful to have an abstract opinion on the commercial element of the case to be weighed in the mind of another person against all the other different elements which compose the whole question for consideration.

2634. Is it not the fact, that with reference to an opinion formerly given by the Board of Trade on one of the questions affecting the sugar duties, the Board of Trade expressed an opinion in an official letter, at variance with the view which the same Minister who had written that letter afterwards took when he had the whole question put before him?—No doubt; that is a striking illustration of what I state; and that led to considerable inconvenience.

2635. Does not your evidence point to this, that it is desirable, as far as possible, to concentrate responsibility upon the office which is to be the executive office, to strengthen that office as far as possible, and to give it so much of a consultative organization as shall enable it to discharge its duties on its own responsibility?—I think so, decidedly.

2636. I think you say it is the habit of merchants to come with complaints to the Board of Trade, which complaints are transmitted by the Board of Trade to the Treasury. Is there, in your opinion, any advantage in that over a system by which the merchants would carry their complaints directly to the Treasury?—The duty of the Board of Trade is to see that, as regards the Treasury, the Treasury in execution of its duties in imposing and in raising taxes, should give due consideration to the convenience and interests of trade. The theory is, that the Minister whose duty and object it is to collect the taxes, may not perhaps sufficiently consider the interests of trade in imposing a particular tax, and that he may not give sufficient weight to commercial considerations; the function of the Board of Trade in theory is, that should that take place, the Chancellor of the Exchequer should be well informed as to all the commercial inconvenience that would result from the particular tax; that is the idea in theory on which the office exists, but practically I think it is very difficult to believe that that theory works out to any great advantage. It seems to me that a Minister who has to impose a tax, must consider the commercial bearings of the question, and he is perfectly able to collect information as to the commercial bearings of it; and the commercial public is able to submit to him its grievances as well as to the President of the Board of Trade.

2637. Would it not be more convenient that they should carry their complaints direct to the Treasury?—No doubt; because that would save one stage; and if their complaints received equal consideration there, it would certainly be better.

2638. If the Board of Trade is to be retained purely as a consultative body, the theory would be that it should be furnished with every kind of information that could possibly bear upon the questions upon which it might be consulted?—That is quite essential for the proper discharge of its functions.

2639. And that information should be put on record in the office for future use?—Yes, certainly.

L. Mallet, Esq.

21 June 1864.

2640. But I gather that, so far as you are aware, communications take place between the President of the Board of Trade and Foreign Secretaries which are not officially put on record?—To that I can hardly speak.

2641. If, however that, should turn out to be the case, must not a good deal of information so obtained by the President of the Board of Trade be lost to the office for future use?—No doubt.

2642. Mr. *Cobden.*] With regard to the two alternatives which have been placed before you, the giving a commercial department to the Foreign Office, or setting up a semi-diplomatic establishment in the Board of Trade, you are aware, I presume, of the nature of Mr. Hammond's evidence from the Foreign Office upon that question?—I have read Mr. Hammond's evidence.

2643. You are aware that he entirely repudiates the idea of having a commercial branch introduced into the Foreign Office?—Yes, I have seen that he has stated that objection.

2644. Turning to the other alternative, I mean giving power to the Board of Trade to communicate directly with our diplomatic representatives abroad, have you thought the matter over in its technical details, with a view to judge whether there would be any insuperable difficulty in making such a change?—That is a question which it is very difficult for an official of the Board of Trade to answer at all satisfactorily. I am not myself aware of the objections to the system; I have not heard them stated; and I cannot myself see why there should be any practical objection to the President of the Board of Trade communicating directly with a Foreign Minister, with reference to a negotiation that has been set on foot, or with a view to obtain information on questions of trade, on the economical condition of a country or the play of parties, or the relative interests which are at issue in a country at a particular time; in short, that kind of knowledge which is requisite to enable the President of the Board of Trade to know what the condition of a country is with which it is proposed to treat. I am not aware what practical inconvenience could result from the President of the Board of Trade communicating directly with a Foreign Minister on such questions; those communications might be made if necessary through the Foreign Office, who might control or stop any communications of that sort; but the important thing is, that there should be a direct personal communication between the Minister who has to direct that policy really, and the agents who give it effect; that is the thing which I think essential, and I am not myself aware of any objection, nor have I heard any practical objection stated to such an arrangement in the case of the French treaty; I am not aware that any inconvenience resulted from the course which was pursued by the Foreign Office; the whole of the communications which passed between the Commission in Paris and the Home Government were directed to the Board of Trade during the negotiation of the supplemental convention; and I cannot see why that practice should not be repeated in similar cases. I do not see what inconvenience resulted from it in that case which could be considered at all to operate as an objection to the extension of the principle.

2645. You are aware that when I had the pleasure of co-operating with you in arranging the details of the Treaty of Commerce in Paris, it was a matter of very great regret with me whenever we could not correspond with the Board of Trade, but found ourselves hung up in consequence of controversies arising with the Foreign Office?—I am aware of that.

2646. And you are aware that the difficulty which I always felt was the want of knowledge at the Foreign Office with reference to questions of commercial policy?—I am quite aware of that.

2647. There can be no offence in attributing a want of knowledge to the Foreign Office inasmuch as they profess to consult the Board of Trade on all occasions with reference to commercial questions?—I think Mr. Hammond stated in his evidence that that was their practice.

2648. Do you remember that after we had finished the details of the Treaty of Commerce between France and England, there was a Belgian minister who came to Paris with a letter of introduction to me from Lord Russell, asking for my assistance to enable him to enter into a similar treaty with France?—I am aware of that.

2649. After we had arranged our treaty, and when it was known that France was going to arrange treaties with Belgium, with the Zollverein, with Italy, and probably elsewhere, do you remember the fact that an intimation was given to me by the French Government that they would be most happy to have a representative of the British Government to co-operate with them, and to go side by side with them in all their negotiations?—I remember that circumstance.

2650. Would you not have been in a position to have acted much more promptly and efficiently in your endeavour to obtain the same terms, and might you not probably have helped the French to obtain better terms in their negotiations with those countries, if representing the Board of Trade you could have gone on continuously; and if you had felt yourself competent to act in concert with the French Government, would it not have placed you, as the representative of English interests, in an advantageous position with reference to the subsequent negotiations with Belgium, Italy, and the Zollverein?—I understand your question to mean whether, if the British Government had made some arrangement with the French Government by which both Governments could have appointed agents to negotiate conjointly with other foreign Governments, great advantages might not have resulted to this country; was that the meaning of your question?

2651. I assume that the English, but for the ignorance of the Foreign Office, would naturally have done that, and that you, as representing the Board of Trade, would have seen the advantage of it, and would have taken the initiative as representing with the Board of Trade?—I think that if the British Government could have made such an arrangement with the French Government, it might have been attended with very great advantage.

2652. But you, as representing the Board of Trade, did not feel yourself competent to take the initiative in any step in connection with foreign diplomacy?—I, as representing the Board of Trade, had no authority to do more than the particular

ticular work entrusted to me to the best of my ability. I could not have gone one inch beyond that point.

2653. Had you represented a department which had diplomatic functions with reference to commercial questions, would it not have occurred to you, knowing that the French Minister was perfectly willing that a representative from England should have attended his representatives in their negotiations in Turin, Brussels, and Berlin, to have suggested to your own department that an agent should be appointed for the purpose?—Yes.

2654. *Chairman.*] Did you understand while you were at Paris, that the French Government would have been willing to allow a representative of the British Government to attend their representatives to other countries with regard to commercial arrangements?—I recollect no mention of specific countries; my recollection is of a general kind, and to the effect Mr. Cobden has just stated; I remember the French Minister, and the officials with whom we had to deal, expressing a general disposition to co-operate with the British Government, but I do not recollect any particular countries being mentioned.

2655. Mr. *Kinnaird.*] Did you communicate that to our Government, and did they refuse to give you permission?—No, I made no communication to them.

2656. Then, how was the Government to be aware of it?—I was not informed of it officially with a view to its being communicated by me, nor was I the person to communicate it; Mr. Cobden, of course, communicated whatever he thought proper.

2657. Mr. *Cobden.*] As I understand, there are three functions which attach to the Board of Trade in its consultative relations with the Foreign Office; you receive through that department documents and communications from abroad, and it applies to your department for information to guide it in its policy abroad?—Yes.

2658. And you are called upon by the merchants and manufacturers in this country for information on matters relating to their daily affairs?—Yes.

2659. Those are your three functions at the Board of Trade in your consultative character?—Yes.

2660. As I understand, you think there would be no difficulty whatever in receiving from our ambassadors, ministers, and consuls all communications direct to the Board of Trade which now come through the Foreign Office?—I am not aware of the objections that there are to it. There may be objections that I am not acquainted with, but I certainly know of none.

2661. As I understand, you think, with reference to the policy pursued abroad in promoting our commercial relations, that it would be an advantage if you could be brought into direct communication with our representatives abroad?—I think that, if the Board of Trade is to be in any way responsible for the conduct of negotiations of this description, it would be a very great advantage, and is, in fact, almost essential, that they should have more direct communication with the agents who conduct those negotiations than they now have.

2662. And among the duties which you would consider, I presume, devolved upon the Department of the Board of Trade, if you were brought into more direct communication with other countries would be that of promoting, as far as you could legitimately, the extension of British commerce abroad?—Certainly.

2663. You are aware that, for a very long time, the Board of Trade has been recognised, both by our highest statesmen in Parliament, and also by the country, as having contributed to the extension of our commerce by changes in our own internal policy?—No doubt.

2664. You are aware, no doubt, that Sir Robert Peel, and Mr. Huskisson long before him, paid high tributes in this House to the Secretary of the Board of Trade, for the assistance which he had rendered in carrying out those measures that led so greatly to the extension of our foreign commerce?—Yes; I am quite aware of Mr. Deacon Hume's services, and of the way in which they were appreciated.

2665. If the Board of Trade were brought into direct communication with our foreign representatives abroad, do you think it would consider it a legitimate exercise of its functions to endeavour, so far as it could, to promote the extension of those principles of free trade which we have acted on in this country?—I think they clearly ought to consider it their duty to do so in every possible way; if they did not, there would be very little use in their continuing to exist.

2666. Assuming the public to wish, and the Board of Trade to desire, to promote the extension abroad of those sound principles of commerce which have tended so much to increase our foreign trade, would there not be an insuperable difficulty in the way of the Board of Trade carrying out that object, of what I will call the propagandism of sound principles, if it can only communicate with foreign countries through the Foreign Office?—I think it enormously diminishes their power of active influence in that direction. I think it is scarcely possible to appreciate the importance of personal knowledge and personal communication between the Ministers at home who direct our commercial policy, and the agents of Her Majesty's Government abroad, on whom the British Government must depend for its execution. So far as the action and influence of the British Government in commercial matters is concerned, for the promotion of British interests in foreign countries, on the personal knowledge and intercourse between the department which directs that policy and the officers who execute it, it seems to me that it is almost indispensable that there shall be constant communications, both of an official and unofficial kind, between the Ministers and officers who conduct that policy or advise upon it for practical purposes and the officers who execute it.

2667. In the case of communications being carried on through the Foreign Office, have you not this disadvantage, that you bring Foreign Governments only into contact with that one department of Government which avows its want of knowledge with regard to questions of commercial policy?—I can conceive many cases in which it must be a disadvantage to the British Government to have to deal with Foreign Governments in negotiations on commercial questions without that sort of knowledge which can only be obtained by a knowledge of details, as they are called.

2668. If you were to attempt to propagate the sound doctrines of trade to foreign countries through

L. Mallet, Esq.

21 June 1864.

through the Foreign Office, as at present constituted, would it not be like attempting to make proselytes through apostles who were themselves entirely ignorant of the faith they wished to propagate?—There is a certain force in the analogy; I can hardly say how far it applies.

2669. But is not that the simple truth, according to the admission of the representative of the Foreign Office?—If you had asked me that question a week ago I could not have answered it, but I see that Mr. Hammond states distinctly that he does not consider it part of the duty of the Under-Secretary for Foreign Affairs to be conversant with matters of trade; and as he is in every way a most efficient officer, he no doubt thinks it is no part of his function to possess much knowledge on commercial questions. As he states that in his evidence, I do not hesitate to refer to it.

2670. He acknowledges that the Foreign Office takes its information on all subjects connected with trade from the Board of Trade, and he has avowed that, so far as he has any influence, he shall resist any change by which a department or branch of the Foreign Office shall be constituted for the purpose of possessing that commercial knowledge which is necessary to carry on their communications on matters of commerce without the aid of the Board of Trade. That being so, should you not consider the Foreign Office a most hopeless instrument, as at present constituted, to effect any conversions, so as to carry out any change in the policy of Foreign Governments with reference to commercial questions?—It is very difficult, without considerable knowledge and without taking considerable interest in commercial matters, to infuse that sort of interest and activity into the agents abroad who have to give effect to your policy that is requisite to accomplish what is wanted.

2671. Seeing how much the Board of Trade has done with reference to the changes in our own tariffs, and seeing how much honourable fame they have acquired by the course they have pursued, and in what exceedingly high respect the department is held by the commercial world, would they not, if they were brought into contact with foreign countries by an arrangement such as that of which we are now speaking, feel impelled by the traditions and reputation of their department to endeavour, as far as possible, to propagate those sound principles of trade abroad which they have been so instrumental in bringing into practice at home?—I am not at all prepared to say how far they might be disposed to embark in those duties. Certainly there has been, as I have already said, during the last 10 years, a progressive tendency towards a diminution of interest and attention to those questions, and that has been coincident with, and I think much dependent upon the large addition to their executive duties that has been thrown upon them, and the mind of the Board of Trade, so to speak, has been, during recent years, principally directed to those executive functions to the detriment, I think, of its action as a consultative department. If the Board of Trade were re-constituted and placed on a different footing, and distinctly made responsible, and if they had given to them the power of communicating directly with foreign agents for that purpose, I presume that under those circumstances they would feel called on to do what you suppose they would naturally be inclined to do.

2672. After we had adopted the policy of freedom with reference to the slave trade and slavery, did we not endeavour, as far as possible, to propagate those just and humane principles abroad?—I have always understood that that has been the case, and that there has been a very great amount of activity and influence exercised to promote those opinions and that policy.

2673. Is there any reason why a similar attempt should not be made to spread those sound principles of commercial freedom which we have adopted in this country with such great success?—I am not aware of any. I have always imagined, on the contrary, that there was a very wide field for the exercise of British influence in promoting the cause of free trade in foreign countries.

2674. The third of the functions which I have mentioned as coming to your department in your consultative capacity is the applications that are made by individuals wanting your intervention to assist them in difficulties that may have arisen in the course of their trade with foreign countries; are not those very often matters of very small detail?—Sometimes they are matters of very small detail, and at other times they are questions which involve grave matters of principle.

2675. And in all cases where you are brought with reference to small matters into communication with foreign Governments, if you were in more direct communication with them, you might find occasions, might you not, for enunciating sound principles in connection with very small matters of detail?—No doubt.

2676. In order to have a chance of influencing foreign Governments with reference to their commercial policy, is it not necessary that opportune occasions should be seized upon for diffusing those principles, and that information?—No doubt it is of the greatest possible importance that that sort of influence should be brought to bear at particular times, and on appropriate occasions.

2677. Whilst on the one hand you are obliged to go now to the Foreign Office with all these minute details, if you had the power of arranging such matters by direct communication with foreign Governments, they would not only be more easily and more expeditiously arranged, but an opportunity would be given to you of diffusing sound principles as occasions might arise?—I think we should be much better informed of the occasions on which opportunities are presented for making useful representations, and for diffusing the experience and knowledge which this country has acquired.

2678. Would not the very fact of bringing foreign Governments into close contact with a department like that of the Board of Trade, where the soundest principles with regard to commerce obtain, and where they have the fullest knowledge of all the statistics and details connected with our commerce, be in itself calculated to promote the interests of Free Trade?—I should think it would.

2679. I have referred to some small matters of detail that are sometimes brought before you by individual merchants and manufacturers; I have had occasion since the completion of the Treaty of Commerce with France very often to send to you individuals who have written to me respecting some little difficulty that may have arisen in the working of the tariff; when individuals

duals call upon you at the Board of Trade, will you tell us what the programme of your action is with regard to those individuals; how do they obtain redress of the grievances of which they complain?—They come to me very often with private letters of introduction from yourself or other people; sometimes they apply directly to the Board of Trade; in the cases which you have referred to me, the gentlemen have come to me with your letter; I then read their paper; sometimes it relates to a matter as to which I can give them an answer at once from my own knowledge, or it is a matter as to which I can obtain information within the walls of the office; in other cases, where action or further information is required, if the case is of sufficient importance, I make it an official paper. I request them to make a representation to the Board of Trade; that representation is then put into an official letter and is sent to the Foreign Office with a request that an inquiry may be made of the foreign Government concerned with reference to the subject matter. That is the course which we pursue; the answer to that inquiry is received after a certain lapse of time, but the process to be gone through is that which I have described; of course that process involves a transfer of the correspondence through a second department.

2680. I hold in my hand a letter which will illustrate this matter, which I received two days ago, and I requested the party who wrote it to apply to you. I will read the letter; it is dated, "172, New Bond-street, London, 14th June 1864. French Treaty of Commerce. Sir,—As manufacturers of Dinneford's fluid magnesia, we have for some time past been able to send the article to France for sale, but are now informed by our agent at Boulogne that the fluid has been declared prohibited by the Douaniere there acting on the instructions of the Minister of Commerce, and as contrary to the existing regulations of the 'Ecole de Pharmacie.' For your consideration we enclose a printed label, with statements of the medicine, which is not a patented or secret remedy, but a solution of magnesia in water, by means of carbonic acid gas, and of nearly uniform strength. The process is published in medical and chemical works, and can be declared in detail for a place in the Codex, or otherwise, as may be desirable. We have thought that, from your influence and connexion with French commerce, you would kindly determine for us as to any possible modification of the prohibition as stated, or otherwise advise us of any way by which we can make supplies to the English residents and visitors of Paris, to many of whom our solution of magnesia has become almost a necessity. We are, &c. *Dinneford & Co.*" That letter is a sample of many others of the same kind that I have received; and when I have received them, I have referred the parties to you, as I did in this case. I wish to ask you whether, in a case like that, you find it necessary to go through the process you have described, that is, that you go to the chief of your own department, in order that he may send a despatch across Downing-street to the Secretary at the Foreign Office, and then, that that secretary may communicate with his chief, who shall communicate by despatch with Lord Cowley; is that the process that you go through?—Yes. I think that such a case as that would probably be made the subject of an official communication, and that we should send it to the Foreign Office, who would send it to Lord Cowley; and we should, probably, not receive an answer for three or four weeks. When you consider the course that that letter would have to take, it is obvious that three weeks or a month would be a short time within which to get an answer. The letter has to go first of all from the Board of Trade to the Foreign Office, where it has to go through certain stages; in my own office, it has to go through three hands at least before it leaves the department; it then goes from the Board of Trade to the Foreign Office; it then goes to Lord Cowley; it then goes to the French Foreign Office, from whence it goes to the Minister of Commerce; from the Minister of Commerce it goes to the Ecole de Pharmacie; then probably to the Minister of Finance; and then back again, through all those several stages; and therefore it is obviously hardly possible for that letter to go through all those stages in less than four or five weeks.

2681. Would you send the letter bodily to the Foreign Office, or would you take a copy of it?—We should send a copy of the letter, and keep the original.

2682. You would keep the original and send a copy across Downing-street to the Foreign Office?—We should.

2683. How would you act if you felt yourself perfectly free?—I cannot say what I should do, but if I were in Mr. Hammond's place, what I should do on receiving that letter, would be to write a private letter to Lord Cowley and request him to ask one of his secretaries to go at once to the proper department, and to send me an answer as soon as he could. I presume that Mr. Hammond would do that, if the matter were brought to him directly, but when he receives an official letter from the Board of Trade, he can hardly deal with it in so irregular a manner.

2684. Supposing the Board of Trade had the power of communicating on these commercial questions with our diplomatic agents abroad, would there not be some one in the Board of Trade who would be at once able to take the case in hand, and to correspond directly with your Minister in Paris?—I think it very important that either in the Foreign Office, or in the Board of Trade, there should be some officers who would be able with the authority of the Minister with whom they acted to communicate semi-officially with the proper people in foreign countries; I have often talked the thing over with Lord Cowley, and we both of us equally lamented the circuitous process necessary to be gone through with reference to these matters, and the delay that necessarily occurs.

2685. If the Board of Trade were empowered to communicate directly with your Ministers abroad, do you not think that in an embassy like that of Paris, there would be a secretary or an attaché who would at once have this commercial department placed in his hands, and to whom it would be a school for training him to a knowledge of commercial questions, and would not Lord Cowley hand a communication like this over to some secretary or attaché who would enter at once upon the matter?—Yes, no doubt.

2686. If that secretary or attaché knew that his communications were going home to a depart-

L. Mallet, Esq.

21 June 1864.

ment thoroughly well versed in these matters, would it not be an inducement to him to inform himself on commercial matters, so that he might be enabled to execute his duties ministerially, and to correspond in a satisfactory manner on such subjects?—I think it must operate in that way; I think that an attaché who had that duty, and who evinced an aptitude for that kind of work, would be encouraged by feeling that his services would be brought to the knowledge of a branch of the Government capable of appreciating the intelligence which he displayed upon the occasion.

2687. Has there been any other permanent official in the Board of Trade who has been abroad, as you yourself have been, to assist in the arrangement of a commercial treaty, or in an attempt to negotiate with foreign countries?—Not in the case of a commercial treaty; I think during my experience, Lord Hobart has been employed on two occasions on a mission to Turkey of a financial character.

2688. Both from the point of view in foreign countries, as well as from your duties in Downing Street, you have had peculiar opportunities of judging how far it would be practicable to have these semi-diplomatic functions intrusted to the Board of Trade?—Many cases have been brought to my knowledge in which I have been made to feel the inconvenience of the circuitous mode in which this branch of business must be done at present; I have had many opportunities of forming an opinion upon the subject.

2689. So far as you are able to judge, you see no difficulty in a technical point of view in carrying on direct communications abroad, on commercial questions, through the Board of Trade?—I am not aware of any practical objections; they may exist, but I am not acquainted with them.

2690. You do not then see any difficulty in the Board of Trade fulfilling those functions for the commercial world that at present have to pass through the Foreign Office, in the respects to which I have alluded?—As I have already said, I am not aware of any serious practical objection to the course proposed.

2691. Mr. *Layard.*] Is there any reason why that letter which has just been read should not have been sent to the Foreign Office?—I am aware of none.

2692. Are such letters constantly sent to the Foreign Office?—I think it is possible that they are; but I am not aware of the fact.

2693. Do you suppose that if such a letter as that which has been read to the Committee had been sent to the Foreign Office, they would have considered it necessary to consult the Board of Trade before making a representation to the French Government?—I should think not; I should have thought, as I have already said, that Mr. Hammond, on receiving such a note, would have sent it privately to Paris.

2694. If you were in direct communication with the Foreign Diplomatic Service, what course should you take?—I think the course that I should have advised the President to take would have been to send the letter to Lord Cowley privately, with a request that one of his secretaries should go round to the several offices, and send over an answer in the course of a week at the latest.

2695. Are you sure that that is never done at the Foreign Office?—I said that I presumed that such a course would be taken in the Foreign Office in such a case as that which has been brought forward.

2696. Is it not a course which is constantly taken every day in the week?—I assume that it is so.

2697. Will you to say that it is not?—I certainly should not presume to say anything of the kind; I know nothing about it. As I understood the question, the object was to illustrate this: that so long as the Board of Trade is held by the commercial public to be a department possessing a knowledge of and taking an interest in commercial questions, they not unnaturally go to the Board of Trade on questions such as this. It happens every day that gentlemen come to me with complaints, or with letters similar to the one that Mr. Cobden has just read.

2698. What I understand you to say is, that if this letter came to you instead of coming to the Foreign Office, that would be one link more, that is, that it would go through the Foreign Office?—That is all I can answer for.

2699. Supposing you sent such a letter to the Foreign Office, would not that letter be sent on that same day to Lord Cowley?—I know nothing of the practice of the Foreign Office in such cases.

2700. But you have led the Committee to believe that, owing to the Foreign Office intervening between you and Lord Cowley, there might be three weeks' or a month's delay in answering the letter?—I could show to the Committee several cases if necessary of communications of a similar kind to the one that has been referred to. Cases constantly arise not quite so trivial as that; but nevertheless with reference to pure matters of detail as to which it is desirable to obtain very rapid answers; instead of which, under the present system, there is a correspondence spreading over several weeks.

2701. Under any circumstances, whether you or the Foreign Office corresponded with Lord Cowley, he would have to go to the Minister of Foreign Affairs, in France, would he not?—That is a matter which must be regulated between the French Government and Lord Cowley. There again, no doubt, difficulties may exist; but, I believe, that practically there is a certain amount of common sense prevailing all over the world, and that every department occasionally deviates from the strict technical rule for practical objects.

2702. Do you know how Lord Cowley does carry on a communication of that sort with the French Government?—I know that his rule is to communicate with the French Foreign Office, and to them only; that is the form in which almost all the colonial correspondence which reaches us from the Foreign Office appears.

2703. Is it not the rule all over the civilised world that the Diplomatic Minister is bound to communicate with the Foreign Office?—Yes.

2704. Does not Lord Cowley, when a matter of that kind comes to him, generally send Mr. Grey, the Secretary of the Legation, or if he is absent, the next secretary, to the Foreign Office, to do the thing at once?—He sends to the Foreign Office, but he cannot do it at once. The only way

way to do it at once is to go to the department with which the decision rests.

2705. Is it the fault, then, of the British Government, if he does not do it at once?—No; when it once reaches Lord Cowley, it must rest with him, and is in his discretion.

2706. But you have led the Committee to believe that this delay of three weeks or a month was owing to Lord Cowley or the Foreign Office?—No; I did not mean at all to convey that impression; I merely stated the process that the letter goes through.

2707. Suppose that letter to be received by me at the Foreign Office at one o'clock, and to be sent off that same day to Lord Cowley, and that Lord Cowley on the following day sends it to the French Foreign Office, and a delay of three weeks occurs before an answer is received, would you attribute that delay to the Foreign Office, or to the French Government?—It is impossible for me to answer that question. All I can say is, that if the President of the Board of Trade were authorised to communicate directly with Lord Cowley on a question of that sort, if an answer was not received within a reasonable time, he would write a private note to Lord Cowley, saying that he had received no answer to his question, saying that it was important to get an answer, and asking if an answer could not be got immediately.

2708. Do you think that, at the Foreign Office, we allow things to lie by for a week without asking for explanations?—I know nothing of the practice.

2709. Do you think yourself justified in condemning the Foreign Office in the sweeping way in which you have condemned it?—I have not said one word that was intended to imply condemnation of the Foreign Office.

Veneris, 24° *die Junii*, 1864.

MEMBERS PRESENT:

Mr. Bazley.	Mr. W. E. Forster.
Mr. Somerset Beaumont.	Mr. Kinnaird.
Mr. Butler Johnstone.	Mr. Laird.
Mr. Cobden.	Mr. Layard.
Sir Minto Farquhar.	Sir Stafford Northcote.
Mr. Seymour Fitzgerald.	Mr. Pender.

WILLIAM EDWARD FORSTER, Esq., in the Chair.

LOUIS MALLET, Esq., called in; and further Examined.

L. Mallet, Esq. 24 June 1864.

2710. Mr. *Pender.*] YOU heard the evidence given by Sir Emerson Tennent, did you not, to the effect that the Colonial Office are in the habit of consulting the Board of Trade in matters connected with commerce?—I did.

2711. Sir Emerson Tennent has stated in answer to Questions 2345 and 2346, that in general the opinions of the Board of Trade are acted upon by the Colonial Office, but that in some instances they have been overruled; do you know to what instances Sir Emerson Tennent refers?—I think Sir Emerson Tennent referred to a very important case, which has led to a great deal of inconvenience in the opinion of the Board of Trade subsequently, namely, the correspondence which took place between the Colonial Office and the Board of Trade on the subject of a proposed commercial union, first of all between Canada and Britsh Guiana in 1855, and subsequently in 1859 a similar proposal for a commercial union between the whole of the North American Provinces. On the first of those occasions, the Board of Trade expressed a very strong opinion to the Colonial Office against the proposed commercial union between Canada and British Guiana, and upon that occasion the Colonial Office acted upon the opinion of the Board of Trade, and objected to the course proposed and stopped that proceeding, and sent a circular to all the British Colonies, intimating the policy which the British Government thought proper to pursue in that case. In the year 1859 a similar proposal was made on the part of Canada and the other North America Provinces, with a view to a commercial union between them; and on that occasion the Board of Trade repeated its objections to the course which was proposed to be adopted, and the Colonial Office, on grounds of general policy, overruled that opinion, and intimated to the Board of Trade that the Duke of Newcastle, who at that time was the Colonial Minister, did not intend to oppose the proposal if persisted in, on the part of the colonies concerned. I think that was the case to which Sir Emerson Tennent referred.

2712. So that the Colonial Office, although coinciding in the views of the Board of Trade, would be constrained to disregard those views if opposed by a Colonial House of Assembly?—I am not prepared to say upon what grounds the Colonial Minister decided that the opinion of the Board of Trade upon that occasion should be set aside, whether it arose from a wish to act in accordance with the wishes of the Colonial Legislature, is a point upon which I am not informed, I can only speak to the fact, that the opinion of the Board of Trade was not adopted by the Colonial Minister.

2713. Since the abolition of the East India Company India has become a dependency of the Crown in the same manner as any other colony is a dependency of the Crown, has it not?—Speaking generally, it has.

2714. I see that Sir Emerson Tennent states in answer to Question 2342, that the India Office never consults the Board of Trade upon any matters connected with Indian commerce; is that correct?—That statement of Sir Emerson Tennent's is perfectly correct, so far as my knowledge is concerned. I cannot recollect any case since the establishment of the India Office in which the opinion of the Board of Trade has been asked upon any question affecting Indian trade.

2715. You are aware that India has conventions with the native princes within her boundary, and treaties with the other States beyond her frontiers; have drafts of those conventions and treaties when commerce has been affected by them been sent for the approval of the Board of Trade?—I have no official knowledge of such conventions. I imagine that they exist, but they are never sent to the Board of Trade, either before they are entered into or after they are adopted, and before they are carried into effect.

2716. The Indian Government has Diplomatic Agents residents at many native ports; do they send home reports to the India Office, and if so are such reports forwarded to the Board of Trade?—They are certainly not forwarded to the Board of Trade; whether they are sent to the India Office or not I am not aware.

2717. In India laws are passed affecting trade in the colonies, and ordinances are passed equally affecting trade; the colonial ordinances are all submitted for the opinion of the Board of Trade previously to Her Majesty being advised to give the Royal sanction to them; do you mean to say that the Indian laws are never submitted in the same way for the opinion of the Board of Trade?—Indian laws are never submitted either for

for the opinion or approval of the Board of Trade.

2718. Alterations in our tariff, like those which were made at the time of the French Treaty, are submitted for the consideration of the Board of Trade; alterations of the tariff of India are of frequent occurrence; are the like alterations in the Indian tariff submitted for the consideration of the Board of Trade?—No, they are not so submitted; nor were the alterations of our tariff at the time of the French Treaty submitted to the Board of Trade.

2719. Do you happen to know the annual value of the trade between India and Great Britain?—Speaking in round numbers it is about 50,000,000 *l.* sterling, backwards and forwards; that was nearly the amount for the year 1862.

2720. It appears, by the evidence given before the Committee, that in matters of foreign trade the opinions of the Board of Trade are only acted upon by the Foreign Office when it is found consistent with political convenience?—That appears to be the practice now observed by the Department.

2721. In matters affecting colonial trade the opinions of the Board of Trade are overruled if they prove to be inacceptable to the House of Assembly, and in matters affecting the commercial interests of our vast empire in India, the Board of Trade are never consulted at all?—Yes. As regards the first part of the question, I cannot state upon what grounds the opinions of the Board of Trade are occasionally set aside by the decision of the Colonial Minister. As regards the second part of the question, I can state positively that the opinion of the Board of Trade is never taken as regards laws affecting the trade of India.

2722. Do you know of a report from a gentleman holding the office of consul at the Island of Zanzibar, made in the year 1860?—I know of the report; I have read it.

2723. Where did you first see that report?—The knowledge of the existence of that report first came to me in a visit from Colonel Rigby, the writer of it, who came to ask me whether the Board of Trade was in possession of that report. That visit took place early in the year 1863; at that time the Board of Trade was not in possession of the report, and I told him so.

2724. That report has since been published in full by the Foreign Office, in a volume containing the commercial reports between 1st July 1862 and 30th June 1863, has it not?—It has.

2725. You are aware, I suppose, that that report is a very valuable report upon trade?—It is an exceedingly valuable report; it contains a great deal of valuable information.

2726. You are also aware that that report must have passed through the hands of the Foreign Office, when an extract was made from it on the Slave Trade?—I presume so.

2727. Was it not the case that the extract upon the Slave Trade was published in the report upon the Slave Trade, and the parts referring to trade were thrown aside?—That appears to have been the case; in fact, it was ascertained to have been the case.

2728. No attention was drawn to it, I believe, until the application was made to the Board of Trade for that report?—That was so. On receiving this visit from Colonel Rigby, and on receiving other inquiries with regard to that report, the Board of Trade made inquiries at the Foreign Office, and discovered that that portion of this report which related to trade had not been published, and had been laid aside. It was subsequently published, I think, in the year 1863, among the other consular reports.

2729. So that the report made in 1860 only reached the commercial bodies interested in it two or three years after it was written?—That is so.

2730. Do you know any other similar case to that which I have just referred to?—I do not; I am not aware of any case precisely similar to that; I have no case to which I could call the attention of the Committee of a precisely similar kind. I can state, generally, that we do not receive reports from a great many of the consuls and vice-consuls and consular agents who appear to be on the list; in fact, I was surprised the other day at looking at the number of those officers who appear to be in the service of the Foreign Office, when compared with the small number of reports we receive. There may be reasons, with which I am not acquainted, for the absence of those reports, but the fact is a striking one.

2731. I see the report in question, the Zanzibar Report, although dated 1860, is published in the Bluebook amongst the papers received from 1st July 1862 up to 30th June 1863; so that that report has been entirely overlooked in the meantime, I suppose?—Yes. I believe there are 500 or 600 consuls, vice-consuls, and consular agents, and the number of reports annually received does not, I believe, usually exceed 100.

2732. If the Board of Trade were in direct communication with those consuls, would such a thing as this occur, in your opinion?—It certainly ought not to occur. If the consuls were under the Board of Trade, I should consider that the Board of Trade ought to see that their reports are sent in regularly, and published at the earliest possible date after their receipt. I have taken out a list, not a complete list, but sufficiently complete to serve as an illustration of my statement with regard to the consuls' reports. These are the names on the list of places at which there are either consuls or consular agents who appear to be resident abroad, but from whom, at the Board of Trade, we have not received reports: Alexandria, Algiers, Borneo, Bahia, Bayonne, Belgrade, Bucharest, Cape Verde Islands, Cologne, Cadiz (I have Elsinore on the list, but a report has been received from Elsinore since), Feejee Islands, Guadaloupe, Galatz, Hayti, Havannah, Jassy, Leghorn, Martinique, Mexico, Malaga, Manilla, Rotterdam, Nicaragua, Oporto, Ostend, Pernambuco, Paris, Rome, Smyrna, St. Domingo, Seville, St. Salvador, Surinam, Santos, Trieste, Valparaiso, and Callao. I do not pretend to say that that is a complete list, but they are illustrations to show that I have not made a statement without some grounds. These reports have not been received at the Board of Trade.

2733. Are all communications relating to trade that come through the Foreign Office printed by the Foreign Office or by the Board of Trade?—Formerly they were prepared for publication at the Board of Trade, but within the last three or four years that practice has been changed, and now they are entirely prepared and presented to Parliament by the Foreign Office; the Board of Trade have no part whatever, either in the preparation for publication or presentation to Parliament.

2734. Would the commercial bodies not be more

L. Mallet, Esq.
24 June 1864.

more open to receive correct information, from the Board of Trade, when they apply to the Board of Trade for information, if all those documents were printed and cared for by the Board of Trade?—I have always understood that the consular reports presented by the Foreign Office to Parliament have been found very interesting by the commercial public. I know they have had a very large sale, I believe a larger sale than almost any Parliamentary Paper, and I have not heard complaints of the reports themselves; on the contrary, I have always been led to believe that they are very useful and acceptable to the commercial public. Many of them are certainly very valuable. I am not prepared to state whether any preparation by the Board of Trade would make them more acceptable to the commercial public. I have not heard any complaints of the mode in which they are given to the public under the present system.

2735. Are you aware of any office that in any way represents the commercial interests of England with India?—Not in this country. The India Office, as far as I am informed, is a self-contained office; it appears to consider that it is competent to discharge all the functions of government which fall within that branch of the Government service without going to any office for the purpose of pure consultation. Of course the India Office must be in constant correspondence with the great executive departments of the State when questions arise upon which it is necessary to consult them; but, as far as the Board of Trade is concerned, the India Office certainly never consults the Board of Trade upon questions connected with trade.

2736. Would it not be for the interest of the trade of this country if the India Office were to consult the Board of Trade, in the same way as the Foreign Office do, upon all matters relating to our export trade?—I think that depends entirely upon whether, in the arrangements of the Government departments, the principle is adopted of having a consultative department to advise the great executive departments of the State, or whether it is considered better that each of the executive offices of the State should be a self-contained office, consulting officers of its own, or anybody whom it pleases to consult, with a view of obtaining the information it requires for the purpose of acting. I think that the answer to the question depends entirely upon the principle which is adopted in that respect. I think one principle or the other ought to be clearly understood, and most decidedly adopted; it is the absence of any clear principle which I think leads to the present difficulty in these arrangements.

2737. You are satisfied, then, that there is no department of Government which, in any way, looks after the interests of British trade with India?—Except the India Office, so far as I am informed.

2738. Sir *Minto Farquhar*.] You were asked, at the last sitting of the Committee, some questions with reference to your position in Paris, and it was stated that you had been offered by the French Minister that you should accompany a French minister to Berlin; was not that so?—I received no offer whatever of that kind.

2739. Did I not understand you to say, the other day, that when the French Government was communicating with Berlin, it was suggested by the French Minister that he would be very glad if you would accompany him?—No; all I know is that, at the conclusion of the negotiation at Paris in 1860, the minister by whom the negotiation was conducted on the part of France expressed a private opinion of his disposition, and the disposition of the French Government, to co-operate with the British Government in those negotiations. That invitation was conveyed to me privately, in the course of my intercourse with M. Rouher and Mr. Cobden; it was never conveyed to me officially, or with a view of my communicating it to my Government. I was, of course, bound to assume that the communication was intended to be made officially, and was made officially to and properly laid before the British Government; I considered that I had nothing to do in the matter.

2740. Supposing you had accompanied the French minister, what part would you have played?—That must have depended entirely upon the part which the British Government was admitted to take in such negotiations.

2741. Do you think that you could have taken any part without communication with the British minister resident at the place in which the negotiations were conducted?—I think not. In the case of the negotiations at Paris, Lord Cowley was associated with Mr. Cobden in all the negotiations. I imagine that that course would equally be adopted in any similar case; I should think it most desirable that it should be adopted.

2742. You have been sent for the purpose of assisting with your knowledge upon questions of tariff details to several places, have you not?—I can only say that I have been sent to perform specific work. I was sent to Paris subsequently to the treaty, with a view to assist Lord Cowley in particular questions which had arisen. I was also sent both to Berlin and to Turin, but no occasion arose for actual work. My duty was confined to examining the situation, and reporting the result of my inquiries.

2743. Did you observe, at any places which you have been to, any indication, whether the question were of great importance or of minor importance, that the persons who represented this country there did not show the most anxious desire to promote in every way they could the commerce of this country?—I have observed in many cases a very great amount of intelligence, and a very great amount of zeal, on the part of the representatives of this country. Certainly, both at Berlin and Paris and Turin, I found the greatest possible disposition to co-operate cordially with me, and to give me every assistance in their power to obtain information in the best possible manner. Nothing could have been, to my mind, more thoroughly satisfactory than the manner in which both Lord Augustus Loftus and Sir James Hudson co-operated with me. On both occasions I had every possible assistance given to me; nothing could exceed their efforts and endeavours to promote the object for which I was sent.

2744. In fact, in your communication with them, you found that they attached great importance to the questions of trade particularly?—Certainly.

2745. Do I rightly collect from your evidence that you think it advisable to separate entirely the action of the Board of Trade and the Foreign Office upon questions of commerce, so that the Foreign Office should have the conduct of the political portion of its communications with foreign

foreign States, and that the Board of Trade should entirely reserve to itself all questions of foreign commerce and tariffs?—I think that the intention of my evidence must have been misunderstood, if my former evidence was understood as tending to show that such a division was desirable. On the contrary, my opinion very strongly is that it is impossible to separate between the political and commercial points which arise in the negociation of questions of this description; I believe by far the best way of conducting them is that both branches of questions should be conducted by the same minister in the same department. With respect to my remarks as to the possibility of the Board of Trade undertaking to perform that part of its business, I made them merely with the view of providing that alternative course which I think, although objectionable in principle and by no means altogether satisfactory in practice, would be nevertheless far better than the present system.

2746. I judge that you are of pretty much the same opinion as Sir Emerson Tennent, that if you had direct communication with the ministers, consuls, and agents abroad, you would always send your communications either under flying-seal through the Foreign Office, or inform them of what you had done?—I am not myself aware of any practical objections that would arise to such a course; I think the thing might be done, by cordial co-operation between the two departments, without giving rise to practical inconvenience.

2747. It has been stated here, that if the foreign agents communicated directly with you instead of with the Foreign Office, as they know that you are at all times entirely taken up with the investigation of commercial subjects, it would promote more emulation and spirit amongst them, in dealing with commercial questions, if they found that the communications went straight to you?—It seems almost indispensable, in order to infuse spirit into a business, that the people who carry out the policy should be in communication with those who inspire it, and who possess the real knowledge upon which they have to act; I think that is very important with reference to a satisfactory and zealous discharge of the duties.

2748. The impression seems to be that the Foreign Office do not encourage their agents to look to commercial subjects; it was to that I referred?—I have no doubt that the Foreign Office wish to encourage them in every way; but I think, from my own observation, that the absence of that sort of habit of dealing with commercial questions which, as Mr. Hammond himself stated, exists in the Foreign Office, cannot but operate to prevent that kind of constant interest and close watching of commercial questions which is important, in order to bring about the results which we desire.

2749. Do you not think that in many negotiations which take place abroad, upon questions of commerce, questions of policy intervene considerably in preventing any progress being made?—So much so, that I feel it almost idle to express an opinion upon an abstract question of trade in total ignorance of the political circumstances of the moment at which that opinion is given.

2750. We have adopted the principle of free-trade, and of course endeavour to encourage it as much as possible; cannot you conceive that there may be very many political questions affecting foreign countries that would delay the completion of satisfactory arrangements between the countries upon commercial matters?—Obviously, such difficulties must constantly arise.

2751. Take the case of the Belgian Treaty: cannot you conceive that, during the year which elapsed before a treaty was signed with this country, there were many difficulties which the Belgian Government had to overcome in their own country, which prevented their giving us the advantages they were bound to give us?—I know that there were such difficulties.

2752. Do you think, therefore, that in what was done by the Foreign Office, they did not press forward sufficiently strongly to enforce their views, and that the cause of delay was owing to the action at the Foreign Office not being sufficiently vigorous?—That is a question which I am quite unable to answer. I wish the Committee to understand that the Board of Trade are placed in such a position that they are totally unable to give an opinion upon those points, because the Board of Trade knows nothing of the political difficulties which exist on the part of the Foreign Office in pressing those negotiations. When I say the Board of Trade I speak now of the permanent officials, not of the President of the Board of Trade.

2753. I collect from your evidence that you think it would greatly facilitate the communication between the two offices if there were a person in the Foreign Office whose special attention was turned to questions of commerce, and who would see that as soon as any communication came into the Foreign Office relating to commerce, they should be at once forwarded to you without delay?—I do not think that I expressed an opinion very decidedly in favour of that course. I think it might be a mechanical advantage if there were some person there to see that the correspondence was conducted with promptitude and despatch, but I said I was not sufficiently acquainted with the internal arrangements of the Foreign Office to know how far such an arrangement would be desirable; I think it is a matter of subordinate importance.

2754. Considering the remarks which have been made about the communications between other offices and the Board of Trade, do you, having had so long and able an experience in the Board of Trade, think it desirable to concentrate all the affairs relating to commerce in the country generally in the Board of Trade, and that there should not be communication with the other offices? Take the Colonial Office, for instance; would you not think it necessary to continue the correspondence with the Colonial Office with respect to any question likely to arise in a Colony, or would you think it advisable that the Board of Trade should have the control of all matters connected with commerce, and that either the President of the Board of Trade or a Minister of Commerce should have all those subjects under his eye?—I think it would be quite impossible that the President of the Board of Trade or a Minister of Commerce could have any control over the colonial policy, or even that he could have that control if his position were strengthened as has been suggested; what he would be able to do would be to advise any great executive department of State, and to express his opinion with such degree of authority and weight that his opinion, if it were not acted upon, should be

L. Mallet, Esq.

24 June 1864.

submitted to the Cabinet and become a political question.

2755. You approve, then, of the present consultative position of the Board of Trade?—I think the weak point in the present Board of Trade is that as a consultative office it does not possess sufficient weight; if retained as a consultative office, it ought to have given to it that degree of authority which would ensure its opinions when expressed being adopted, unless set aside through a decision of the Cabinet.

2756. When you were in Paris you heard what the system of the Ministry of Commerce was there; does the Minister of Commerce superintend entirely and exclusively all the commercial matters connected with trade, foreign and internal, in Paris, or does he communicate according to our practice upon questions of foreign commerce with the Foreign Office?—In the Foreign Office at Paris there is a Commercial Department whose business it is to attend to the commercial questions which arise in the foreign relations of France. That department corresponds, when it requires assistance or advice, with the Foreign Trade Department in the Ministry of Commerce. Of the exact way in which they divide their duties, I am not precisely informed; but, speaking generally, the Foreign Trade Department in the Ministry of Commerce is more especially charged with the duty of superintending the changes in the tariff of France, while the Commercial Department in the Foreign Office would be more specially interested in negotiations with foreign countries, and in endeavouring to obtain concessions in the tariffs of those countries. I may state that at the Conferences at Paris, during the negotiations with respect to the supplemental convention, the official assistance given to those Conferences was given by the Commercial Department of the Foreign Office; the permanent officials who took a part in that negotiation were officials of the Foreign Office, and not of the Ministry of Commerce; they were acquainted with all the details which arose in the course of those negotiations, and were perfectly able to advise the Minister upon every question which arose in connection with those details.

2757. You gave us, on your last examination, an explanation of the course of proceeding, describing how any letter sent to you must be forwarded through the President of the Board of Trade to the Foreign Office, in order that an application may be made by the Foreign Office to Foreign Governments: upon any question of small details, I suppose you very seldom get any application at all from the Foreign Office, do you?—I am hardly aware of the practice of the Foreign Office with regard to matters of trivial importance; I can only say that we often receive from the Foreign Office applications or complaints made to them, respecting matters of detail in particular branches of trade which have been affected; whether there are other applications made to them which are not sent to us or not, I am not aware.

2758. Supposing that the Foreign Office had received the letter (which the Honourable Member for Rochdale mentioned at your last examination) about the fluid magnesia, it would be hardly necessary that a communication of so comparatively trivial a character as that should be sent to you, would it?—It is very difficult to say what question is trivial; that question, when I came to look into it, I found to be not so trivial. In order to answer the question raised in that letter, it would be necessary to examine very carefully the provisions of the French Treaty, and to obtain information (which at the Board of Trade we do not now possess) as to the French law with regard to patent medicines and secret medicines; in short, the case will require a great deal of careful investigation; and it will be necessary, in order to obtain that careful investigation, that it should be sent to Paris, and that some agency should be employed in Paris to give us the requisite information.

2759. Supposing I had received such a communication, and had gone to Mr. Layard, or any gentleman who was the Parliamentary Under Secretary at the Foreign Office, and had given him this letter, he would have sat down and sent by that post a copy of the letter to Lord Cowley, or to our Minister in any European Court; do you not think that the probability is that, within two or three days, a perfectly clear explanation would have been received at the Foreign Office, without any reference to the Board of Trade at all?—That I can hardly state. It certainly is not in accordance with my experience to think that questions of that sort would be dealt with, from first to last, by the Foreign Office without consulting the Board of Trade. I could refer to cases larger in scope, but not more important in the principles involved, and not more distinct from the questions of detail connected with them, upon which correspondence has taken place between the Foreign Office and the Board of Trade. It seems to me, that so long as the Foreign Office abstains from dealing with what they call the details of these questions, this must be the case.

2760. Supposing that Lord Cowley receives such a letter as this from Mr. Layard, he gives it to Mr. Grey, or to some attaché, and says, "Take this to the proper party, whoever he may be, consult him, and let me know what he says about it:" when he received the answer to that inquiry he would inform the Foreign Office, and if any further difficulty turned up they would consult the Board of Trade; would not that be the course?—No doubt. I think in that way inconvenience sometimes arises. There is a case which I may mention to the Committee, as Mr. Hammond has already referred to it, which arose last year with reference to the exportation from England of petroleum oil, and another case which involved a similar question with reference to the exportation from England of sewing-machines. In the case of the sewing-machines an application was made, in the first instance, to the Foreign Office; the Foreign Office (thinking, very naturally, that it was a case which it was not necessary to consult the Board of Trade upon) sent an instruction to Lord Cowley at Paris to make proper inquiries upon the subject, and to represent it to the French Government. The answer of the French Government was of a kind which made it appear that the question which had been raised involved principles which were not at first sight apparent to the Foreign Office. The question was then referred to the Board of Trade; the Board of Trade made a long report to the Foreign Office on the subject, and further representations were made to the French Government; but the effect of that double operation was, in my opinion, that the representation made to the French Government having been made in the first instance without such a distinct statement of the principles involved, and such a detailed exposition of the points

points as was subsequently submitted to the Foreign Office by the Board of Trade, caused the second representation containing those distinct specifications to come with less advantage before the French Government, which had already committed itself to a particular answer, than if the application had been made in the first instance in such a way that it would have been impossible for the French Government to give the answer to it which they did give to the application which was actually made.

2761. Mr. *Somerset Beaumont.*] I believe there are negotiations going on now with several Foreign Governments with a view to commercial treaties, are not there; for instance, are not there negotiations going on between Prussia and Austria and this country?—I am hardly informed as to how far it can be said that those negotiations are still in progress; there is a pending negotiation with Prussia. At the time of the conclusion and signature of the treaty between France and Prussia on the part of the Zollverein, the British Government had brought a negotiation with Prussia with the view of obtaining similar concessions to a conclusion; since then, everything has waited the conclusion of the arrangement between Prussia and the Confederate States forming the Zollverein. In that sense, no doubt, it may be said that there is still a pending negotiation for a commercial treaty between the British Government and the Prussian Government.

2762. In July 1862 the Board of Trade addressed questions to the Chambers of Commerce, asking for information upon the tariffs of Austria, and I think also of the Zollverein, did it not?—Such communications were made, but the precise date I cannot speak to.

2763. I have before me a copy of a letter which was addressed to the Newcastle Chamber of Commerce, dated 29th July 1862; it is signed by Sir Emerson Tennent. He informs the Chamber of Commerce that negotiations have been commenced with Austria with a view to the conclusion of a new commercial treaty; was that a commercial treaty which was in contemplation to be made with that Government independently of the Zollverein, or were the political relations with Austria at that time such that there was any chance of a distinct commercial treaty being made between England and Austria?—So far as I am informed, the intention was that that should be a distinct negotiation between the Austrian and the British Governments.

2764. Has it been the case that political considerations have interrupted those negotiations?—Of that I know nothing; I have not heard since that time what steps have been taken in reference to the negotiation; it has not proceeded to any further stage, so far as the Board of Trade is concerned.

2765. Therefore I gather that no communications are made at present to the Board of Trade with respect to any negotiation which may be going on between Austria and this country?—I am not aware, so far as my knowledge at the Board of Trade extends, of any negotiations at present between the Austrian and British Governments for a commercial treaty.

2766. Are you aware whether there have been any communications addressed to the Foreign Office by Lord Bloomfield, since the date of 1862, respecting a commercial treaty?—I have seen several despatches from Lord Bloomfield on the subject, generally, of the commercial relations of this country and Austria.

2767. Was not there a project for a new tariff published in Vienna last year?—There was a tariff published; in what sense published I am hardly informed, but it was published no doubt with the sanction of the Austrian Government. As I understand, it was the project of a tariff as between Austria and the Zollverein, not as between Austria and other foreign countries; it was, in fact, a project of a tariff to be substituted for what is merely an intermediate tariff between Austria and the Zollverein States.

2768. I think that project was communicated to the different Chambers of Commerce in the Austrian Empire?—I believe it was.

2769. Was that tariff communicated to the Board of Trade?—It was obtained for the Board of Trade; it reached us during the early part of this year.

2770. Was it communicated officially to the Board of Trade?—It was communicated officially by the Foreign Office to the Board of Trade.

2771. What was the date at which it was communicated?—I have not got the date in my head, but I can very easily obtain it for the Committee.

2772. That tariff was published in November, was not it?—It was.

2773. A question was asked of the Vice-President of the Board of Trade, on the 18th of February, as to whether the Board of Trade possessed a copy of that tariff, and the Vice-President of the Board of Trade said that the Board of Trade had not got it; are you aware of that fact?—The Board of Trade did not possess it at that time; the tariff was received subsequently to that date, either at the end of February or the beginning of March.

2774. Would it not have been usual that a tariff proposing to alter the commercial system between Austria and the Zollverein should have been communicated to the Board of Trade?—I think there can be no doubt that that is a kind of law which ought to have been communicated to the Board of Trade; but I may state that the intermediate tariff itself, which is now in existence between Austria and the Zollverein, was not communicated to the Board of Trade at the time when it was adopted, nor did it reach us for a very long time afterwards.

2775. If there were more direct communications between our representatives abroad and the Board of Trade, do you not think it likely that such a document would have been communicated, as a matter of course, immediately after its publication?—I think if there was that kind of constant and free intercourse between the department of Government, or the Minister who really conducts, you may say, the foreign commercial business of the country, and the British agents who give effect to that policy in foreign countries, there would be a greater amount of interest and energy imported into that branch of the public business than now exists. I think, certainly, that free and personal intercourse would impart a much greater amount of interest to the work than can be obtained by the indirect and circuitous mode of communication which now exists between the Board of Trade and the British Ministers resident abroad.

2776. Mr. *Butler-Johnstone.*] Is not there, in the Board of Trade, a separate department which takes cognisance of lighthouses?—There is.

L. Mallet, Esq.
24 June 1864.

2777. Who is the head of that department?—That is a division of the Marine Department; the Marine Secretary is Mr. Farrer, and the Lighthouse branch is one of the sections of his department.

2778. Is not there a head of that section of the Marine Department?—There is a clerk at the head of each section, the Lighthouse section among others.

2779. What is the connection of Admiral Sullivan with that branch of the department?—Admiral Sullivan is a consulting officer of the Board of Trade, who, I believe, among his other functions, attends to lighthouses, and so forth. When I spoke of the clerk at the head of the department I did not refer to Admiral Sullivan, of course; I believe Admiral Sullivan has cognisance of what goes on in that department.

2780. Do you not, upon questions with respect to lighthouses, sometimes have to refer to the Admiralty?—I believe there is a correspondence between the Lighthouse division of the Marine Department of the Board of Trade and the Admiralty occasionally.

2781. Are there not complaints made of the Board of Trade taking the initiative without consulting the Admiralty?—That is a question which I am not informed upon; I have not any knowledge of the correspondence that takes place between that department and the other offices of the Government.

2782. Would not the appointment of a separate department in the Foreign Office for Commerce by itself, resemble this separate department for Lighthouses in the Board of Trade; and would it not, like it, on important matters have to consult another office altogether, such as the Admiralty in the one case, and the Board of Trade in the other?—I think a Commercial Department in the Foreign Office would be under the necessity, on many occasions, of consulting other departments of State. But the principle which I endeavoured to explain on the occasion of my former examination is, that there should be no one office of State whose business it should be to collect information, without reference to its executive duties, merely for the purpose of advising the executive offices, but that each executive department should be self-contained, and should be provided with officers competent to advise it on all matters that come within its province, and that it should consult another executive office solely upon those questions which fall within the executive work of that department.

2783. Except in cases of commercial treaties, which are of rare occurrence, would there be sufficient permanent work for such an officer as a Minister of Commerce in this country, supposing such an office to be created?—I think that if the Minister of Commerce were assigned the functions now pertaining to the President of the Board of Trade, in respect of shipping and railways and other miscellaneous work which now devolves upon the department of the Board of Trade, not only would such a Minister be fully employed, but my doubt is whether he would not have more duties to perform than he could discharge.

2784. I refer to foreign commerce alone?—I do not think that the business connected with foreign commerce would be sufficient to occupy the full time of any one Minister, but I think it requires a considerable amount of time, and probably more time than, under the present arrangement, any one Minister can give to it.

2785. Does the Minister of Commerce in France ever communicate directly with the French agents abroad?—One case has fallen within my knowledge in which such a communication has taken place. Whether that was of an exceptional kind, similar to a case which occurred in Paris in which Mr. Cobden was instructed to communicate with the Board of Trade directly, I am not informed.

2786. Had that reference to the negotiation of a treaty between France and another country?—It had reference to the negotiation between France and the Zollverein. I know that the French Minister who negotiated the treaty with the Zollverein at Berlin was in direct and daily communication with the Minister of Commerce in France, and received instructions from him upon every point connected with the negotiation.

2787. If there were such a separation as you have suggested between the offices, considering how intimately connected politics and commerce are, would not the same delay take place whether the Foreign Office or the Board of Trade took the initiative, because the question would have to be sifted by the other office? If the Board of Trade took the initiative, it would still have to go through the Foreign Office for the approval of the Foreign Secretary, would it not?—No treaty could be concluded, of course, without a full examination by the Foreign Secretary; but I imagine that in the ordinary course of business in the conduct of a negotiation, or as regards any purely executive business which is carried on from week to week between the Foreign Missions and the Home Government, there would be no necessity for that close superintendence on the part of the Foreign Office; in fact, there would be no occasion for a greater amount of attention to those questions than is now given to them.

2787.* I will read to you what you said in your last examination, in answer to Question 2644: "Those communications might be made, if necessary, through the Foreign Office, who might control or stop any communication of that sort;" what did you mean by that?—I meant that it would probably be thought necessary that the Foreign Office should have the power of stopping any communication sent out from another department of the State to a foreign country, in case political reasons might exist, with which that department was not acquainted, which made such a communication inconvenient.

2788. In that case there would be a supervision only transferred from one office to the other, would there not?—It would hardly amount to supervision; the kind of control which I contemplated was merely seeing that an instruction given by the Board of Trade, at a particular moment, did not clash with any political considerations which were paramount at that moment.

2789. Among the inconveniences which you referred to, one was that the "Gazette" was only published twice a-week, and that the information contained in it came some days later than was necessary to the commercial classes; have you any suggestion to make with a view to obviating this defect?—I think one mode of obviating it would be to publish the "Gazette" every day, and to publish it for one penny instead of for 6 *d.*; that would no doubt considerably diminish the inconvenience which exists at present.

2790. Was

2790. Was the Colonial Minister who set aside the opinion of the Board of Trade relative to the American commercial union the Duke of Newcastle?—It was the Duke of Newcastle who set aside the opinion of the Board of Trade, in 1859, with reference to the proposed commercial union between the North American Provinces.

2791. Did he state his reasons to the Board of Trade for doing so, or not?—It was stated generally that, upon considerations of general policy, he thought it not expedient to oppose the wishes of the Colonial Legislatures.

2792. Was there any discussion between the Departments on that point?—There was no discussion whatever between the Departments. I am not aware of any between the Ministers, but that is beyond my province.

2793. Mr. *Layard.*] With reference to an answer which you have just given on the subject of the Austrian Treaty, have you any grounds for believing that the Austrian Government were prepared to enter into a commercial treaty with this country?—None whatever.

2794. You have no grounds for believing either one way or the other?—No; I am quite uninformed.

2795. You do not know whether any negotiations were carried on by the British Government with the Austrian Government?—I know of nothing beyond a communication, which I believe was made by the Foreign Office to the Board of Trade at the close of 1860 or the beginning of 1861, in which the Foreign Office requested the Board of Trade to prepare a draft of a treaty for negotiation; with reference to which the Board of Trade was subsequently informed that, for political reasons, Earl Russell did not open that negotiation, or continue it. And on a subsequent occasion, I think in 1862, the Board of Trade was again requested to send a draft treaty, or at all events was informed that Earl Russell proposed to offer a treaty.

2796. Therefore, you can give no information to the Committee as to whether the British Government were in communication with the Austrian Government, or not, with regard to a treaty?—No, none whatever.

2797. As to the tariff which was mentioned by the Honourable Member for Newcastle, are you aware that we asked for the tariff, and that Count Rechberg said that it was an entirely unauthorised document, and not even printed, but only in lithograph, of which he had no knowledge whatever?—I am not aware of it.

2798. Are you aware that it was some time before we could obtain a copy from Count Rechberg, and that he stated that it was not an official document?—I am not informed of any correspondence which passed with Count Rechberg with reference to that subject.

2799. You say that there has been less communication recently than there was formerly between the Board of Trade and the Foreign Office; will you give your reasons for that statement?—I did not mean to say that there had been less communication, because I believe that with regard to the amount of correspondence, it is as large, if not larger, than in the former years to which I referred. What I meant was, that in the earlier part of my connection with the Board of Trade it was more the practice of the Foreign Office in the case of commercial negotiations to request the Board of Trade to conduct those negotiations by personal intercourse with the Foreign Ministers who were charged with their conduct in London; that was the point which I intended to enforce, and I referred to three cases in which, within my own knowledge, that practice had been adopted by the Foreign Office.

2800. You say, I think, that the information on questions as to which it is important to communicate to the public the earliest information reaches you too late very often for useful publication: whose fault is that; do you believe that that is the fault of the Foreign Office, or the fault of our agents abroad in not communicating the information sooner?—I am unable to answer that question; I have no means whatever of forming any opinion on that point; I know nothing beyond the fact that the information does reach us not unfrequently later than is requisite, with a view to giving to the public prompt information upon commercial changes.

2801. Have you any reason to believe that this information, having been received at the Foreign Office, is withheld from the Board of Trade?—I have no reason to believe that; on the contrary, my opinion is that all information received at the Foreign Office is at once communicated to the Board of Trade.

2802. You said, in answer to the Honourable Chairman: "We consider that we ought always to make public any law or regulation of a public kind, and any public act of a foreign Government, which effects a change in the commercial laws of a foreign country affecting British trade;" has not the Foreign Office directed our agents abroad to send at once for communication to the Board of Trade all such laws and regulations as are here alluded to?—Most certainly; I know that to have been done on more than one occasion by distinct instructions.

2803. You appear to object to the system of publishing those laws and regulations in the "London Gazette," do you not?——I do not think that I objected to their being published in the "London Gazette;" my objection was rather to the "London Gazette" as a newspaper which only appeared twice a week, and which is therefore not a convenient publication to give information of that kind to the public. If the "Gazette" appeared every day, and was published at rather a cheaper price, the delays to which I have referred would not occur to the same degree; and in case of prompt communication from the Foreign Office, the publication of those notices in the "Gazette" by the Board of Trade need not lead to more than one day's delay in consequence of their passing through the Foreign Office.

2804. I think that your answers rather led to the inference that you contrasted, rather unfavourably, the "Gazette" with the French publication called the "Annales du Commerce"?—I did not intend in any way to compare those two publications, in the sense in which my remarks seem to have been understood. The "Annales du Commerce" does not profess to give information in the same way as the "Gazette." The "Gazette" is simply a newspaper, published by the authority of the Government, containing information upon specific laws or acts of the Government, but the "Annales du Commerce" is a publication of a totally different kind; it is a compilation not published with the authority of the Ministry of Commerce, but prepared by officials of that department for publication, I think, mainly containing the results of

L. Mallet, Esq.

24 June 1864.

the important international questions which have arisen in a certain period preceding the publication of that number of the "Annales," for the information of the public; but it is not published with a view to immediate action on the part of the commercial public at all; it is rather a historical record.

2805. Is it not published under the authority of the Minister of Commerce?—It is prepared by the officials of the Ministry of Commerce, under the sanction but not with the authority of the Minister, and I believe it pays its own expenses.

2806. If such a publication were printed and published in England, it would not be by the Foreign Office but by the Board of Trade, in order to make the comparison complete?—Yes, no doubt.

2807. Therefore it is no condemnation to the Foreign Office that we do not publish a similar work?—Not in the slightest degree, in my opinion.

2808. You have stated that in the "Moniteur" the French publish the changes affecting their own commerce, and not the commerce of other countries?—I believe not, except in those cases where those changes are the result of a treaty between France and other countries.

2809. In the "Gazette" we publish all treaties affecting our commerce with other nations, do we not?—Yes, all laws of foreign countries affecting British trade.

2810. In that respect the "London Gazette," therefore, is better, and contains more than the "Moniteur"?—Yes, in that respect the "London Gazette" contains more. I am not aware that the French Government has any other channel for making public the laws of other countries.

2811. Could not the Board of Trade publish daily, or twice a week, or oftener if necessary, some paper such as you have described, giving commercial information?—I can see no reason why it should not be done.

2812. That would be a matter for the consideration of the Board of Trade and not of the Foreign Office, would it not?—Yes, no doubt.

2813. Can you give any particular instances of information which has not reached you from the Foreign Office in time?—I can give several cases in which decrees appearing in the "Moniteur" did not reach us in time for publication. But I have not thought it necessary to make up any great number of cases, because I thought that the Committee would be satisfied with the general results of my experience. I have, however, here a list of several cases in which the decrees published in the "Moniteur" affecting English trade were not communicated to the Board of Trade in time, as I stated the other day, and repeat now. I may mention (as being, I think, a sufficient fact in confirmation of what I have stated) the habit of the Statistical Department, which is charged with the preparation of the Returns to Parliament, showing all the changes in matters of commerce during the year. The system of that department is to consult not the documents received from the Foreign Office, finding that they are not sufficiently complete for the purpose, but the "Annales du Commerce," and other documents which they obtain from private sources, and which the Board of Trade takes in; in short, any information upon which they can lay their hands, that is to say, any information which they consider sufficiently reliable. They disregard the correspondence which comes from the Foreign Office. That is, as I have been informed, the practice of the gentlemen in the Statistical Department. That in itself I consider to be most conclusive proof of what I said as to the irregularity with which these notices are communicated to the Board of Trade. The following are some of the more recent decrees which have appeared in the French "Moniteur" with regard to important commercial changes, and which have been gazetted by the Board of Trade from that journal before receiving them from the Foreign Office:—In the "Moniteur" of the 8th July 1862, decree effecting reduction of duties on sugars imported into France. "Moniteur," 3d July 1862; decree opening Custom House of Chambèry for importation of cotton and woollen yarns. "Moniteur," 6th November 1862; decree authorising free importation of bleached tissues for dyeing. "Moniteur," 29th November 1862; decree opening Custom House at Dieppe for the importation of British tissues taxed *ad valorem*. "Moniteur," 6th December 1862; decree opening Custom House of Treguier for importation of certain merchandise. "Moniteur," 30th December 1862; decree notifying drawbacks on salt; decree modifying import duties on salt; decree exempting certain articles from duty. "Moniteur," 6th January 1863; decree fixing duty on natron imported into France. "Moniteur," 1st February 1863; decree opening Custom House at Honfleur. "Moniteur," 23d April 1863; the same, and decree opening Custom House at Granville. Moniteur, 19th July 1863; decree modifying rates of import duties on numerous articles. "Moniteur," 19th July 1863; decree establishing import duties on petroleum. Again, the "Moniteur" of the 22d instant (June 1864) contains a decree modifying the duties on raw beetroot sugar imported into France; no copy of this decree has yet (25th June) been received from the Foreign Office. The list that I have given is intended rather as an illustration than an exact list of all the cases (which are numerous) in which the Board of Trade has published notifications of decrees, &c. which have appeared in the "Moniteur," and of which the Foreign Office has forwarded copies at a later period.

2814. Did you ever call the attention of the Foreign Office to the omission of those decrees?—We have done so from time to time, but it is a kind of duty which we hardly like to offer to undertake; it would lead to a great deal of correspondence, and it is not exactly the business of the Board of Trade to be pointing out any omissions of that sort which arise on the part of the officers of the Foreign Office. Although we have occasionally done it, as a rule we have not done it; but it would be very difficult and very tedious to write upon every occasion when we find in the "Moniteur" a decree before we have received it at the Board of Trade from the Foreign Office.

2815. I presume, then, that this omission is on the part of our agents abroad?—I presume so.

2816. Supposing those agents were under your orders, would they, having probably received the same circular which we have sent to them, be likely to make fewer mistakes than they do in their correspondence with the Foreign Office?—That I am quite unable to say; I think the sort of change which might be brought about would be that the members of the foreign missions would

would be brought to take a more active and direct interest in commercial questions, and consequently be less likely to omit the transmission of important information than we find to be the case now; that is rather the tendency of the reform which I should think might be brought about, by bringing those agents into more direct communication, official, and personal, with the department which ultimately deals with these questions.

2817. Upon what ground do you say that our agents abroad do not take an interest in commercial questions?—I am not aware that I have made any statement of the kind. I often find that the information does not reach us with regularity and completeness, and I can attribute it to no other cause than to the want of interest in those questions, which, if it existed, could hardly fail to lead to a careful and rapid transmission of all information affecting trade. It is purely an inference from what I see before me. I have no right to make such a statement, nor do I wish to make it.

2818. I think you have said that, as far as your personal experience has gone, you have found the members of our missions abroad very anxious to promote the interests of British commerce?—Yes, exceedingly so; I may refer to the case of Mr. Morier and Mr. West, whose reports, as well as those of Mr. Barron, at Brussels, and Mr. Grey, at Paris, are exceedingly able. Mr. Barron's last report is one which reflects the highest possible honour upon him, and makes me feel that the idea that it is impossible for diplomatic agents to master commercial questions cannot be entertained for a moment. I am convinced that either of those gentlemen whom I have named would be perfectly competent to undertake the conduct of questions affecting trade. Of course, they would have to go through a certain amount of training for the particular purpose; but it illustrates my idea that you cannot draw the broad line which has sometimes been attempted to be drawn between commercial and diplomatic duties.

2819. You would presume that if there were any omission to send home those laws and regulations affecting commerce, it was rather from oversight than from a desire not to take an interest in matters affecting commerce?—I am quite certain that it is not from disinclination. I think it may arise from an absence of that knowledge of commercial questions and interest in them which I think can only be induced by personal intercourse with that branch of Government which really follows these questions with knowledge and interest.

2820. Is there any objection to your taking in the "Moniteur" at the Board of Trade, and seeing for yourselves what decrees there are in the "Moniteur" affecting the interests of British commerce?—We do take it in, and we do look at the decrees, and we do publish them very often without having received them from the Foreign Office; such has been our practice. I can hardly say how far it has been approved of by the Foreign Office. On one occasion, when we asked the question lately, the Foreign Office gave an answer which led us to think that they did not quite approve of the publication of any information by the Board of Trade which was not received from them.

2821. Sir *Minto Farquhar.*] When you speak of not having received those communications from the Foreign Office, do you mean to say that you did not receive them at all, or that you only received them after a considerable delay?—I mean that the communications were received considerably after the time at which they had been made public. I am not aware that we received all of them even after long delay.

2822. Mr. *Layard.*] Have you the letter with you which you have referred to?—I have.

2823. Does not the Foreign Office rather allude, in their letter to you, to information obtained from private sources, which is not always authentic?—I presume that that must have been the intention; there was some little misunderstanding about it.

2824. Do you not think it advisable not to publish information which, not being authentic, might sometimes mislead persons engaged in trade to their disadvantage?—I think it very important that this information should come through one channel, and that that channel should be the authentic one. I may state, with reference to the difficulty which the Board of Trade would feel in publishing notices appearing in foreign newspapers, of an official kind, that did not reach them through the Foreign Office, that it would involve the necessity of the Board of Trade taking in the newspapers of all the principal Governments in the world, which we are very far from doing now, and which we should have great difficulty in doing; and the further necessity of examining them carefully; and that examination would require a great deal of labour more than we can give. Therefore, the only way of giving such information in a complete manner is through the Foreign Office; we hardly feel justified in adopting a practice which we cannot completely carry into effect.

2825. If we could get our representatives abroad to be still more careful than they are now, in sending everything, and if they did send everything, that would remedy the evil which you complain of, would it not?—Yes.

2826. You do not, I presume, mean that all our representatives abroad should be educated for commerce exclusively?—Certainly not; but I think a general knowledge of commercial questions, that is to say, a knowledge of the bearing of legislation upon trade is a most essential part of the education of every person who is called upon to take a part in public affairs. I certainly observed, with great surprise, in the regulations of the Foreign Office with regard to the examination of attachés which Mr. Hammond put in evidence, that political economy is not one of the questions upon which attachés are examined. That I consider a serious omission, and one which I greatly regret. I could not myself discover any reference to political economy in the regulations.

2827. As a matter of fact, I think you stated (virtually confirming what Sir Emerson Tennent has stated) that the Board of Trade was not consulted with regard to the Reciprocity Treaty?—That was the case.

2828. You further stated that this was the case, of all others, in which the Board of Trade ought to have been consulted?—I think pre-eminently so. It was an infringement of a most important principle of our free-trade policy, and one which has led to a great deal of embarrassment with reference particularly to the colonial policy to which I have referred.

2829. Will you look at that book (*handing a book*

L. Mallet, Esq.
24 June 1864.

a book to the Witness); and will you read out the title of it?—"Correspondence with the Board of Trade respecting proposed commercial treaty with the United States, 1852."

2830. Will you open the book where the first mark is in it, and tell me whom you find the letter signed by?—It is signed by Sir Emerson Tennent.

2831. *Chairman.*] What is the date of it?—It is dated the 20th of April 1853.

2832. Mr. *Layard.*] Is not that a letter from the Board of Trade?—It appears to be a letter from the Board of Trade.

2833. That contains, does not it, the whole plan of the Board of Trade for negotiating the treaty of commerce with the United States; the Reciprocity Treaty?—I cannot say without reading the letter; it is a very long letter.

2834. Could you tell the Committee how it is that Sir Emerson Tennant and yourself have stated that there was no communication with the Board of Trade upon that treaty, when the whole of that treaty was carried on upon the instructions of the Board of Trade sent to the Foreign Office, and placed in the hands of Lord Elgin?—I am totally unable to explain the evidence which has been given without reading this letter, but I was wholly unaware of the existence of such a correspondence as you represent this to be.

2835. Will you look at the first Despatch in that book, and read it to the Committee; it is a draft of a Foreign Office letter to the Board of Trade?—The date is the 13th October 1852: "I am directed by the Earl of Malmesbury to transmit to you herewith, to be laid before the Board of Trade, a copy of a Despatch from Her Majesty's Minister at Washington, relative to a new commercial connection which it is proposed to negotiate with the United States of America; and I am to request that you will move the Board to favour his Lordship with a statement of the points which it may be desirable for Mr. Crampton to submit to the consideration of the President of the United States. I am to add that a copy of Mr. Crampton's Despatch has been laid before the Secretary of State for the Colonial Department, with reference to the colonial interests involved in this question." I was certainly most distinctly under the impression that the Board of Trade was not consulted at the time of that treaty, and there was certainly some stage in the matter which was not communicated to us. I was quite unaware that these letters had been written; the contents of them I cannot refer to because I have not read them, nor can I state at the present moment that I ever saw those letters; but if this long letter enters into the question of the principle of the reciprocal free admission of the produce of the United States and the North American provinces, of course all I have said upon this point falls to the ground. I can only in that case apologise to the Committee for having misled them, but I can hardly believe that such is the case without having read the correspondence.

2836. Mr. *Seymour Fitzgerald.*] The date of that letter is April 1853; what was the date of the treaty?—1854.

2837. Mr. *Layard.*] Are you not aware that between June 1852 and April 1854 no less than 26 letters passed between the Foreign Office and the Board of Trade, 27 between the Foreign Office and the Admiralty, and 94 between the Foreign Office and the Colonial Office?—I know nothing, of course, with respect to any correspondence except that between the Board of Trade and the Foreign Office; I was not aware that 26 letters passed between the Board of Trade and the Foreign Office, nor do I know to what they related.

2838. You are not, therefore, aware that Lord Elgin negotiated the treaty entirely upon the basis furnished to the Foreign Office by the Board of Trade?—I was not aware of that fact, certainly.

2839. You admit that those letters which I have shown you are letters from the Board of Trade and signed by Sir Emerson Tennent?—They are so, clearly.

2840. I wish to refer you to some statements of Mr. Behrens, with respect to your mission to Turin; Mr. Behrens was asked, "Have you not reason to believe that this information is correct" (that refers to some information about the Italian Treaty) "from information which you have obtained from a gentleman connected with your firm, Mr. Nordlingen, who was at Turin at the time, and had interviews with our Minister, and also the Italian Minister of Commerce?" and his answer was, "I had it, not only from him, but from some other persons who were equally well informed that nothing could be done at the time that Mr. Mallet came out much too late, and that his instructions were entirely at variance with the facts as he found them at Turin;" was that so?—No; I certainly cannot state the facts in that way at all; in the first place, I have no means of stating whether I arrived at Turin too late; I arrived there at a time when I found I could do no good; but I cannot say whether, if I had gone there earlier, I might have done good or not. Then, there was nothing in my instructions at variance with the facts; I do not understand that statement.

2841. Can you confirm Mr. Behrens' statement that you arrived too late?—No; I cannot say that I arrived too late, because I know nothing of the state of things prior to my arrival.

2842. There is another statement of Mr. Behrens, to this effect: he was asked, "Are you aware that one of the objects of the communication that was made to us with a view to a treaty, was, that we should reduce our duties on sugar, confectionary, wine, and other articles?" His reply was, "There were two things proposed, one was candied fruit, and the other Marsala wine; but I have it from very good authority, that they were so offended at the treatment which they received here, that they threatentd to put differential duties upon English goods." Are you aware of anything of the kind?—I never heard anything of the kind in my life; I never heard any reference to such cause of offence in the course of my acquaintance with the subject.

2843. What did Mr. Behrens mean when he said that they had received bad treatment here?—I am wholly uninformed as to that.

2844. You never heard of anything of the kind?—No; never.

2845. Are you aware what the Italian Government wished us to do in order that they should make reductions in our favour?—I saw the list of the proposals which the Italian Government submitted to the British Government for alterations in the British tariff.

2846. Did they not wish us to make reductions upon wines, candied fruit, and other articles?—Yes; they did.

2847. Those

2847. Those reductions involved a question for the consideration, not of the Board of Trade, but of the Chancellor of the Exchequer, I presume?—Yes.

2848–9. Thefore, it would have been the natural course that the Board of Trade, before giving an answer, should consult the Chancellor of the Exchequer?—Yes; it is indispensably necessary; the Board of Trade, never deal with a proposal of that sort, without the concurrence of the Chancellor of the Exchequer.

2850. That was entirely a question of revenue, was not it?—No doubt.

2851. Mr. Behrens further states, at page 36, in answer to a question: "Do not you think, that we have a right to request that information" (that is to say with reference to a tariff negotiation) "should be given to us as a friendly nation, by any friendly Government at the time that it was revising its tariff?" "Yes, and I do not think it would ever be denied." You have had great experience of these matters; is that consistent with your experience?—The question is put in too general a way for me to answer it with any degree of precision. In all the experience which I have had in these negotiations, which is limited to a very few cases, I have certainly always found the greatest disposition on the part of the officials with whom I have to deal, to communicate very freely to me all the information they possessed.

2852. Do you mean to say that supposing a negotiation was going on between two foreign countries in regard to alterations in their tariff, they would have allowed you to be acquainted with what was doing?—I cannot answer that question generally; I can say with reference to a particular case, that at Berlin I found on the part of the French representative there a disposition to communicate in the most confidential manner some changes which were not yet decided upon by the two Governments, I could not answer the question in a general form of course.

2853. This question is put to Mr. Behrens: "Does not your cause of complaint against the present action of the Government very much arise from what you consider the want of that request being made in the cases of Belgium, Italy, and Prussia?" and his anwer is: "If it had been made, I believe it would have been granted; and therefore, I suppose, it has never been made." Do you think he is authorised to make that statement?—I have no means of confirming it, or of disproving it. I am quite unacquainted with the state of the case; I have no means of forming an opinion upon the point.

2854. Are you aware whether the English Government did all they possibly could to ascertain what was going on at Paris during the negotiation of the Italian Treaty, and failed?—I am not aware of anything except what passed in the correspondence between the Foreign Office and the Board of Trade. From that correspondence it appears that questions had been put by the British Government to the French Government, and that two memoranda were sent by Mr. Grey, which are published in the correspondence, containing a great deal of information upon the tariff.

2855. I think you applied to us to obtain a copy of that treaty and we could not obtain it for some time?—Yes.

2856. And when we did obtain it we only obtained it confidentially?—Yes.

2857. The Government did make an attempt to obtain a copy of the draft of the tariff which was then being negotiated?—Yes, they did.

2858. Mr. Ripley, another gentleman, who was examined before the Committee, was asked, "Upon what grounds do you so completely condemn the relations between the Foreign Office and the Board of Trade if you do not know what they are?—I condemn the results; I do not condemn the relations. What results?—The absolute want of results, if you like to put it in that way, consequent upon the action of the various Chambers of Commerce who have been bringing pressure to bear upon the Foreign Office for the last three or four years; the perfect barrenness of results, as far as I can see, in any negotiation with any country upon the face of the earth." Is that answer consistent with the facts?—Certainly not; there is the treaty with France which has been concluded, and since then a treaty with Belgium has been concluded; from both those treaties considerable results have ensued.

2859. Is there no other treaty you can name?—The treaty with Italy has been concluded; the results of which, as yet, we hardly know.

2860. Can you mention no other; is there not a treaty with Turkey—Yes, no doubt; those have been made since the conclusion of the French Treaty.

2861. Those negotiations have not then been so barren of all results?—They have not, certainly, been barren of all results.

2862. Can you say what treaties the French have obtained during that period, more than we have?—I cannot speak with certainty, but I do not know of any treaty which France has concluded with European nations except those with Belgium, Italy, and Turkey.

2863. Then, as far as you know, France has not done more than we have during that period?—I am not aware of any more treaties which France has concluded since that time than those which we have concluded.

2864. Did not the English Government take the initiative in the case of the treaty with Turkey?—I believe they did.

2865. You cannot state confidently that if you had gone to Turin earlier you would have obtained more than you did obtain?—Certainly not. I have no means whatever of making such a statement.

2866. Are you personally acquainted with Mr. Ward?—I am not personally acquainted with him.

2867. You are aware that he was sent to Berlin previously to yourself to assist at any negotiations that might be going on there?—I am.

2868. Are you aware that the Prussian Government has given a distinct promise to this country that we are to have the same treaty as she gives to France as soon as the treaty comes into operation?—Yes, I am aware of that.

2869. There is a distinct promise to that effect made?—Yes.

2870. If evidence has been given before the Committee that such a promise is very doubtful, it is contrary to your knowledge?—Yes, it is contrary to my knowledge.

2871. Do you remember when that promise was given?—It was given at the time that I was in Berlin; I think it was given in writing subsequently; it was certainly given when I was in Berlin personally, both to Lord Augustus Loftus and myself, when we visited the different ministers concerned in the negotiation.

L. Mallet, Esq.

24 June 1864.

2872. The British Government has a right to believe that there is a promise on the part of the Prussian Government to give us the same treaty as is given to France, as soon as that treaty comes into operation?—They have a perfect right to believe that the Prussian Government gave that promise at the time; whether the present Prussian Government would consider itself bound by that promise I am not able to say; a promise was given by the Prussian Government at that time.

2873. Have you any reason to believe that the Austrian or Prussian Governments would ever have given us the most favoured nation clause so long as they had the relations which then existed between them?—No; there was a great discussion at Berlin at the time of the negotiation of the treaty which arose upon that question, whether inserting the most favoured nation clause would cover the intermediate tariff arrangement with Austria, and great difficulty was found in framing the article in such a way as not to reach that point, at the same time, the Berlin Government gave Lord Augustus Loftus and myself to understand that it was not the intention of the Zollverein on the expiration of the intermediate tariff to renew it, and that the most favoured nation article would be extended unconditionally to England upon the expiration of that intermediate tariff.

2874. Up to the present time, they never would have given to England the most favoured nation clause, which would have enabled England to demand from Austria on the one hand, and the Zollverein on the other, the same privileges which they had conceded to each other, would they?—On the contrary; it was quite opposed to their policy.

2875. It has been stated to the Committee that if we had applied earlier, we might have got the most favoured nation clause; that is not consistent with your experience?—I think that all we could have got by an earlier application, would have been the most favoured nation clause qualified as it is now qualified.

2876. I think you rather complained that private information was not given by the Foreign Office to the Board of Trade; your words are, "I cannot recollect any case in which information of a private kind which has been communicated by the Foreign Office to the Board of Trade, has been communicated to the permanent officials; there may have been an occasional case of that kind, but as a rule, I should say certainly not. Then the next question is, "Then the permanent officials at the Board of Trade, have not the advantage of being aware of the private information which has been communicated to the Foreign Office on commercial questions? I cannot say what amount of private information there may be, or whether it exists at all; I can only speak to the fact, that it is only on very rare occasions that private information obtained by the Foreign Office from their own agents, is communicated to the permanent officials of the Board of Trade." What do you mean by private information?—I meant information communicated privately by Foreign Ministers or coming from any other source to the Secretary of State, which has not formed part of the official Departmental correspondence.

2877. Do you mean to say then that Lord Russell, if he receives a private letter from Lord Cowley or Lord Bloomfield, ought to show that private letter to the permanent officials of the Board of Trade?—Certainly not, I should be very wrong in making a statement of that kind; I merely stated that the permanent officials of the Board of Trade were not in the habit of receiving such communications.

2878. You do not make any grievance of that?—No.

2879. Might it not be desirable that such private information should not be communicated?—It might be not only desirable, but it might be absolutely necessary.

2880. May not the Foreign Office have some little doubt as to the discretion of the other offices, and on that account, not communicate to them confidential information, even when it is contained in despatches?—I think it must constantly arise; it is one of the things which has led me to believe that inconvenience must arise in consequence of the business being divided between two departments, between which there is not the same interchange of confidential communications which exists between two divisions of one department.

2881. Does not that apply to every other office; the Home Office, and the Admiralty, and the War Office, and all others?—It does, no doubt, in some cases it is unavoidable; in the present case I am not aware that there is any necessity for that division of the work.

2882. You state that the permanent officials in your office are not in communication with the foreign Ministers in this country?—They are not.

2883. Do you think it desirable that they should be placed in communication with the Foreign Ministers in this country?—I do not say that it is desirable that the Board of Trade, as at present constituted, should have that communication. What I stated was, that I think it very essential that whatever department is intrusted with the conduct of this business, and possesses the knowledge and interest in those subjects which enables them to deal with them satisfactorily, should have the means of that sort of intercourse.

2884. You were asked in your former evidence, "Do you not think it would be attended with advantage if you had free means of communication with them?" Your answer is, "I think there might be occasions on which it would be an advantage that we should have freer and more systematic communication with Foreign Ministers in London?—Certainly, if the Board of Trade conducts this business, I think so.

2885. Do you not think that it would lead to great confusion if the Foreign Ministers in London were in direct official communication with various departments of the State?—I am not prepared to state that. I know that Lord Cowley is in the habit of being in constant intercourse with the Minister of Commerce at Paris. I do not see any inconvenience in that.

2886. I am speaking now of the officials, not of the heads of departments. You say that Lord Cowley communicates with M. Rouher; he is a head of a Department. Your answer applied to officials, that is to say, Mr. Booth, Sir Emerson Tennent and yourself, and all the gentlemen in the office?—I do not think I put it in that way. I do not think the officials ought to be recognised. The Minister may refer anybody he likes to the permanent officials, but when I speak of the communication between the Foreign Ministers and the Department, I refer to the President of the Board of Trade, the chief of the Department.

2887. Here

2887. Here is your own answer, "I myself am in the habit of receiving letters from secretaries of Legations, and occasionally from Ministers who come to ask a question on a matter of trade, or who wish for immediate information, but that is a very rare occurrence;" if you go to them at all, it is very rarely; therefore, that applies not to the head of the office but to yourself?—No doubt; I think that kind of private communication is almost unavoidable. I do not see how it can be avoided without inconvenience. A secretary of Legation wants distinct information upon some matter of detail upon which a permanent official only can give it, upon questions incident to, and affecting trade, he comes to the office and the Minister is occupied and cannot see him, or is not there, then unless he can communicate with the permanent officials, great inconvenience and delay must be occasioned.

2888. That he does now, does he not?—Yes; but very rarely.

2889. No objection has been raised to that, has there?—Not the slightest.

2890. That is not a cause of grievance?—There is no objection to it whatever that I know of.

2891. Is not the head of the Department in constant private communication with the Foreign Ministers in this country?—I have no reason to think that he is not.

2892. During the negotiation of the Belgian Treaty, was not Mr. Milner Gibson in almost daily communication with M. Van de Weyer?—I believe he attended a great many conferences at the Foreign Office.

2892*. Was not that as good a system as could be devised, that M. Van de Weyer should meet the Secretary of State for Foreign Affairs, who had all the diplomatic experience and power, and at the same time meet the President of the Board of Trade, who had all the information of the details, and could communicate the information which Lord Russell from his position was unable to give?—I think that the greatest advantage would be derived generally speaking, (I do not speak with regard to that particular negotiation, or its results; I will assume that there was nothing in that case in which any difference would or could have been made) from the fact of the office in which those negotiations were being conducted, possessing within its walls officers capable of giving to the Foreign Minister accurate and detailed information upon all the points brought under discussion. I may refer to the negotiation of the French Treaty, in respect to which I think Mr. Cobden will bear me out, in saying that the assistance given by the members of the commercial department, of the Foreign Office at Paris, was of the greatest possible value to the conference and to the Minister who conducted the negotiations; I think he could hardly have conducted them so well without having had the assistance of those officers.

2893. Is not it better in this country to have the head of the Commercial Department of this country, the President of the Board of Trade, who is able to generalise, and who has an intimate knowledge of the policy of the Government, and the requirements of the country, put in communication with the foreign negotiators in company with the Secretary of State for Foreign Affairs, than to have the foreign negotiators placed merely in communication with an official who has not such knowledge?—I think that in all cases the foreign negociator should be placed in connection with a Minister. The only question is, whether the communication should take place with the Minister specially conversant with the details, or with the Minister who deals with the general diplomatic bearings of the case.

2894. There were no details in the Belgian case, were there; the only question was, whether we should, or should not, have the French treaty, and whether we should, or should not, give the Scheldt dues in return?—Some very important details were involved. The great difficulty in the negotiation arose from the great indisposition of the Belgian Government to extend to England the tariff which had been extended to France, in fact to give us the most favoured nation clause; very important exceptions were proposed by Belgium in that case, and the amount of those exceptions, and the degree to which they were to be admitted, formed a subject of great importance, and one that involved the knowledge of a great deal of detail. That was obviously a question upon which, if the Board of Trade retains its present functions, it would be right that it should be consulted, and upon which it was consulted, the Foreign Office authorities not being prepared to act without its advice. There were details of an important kind involved in that negotiation.

2895. There was no question of tariff revision, was there?—Not of a whole tariff revision.

2896. I presume that Mr. Milner Gibson consulted the officials of his Department, and that it was acting under the information he obtained in the Board of Trade, that he negotiated with M. Van de Weyer?—Yes, no doubt.

2897. Did he not speak with much greater authority as being President of the Board of Trade and a member of the Cabinet, than a gentleman like yourself, for instance, would have spoken?—Certainly. I never contemplated the President of the Board of Trade, so long as he retains his present functions, being left out of a negotiation.

2898. You stated this in your answer the other day. The question was, "Are you of the same opinion as that expressed by Sir James Emerson Tennent, that if our Government had communicated with Spain and Portugal at the time they communicated to France their intention of reducing the duties on wines; for example, it would have been more probable than it is now that we might have obtained a reduction of the Spanish and Portuguese tariffs?" And your answer is, "As a question of personal opinion, I should say so; but I have no knowledge as to the feelings and intentions of the Spanish or Portuguese Government. I should have been inclined, however, to think that they would have been more disposed to make concessions at that time than at a later date." You have no knowledge with regard to Spain whether they were inclined to make reductions or not, have you?—No; I have no knowledge whatever; it is a mere opinion.

2899. You do not know whether the British Government have been for some time in communication with the Spanish Government?—I have no knowledge.

2900. With regard to the wine trade of Portugal, do you know whether the Government have been for a very long time in communication with the Portuguese Government?—I am aware that there has been a very long correspondence.

2901. Have not the Portuguese Government promised,

L. Mallet, Esq.

24 June 1864.

promised, over and over again, to bring a Bill into the Chamber for certain reductions of duties, and have they not broken that promise?—Yes.

2902. That is not the fault of the British Government, is it?—No.

2903. Have not the British Government called upon the Portuguese Ministers over and over again to pass that law?—They have, to my knowledge.

2904. Why did you state that if we had been earlier we might have obtained those concessions?—The opinion which I expressed was only this; that at the moment when it was thought advisable to make reductions in the British Wine Duties at the time of the French Treaty, it appeared to me and to others in the Board of Trade probable that if at that time the question had been asked of the Portuguese Government as to whether they would make any concession to us in return for the privilege accorded to them, they would have been disposed to do something—more disposed to do it than when a concession had been made to them unconditionally.

2905. Was not the question of making similar treaties at the time of the French treaty a question of Imperial policy and not a question for the decision of any office in the State, the Foreign Office or any other?—Yes.

2906. Therefore, our not having gone to other countries, Spain and Portugal, and so on, at that time was not the fault of the Foreign Office but the decision of the Cabinet at the time?—I presume it was the decision of the Cabinet at the time.

2907. It may have been a right or a wrong policy, but it was not for the Foreign Office to decide upon it?—Certainly not.

2908. What, in your opinion, with your great experience and study of these matters, should be done with regard either to the establishment of a commercial department in the Foreign Office, or of a politico-commercial department, if I may so express myself, in the Board of Trade; what plan would you suggest?—I think myself, as I stated the other day, that the important thing to aim at is that there should be one Minister either in or out of the Cabinet, but at all events that there should be a Minister possessing the confidence of the Government, and in such a position as to be entrusted with a knowledge of the political as well as the commercial bearings of all those questions, who should, in point of fact, conduct that branch of public business, and be placed in a position which would enable him to conduct those negotiations completely; that is a position in which I think the Board of Trade is not placed. That is the principle at which I should aim; one way in which it may be attained, is by getting rid entirely of the consultative functions of the Board of Trade, and putting the Foreign Office on the same footing with regard to the Board of Trade, as the India Office is at the present time; the India Office contains within its own walls commercial officers, financial officers, and legal officers, and it possesses within its own walls all the knowledge which it thinks requisite to conduct that great administration. I can imagine that the Foreign Office might be constructed upon an analogous principle; that it might have within its walls such an amount of commercial, political, and legal knowledge as is necessary to enable it to conduct that important branch of public business. That is the most perfect theory; I can see in it many advantages; I cannot in the slightest degree recognise the distinction which has been attempted to be drawn between commercial and political knowledge of business, I think the two things are mixed up inextricably together; I think the knowledge of business as affecting trade is a knowledge which every Minister and every public man must possess to a great extent. I cannot, therefore, recognise that distinction, nor can I altogether admit the possibility of any very clear distinction between the principles and details of a negotiation; I think that they are so inextricably mixed up as to make it very necessary that the conduct of both principles and details should be in the hands of the same Minister and the same Department. That being so, I cannot but feel that, in principle, and, I believe ultimately in practice, the most perfect system will be one in which the Foreign Office should be made self-contained; that it should contain within its walls the officers and the information requisite to enable it to conduct the whole of its executive functions without consultation; it should then only consult other departments as executive departments upon questions connected with their executive functions. That would be the most perfect theory, and the objection to that resolves itself into a question of work. As far as I can comprehend the bearings of Mr. Hammond's evidence, it is the opinion of Mr. Hammond that such a system would throw upon the Foreign Office, or upon the Foreign Minister, an amount of work which it would be impossible for him to undertake in addition to his other duties. It resolves itself, in my mind, not into a question of the kind of work, or the quality of the work, but into a question of the amount of the work. If the amount of the work which would by that means be created, is such as to make it practically impossible for the Department to undertake that work, I think, as an alternative course, it might be possible to give to the Board of Trade such a means of direct communication with our agents abroad as to enable them to carry out the work efficiently, and render the system practically effective.

2909. Do you mean to say that the Board of Trade should abdicate altogether its consultative faculties?—I think that unless the consultative functions of the Board of Trade are revived, and the office has generally a more distinctly consultative character than it now possesses, the continuance of the consultative functions in the very limited extent to which they now exist, is not only useless but disadvantageous. I think it gives rise to expectations on the part of the public which the Board of Trade is unable to fulfil. I think the public at large is not at all acquainted with the very small amount of useful power which the Board of Trade possesses in influencing other departments, and I think that in some respects it misleads and operates mischievously in that way. The original idea of the Board of Trade was that it was a Board composed of men whose opinion and judgment upon all commercial questions submitted to them was of a kind to carry great weight with the public and the Government. I speak of the original constitution of the Department, as a Committee of Privy Council for Trade, whose function was to report to the Queen in Council upon matters referred to it from the Queen in Council. Those reports became State papers, and became the natural ground-work for the Imperial policy of the State upon commercial questions. That was the original idea of the Board of

of Trade as a consultative office. But that constitution is now merely a name, and no longer exists in reality; there is at present no Board, not even the fragmentary Board which used to exist when I first became connected with the Department, namely, a Board composed of the president, the vice-president, and the two secretaries, who used to meet for the transaction of business. Even that vestige of a Board has been removed for many years now, and nothing remains but a Minister, whose principal functions are executive, and who in no sense represents a Board. That being so, it can hardly be expected that the opinions of that Department, as a consultative department, should carry the same weight as they originally did. Practically, reports to the Queen in Council are never made, and the consulting business of the Department is carried on by means of correspondence with the great executive offices of State to which advice is given, that advice being either adopted or set aside, at the option of the Minister who consults the Department.

2910. Do I rightly understand you to say that if the Board of Trade were reformed and made a more competent department, the evils of which you complain might be remedied?—I think that to a certain extent they might be. I think that for practical purposes, and with a view to practical results, it might be very possible so to reorganize the Board of Trade as to enable it to undertake those functions usefully.

2911. Then do you not think that it would be more useful for the public service to make the Board of Trade an efficient department, than to clog the Foreign Office by putting upon it part of the functions of the Board of Trade?—Of course, if the effect of throwing those duties upon the Foreign Office were to clog its work, it would be a great evil. I am not able to form an opinion upon that point.

2912. Have you read Sir Emerson Tennent's evidence?—I heard the greater part of it.

2913. Do you remember that he stated that he thought it was a very great evil that the India Office did not consult the Board of Trade?—I heard him make that statement.

2914. Do you agree with him on that point?—I am scarcely prepared to say. I can quite conceive cases in which the intervention of the Board of Trade might or might not have been useful; but I doubt whether as the Board of Trade is now constituted much advantage can result from its being consulted by the India Office.

2915. If it were properly constituted, I may infer, may I not, that you think there would be an advantage in that consultation?—I think if the Board of Trade possessed its original character as a Board, whose reports became State documents, and possessed an important and grave character, such a department might exercise a great influence upon the departments of State in the conduct of their commercial business.

2916. Supposing such another treaty as the Reciprocity Treaty were being negotiated, and negotiated not only by the Foreign Office, but by the Foreign Office, in conjunction with the Colonial Office, do you not think that it would be a great advantage if the Colonial Office were to consult the Board of Trade, supposing the Board of Trade were reformed as you suggest?—I can conceive cases in which advantage might result from that consultation.

2917. If the Board of Trade were not reformed, but remained as it is, if your proposal were carried out—each of the public offices—the Colonial Office, the India Office, and the Foreign Office, would require to have in itself the machinery which you now have at the Board of Trade; that is to say, a machinery provided for foreign commercial matters, or the commercial matters relating to the department which I have mentioned?—No doubt they would be obliged to make certain additions to their staffs. I do not know that I go too far when I say that they would be obliged to make themselves acquainted with commercial questions.

2918. Do you not think that it would be much more desirable that there should be one Department of the State devoted to commerce, to which all the other departments could go when they wished to ask an opinion, or to obtain information upon a matter relating to trade or commerce?—I do not see why such a state of things should exist with regard to trade more than with regard to law. I believe that all departments have legal advisers within their walls. There is no doubt that the Law Officers of the Crown are referred to in important matters, but that partakes more of the character of a reference for a report, than a reference with a view to the conduct of executive business.

2919. The facts are given to the lawyer, and upon those facts he gives an opinion; that is very different from giving an opinion upon a matter of policy, is not it?—The commercial officers would give an opinion upon the commercial principle or policy involved in any particular question.

2920. If you had a question of law of great importance, in which great interests were involved, should you not then consult the legal advisers of the Crown?—We should for great cases. For the ordinary current business of the department the legal advice contained in the department would be found quite sufficient; it is very rarely the practice of the Board of Trade to consult the Law Advisers of the Crown; we find our own legal advice sufficient, generally speaking.

2921. Does not the Foreign Office consult the Colonial Office, the Home Office, the War Office, and the other public offices, on all questions in which they are concerned?—No doubt there must always be that kind of consultation.

2922. You would not, I presume, propose that in the Foreign Office there should be a department for Colonial questions, for legal questions, for trade questions, and for military questions, which would render the Foreign Office independent of all those other departments?—I do not think it possible for the Foreign Office to conduct its business without consulting the great executive offices of State upon questions in which they are concerned; that seems impossible.

2923. If your plan were carried out, and if there were a Commercial Department in the Foreign Office, the Foreign Office would still have to consult the Board of Trade, would it not?—It would still have to consult the Board of Trade upon questions belonging to the executive functions which still attached to the Board of Trade. For instance, the Board of Trade is charged by Parliament with the administration of the Merchant Shipping Acts; and in the administration of those Acts, the Board necessarily become acquainted with the events affecting shipping in this country and in other countries; they also become conversant with the taxes incident to shipping. They have to deal with the abolition

L. Mallet, Esq.
24 June 1864.

or reduction of all those taxes, and therefore they become peculiarly qualified to advise the other departments of State upon questions relating to shipping. I think that the Foreign Office would still consult the Board of Trade upon those questions, even if the purely consultative character of the Board of Trade were taken away.

2924. Putting aside those cases, do you think that the Secretary of State for Foreign Affairs would venture to make alterations in our tariff, or to suggest alterations in a foreign tariff, merely upon the advice given by the head of the Commercial Department in his own office?—I think that with regard to changes in our tariff, he would be obliged to consult the Treasury, as he is now, and you would save the intermediate stage. With regard to changes in foreign tariffs, I do not see why the Foreign Secretary should not be quite as capable of dealing with those questions, with proper advice, as the President of the Board of Trade. The President of the Board of Trade is not selected with any particular reference to trade. During my connection with the Board of Trade, the Presidents have not been commercial men; they have always been men taken from Parliament for political considerations, and it is merely as regards the department over which they preside that they possess any peculiar weight or authority upon commercial questions. It therefore resolves itself into a question of a certain staff, and whether a certain staff of gentlemen is to work in one department or another, which is a very subordinate question.

2925. In one of your answers, you state that the person who is at the head of this department, whether Under Secretary or otherwise, "should be able to direct, guide, and follow the whole of the commercial questions which arise in the course of our foreign trade, and should direct that policy under the guidance of the Government"; the person who had those functions would not be responsible to Parliament, or the country would he?—Not directly responsible; if he was as I imagine, it is most desirable he should be a Parliamentary Under Secretary in the Foreign Office; he would of course be responsible to the Foreign Secretary.

2926. You are aware, are you not, that the Under Secretary has no responsibility; he is merely the organ of the Secretary of State?—Yes, his responsibility is merely to the Secretary of State, I presume.

2927. His responsibility is limited to carrying out the views of the Secretary of State?—Yes.

2928. He is not responsible for the views which the Secretary of State may adopt, is he?—Certainly not.

2929. You would not place this commercial Under Secretary in a different position from the the present Parliamentary Under Secretary, would you?—Certainly not; he would be responsible to the Secretary of State.

2930. You have stated that the introduction of a Commercial Department into the Foreign Office, would be merely a question of work; would it not be a question of responsibility also?—It would no doubt be a question of responsibility, but it is a responsibility which I think might be as well undertaken by the Secretary of State for Foreign Affairs as by the President of the Board of Trade.

2931. Do you think that the Foreign Secretary, in addition to his arduous duties, could take upon himself to be responsible for questions of trade?—It becomes a question of work as I have stated. If he had time to devote to it, I see nothing in the character of the work to make it impossible that he should be responsible for it; it is a question of the amount of work which the Secretary of State is able to discharge.

2932. Is not it better that the person at the head of the regular commercial department who has the means of obtaining information upon all points of foreign and domestic trade, and everything bearing upon that trade, should be the responsible person, and the person to give opinions upon questions relating to trade?—I think that if the President of the Board of Trade was such a Minister, there would be advantages to be derived from it. But I contend that as the Board of Trade is now constituted, he does not stand in that position; he is only a Minister charged with the administration of certain Acts of Parliament affecting railways, shipping, and other subjects, and certain consultative functions of a very ill-defined kind towards other departments.

2933. Still, as I understand what you now state, your objection is rather to the constitution of the Board of Trade, than anything else; you seem to raise the inference that if the Board of Trade were placed upon a proper footing, those evils would be removed?—I think they would be removed to a great extent. I think that the Board of Trade, under other circumstances, might exercise those functions to a great advantage.

2934. You rather complain that there is not sufficient personal intercourse between the officials in your department and the Foreign Office, do you not?—I do not know that I made a complaint of that kind. I merely stated the fact that there is a very limited amount of intercourse between them.

2935. You stated that, as if it were a regrettable fact, did you not?—I think that it is to be regretted. I think that the more free personal intercourse there is, between the officials who have to deal with the daily business, the more likely it is that the business will be well discharged.

2936. Except upon matters of importance on which it is desirable that the correspondence between the departments should be carried on in writing, there would be no desire on the part of the Foreign Office not to have personal communications with the gentlemen in your office?—I am not aware that there is any such desire. On the contrary, I may say that I have always met with great courtesy in my communications with the Foreign Office; but as a fact, I believe there is very little personal intercourse indeed.

2937. As a rule, do you not think it advisable that the communications between the officials of the two departments should be carried on in writing?—As a rule, it ought to be carried on in writing, but I think it is impossible that the business could be efficiently conducted unless there was also a good deal of personal intercourse.

2938. Would not it lead to confusion unless there were records of what took place between the offices?—There are cases which arise in every branch of business in which it is advisable to have on record everything that passes. But in the daily transaction of business there are a thousand cases in which I think no inconvenience results from

from a free and unreserved personal communication between the officials.

2939. In those thousand cases which you have just alluded to, could there not be now this personal intercommunication?—I think there might be a good deal more than there is.

2940. I suppose you would not object to seeing me if I came over to the Board of Trade, and I should not object to seeing you if you came to the Foreign Office?—No; but under the present organisation of the Foreign Office (which I do not pretend to criticise; it may be the best), everything goes through the Under Secretaries, as far as I understand, and it is of very little use to communicate to the head of a department with a view to arriving at any distinct conclusion. It is necessary in almost all cases that such communication should take place with one of the Under-Secretaries who, as Mr. Hammond has said, are necessarily occupied with a great variety of other questions, and with them it is not always possible to communicate upon questions which arise in business of the Board of Trade with that degree of regularity and frequency which may be often desirable.

2941. There is no other objection than that the officials have too much to do to have much personal intercourse, is there?—That, I think, is the principal difficulty, so far as I am informed.

2942. With regard to this information which we have heard was given either to Mr. Cobden or yourself, that if we had sent an agent, the French Government would have associated their representative with him in the negotiation of the treaties with Belgium, Prussia, and Italy; you do not state that of your own knowledge, do you?—I merely know that it was stated to me in Paris at that time, I think, by Mr. Cobden; I cannot now recall whether M. Rouher himself ever made the remark to me, but I was cognizant of the fact that that intimation had been given.

2943. I presume that if that intimation had been given, it ought to have been officially communicated at once to the English Government?—I have no reason to doubt that such was the case; I have no knowledge of the fact. It was a kind of communication which could only be good for anything if made officially, and therefore I thought if the French meant it, they would have made the proposal officially.

2944. Do you suppose that if so advantageous a proposal had been made to the English Government, they would not have accepted it?—I know nothing whatever as to what passed; I was wholly uninformed.

2945. You have no reason to believe that the Foreign Office would, at any time offer any obstructions to commercial treaties with other countries, have you?—I have no reason to believe that they would offer obstructions intentionally; and all that my remarks have tended to show is, that a department which does not profess to possess great knowledge of or interest in these questions may possibly not pay that close attention to them that it would do if it possessed within its walls a greater amount of knowledge and interest; that was the drift of my remarks.

2946. In all your communications with the Foreign Office, and with the agents of the Foreign Office abroad, you have always found the greatest possible willingness to do what was possible for the forwarding of the commercial interests of the country, have you not?—I have found the greatest possible willingness on all occasions.

2947. Do you happen to know what was the reason why that Zanzibar Report, to which you referred, was not published previously?—I do not know; I never heard the thing fully explained. I merely know the fact that it was discovered in the Foreign Office after inquiry had been made by the Board of Trade; it had apparently been set aside, but upon what grounds, or from what cause, I do not know.

2948. You are aware that the reports of consuls are generally published within a year after they are received?—I know that is the general practice.

2949. Do you know why the former system was changed, and why the Foreign Office printed them, instead of sending them to the Board of Trade; was it to save time?—I cannot at this moment remember the reason that was given.

2950. Are you not aware that Mr. Hammond considered that the Board of Trade was very remiss in publishing them, and that he thought he would save time by publishing them at the Foreign Office?—I am not aware that that was his opinion.

2951. With regard to the case which was mentioned by the Honourable Member for Rochdale the other day, and which another Honourable Member called a trivial point, it would have appeared at first sight to be a trivial point, would it not?—It would appear a trivial point to a person not conversant with the subject.

2952. Does not that show the importance of the Foreign Office always consulting the Board Trade, in a question affecting a tariff?—I think it does; I think that, as at present constituted, the Foreign Office must consult the Board of Trade upon those questions. That is the inconvenience which I feel, that the question involves a correspondence between two departments, whereas it might be dealt with by one.

2953. Supposing that we have a complaint about some colonial matter, as we frequently have; for instance, we frequently have a complaint with regard to some question with the Dutch; we have also to consult the Colonial Office upon such a matter, have we not, before deciding?—No doubt it must be so.

2954. Do you not see from Mr. Hammond's evidence that our correspondence with the Colonial Office is much greater than with the Board of Trade?—I perceived that it was stated to be so.

2955. We are constantly in communication with the Colonial Office are we not?—Yes.

2956. Surely the arguments which apply to our communications with the Board of Trade would apply equally to those with the Colonial Office, would they not?—The Colonial Office is an executive department, and as such the Foreign Office must consult it upon all questions concerning its executive duties; the position of the Board of Trade is very different.

2957. I presume you would not advocate a system of making the permanent officials, that is to say the heads of departments, as powerful here as they are in France?—I am not aware of the details of the operation of the French system, and I do not know how far it is attended with inconvenience.

2958. Do you think it advisable that there should be at the head of each public department a permanent official, who really governs and controls that department?—My own experience is, that it is exceedingly undesirable to give undue power or control to permanent officials.

L. Mallet, Esq.
24 June 1864.

2959. If there were this gentleman whom you have mentioned at the Foreign Office, to guide and direct the Government upon matters of commerce, he would become really a permanent Foreign Minister, would he not?—It is with reference to that that I have always contemplated that he should be a Parliamentary and not a permanent Under-Secretary.

2960. Then you think that this person who is to guide the Minister of State upon matters of commerce should be a Parliamentary Under-Secretary?—I think so.

2961. Being a Parliamentary Under-Secretary, he would change with each Government, would he not?—No doubt.

2962. How could that gentleman, coming in for the first time, be able, within a few days of his entrance upon the duties, to guide and direct the Secretary of State upon matters of commerce?—He would be quite as well able to do it as the President of the Board of Trade is now, under similar circumstances.

2963. Would he not become a mere tool of the chief of the department?—Not more so than if he became President of the Board of Trade.

2964. The President of the Board of Trade is responsible to the country, is not he?—I do not think that the President of the Board of Trade could be held to be responsible to the country as the matter now stands; and I do not think that the responsibility is accepted by tht President of the Board of Trade; certainly it has not been accepted by all the Presidents of the Board of Trade.

2965. Have we a consul at Paris at the present moment?—I do not know. When I was in Paris last year there was a consul in Paris. I have never heard that the office has been abolished.

2966. Mr. *Somerset Beaumont.*] With regard to your calling the attention of the Foreign Office to the tardiness with which they send you any of the consuls' reports, is it very customary for one Government department to criticise its relations with another Government department?—It is a sort of thing which, I should think, would be resorted to with extreme reluctance; it is scarcely ever done. I should think there would be a very great reluctance to do it on the part of a department placed as the Board of Trade is to the Foreign Office.

2967. Have the Board of Trade ever called the attention of the Foreign Office to the, according to your view, unsatisfactory relations between the two departments?—Not to my knowledge, at any time.

2968. The Board of Trade has not, to your knowledge, made any such representation?—It has not, to my knowledge.

2969. Mr. *Layard.*] Does the French Ministry of Commerce communicate directly with the foreign ministers at Paris, and the French representatives abroad?—I know that the Ministry of Commerce communicates directly with Lord Cowley; I cannot speak as to other ministers. I know that upon one occasion, within my own experience, the French Minister of Commerce did communicate directly with a French minister at a foreign court, but what the general practice is, I am not prepared to state.

2970. With our machinery, bad as it is alleged to be, there is no country in the world whose commerce has so developed itself as the commerce of this country, is there?—The commerce of France, since the conclusion of the treaty, has developed itself, I believe, in as great a ratio.

2971. Still the commerce of England has spread much more than that of any other country, has it not?—It is the largest commerce in the world.

2972. Do not many of those defects which have been spoken to before the Committee arise from the constitution of this country, and from the habits of the people, who prefer doing their own work to allowing a Government department to do it for them?—I do not think that anybody can contemplate with any degree of satisfaction the idea of the Government undertaking to do for the merchants what they could do for themselves. But in an enormous trade like the foreign trade of England, of course, there must frequently be occasions on which the intervention of the Government is necessary in order to prevent injury and injustice being inflicted by Foreign Governments upon British merchants. The larger the trade, the more often is it likely to happen that the intervention of the Government becomes necessary to see that the trade is not obstructed by the regulations of Foreign Governments.

2973. Do you think that there is any remissness on the part of the Foreign Office in supporting the interests of British subjects abroad?—There is no intentional remissness, certainly; on the contrary, there is the greatest desire to protect British interest.

2974. Is there any actual remissness?—I am not prepared to state; there are cases in which more might have been done, probably, and there are cases in which it might not have been possible to do more.

Martis, 28° *die Junii*, 1864.

MEMBERS PRESENT:

Mr. Bazley.	Mr. Milner Gibson.
Mr. S. Beaumont.	Mr. Kinnaird.
Mr. Butler-Johnstone.	Mr. Layard.
Mr. Cobden.	Sir Stafford Northcote.
Sir Minto Farquhar.	Mr. Pender.
Mr. W. E. Forster.	Mr. C. Turner.

WILLIAM EDWARD FORSTER, Esq., IN THE CHAIR.

THE RIGHT HON. THE EARL OF CLARENDON, K.G., attending by permission of the House of Lords; Examined.

The Right Hon. The Earl of *Clarendon*, K.G.

28 June 1864.

2975. *Chairman.*] THE Committee are, of course, aware that your Lordship has been the Secretary of State for Foreign Affairs; when did you last hold that office?—I have not been Foreign Secretary more than once. I was Foreign Secretary for a period of five years, from the 21st of February 1853 to the 26th of February 1858.

2976. You were also President of the Board of Trade at one time, were you not?—I was.

2977. When was that?—It was in 1846 and 1847.

2978. I think, also, your Lordship, many years ago, went on one or two commercial missions abroad?—On one only that was of any importance.

2979. You are, no doubt, aware that this Committee has been appointed to inquire into the arrangement between the Foreign Office and the Board of Trade in reference to trade with foreign nations, chiefly on account of the dissatisfaction that is felt, to a considerable extent, among the commercial community with the present working of that arrangement?—Yes, I am aware of it.

2980. Some of the witnesses that have come before the Committee have stated that they think that there is delay, and that there may be inefficiency arising from the necessity of commercial men communicating with the office which conducts the negotiations — namely, the Foreign Office—with reference to foreign trade, through the Board of Trade, and from their having to deal with two offices instead of one. Consequently a suggestion has been made that it would be an advantage that the permanent officials who are versed in the details of trade should be transferred from the Board of Trade to the Foreign Office, so as to remove the necessity of the Foreign Office consulting the Board of Trade. What would be your idea of the establishment of such a commercial department in the Foreign Office?—Both as President of the Board of Trade and as Foreign Secretary, I have often considered that subject, because I have always attached the greatest importance to our commercial relations with other countries; I think that they are intimately bound up with our political relations, and that the more we can connect different nations together by the ties of material interests, the more binding and satisfactory is their political connection likely to be; and I have therefore always given all the attention I was able, during the time I was Foreign Secretary, to our commercial relations with other countries. I have endeavoured, in every way I could, to facilitate and promote those relations, and in doing so I have, of course, considered whether the Board of Trade could be rendered of greater assistance to the Foreign Office, and the Foreign Office of greater assistance to the Board of Trade. I consider that all public departments are only public servants, and that there ought to exist no jealousy or unfriendly rivalry between them; I consider that they are bound by their duty to the public and the interests that are confided to them, to endeavour to make each department, either separately or in connection with other departments, as effective as it possibly can be; and if I could have suggested any mode by which those two offices could have been rendered more useful to each other, I should assuredly have done so while I was in the Foreign Office; but I really have not been able to suggest any such mode. I do not mean to say that during the last five years I have given much attention to the subject, but during the time that I was in the Foreign Office I did give great attention to the subject, and I could not devise any mode that would be more efficient than the existing system, provided, of course, that the system is worked in the most efficient manner of which it is capable. I know that an opinion exists that more direct communication should be established between the Board of Trade and our agents abroad, but I cannot say that I concur in it.

2981. Then your opinion, with regard to a Commercial Department in the Foreign Office, would be decidedly against it?—I do not see my way to its efficient working.

2982. It has been suggested that instead of the Foreign Office having to obtain its knowledge of commercial details by communicating through its own staff, as it does at present, with the staff at the Board of Trade, or else by the Foreign Secretary communicating with that staff through the President of the Board of Trade, there should be such a staff in the Foreign Office itself; and then there is a twofold suggestion, one being that that staff should be under the superintendence of a political Parliamentary Under-Secretary, whose business it would be particularly to attend to the commercial questions which came before the Foreign Office, and the other, that it should be under a permanent Under-Secretary; would your objection apply to both those forms of the suggestion?

The Right Hon. The Earl of *Clarendon*, K.G.

28 June 1864.

gestion?—Yes, it would. It would be merely another method, and I do not think so good and easy a method, of working the system as now exists. Supposing that you were to have a commercial staff in the Foreign Office, no matter whether it were put under a permanent Under-Secretary or a Parliamentary Under Secretary, you still would have to refer from that staff to the President of the Board of Trade, who is generally, and ought always to be, a Cabinet Minister; you would have just the same references to make, and I do not see that either time or labour would be saved by the change.

2983. You do not think that the Foreign Office could be made self-sufficing upon trade questions; you think that it would, notwithstanding having such a staff within its own department, have still to consult the Board of Trade upon the general bearing of any commercial question that came before it?—I think so, because I look upon the Board of Trade as the repository (that is my notion of what it ought to be, and what, as far as I was concerned, I always endeavoured to make it) of all commercial information. It therefore constitutes a consultative body for all other departments of the Government; and when I was at the Foreign Office, I should have been sorry to have undertaken any large commercial negotiation, or indeed, any preliminary negotiation or communication of importance bearing upon trade, without a consultation with the Board of Trade; I should have felt it necessary to do so for my own information and guidance; therefore, although there might be a staff, however efficient, and however well composed in the Foreign Office, I should say that the Foreign Secretary always must go to the repertorium or repository of information, which should be the Board of Trade; and I never, if I were Foreign Secretary, should be satisfied with any amount of information that I obtained from the staff in the Foreign Office without communication with the President of the Board of Trade, whether as a colleague and a Cabinet Minister, or as head of that important department.

2984. One, I can hardly say complaint, but doubt, which has been expressed with regard to the good working of the present arrangement, arises from this: it appears to be the custom that the information which is given by the permanent officials in the Board of Trade is conveyed almost entirely by writing to the Foreign Secretary, by correspondence on the part of one of the Secretaries of the Board of Trade with an Under-Secretary, at the Foreign Office; or if it be conveyed personally, it is conveyed through the President of the Board of Trade. Do you recollect, at the time you were Foreign Secretary, what was the system you pursued, in order to obtain information with regard to the details of any commercial matter?—Any matter that I considered of importance, and which was consequently referred to the Board of Trade, was always referred in writing, and the answers were always given in writing. I should be sorry to see that communication placed upon any other footing, because *litera scripta manet*; and where departments are responsible for advice given upon matters most important to the community, it would never do to have that advice resting upon mere verbal communications, which might be either accidentally or intentionally contradicted afterwards. Therefore, if I was sitting in the next room to the President of the Board of Trade in the same office, I should have to be guided by his advice upon a matter for which he and I were both at the same time responsible, and should put my question in writing, and expect to have his answer in writing, in order that it might be recorded in the office, not only with respect to our mutual responsibilities, but also for the guidance of other persons in the office. Allow me to add that, upon all matters upon which I should require speed, and when there was inconvenience in delay, I should not have the least hesitation in going over to the Board of Trade and asking the President of the Board of Trade to communicate with me, in order to agree upon what might be necessary to be done immediately, with the proviso that the question and answer should be in writing. But my notion is, that there should be the most completely harmonious action between those two departments, and that there should be no delay whatever, except what is caused entirely by the necessity of referring. You cannot ask for information and always get it directly. Inquiries will have to be made, and precedents will have to be searched for, and delay will be occasioned, which may sometimes be complained of, and which cannot be exactly explained to persons who are not acquainted with the working of these matters, but which must be perfectly well understood by those who have to seek for information, and are responsible for giving it correctly.

2985. The difficulty which has been felt is this; and those who have expressed it are quite aware of the facts that the department has to consult another department, and that that consultation must be carried on in writing, in order, as you say, that the department which acts from advice should have it recorded upon what advice it does act; but then there is a feeling that the Foreign Secretary would be under this disadvantage, that whereas upon the political bearing of any question, he would have the advantage of close personal contact with those of his officials whose business it is to obtain and gather information for him, and give it to him, he would be under the comparative disadvantage of only having a written communication from, and not being brought in personal contact with, those whose business it is to give him information upon the commercial part of the case. And, therefore, there is a fear that the political bearings of a question would be more considered by him than its commercial bearings, from the very fact that he was more completely informed in the one case than in the other. Do you see anything in that objection?—No, I do not at all; because you must have a reference; and the Secretary of State, who is going to make himself responsible for any negotiation, or any public act, whether commercial or political, will always seek his information at the best source, and desire to cover his responsibility by the best information. Therefore, it does not matter what staff you have in the Foreign Office, you must go to the Board of Trade, as I have said before, as the centre of information. I do not mean to say that if you chose to amalgamate the Board of Trade with the Foreign Office, to do away with the Board of Trade, and to make it altogether one department, you might not then concentrate, or endeavour to concentrate, in the Foreign Secretary all that information which is now, I think more usefully to the public,

public, distributed between the two. But then I have no hesitation in saying that you would call upon the Foreign Secretary to do more than any man is able to do; and if you do that, I need not say that the work will be ill-done.

2986. I suppose, practically, at the time when you were at the Foreign Office, if there was any question upon which you particularly wished to know the details, you would not only obtain a written answer from the Board of Trade, but, if it were desirable, you would have consulted those officials at the Board of Trade who were versed in it?—Without the least hesitation; just as I should have asked any clerk in the Foreign Office to come up to me. I was very often in the habit of asking the opinions of the officials at the Board of Trade upon any matter in which I could not rely upon the information which I possessed myself, or which I had collected from the consular on other reports. In such a case I had no hesitation in communicating, and there was no more time lost in communicating, with the person most able to give information upon that particular subject in the Board of Trade, than there would have been in sending down in the office. I never experienced the least difficulty in the matter.

2987. Then we come to the other suggestion which has been made. Several of the witnesses, who have felt that the system does not work altogether well at present, but who have the same feeling as your Lordship, that it would not answer to transfer the staff from the Board of Trade to the Foreign Office, have suggested that if the Board of Trade is to be the advising body to the Foreign Office, they should be put into the position of being able to get information direct from our foreign ministers and consuls abroad, and also that they should be able to communicate with them direct, by sending them letters through the Foreign Office: what do you think with regard to that suggestion?—If I thought that there was any advantage in that, no jealousy for the Foreign Office or of the Board of Trade would make me hesitate about adopting such a change as that, because I have only the idea that the public departments ought to do the best for the public. This is a matter which I have also considered, and I do not think that there would be any advantage in the change, because I do not see any delay that is created, or rather that need be created, by this communication, by what you may call the passing through the Foreign Office. I think that if you had the two different departments each of them responsible, and each of them corresponding with the same people, you would find, in the long run, that it was productive of a good deal of confusion, because the correspondence must involve more or less of instruction. The two departments would then have less necessity of communicating with each other for the purpose of obtaining and giving information, and they would communicate less with each other; therefore, it is impossible to suppose that either their queries or their instructions would be framed in exactly the same manner; I think you would find that confusion would be the result of it. With regard to the working of the present system (I am not talking of the system as it is actually put into operation, although I have no doubt that it is working properly; I am talking of the system as it exists, as it may, or ought to be, worked properly), one cannot conceive that there is any delay, or that there need be any delay, worth speaking of in the working of the present system. We will say that the Board of Trade wishes to have information from the consuls in France, or any particular consul; very often it may not be of great importance whether that information comes one or two days sooner; if it was urgent, or if it was anything that required immediate attention, it should be so stated by the Board of Trade. There is not the smallest reason why the Board of Trade, upon finding, at 12 o'clock in the day, when the President of the Board of Trade has made up his mind that certain information is wanted, should not send before one o'clock to the Foreign Office; nor why, if it is required, the letter should not be despatched that night by the post to the consul or consuls, in exactly the same manner as if it went from the Board of Trade. I think you would find that the consuls, not having that divided duty and that divided responsibility, are more likely to perform their duty well than if they had to correspond with the Board of Trade separately; and I think that very often you would find that that separate correspondence would be productive of great delay, because in any of the great ports abroad, which probably would be those from which the Board of Trade would most desire to get information, the consuls are much overworked. They have very little assistance, except what they pay for themselves; and if they had that great addition thrown upon them, I think you would often find (upon that I speak hypothetically) that it would rather occasion delay than otherwise.

2988. May I ask your Lordship whether the arrangements by which the Board of Trade corresponds direct with the consuls upon matters connected with mercantile marine was made before your holding office?—It was made, I think, before my time; I do not exactly remember when it was made.

2989. That is a case in which a precedent has been established for direct communication between the Board of Trade and the Consuls by Act of Parliament; have you had any experience as to the effect of that change?—I have not had experience of it.

2990. The evidence which we have before us, making the suggestion I have referred to, went not only to the supposed advantage arising from the communications, either asking for information or conveying a requisition upon commercial matters, going quicker by the Board of Trade being able to communicate directly with the ministers abroad, but also referred to an advantage which the Board of Trade would have when requested to advise the Foreign Office upon a commercial question. For instance, in the late Treaty with Italy, it appears from the correspondence that has been laid before us, that the officials at the Board of Trade were not in full possession of the exact state of the negotiations, and that they might have been, very probably, in more complete possession of them if they had been able to communicate direct with the diplomatic body abroad; do you think that there would be any advantage in that communication in such cases?—No, I do not think that there would be. You may depend upon it that separate departments communicating with the ministers abroad would only be productive of confusion. If the Board of Trade was not fully informed upon that matter, it must have been some accidental circumstance.

2991. A suggestion

The Right Hon. The Earl of *Clarendon*, K.G.

28 June 1864.

2991. A suggestion which has been made to obviate the difficulty of there being any collision between the two departments both instructing the foreign ministers, is that all the letters that were sent from the Board of Trade to our diplomatic body abroad, whether ministers or consuls, should go under flying seal to the Foreign Office, with the understanding that if the Foreign Secretary thought it unadvisable that such letters should go forward, he should not send them without communication with the Board of Trade, so that the risk of collision would be prevented; would it alter your view if the communication were worked in that manner?—I think that that would be a roundabout way of doing things; and that you would be exposed to delay. I can assure you that the Foreign Secretary is not always master of his own time; and supposing a letter came under flying seal from the Board of Trade, probably sent out late in the day, you could not be sure that the Foreign Secretary could be caught and made to pay attention to that letter on that day. I think that the same course might be followed as is followed in all the other departments which are either consulted or which originate matters. The Colonial Office, for instance, either sends to the Foreign Office to say that they wish for information, or that such-and-such a case has occurred demanding an inquiry, or a reply to a request for information. I need not say that the usual practice is to embody that letter in a letter from the Foreign Office, whether signed by an Under-Secretary or by the Secretary of Sate, and that letter is forwarded. I think that that is the regular course which is adopted in all the departments, and I do not believe that it has worked ill; I contend that, at any rate, it need not work ill.

2992. Another suggestion has come before the Committee, upon which we should be very glad of the opinion of your Lordship. Many of those who feel that the Board of Trade must remain a consultative department, with regard to trade questions, to the Foreign Office, as well as to the other departments, think that it is not sufficiently able to make its advice felt, and to carry with it the weight which, if it is to be responsible for giving advice, it ought to have, on account of its different position from the other departments, arising from the fact of its being a Board rather than a Secretaryship, that it holds rather a lower position than the other offices; and, therefore, a suggestion has been made that it should be replaced by a Department of Commerce, more like that in France or many of the continental countries: what do you think of that suggestion?—When I was President of the Board of Trade, I felt myself that it was not so important a department of the Government as I should have liked to have seen it, and as I should have been extremely disposed to make it; but having well considered the subject, I did not see how, in reality, it could be altered. From the duties inherent in the office, it is not an executive department, and can never be made an executive department; it is, essentially, a consultative department; it is a department in which information is collected, and from which information ought to radiate. It should always be ready to give advice; but, according to my notions respecting trade, it should never unnecessarily interfere.

2993. I suppose, at the time when you were President, the executive functions were not quite so important or so onerous as they are now; you were President, were you not, before the railway department attained its present importance?—I was. I was confining myself at the moment to commerce. I have had a good deal to do with the railways; that department is very important, but it has a very small connection with foreign trade. I do not see how the Board of Trade can be made of more importance. I do not know exactly how the business of it is now conducted; but certainly, as I say, being the repository of information, it ought, I think, to disseminate that information as widely as possible; and during the time that I was Foreign Secretary there was nothing that I thought could, directly or indirectly, be interesting or useful to the commercial interests of the country, that I did not immediately send to the Board of Trade. I was in the habit of reading every paper that came into the office, I believe, either on the day or the day after it came in, and always myself marked everything that I thought could be useful or interesting to the Board of Trade; and I believe it was always forwarded without the least delay, very often in the original, or if it was too bulky, the important matter might be copied out; but I am sure that there was never any unnecessary delay in the Foreign Office, in sending all this information to the Board of Trade. Then it was for the Board of Trade to judge in what manner that information could be made most useful, whether by publishing it in reports, or by sending it to the different chambers of commerce, or to individuals concerned in particular branches of commerce or manufacture.

2994. You were in the Cabinet, I believe, at the time you were President of the Board of Trade?—Yes.

2995. Do you not think that it may be a disadvantage that the head of so important a department as the Trade Department, especially if it be continued as a consultative body upon all trade questions, should sometimes not be in the Cabinet?—I think that quite wrong.

2996. Do you think that there is any advantage in its being a Board; for instance, in the relation in which the President stands to the Vice-President, as compared with the relation in which the Secretary of State stands to the Parliamentary Under-Secretary?—I think those are matters of form. I think that the President of the Board of Trade and the Vice-President of the Board of Trade are very much like the chairman and deputy-chairman of a Board, one acting for the other; always acting together, as they ought to do, and always consulting together, very often one being responsible in each House of Parliament.

2997. But the relation is different from that between the Secretary of State and the Parliamentary Under-Secretary; the Vice-President is not so subordinate to the President of the Board of Trade, I presume?—No, perhaps not as subordinate, certainly. The President is the Vice-President's superior in official rank, but they are both Privy Councillors.

2998. One other suggestion has been made to the Committee with which I must trouble your Lordship; it is almost a departmental suggestion. We were informed by Mr. Hammond, in his evidence, that there was no special clerk at the Foreign Office whose business it was to superintend the correspondence upon commercial questions with the Board of Trade, and he gave a strong opinion that it would be better not

not to have such a clerk. On the other hand, Sir Emerson Tennent, with whom he corresponded as the Secretary of the Board of Trade, seemed to think that there would be an advantage in such a clerk; have you directed your attention to that at all?—I cannot say that I have directed my attention specially to that point, because I think that is a departmental arrangement; but it ought, of course, to be made if any practical use could be pointed out in it. The custom at the Foreign Office would be this: for instance, I read a certain letter belonging to the German Department or belonging to the French Department, coming from a consul or a minister; I mark that "Board of Trade," then the clerk in the German or the French Department sends it on; it passes first through the hands of the Under-Secretary, and then it is forwarded directly to the Board of Trade. If the Secretary of State wishes to get an opinion from the Board of Trade, say with respect to any German or Russian matter, the clerk of that department would carry out the instructions of the Secretary of State in the form in which he wished them. I do not see that any despatch would be gained by the change, although that is a matter for consideration, in having one clerk devoted entirely to commercial correspondence. But there would be this delay: for instance, a letter comes from a consul in Germany, that letter must go, as a matter of course, to the German Department; then, if there was to be a clerk for commercial matters, the German Department clerk would have to send it to that clerk, in order that he might inform himself upon the matter before it came to the Secretary of State, who would then have to take action upon it. Therefore by having that additional clerk, you would just create an intermediate step between the German Department and the Secretary of State. The letter would have to go round by him, in order that the clerk devoted to commercial business should take the same orders from the same person, and give effect to them in the same way as now.

2999. May I ask whether the departmental arrangement in the Foreign Office, by which all business connected with the slave trade was taken out of the special countries and collected together under one official, was made during your administration, or before it or since?—Long before it.

3000. Did you find any disadvantage in the whole slave trade business being conducted by one department?—The slave trade business was a matter *per se*, and it was confined to two or three countries after all. When you took the correspondence out of Spain and Portugal and Brazil, there was not a great deal to be kept separate. That division of clerks has always, I believe, tended to create confusion in the office; that department has always been a sort of outrigger; the gentlemen employed in it were merely confined to that one subject, and did not acquire the general information which changing from one department to another must have given them, and which it is most useful that they should acquire. After years of labour, and very dull and dry labour too, they could not well dovetail into the rest of the Department. I have always thought that that division was to be regretted. At one time, the slave trade was of immense importance, and of great public interest to this country, and a separate department was created for it. I do not mean to say that the department itself has worked ill, but I do not think that there has been any advantage in the separation of it. If it had been kept according to countries, like all other matters connected with the commercial or political or financial questions with Spain, Portugal, Brazil, and other countries engaged in slave trading, I do not see that the subject would have suffered at all.

3001. I would ask your Lordship whether you have any suggestion that you would like to make with reference to the subject before the Committee?—No; I would merely just say one word more upon this point. I do beg that the Committee will believe, knowing what the tendency of their opinion is about the separation, or perhaps I should more properly say the amalgamation of these offices, that if I had any suggestion to offer which would at all fall in with their views I would give it with the greatest pleasure. I am only looking to what I believe to be for the public service, without any prejudice or favour to one department rather than the other, because I think we are all equally concerned to do our best for the public. I may add one observation with respect to the Foreign Office, namely, that if I thought it would be useful to communicate direct with any chamber of commerce or with any commercial man, either because I thought that speed, or that any other interest, would be promoted by it, I have not hesitated, and I should not hesitate, to make such a direct communication, always keeping the President of the Board of Trade informed of everything that I thought it was useful for him to know. The Honourable Member for Manchester will remember that various communications have been made direct between the Foreign Office and chambers of commerce. I think that he will recollect one very important move that was made by the Foreign Office, in conjunction with the Cotton Association at Liverpool, and I will take that as an instance. The Cotton Association, long before the Civil War broke out in America, with very proper foresight, endeavoured to look round and see from what parts of the world cotton could be supplied, in order that they might become less dependent upon one source of supply alone, and they communicated with the Foreign Office. I think the Honourable Member will recollect that I was not slow in meeting their wishes. I determined that to every part of the world we would send out circulars and endeavour to get information. Now, supposing that the Cotton Association, or the Chamber of Commerce at Manchester engaged in this inquiry, had had to communicate, and did communicate, with the Board of Trade, the Board of Trade must have come to the Foreign Office, and inquired who were the different consuls, and where the circulars were to be sent out to. We did not stop at the consuls, but wherever we thought information could be got, that was likely to further this object, those circulars were sent from the Foreign Office all over the world. I read all the replies as they came in, and forwarded them straight to the Cotton Association. I give this as an example of great rapidity being obtained upon a very important subject, where the inquiry was urgent, and where the answer was obtained more quickly through the Foreign Office, than it could have been obtained in any other way. I consulted, I believe, the Cotton Association also, as to whether we might not stimulate the growth of

The Right Hon. The Earl of *Clarendon*, K.G.

28 June 1864.

cotton through them; the Foreign Office procured seed; through them we got cotton gins, which I sent to Lagos, and to other places on the African Coast, endeavouring to excite a competition, and to create an interest in it amongst the native chiefs. Therefore, I must say that wherever the Foreign Office, as far as I am acquainted with it, saw even an opening to be useful to commerce, or to promote commercial interests, I can answer for it, as far as I was concerned, that there never has been any hesitation in seizing the opportunity.

3002. Mr. *Cobden.*] You had been at the Board of Trade before you were at the Foreign Office, I believe?—Yes; in 1847.

3003. And earlier in your public life you had fulfilled, at least, one mission of a commercial character abroad?—Yes.

3004. Your Lordship has given considerable attention to questions of commerce, and political economy, as we all know?—Yes; I was for six or seven years a Commissioner of Customs.

3005. It was during your tenure of office at the Foreign Office that the secretaries of our foreign embassies were required to send home periodical reports upon the commerce of foreign countries, was it not?—Yes; that originated with me.

3006. You must have had many advantages, as Secretary of State for Foreign Affairs, in a commercial sense, over most persons who have filled that important office?—It is not for me to say that I had any advantages over anybody else; commerce was a subject that interested me all my life.

3007. It is no disparagement to the important office of Foreign Secretary to say that, generally speaking, persons who fill that post have not the same advantages that you had in understanding commercial questions at the Foreign Office, or, probably, the same interest and zeal in reference to these matters; and, I may say, without any disparagement or offence to the Foreign Office, that the impression amongst commercial men is, that there is a great want of knowledge at the Foreign Office upon commercial questions. You are aware that the reason why this Committee is assembled is, that there is that impression; would you not think that of itself a very good reason, if there were no insuperable obstacle, that there should be either a department at the Foreign Office, where commercial questions should be specially understood, or that authority should be given to the Board of Trade to deal directly upon commercial questions on behalf of our commercial interests?—I do not see how having a commercial staff in the Foreign Office would diminish or remove the ignorance you suppose to exist in the Foreign Secretary. He might send down-stairs to those gentlemen who are learned in commercial matters for information; but I do not suppose he would put himself to school, and endeavour to get general information upon commercial matters; he would not have the time, and, possibly, not the inclination to do so; but he would always ask for information upon particular subjects, in order to see deputations, to conduct negotiations, and for other matters upon which commercial information was necessary to him; he would send down-stairs to the Commercial Department of the Foreign Office for the information he required, but he would gain no time, and, very possibly, obtain less correct information by sending down-stairs in his own office than by sending over the way to the Board of Trade. And you would find probably, that the Commercial Department in the Foreign Office, upon all matters of real consequence, would not venture to act for themselves, but would go over to the Board of Trade, and inquire what was the answer that should be given to the inquiry of the Foreign Secretary.

3008. You are aware that in the French Foreign Office, there is a Commercial Department?—Yes, there is a Commercial Department, but there is also a Ministry of Commerce. You must be aware that the French Foreign Office interferes in matters of commerce a great deal more than our own does.

3009. Apart from great questions of a diplomatic character, I mean with reference to the negotiation of Treaties of Commerce abroad, there are a multitude of cases in which merchants and manufacturers have occasion to apply to the Government for aid in the removal of difficulties abroad, in the way of their business; if you could not have a department in the Foreign Office that would enable those matters of detail to be arranged without reference to the Board of Trade, would there be any insuperable objection to the Board of Trade dealing directly with our ministers or agents abroad, whether consular or diplomatic, upon those matters of detail?—I do not see any insuperable objection in anything; I do not admit that there is any insuperable objection to any improvement that could be shown to be an improvement; and if it could be proved that this would afford despatch, or promote greater regularity in the performance of business, or give greater satisfaction to the commercial community, and more especially the commercial complainants in such cases, there is no difficulty in anything. But what I should look to first, is to show that it would be an improvement; I do not think that it would be an improvement, because a divided responsibility and a divided allegiance never works well in the long run, and I should say with respect to the foreign ministers as I did with respect to the consuls before, that it is more easy for them to work well with their own department, than if they get instructions from another. It would be impossible for the Board of Trade and the Foreign Office, with the best intentions towards each other, always to preserve that harmonious action that I think would be best for the public interest. I do not see where the delay should arise. I am not saying that it does not arise, but I do not see where it need arise. I can see no necessary delay in that sort of intercommunication between the two officers, in the one being, in one respect, an organ of the other, just as the other is a repertorium for the information of the former. I do not see why these two should not work quite harmoniously together, or why the Foreign Office should not take immediate action upon anything that the Board of Trade require. If the Board of Trade receives a complaint of some impediment, such as has been alluded to this morning, that a merchant has met with, at a particular port, wrong duty charged or wrong interpretation of the tariff; for that it may be necessary first to have a consul's report, in order that you may be quite sure of the ground you have to go upon, for you cannot always take for granted exactly what the complainant, who of course takes his own view, says; therefore you may have to refer to the consul for information upon it. It may be

be a case which is so plain that you would immediately send it to the minister. I see no difficulty in its being sent over by the Board of Trade to the Foreign Office; the Board of Trade has to decide whether it is an urgent case or not; if it is urgent let them put "urgent" upon it; let it be accompanied by a letter to the minister or ambassador abroad, stating that great inconvenience or injury will result from delay in this matter; let this letter go direct to the Minister of Commerce, or the Minister of Foreign Affairs; let it be expedited in every way you can. I should say that orders coming in in that way from the Secretary of State to a minister or a consul, would (I do not mean to say that they ought to meet with more attention, but we all know what the subordination of departments is) be very likely to meet with more attention than if they came from the Board of Trade. I say that without meaning to cast the least blame upon ministers, consuls, or any one else.

3010. You are aware that in arranging the Treaty of Commerce with France, after the principle of the treaty had been determined upon, and during the negotiation of the details of tariff, the whole of the correspondence was carried on between the Commissioners in Paris and the Board of Trade?—Yes.

3011. Would there be any objection in your Lordship's mind, in the Board of Trade still continuing to carry on the correspondence with Paris, in any questions that arose out of the working of the treaty, in reference to the details of the tariff?—I think none. Give me leave to say, with respect to your negotiation of your treaty, that I look upon it altogether as an exceptional case, but most fortunate in every respect. I think that it was quite right that you should be placed in communication with the Board of Trade, not because that department was better than the Foreign Office *per se*, to be put in communication with you, but because they might communicate with all the different interests upon all the infinitesimally small matters with which you had to deal, and which were, of course, matters of very great anxiety and trouble to you. I think the Board of Trade were more direct in their means of communication with all the different interests, the chambers of commerce and others, than the Foreign Office would have been; therefore, in answer to your question, whether the communication so begun should be so continued, I should quite agree in it with respect to that particular case. But then you must remember that that is a case which has scarcely ever happened before, and I do not know that it is very likely to happen again, with respect to the negotiation of a tariff in all its details. You know that we never should have improved our commercial relations with France, unless we had had a treaty; that was the thing that obviated all the protectionist's objections. I need not tell you that that had to be worked out as part of an international negotiation in all its details, and, therefore, I think it was quite right that you should go to the department that had, not exactly possession of all these details, but had much better machinery than the Foreign Office for obtaining all the information you wanted. I look upon that as a case *per se*.

3012. You are aware that an arrangement was specially entered into for corresponding with the Board of Trade, with a view to save time and trouble in the negotiations?—No doubt.

3013. Does not that same argument apply to each individual case that arises out of the treaty, or any difficulty with respect to any individual transactions of our merchants or manufacturers with any foreign country. Would there not be a saving of time by having a direct communication between the Board of Trade and our missions abroad upon matters of detail connected with trade?—I do not think there would, because I think it would be exceedingly difficult to draw a line where detail ends, and what is not detail begins.

3014. You stated at the outset of your evidence that you corresponded between the Foreign Office and the Board of Trade by letter, upon all matters connected with commerce. When the manufacturing and trading community know that in going to the Board of Trade to state their individual grievances, they are merely setting in motion a machinery by which there shall be a correspondence across Downing-street to the Foreign Office, and that their business is to be transferred from the Board of Trade, which has full knowledge upon these subjects, to a department which is avowedly without knowledge upon these subjects, must it not be unsatisfactory to the commercial world; must they not feel that their business is imperfectly, or, at least, is not very promptly or speedily attended to?—I do not see why it should be so, because, when they go to the Board of Trade (though I believe they come straight to the Foreign Office sometimes) and represent a grievance, they know that the Board of Trade, if it considers that grievance well founded, records an opinion upon it, and sends that opinion upon it to the Foreign Office, and then makes the Foreign Office its mouthpiece. The Foreign Office, in endeavouring to remedy that grievance (I am not talking of matters of mere detail), has to communicate with a foreign Government, and that is done more quickly by means of the Foreign Office than, I believe, it could be done by the Board of Trade. If merchants, coming to the Board of Trade, go away from the Board of Trade with the idea which you suggest, I think they entertain an erroneous idea. They merely go there and make the Board of Trade the channel for getting an authentic report and an official backing of what they want, to the mouthpiece of the Board of Trade with foreign governments. If I were in their place, I should not feel dissatisfied, provided that I felt confident that the Foreign Office would give immediate effect to and take up, in whatever way was necessary, any well-founded complaints that wanted redress.

3015. You are aware that the manufacturing community, through their chambers of commerce, have expressed their dissatisfaction with the present arrangement, on the ground that it does cause delay in the action of the Government upon their special matters?—Yes, I have heard so; but you know that a general denunciation of a department of that kind does not carry conviction unless there is some proof of it.

3016. I understood your Lordship to say that you thought that communications might be made with greater despatch through the Foreign Office than if the Board of Trade corresponded directly; can that be so, seeing that it involves two communications, by writing, instead of one?—That entirely depends upon whether the matter is urgent or not. There is no delay, supposing that the Board of Trade, as I said before, in the morning

The Right Hon. The Earl of *Clarendon*, K.G.

28 June 1864.

morning or in the course of the day, sends over to the Foreign Office word to the Under-Secretary of State or word to the Secretary of State, "Here is an urgent matter; do not let this be delayed; let your ambassador or a foreign minister be written to directly, and let it go by post to-night;" it would be just as certain to go by post that night as if it had gone from the Board of Trade.

3017. In these days of steam and electricity, when commercial transactions are carried on with great rapidity, are not all matters affecting commerce urgent?—Certainly; but you are aware that where a question arises upon the interpretation of a tariff, or where a principle is involved, although I do not mean to say that 24 hours may not be, sometimes, very important, yet there are cases in which it may not be important. Whenever any matter is of urgent importance, I am perfectly sure, from my recollections of the Foreign Office, that there would not be any delay. My objection to the double correspondence is, that neither department would then know exactly what the inquiries made, or what the information asked for, have been. I believe that, although in the first three or four months you might not find it so, yet, in the long run, it would be productive of more or less confusion, and confusion is always productive of delay.

3018. Would there be any necessity for the Foreign Office keeping itself constantly informed as to the progress of this correspondence regarding mere details?—I think it would be very difficult to define where details begin or end; what is a detail?

3019. I mentioned to your Lordship, that all the details of the French treaty were arranged by correspondence with the Board of Trade, and I assume that there are a great number of cases of difficulty, or of want of interpretation and explanation, arising out of the working of that treaty; my question was, whether there was any objection to the Board of Trade now corresponding with Paris direct upon those questions, as it corresponded during the negotiation of the treaty?—No; but your answer to my general question of what are details, is a particular and exceptional one, because the details that were then under discussion, were not those details that will arise in the ordinary course of commerce; they were details as to the nature and value of manufactures, and everything else connected with the mercantile community upon which information was required, in order that they should be taxed, and that they should be compared with other commodities more or less of the same kind. Those were details of a most important kind, which it was absolutely necessary for you to know, but quite exceptional in their nature, and not the kind of details likely to occur in the ordinary transaction of commercial business. If there is any doubt now arising upon the interpretation of your treaty, as to the correctness or incorrectness of the details which you procured from the Board of Trade, and which are now contained in that treaty, and which are consequently matters, I may say of international obligation, I should see no objection whatever in whoever it may concern going to the same source for information from which it was supplied to you.

3020. That would partially meet the difficulty which the manufacturers and merchants have been labouring under for some little time; but could you not carry out that principle a little further. The French Government has been making treaties with other countries, and we have come into the same terms as the French, under the favoured-nation clause; would there be any insuperable objection to a merchant or manufacturer going to the Board of Trade and complaining of some grievance arising out of the Custom-house regulations in Italy or Belgium, or elsewhere; and if it was thought desirable by the merchants and manufacturers of this country that the Board of Trade should be also empowered to send communications with those countries, under flying seal, through the Foreign Office upon questions of detail?—I do not understand who they should be sent to.

3021. To our ministers at those places, either at Brussels, or at Berlin, or at Turin?—I see no objection whatever to that; it comes to exactly the same thing as the present system. As I took leave to suggest some little time ago, I think that that might be often productive of delay, because you cannot expect the Foreign Secretary to send forward a letter that comes under flying seal to him, and desire the minister abroad, whoever he may be, to use his utmost exertions to give effect to it without making himself cognizant of the contents of that letter, in order that he may be responsible for the conduct of his agents. As I said before, such is the pressure of business, as I can testify, upon the Foreign Secretary, that you cannot always rely upon a letter under flying seal coming to the Secretary of State being sent forward that day. I am quite certain that if it were sent late in the evening it would not be forwarded. Otherwise I see no very great objection to it, if it was thought to give any facility; but I think it comes to the same thing. If it comes to be understood that any letter received under flying seal from the Board of Trade is sent forward under the responsibility of the Foreign Secretary, then it appears to me to come to exactly the same thing as the present system. I do not see how the mercantile community would gain any advantage by it.

3022. The mercantile community feels itself in this difficulty; the Foreign Office avows its want of knowledge upon commercial questions?—Does the Foreign Office avow its want of knowledge upon commercial questions?

3023. I understood you to say, at the commencement of your examination, that the Foreign Office would never take a single step upon commercial matters without consulting, by writing, the Board of Trade?—When I said a single step, of course I meant upon matters of importance upon which information or reference was necessary for the support, the assistance, and advice of the Board of Trade. From that I beg that it may not be inferred that I admit that the Foreign Office avows its ignorance upon commercial matters, for I do no such thing.

3024. If the Foreign Office were sufficiently well informed within itself upon commercial questions, would it be under the necessity of consulting the Board of Trade upon matters of commerce?—There is no amount of commercial information that officials of the Foreign Office have had that could do away with the necessity of further inquiry upon cases that arise.

3025. In matters of detail connected with commerce abroad, would it not be even more important and necessary to consult the Board of Trade

Trade than on matters in which a great principle is involved?—Certainly, I should say so.

3026. Seeing that it is necessary to consult the Board of Trade always, is it unfair towards the Foreign Office to assume that it does not possess the necessary knowledge within itself upon these questions?—As to the possession of knowledge, that is an extremely vague and indefinite expression, whether applied to commercial or to any other knowledge. The Foreign Office may possess knowledge upon a great many subjects; it may possess knowledge upon Colonial matters, upon legal matters, and upon a variety of other subjects which necessarily come under its consideration, yet it would nevertheless desire and require to have further information upon those matters, to be sure that it is quite right in its own interpretation, and it would desire to consult those departments of the Government which are specially created for that purpose.

3027. Has your Lordship seen the Report of the Associated Chambers of Commerce, in which they state the difficulty under which the commercial world finds itself placed, namely, that in going to the Foreign Office they find a body not acquainted with matters of commerce, which refers them to the Board of Trade, and in going to the Board of Trade, they find a body which is acquainted with their interests, but which is incapable of acting?—I have not seen that Report, but I think that that statement is one of those vague statements that are easily made; that impression may arise from some particular case, but that remark, I should say, was not of general application.

3028. I understand you to say that you would see no practical difficulty or impossibility, if it was more satisfactory to the commercial and manufacturing world, that upon all matters of detail connected with the working of foreign tariffs, the Board of Trade should communicate with our foreign missions directly, with a view to the redress of their grievances?—I say that I see no objection to anything, and that I regard no difficulty as insuperable, provided you can show that the public interest will be served by it; that was a general statement; in particular, I said that I saw no objection to the communication by the same persons with respect to the same character of details; that is to say, regarding the Paris Treaty, with the same sources of information which they addressed themselves to before. But with respect to details in general, it would be very difficult, as I have said before, to specify where details begin or end; I see just the same difficulty with respect to the correspondence upon details as I do with respect to other matters.

3029. Would it be unsafe to take the shrewd men of business in the country, the merchants and manufacturers, as good judges with respect to what would most facilitate their own interests abroad?—Shrewd men of business are very good judges of their own interest, no doubt, in certain respects; but I do not know that they would be the best judges of what would be the most effectual way of promoting their own interests with foreign governments.

3030. Mr. *Kinnaird.*] I think your Lordship stated that you were in the constant habit, when you were Foreign Minister, of communicating with the Board of Trade?—Always.

3031. And you found them generally very well informed upon matters of trade?—Always, upon all matters upon which I have referred to them, or upon which I have asked advice. We have had some most valuable reports from the Board of Trade. When I mention the names of Mr. Porter, Sir Emerson Tennent, and others in the Board of Trade, it is almost unnecessary to say that any information they have given was given in the most complete and acceptable form.

3032. Have there been any difficulties at the time when the Foreign Office was conducting a treaty with any foreign country, in attaching any subordinate officer of the Board of Trade to aid and assist in doing that?—None whatever.

3032.*—There never was any jealousy on the part of the Foreign Office in availing itself of that assistance?—None whatever that I know of. I should have no hesitation, if I was conducting a negotiation like that which led to Mr. Cobden's treaty, in following the course which was then adopted. It would be most inexpedient and most unwise not to send, as was done in that case, the very best officers from the Board of Trade to assist the person who was negotiating by communicating with his own department, in order to obtain all the information he wished. In that manner the French treaty was negotiated; and in any negotiation in which I thought it would be useful, I should have no hesitation in applying to the Board of Trade, with just the same certainty that the best man would be selected for the purpose as if I applied to Mr. Layard or Mr. Hammond to tell me who was the best clerk in the Foreign Office to assist in a certain negotiation.

3033. Supposing that the negotiation reached a certain point, would it not be necessary that the Foreign Office should conduct the wording of the treaty; is not there a great deal in the details of the drawing up of treaties which only the experience of the Foreign Office can bring about successfully?—I should say so, certainly. Supposing that a Minister, aided by a gentleman from the Board of Trade, was to draw up a treaty, I should not consider that treaty safe to sign, until it had passed through the experienced hands that would have to revise it, or look over it in the Foreign Office.

3034. I think your Lordship has had a great deal of experience with regard to treaties which have required a great deal of revision?—Certainly.

3035. And, therefore, you think it of the greatest importantance that the final conducting of such treaties should come through the foreign department?—I should be very sorry to sign a treaty that did not.

3036. I suppose you have not had time to read much of the evidence that has been given before this Committee?—In the last two or three days I have been rather engaged, but I have seen some of it.

3037. There has been some evidence tending to imply, I think, that there is a feeling amongst the commercial classes, that Spain has remained shut up from commercial relations, owing to the absence of sufficient energy, I may say, on the part of the Foreign Office, in securing the commercial relations which are so important to this country with Spain. Having been so many years in Spain, perhaps your Lordship can give the Committee some information as to whether that impression is well founded, that some neglect and some want of energy in the department, has brought about the result of that want of commer-

The Right Hon. The Earl of *Clarendon*, K.G.

28 June 1864.

cial reciprocity with Spain?—I certainly cannot speak for the department now, but I have not the least doubt that my noble friend, Lord Russell, has been active about it. I will only speak of my own time, and more particularly of the time when I was Minister in Spain, which was six years. I can say that I never lost an opportunity with all those Governments that so rapidly succeeded each other in Spain, of endeavouring to produce a better state of commercial relations between the two countries, whether by alteration of tariff, or treaty, or in any other way that could be suggested. But in spite of every effort that I made, although I must say I found some ministers, and indeed some Governments, favourable to the change, none of them were able to make one single step in advance, such was the political influence of Catalonia, and so much fear did the Catalan deputies inspire. So strong was, in the first place, the protective, and the next place, the smuggling interest, in which the highest people in the land were concerned, that all my efforts broke as against a dead wall. How far that protectionist feeling is yielding before the march of events and the experience of other countries, I cannot say at the present moment ment; I can only state that it was from no want of effort during the time that I had anything to do with it, that the relations between the two countries were not put upon a different footing.

3038. You do not think it proceeds from any remissness upon the part of our Government, but from the inherent protectionist principles in Spain, which are almost an insuperable obstacle?—Certainly; a remonstrance on our part in favour of free trade, would have been met by Spain just as a remonstrance by Prussia would have been met in this country before the year 1845, in order to procure a better corn law in England.

3039. Would you think it desirable when there are commercial conferences, seeing that foreign powers are in the habit of having either their secretary of embassy, or their first attaché attending those conferences, and thereby acquiring additional commercial knowledge, that that course should be adopted by our Government?—I can give you no answer to that, because I know of very few commercial conferences which have taken place of any kind. If any do take place at which the English Minister attends, I think he would take the attaché with him to assist him in taking notes.

3040. Did it not probably arise from the exceptional character of the negotiation of the French Treaty, that no such course was taken then?—Perhaps; I know of no commercial conferences.

3041. There would be no objection to that course being taken, would there?—None whatever. I am quite sure that it is the feeling of all our Ministers and Ambassadors that they desire that the different legations should be fully conversant with commercial matters which are every day increasing in importance, not only in their commercial, but in their political character.

3042. You decidedly do not recommend the experiment which has been made in regard to putting the slave trade into a particular department at the Foreign Office, to be repeated in the case of commerce?—I think not; I do not see that it would work well.

3043. You do not, therefore, recommend any great alteration in the system which has been going on up to the present time?—No; what I should recommend, would be that those shrewd men of business, who are acquainted with their own interests, having made certain complaints, and being under certain impressions whether erroneous or not, their complaints should be duly considered both by the Foreign Office and by the Board of Trade; and if any improvement can be made in the existing system, I am quite certain that both those departments would be willing to make it; but I do not see my way to any radical change in the system that I think would work well for the public. If I did, I would not wait to be asked about it; I would mention it at once.

3044. Sir *Minto Farquhar.*] With respect to Belgium, and also the Italian Treaty, complaints were made that delay had taken place; do you think it likely that in those cases the commercial gentlemen who made those complaints, did not sufficiently weigh and consider the political reasons which operated in both cases to prevent the rapid completion of the treaty between the two countries?—I think it very likely; I am not aware of the circumstances of either of those cases; they were not in my time. If such complaints had been made to me, and if political causes had occasioned the delay, there would not have been the slightest difficulty in telling the complainants what those causes were, in full reliance that they would accept them as reasons just as I should offer them.

3045. In the evidence we have had from one of the presidents of a chamber of commerce, it was stated with reference to our diplomatic corps, that they were not fully conversant with commercial matters, that they were a very gentlemanly body of men, but that their education was not exactly that which fitted them for carrying on commercial matters in the states in which they were placed. The inference I drew from that was, that they were not urged sufficiently by the Foreign Office to direct their minds specially to commercial subjects, and that they gave a preference to political over commercial matters; nobody has had a greater experience than your Lordship upon this point. I should like to ask you whether if you supposed that any of our representatives abroad, whether he were an ambassador, a minister, or a secretary holding his position as a Chargé d'Affaires, neglected in any way commercial matters which were of importance to this country, he would not receive an immediate reprimand, and perhaps an intimation that his services would not be required if he persisted in such a course?—Speaking only for myself, if I was in authority, I will say that there is nothing which I should treat more severely than any neglect of commercial interests, because I think it is impossible to know how far an injury may extend, and therefore there should always be the utmost care in dealing with those interests. With respect to any complaint that diplomatic employés are not well informed upon commercial matters, I think their attention has been directed to it a great deal more lately, and I think those reports that have to be made, have created a great stimulus and emulation amongst them; I believe that amongst those reports will be found some as able papers, and papers containing as valuable information as ever were made public in this country; I think that that has created a great deal of emulation in the lower ranks of the diplomatic body. I think there is no young gentleman who comes to be a secretary

of

of legation, or a secretary of embassy, who would not wish to stand as well before the commercial world as with his own Government, for having contributed information which may be useful to the country. I think, therefore, that it has worked extremely well; but it is very difficult to acquire a general commercial knowledge. If we send a man to one of the minor German States, he may have knowledge with respect to the commerce of the Zollverein; but he very likely will not have it upon all commercial subjects; and a commercial gentleman going there may ask some particular questions upon which he may not find that young gentleman informed. But if the question was upon any matter within his own reach and scope, I should blame that young gentleman very much if he was not able to procure that information, and to give it to the person requiring it. I am sure that not only at the Foreign Office, but by all the heads of missions, attention now is really turned in a very different way from what it was 20 or 30 years ago to commercial questions; the magnitude of our commercial relations has created an interest that did not exist before.

3046. It has also been stated that if our ministers and others were put in direct communication with the Board of Trade, which is considered the consultative department upon all questions of trade, the fact of that corresponding with the Board of Trade would give them an impulse, and desire to show their knowledge of commerce, more than the present system of communicating with the Foreign Office. Do you not think that the Foreign Office would instantly mark out a man who showed zeal and knowledge upon questions of commerce, and all matters of that kind, which are so important in these days?—Certainly; and it would be able to reward him and promote him, and make him a more useful public servant, far better than the Board of Trade could do. But, after all, in the correspondence between a Minister abroad and the Board of Trade there is nothing to enliven or instruct either the Minister or the department; that benefit is all imaginary. If the Board of Trade writes to a Minister in Bavaria, in Stuttgard, or anywhere else, about a commercial question, it can only write about details, and he can only answer about details; therefore, the advantage of that correspondence, with a view to making a man more alive to his duties—which he ought to be alive to, without being enlivened, as I may say, by points of detail being run into him—is quite imaginary.

3047. Mr. *Bazley.*] In my own experience I am quite aware that when your Lordship was Foreign Minister you were very exact and prompt in your correspondence with such bodies as the Manchester Chamber of Commerce; and I am quite aware that you are well acquainted with the principles as well as the details of commerce; but may it not happen that a very distinguished politician may not be very well informed upon commercial subjects, and, therefore, is it not desirable that there should, if possible, be as perfect a system connected with the Board of Trade and the Foreign Office as can possibly be established?—I understand the bearing of the question to be, that if a distinguished politician is at the Foreign Office, and is not acquainted with commercial matters, that may render him still more dependent upon the Board of Trade, and that, therefore, a different system would be required. My answer to that would be, that I think you cannot provide departments for particular cases. I think that whether a man has commercial knowledge or not, he is obliged to employ the same machinery for arriving at an opinion in either case. I do not consider that I was wholly devoid of commercial knowledge when I was at the Foreign Office. Commercial affairs interested me particularly; but I never should on that account have foregone any precaution or means for acquiring information that I should have resorted to if I had had no knowledge at all, because no man ought to be so entirely confident in his own judgment as to be certain that he could not get something from others; and before I decided upon a matter which concerned others, and very often affected most important interests, I always sought the information that I thought would be most useful.

3048. There certainly prevails, in the commercial community, the impression that, if there had been a commercial department at the Foreign Office, and if they had been more active, or if there had been a foreign department at the Board of Trade, possibly our commercial relations might have been very considerably extended. The men of business in this country also complain that when they apply to the Foreign Office they do not obtain specific information upon the points respecting which they inquire; they are referred to the Board of Trade, and they consider that from there being two departments to be referred to upon matters of business, they lose the object which they wish to promote, namely, the extension of commerce. It is supposed that if there had been more activity in the case of Italy and Belgium, possibly we might have had more satisfactory treaties with those countries than we have, and that it seems to have been rather the policy of our Government to follow France than to lead France in obtaining commercial treaties; what is your opinion upon that?—Upon that subject it must be said that the commercial community here, when they find that our commercial relations are not extended so much as they would desire with other countries, of course look about, first of all, for somebody to blame, and then they fall, of course, upon the Foreign Office, and the employés of the Foreign Office; but they do so, I am quite certain, from my own knowledge, in many cases, and I dare say, in others besides, upon insufficient information, and upon merely their own supposition, because our position is very different from that of other countries. You must remember that we have, happily for ourselves, and for many other nations also, adopted a system of free trade, and that consequently we have very little to give; and other countries say, that they will not part with that which they still hold to very dearly, their high tariffs and their protectionist principles, without getting something in exchange. When we go and say to them, We have nothing to give you in exchange, but we wish you would, for your own interests, and in furtherance of the principles that we have proved to be advantageous to ourselves, adopt similar principles, and give us the facilities that we have already given you; the answer invariably is, We are exceedingly obliged to you for the care you take of our interests, but we claim to be the best judges of them ourselves. That is how our constant advances, to induce other governments to adopt free trade, and our constant remonstrances against

The Right Hon. The Earl of *Clarendon*, K.G.

28 June 1864.

against not having the same facilities which we have offered, are met. That is the reason why we often appear in the wake or at the tail of other countries, such as Belgium or France, because they have concessions to make which we have not. It is very advantageous to us to come in, in the only way we can come in with those countries, who otherwise would give us nothing; namely, under the Favoured Nation Clause. If we did not get that we should only remain where we are; therefore, you see that that which is offensive and annoying to our mercantile men, namely, our coming, as it appears, in the wake of other countries, is in reality the only means by which we can arrive at what we desire to establish.

3049. Regarding our consuls as essentially commercial agents, could not the Board of Trade correspond directly with them, leaving the diplomatic and political correspondence with the Foreign Department?—I think I have answered that question tolerably fully before. I said that I did not see where the advantage would be; I do not think you would gain anything in the matter of time, and I think it would be imposing upon our consuls more labour, although many of them have now more than they can get through. I think you would impose further labours upon them, and that might create delay. I see no delay that need take place in the Foreign Office; of course there may arise matters of complaint from there being occasional delay. I only speak of the system as it is, and as it may be worked. Of course there are particular cases, such as that case of Mr. Cobden's Treaty of Paris, in which you might make exceptions, but as a general rule I do not think that the separate correspondence of the Board of Trade with the consuls would be advantageous, because, as you are aware, it must be carried out completely or not at all. I defy anybody to draw a line between the details, taking commercial matters generally, upon which the Board of Trade shall communicate direct with the consuls, and those other matters upon which they shall communicate through the Foreign Office. If you establish a correspondence with the consuls, it must be complete upon all commercial matters; then you create a necessity for a double correspondence. The Board of Trade must then send copies to the Foreign Office of all the letters that it writes to the consuls, and the consuls must furnish to the Foreign Office copies of the answers that they have sent to the Board of Trade, and double sets of information as to the steps which have been taken must be provided; otherwise you would have the two departments constantly jarring with each other, both at home and at the seat of Government in the foreign country to which the matter relates. Therefore I see no advantage, in point of time or commercial facilities, in that system being adopted.

3050. A clever executive will generally remedy the defects of a system, but do you not think that our system could be improved; perhaps your experience would enable you to make some suggestion to the Committee with respect to the difficulties that are acknowledged to arise between the Foreign Department and the Board of Trade?—It is a question for the departments between themselves; I am convinced that those departments, if they are the same as they were in my time, have no other desire than to promote the public good. If by consulting with each other in any way the complaints can be met and greater facilities given, I am certain that that will be done; I have no different system to suggest.

3051. Mr. *Layard.*] It has been suggested before this Committee that the Board of Trade and the officials in the Board of Trade, might be placed in direct communication with the foreign Ministers in this country; would you think that a practicable or an advisable course?—No; I do not think you would get a foreign Minister to agree to it.

3052. Such a thing is not done in any other country, is it?—Not that I am aware of, except in exceptional cases, such as that Mr. Cobden referred to, in which you would write to Lord Cowley or Sir Anthony Buchanan and say, "This is urgent, we want an answer directly;" it might then be sent to the Minister of Commerce, but it would be done as a favour, and as an exceptional case; it would not be liked.

3053. The Honourable Member for Rochdale asked you whether, as he at Paris had carried on communication with the Board of Trade, with regard to the details of the tariff, the Board of Trade could not now carry on communications with the French Government upon commercial subjects connected with the tariff; I think you said you had no objection to that?—I said I had no objection to continue the system which was begun.

3054. In the case of the negotiations at Paris, there were Commissioners appointed on both sides to discuss the questions of tariff; therefore, in that particular instance, they might have referred undoubtedly to the Board of Trade, but when you come to a question between the two Governments, do not you think that the Foreign Office ought to be intermediary in the communications?—Yes, certainly. My answer to Mr. Cobden was, that the same machinery might go on to settle details, or any difficulties that arose about details, as existed before.

3055. That is to say, supposing those were mere details of tariffs?—Yes, interpretations of the tariff, and so on.

The Right Hon. Earl Russell, K.G., attending by permission of the House of Lords; Examined.

The Right Hon. Earl *Russell*, K.G.

3056. *Chairman.*] Your Lordship has been twice, or more than twice, Foreign Secretary, I believe?—Twice; the first time for a very short time.

3057. You never were connected with the Board of Trade, I think?—Never, in any way.

3058. So that your special experience with regard to the matters of our reference would be as Foreign Secretary and as Premier?—Yes.

3059. You are aware that the Committee has been appointed to inquire into the relations between the Foreign Office and the Board of Trade, with reference to trade with foreign nations, in consequence of the dissatisfaction with the present working of those arrangements, which has been expressed by the commercial community?—Yes, I am aware of that.

3060. Two or three suggestions have been brought before the Committee, upon which the Committee will be glad to know your Lordship's opinion. I will go over them *seriatim*; the first is, that merchants and manufacturers have felt that

that there is delay, and that there may be inefficiency in having to communicate with two offices instead of one; and, inasmuch as the Foreign Office must conduct the negotiations, they would think that it might be more advantageous if they were to have to do with the Foreign Office only, and not be obliged to go to two offices. Consequently, a suggestion has been made that the staff, that is to say, the permanent officials, at present at the Board of Trade, whose business it is to obtain information in regard to trade, should be placed at the Foreign Office, so that the Secretary of State should have within his own office the means of acquiring information upon details, instead of having to go to another office. What is your Lordship's opinion with regard to this suggestion of a commercial department at the Foreign Office?—I do not like to give a very decided and ultimate opinion with respect to any of those matters until the Committee have taken all their evidence. I wish to say that, in order to save myself with respect to any future conclusions that I might arrive at. But my impression is, that there would be no public advantage in it at all, and there might be some considerable disadvantage. I think that the Foreign Office has certainly quite enough to do; if you mean that the Secretary of State should, besides what he has to do, be obliged to be acquainted with all the details of trade, and to enter into them, I think that that would be nearly impossible, as far as my experience goes.

3061. That is not exactly the suggestion; it is rather this, that inasmuch as the Foreign Secretary has to obtain that knowledge with regard to detail, or, rather to obtain the result of that knowledge from some quarter, instead of obtaining it from another department, he should have gentlemen in his own office who would be able to give it to him, and he would then be under the advantage of being in personal communication with those gentlemen, instead of obtaining that knowledge at second-hand through his colleague, the President of the Board of Trade, or by epistolary communication between the two offices?—I should say that the present way was the better way of the two. It seems to me to be so very extensive a matter that it is very desirable to have an officer specially intrusted with that matter, and from whom the Secretary of State should get his information from time to time; I am afraid his information would be very incomplete if it was to depend entirely upon the gentlemen in his own office.

3062. There are two division sof that suggestion; one is, that such staff should be under a Parliamentary Under-Secretary within the Foreign Office, whose business it should be to be particularly conversant with commercial questions; and the other, that it should be under a permanent Under-Secretary. In the one case, the head of the commercial department of the Foreign Office would be in Mr. Layard's present position, and in the other case, he would be in Mr. Hammond's present position. Would your objection apply to both of those cases?—I think so. It does not seem to me that the business would be so well done. When you have the Board of Trade, you have a complete office competent to do its work, whereas, I am afraid that this new office would not be competent to do its work, and then if it went to the Board of Trade to seek for information, that, again, would be only a new complication, making the carrying on of the business more difficult than it would otherwise be.

3063. I suppose that at present, when any question with any foreign Government comes before you, in which politics and commerce are intermingled together, upon the political part of the question you would consult, personally, the officials within your own office whose business it is to acquire knowledge of details with regard to it?—Yes, certainly.

3064. But with regard to the commercial part of the question, instead of being in personal contact with such officials, you would be under the necessity of obtaining your information at second-hand, either by Mr. Hammond or some one of your staff, communicating with the staff of the Board of Trade, or through Mr. Milner Gibson; do you think that there is no fear of a commercial question rather suffering as compared with a political question, from your having direct and immediate information in the one case, and indirect and second-hand information in the other case?—I do not well see how it can be otherwise. If a matter of commercial importance arises I send to ask Mr. Milner Gibson to ask him to come to me, or Mr. Milner Gibson walks into my room, and tells me what his information is upon a certain commercial subject, and what he thinks ought to be done upon it for the benefit of commerce. He tells me all the representations that have been made to him upon any particular class of goods, for instance, that are not properly rated in a foreign tariff, and informs me on any question of that kind.

3065. May I ask your Lordship whether your communication with the Board of Trade upon commercial matters, such communication being the means by which you obtain their opinion, is almost entirely through the head of the office, the President of the Board of Trade, or whether you individually have communication with the officials of that department?—No, I never have individual communication with the officials. If Mr. Milner Gibson were to say to me, I think you had better see Sir Emerson Tennent, or you had better see Mr. Mallet, I should then send for either of them. But without a suggestion of that kind, I should conduct all my communications either by letter to the Board of Trade, or through Mr. Milner Gibson personally.

3066. Another suggestion has been made of not at all the same importance as this, upon which we should be glad of your opinion; that although there might be disadvantages in transferring the staff who had to deal with foreign trade from the Board of Trade to the Foreign Office, yet that there would be an advantage in the superintendence of the correspondence upon commercial questions with the Board of Trade being in the hands of one officer in the Foreign Office, in like manner as the slave trade correspondence is; what would be your idea with regard to that suggestion?—Without, as I said before, pronouncing finally upon it, it seems to me to be at all events a very valuable suggestion, and I should like very much to consider it, with a view to see whether an improvement could be made. I should be very glad to adopt it, if it should be found that it would make an improvement in the mode of conducting business.

3067. You are aware that we have the correspondence before us with regard to the Italian and Belgian Treaties. Upon looking through that correspondence, although I dare say we should understand if we were in the offices how

The Right Hon. Earl *Russell*, K.G.

28 June 1864.

it was, still we have been surprised that there should be so long a time in some cases before replies are made to letters from the Board of Trade. I will take, for instance, the draft Treaty, that was sent to you in the beginning of 1862. The Foreign Office appears almost to have been unaware of it, and to have sent to the Board of Trade a draft of a Treaty which was forwarded by Mr. West in 1863. We cannot help thinking, that if there had been an officer at the Foreign Office, whose business it was to superintend such correspondence, we should hardly have found that state of things?—I cannot, from my memory, precisely account for it; but I rather suppose that we got information from Turin, as has happened in other cases, that there was no chance of any project of a Treaty of Commerce with Italy being considered until the French Treaty had been negotiated, or until they had sent some person over here. They did send Signor Marliani over here soon afterwards. I will tell you presently what happened with regard to him. But upon getting the suggestion of Mr. West, I suppose I had forgotten that I had had previous communication. I dare say that was the reason.

3068. With regard to Signor Marliani, do you not think that there might have been an advantage in his being brought into personal communication with the gentlemen at the Board of Trade, who were well acquainted with the interests and with the wishes of the different commercial bodies, and whose business it is to be better acquainted with their interests and wishes than it is of any one at the Foreign Office?—Perhaps you will allow me to make an explanation, that may be rather long, upon that subject and others connected with it. I think the whole of that matter, and several others of the same kind, depended upon what was done with regard to the French Treaty. The general notion of a commercial treaty prevailing on the Continent, and which has generally prevailed, is, that it is a bargain; that is to say, that you give something and that you are to get something in return. The English Government, after the conclusion of the French Treaty, which I should be glad to explain hereafter, considered the matter very thoroughly, in my opinion. I have no doubt that Mr. Milner Gibson will recollect the circumstances. It was a question with us whether this Treaty should be taken as a Treaty with France only, and that everything stipulated in that Treaty should be given to France, and there we should stop, and bargain in the same way with other countries, or whether there should be, with regard to those articles, and with regard to several more, a complete sweeping away of the restrictions in certain cases, and a reduction of duties in others to other nations who had given us nothing. The Government, upon Imperial considerations, and in the Cabinet, upon the strong advice of Mr. Gladstone, came to the conclusion that the better way, and the way most for the interest of this country, was to give to other nations at once what we had given to France. That was proposed to Parliament, and adopted by Parliament. But the immediate consequence was, and it is a consequence which has affected all these different matters, that, as France did not adopt the same course, all those different powers with whom we treated, went to France for a bargain and did not come to us, or, if they came to us, they consented to treat with us only for further reductions; for instance, Signor Marliani said, We should be very glad to have a treaty with you, but we should like to have a great reduction in wines beyond what you have given by the French Treaty. That reduction should be very considerable, perhaps half the duty which is now payable upon French wines, and we should like to have a very great reduction upon all confectionery. The first thing I did without referring to the Board of Trade, because I thought I knew pretty well what would be done, was this, I asked the Chancellor of the Exchequer, Are you prepared to make a further reduction on wine? Are you prepared to reduce the duties upon confectionery? And Mr. Gladstone answered, "I cannot afford to make any further great reduction upon wine; it would not suit the purposes of the revenue, and, with regard to sugar, I cannot but see that a very great reduction of the duties upon confectionery would lead to fraud and evasion, and we should be, in fact, lowering the sugar duties; therefore, for the interest of the revenue, I can consent to neither of these reductions." Signor Marliani, for a long while, had said that he could not listen to anything until the French Treaty was settled. Then he told us that they would give us nothing beyond the terms of that treaty. He said, "You cannot expect that we should give you anything, when you give us nothing in return. The bargain ceases altogether. If we choose to change our duties, we can do it ourselves, but that we should stipulate to you to make concessions to you, when you make none to us, is absurd and out of the question." In the same way, a gentleman was sent by Count Rechberg, who is understood (and I believe rightly) to be very favourable in his opinion to greater relaxations of trade, but the gentlemen he sent here said, "We shall expect, of course, if we make great reductions in our duties upon English goods to have something in return. I propose to you this: for instance, you have a duty of 3 *s.* a lb. upon tobacco; give us 1 *s.*, let other nations pay 3 *s.* a lb., and let the Austrians pay 1 *s.*" Those are the sort of notions that people have with respect to making a bargain. They seem to me very soon to bring to a close negotiations of this kind. It is not very necessary when the opinion of the Chancellor of the Exchequer would be so clear, and when my opinion also would be so clear upon such a matter, to go to the Board of Trade and ask them, "Shall we make a differential duty of 3 *s.* a lb. upon all American and other tobacco, and 1 *s.* a lb. upon Austrian tobacco?"

3069. I suppose that the memorandum that was sent to the Board of Trade, containing Signor Marliani's and the Marquis d'Azeglio's suggestion to that effect, was sent to them merely as a matter of form, because it appears here as being sent to the Board of Trade for their opinion as to whether those duties should be lowered, and we find from the evidence, that they sent it on to the Treasury, and were a long time before they got an answer; I suppose you ascertained the answer from your colleague without waiting for the reply of the Board of Trade?—I have no doubt that it was sent as a matter of form; it did not take half an hour for me to settle it with Mr. Gladstone, I think.

3070. What is felt by commercial men is this: they are quite aware that the time for bargains has gone past, but they think that while any foreign

foreign country is making a bargain with France, for example, and completing its arrangements, if we had at both ends, so to speak, of our communication with foreign countries, a complete and absolute knowledge with regard to the details of English commerce, it would be possible to say to a foreign government, Let us know what you are doing, because we can give you information which will enable you to increase the trade between the two countries without injuring your own, without even in some cases hurting the prejudices of your manufacturers or exciting a protectionist feeling. Do you not think that there might be an advantage in the Board of Trade, who have this knowledge, being in immediate communication with our diplomatic body abroad, in order that they should be armed with the information at any opportunity, which might make it possible for them to make use of it?—I think it would be a great advantage if we could more completely than we do at present, put our Foreign Ministers in possession of information which they might use; I must confess that, generally speaking, I have been very much disappointed in the result. The President of the Board of Trade pointed out to me several articles upon which the trade between France and Italy would not suffer by an alteration of the arrangement, and that such an alteration would be a great advantage to us and no disadvantage to France or Italy; but I do not think we were ever very successful in urging those matters.

3071. From these papers we find that on February the 18th, 1862, the Board of Trade writes a letter to the Foreign Office, in which they express a fear that the alterations will be made with regard to France, before suggestions are made from England; and that then it will be too late for us to do anything. We have it from Mr. Mallet that when, at last, he went over to Turin, and pressed those suggestions, they had already made that arrangement with France, and, in fact, the arrangement had been already published to the manufacturers. We look back and find that when the suggestions were made, there is reason to believe that the arrangements between Italy and France had been concluded. Do you not think that it might have been of advantage that Sir James Hudson should have been aware of those suggestions at the very time the arrangement was making. I will give, as a proof of this, on May the 26th, 1862, you obtained from Paris the particulars of the treaty between France and Italy. This is not a very important question, but it is a matter of illustration. It appears that in that there was a new duty put upon linen; and the duty upon jute is marked in this list, "not yet determined." Sometime after that, suggestions are made by you, with regard to jute, would it not have been of advantage that at that time Sir James Hudson should have been informed of the English interests concerned in jute?—I do not exactly remember when the various communications took place; but my general impression is that, like some other nations, the Italians said, We have got certain advantages to acquire from France, and we must make our treaty with France before we listen to you. After that time, we shall be as liberal as possible with regard to you; but before that time we shall not go into any particulars.

3072. Your Lordship is perhaps aware that the duty upon linen continued the same as before in Italy, being a very low duty; and the Dundee jute manufacturers think that it was merely from the Italians not being aware of what jute was that they put a higher duty, in proportion, upon jute. It has come out in evidence that there is no jute interest to protect in Italy. Do you not think that it would have been an advantage that that department which received the facts with regard to this jute trade from Dundee, should have been able immediately to put our Minister at Turin in possession of those facts?—I do not quite know why they were not communicated.

The Right Hon. Earl *Russell*, K G.

28 June 1864.

3073. That brings me to the general question. A suggestion has been made that it would be to the interest of trade if the Board of Trade—inasmuch as it gets information from the diplomatic body abroad, through the Foreign Office, which it furnishes to the merchants, and as it also gives suggestions for your guidance, which you communicate to the diplomatic body—were put in immediate communication with the diplomatic body, so that the communication should not come at second hand, but should be direct and immediate. What is your opinion as to that?—It seems to me that it would be of great advantage (though I will not be quite sure as to that) if there was some person in the Foreign Office who collected from the different departments in the Foreign Office everything relating to trade, and who, when he carried that to the Board of Trade, should receive any new suggestion from them which they had recently received, and should bring back that as the information, or, it might be, the opinion of the Board of Trade to the Foreign Office; in that way there might be a greater facility of communication. But in regard to matters connected with political affairs, I must say that I think the officers at the Board of Trade would fail there; because, in fact, there is the closest connection in all foreign countries between the political and the commercial business which those countries carry on. There is a gentleman I see in this room who will bear witness to that. If you go Vienna, you will find that they are engaged, and very deeply engaged, in plans by which they might enter into the Zollverein, and become a part of that great body; that on the other hand, there is the greatest wish in Prussia that they should not enter into it; and that until that is decided between the two, which has taken some years, and may take some years to come, they will not listen to anything. That is the obstacle in the way, and a statement of that in very great detail was sent to the Board of Trade in the shape of information received from Mr. Morier, from Prussia, from Bavaria, and from Austria, with regard to all those matters. If you go to Spain again; I have always found for years in Spain that when there is a political struggle there, there is always a very determined and a very obstinate body, consisting of the deputies for Catalonia, and those deputies for Catalonia always say, Whatever else happens, if the Ministry are for free trade, we shall go against the Ministry; and if the Ministry has a small majority, that Ministry would be overturned. In the same manner with regard to other countries; there is hardly a country I know of in Europe in which there is not a great deal of political intrigue and political jealousy, and political party questions mixed up with the real questions of commerce; and if a commercial man, or an agent of the Board of Trade went to one of those countries without any knowledge of the circumstances,

The Right Hon. Earl *Russell*, G.

28 June 1864.

he would only be disappointed; a political agent would be informed that the attempt must fail.

3074. There appear to be two kinds of communication between the Board of Trade as representing the commercial interests, and the diplomatic body; in both cases it is now conducted entirely through your office; in the one case, the Board of Trade forwards the complaints or representations of commercial men upon matters of detail; and in the ther, they have to forward or receive the information by which they guide your office, or yourself, as Foreign Secretary, in the conduct of important commercial business; such, for instance, as the Italian Treaty. I will take, first, matters of detail. A suggestion has been made, that complaints with regard to the working of a treaty, for example, would be more quickly arranged if the Board of Trade, instead of referring the complainant to your department, or sending the representation in writing to your department, were permitted to forward that representation in writing themselves under flying seal through your department; what would be your opinion with regard to that?—I really do not see that that would make much difference. We should send, or we might easily send the letter to the Minister with a cover, or we might send a letter from the Board of Trade under flying seal.

3075. It has been supposed that a consul or a Minister abroad, feeling that he was in direct communication with the office which possessed the detailed knowledge upon the matter, would be able to arrange it more quickly. What do you think with regard to that?—I do not see how he would.

3076. With regard to a more important question, with reference to the correspondence that takes place in order that the Board of Trade should be able to give its full opinion upon a commercial question, do you think that there would be any disadvantage in the Board of Trade communicating direct, as, for instance, in the late Italian Treaty, with Sir James Hudson, under flying seal through your office, thereby enabling the Foreign Secretary to prevent any letter being sent out which in any way would clash with the political business of the office?—I do not know that I should see that there was any great evil in it; but I should not see that there was any great advantage, I think.

3077. It has been also stated before the Committee by one or two gentlemen possessing a good deal of knowledge upon the subject, that if the Board of Trade is to continue as the consulting body upon matters of trade, it would be of advantage if it was put in a higher position as compared with the other departments; if it was put more upon an equality with the Secretaryships of State, as the Ministry of Commerce is in France. Have you formed any opinion upon that subject?—I think that the Board of Trade is one of the most important departments of the State; I do not think that it is necessary that it should be under a Secretary of State.

3078. Occasionally, I suppose, when your Lordship has been in the Cabinet, the President of the Board of Trade has not been a member of the Cabinet?—He has been very often a Member of the Cabinet.

3079. Do you not think that the fact that it is possible that he should not be a member of the Cabinet, does in itself cause the department to be considered of less importance?—I think it desirable that he should be a member of the Cabinet.

3080. Do you think that there is any advantage in the Board of Trade being conducted as a Board, with a President and Vice President, as compared with a Secretaryship of State, with a Secretary and Under Secretary?—No, I do not know that there is any advantage in it; but I really cannot well tell, because I do not know the internal arrangements of the Board of Trade.

3081. Have you any suggestion to make to the Committee upon the subject of our reference?—I may say, that with regard to some of the explanations that have been made by the officers of the Board of Trade, I have read the evidence of Sir Emerson Tennent, and I thought it was very good and very able; but with regard to the French Treaty, it seemed to be considered that there had been some sort of negligence upon the part of the Government (either the Foreign Office or the Chancellor of the Exchequer) in having overlooked the Board of Trade. What happened was this: Lord Palmerston and I were not much in favour of the principle of treaties of commerce. At that time I had some communication with the Duc de Persigny, the French Ambassador, and some communication also with Mr. Cobden. The French Ambassador came to me, and asked me to bring before the Cabinet the question of having a treaty with France. It was done in a very intelligent manner, as one would expect from the Duc de Persigny; and I need not say that the Emperor of the French is a man of great knowledge and enlightened views upon these subjects. The Duc de Persigny said that if we could obtain a treaty of commerce between France and England, it would be of immense advantage to France. He said: "France is half ruined by the Protectionists and by the Monopolists, and it would be an immense gain to France to do away with the loss that is suffered now in consequence of the Monopolists. At the same time, seeing your advantages in regard to coal and iron, you need not be afraid of French competition. The Emperor wishes very much to have a treaty of commerce." I said: "Why cannot you reduce your own duties?" He said: "That is impossible; it cannot be done. The Protectionist party is very strong, and if the proposal was made to the Legislative Body, strong as the Emperor is, that proposal would be refused, and the project would fall to the ground; and therefore, the only way, if you wish to have a trade that should be beneficial to France and to England is to have a treaty of commerce." I spoke to Mr. Cobden upon the same subject; I need not repeat what he said as to what he considered would be the advantage of a treaty of commerce between the two countries. Then I carried the question to Lord Palmerston and to the Cabinet, and the Cabinet entirely approved of the proposal. Though we were not fond of treaties of commerce, we thought it would be of great advantage to both countries. The Chancellor of the Exchequer, after that, undertook the diminution of the duties, and the taking away of certain duties, and Mr. Cobden conducted, with that great knowledge and great ability which he possesses, and with the good will of the French Government, the treaty to a successful issue. But it does not follow from that that we ought to attempt to do similar things in other countries.

3082. I think

3082. I think that your Lordship's very interesting statement probably applies to a remark of Sir Emerson Tennent, that if the Board of Trade had been informed that the negotiation was going on in France before we had become committed to the reduction of particular duties, the Board of Trade would very likely have advised that the same attempt should have been made in Spain and Portugal, and that attempt might have been successful?—My opinion is that we should not have obtained the same advantage in Spain as in France.

3083. However, if I rightly understand it, it was not considered by the Cabinet whether it was advisable to do it or not?—It was considered, and it was considered advisable to adopt all the principles embodied in the French Treaty, with regard to other powers.

3084. It was not considered whether it would be advisable to open a negotiation with other countries before the Government had committed itself to the reduction?—Yes, and it was considered not advisable.

3085. Mr. *Cobden.*] Your Lordship does not, I think, very decidedly object to either plan which has been suggested for putting the commercial world in more immediate and direct contact with foreign governments upon any matters upon which they might wish to have their interests represented. You do not say that you have any deliberate objection against having an officer in the Foreign Office to take charge of commercial matters—something analagous to the clerk or secretary at the head of the Slave Trade Department, or allowing some one in the Board of Trade to correspond upon matters of detail directly with foreign missions?—With regard to the first, I have no objection to the principle at all. With regard to the second, I am afraid it would only produce confusion.

3086. I think you stated that in your communications with the Board of Trade, it was solely with the President of the Board of Trade that you communicate?—It is.

3087. Does not it sometimes happen, in the exigencies of political parties, that the President of the Board of Trade might possibly be a person who was not very authoritative on matters of commerce; in that case, according to the habit and custom of the Foreign Office, you would not be in communication with what I would call the commercial knowledge and experience of the Board of Trade by merely communicating personally with the President?—That might be the case; but the Presidents of the Board of Trade whom I remember, have been very able men. I consider that Mr. Powlett Thompson was a man remarkably enlightened with regard to all these questions, and Mr. Gladstone and Mr. Cardwell are certainly persons very well acquainted with those matters.

3088. But it is the permanent officials of each department who are the depositories of the knowledge and experience of the department, is it not?—No doubt that is the fact.

3089. In the case of a change such as has been recommended, of having a Department for Commerce in the Foreign Office, as is the case in the French Foreign Office, you would be enabled to manage a great many matters connected with the foreign commerce of the country without having to refer to the Board of Trade at all, would you not?—I am by no means certain of that. As I have already said, I should request permission to consider these matters very maturely after the Committee is over; but I must remind you that in France there is a Minister of Commerce as well as a Department for Commerce in the Foreign Office.

3090. Mr. *Kinnaird.*] I think I understand that your Lordship does not consider that any blame is attachable to either of the departments, with respect to the Italian and Belgium treaties; you do not consider that there was any neglect, or that any other means might have produced better results?—No, I do not think they could.

3091. You did not state any reason why you think Treaties of Commerce are not desirable?—The French you know took a course different from the course that we took, and I believe that our course is the wise one for the benefit of the country.

3092. Taking it to have been the Board of Trade which conducted the negotiations for the French Treaty, was that treaty when it was sent over from France in a complete and perfect state when it reached the Foreign Office, or had many alterations to be made it?—There were questions of importance; the minute questions were all considered at the Board of Trade, and there were two gentlemen who went to Paris and assisted Mr. Cobden and Lord Cowley in the negotiations.

3093. From the Foreign Office?—The one was from the Board of Trade and the other from the Custom House.

3094. It is almost necessary that those treaties should pass through the Foreign Office after all, is it not, before they could be complete and available between this country and foreign countries?—It was necessary that they should.

3095. And it would be generally necessary, would it not, supposing a matter was left to the Board of Trade to negotiate directly with our consular and diplomatic agents, that it should yet come for completion and perfection through the Foreign Office?—Yes, I think so, certainly.

3096. Mr. *Layard.*] When Signor Marliani was in England he was in communication with Mr. Milner Gibson as well as yourself, was he not?—Yes, certainly.

3097. He met Mr. Milner Gibson at the Foreign Office, did he not?—Yes, I think so; that is my recollection.

3098. Is not that probably the reason why there appears to have been a blank in the correspondence to which the Honourable Chairman alludes, namely, because you and Mr. Milner Gibson were in direct communication with Signor Marliani?—Certainly.

3099. I believe the Draft Treaty which the Board of Trade sent to the Foreign Office was not sent to Italy, because at that time Signor Marliani was in England?—That is my recollection, that we expected Signor Marliani to come to this country. I do not know that he came so immediately as I expected.

3100. I think we received the Draft Treaty at the Foreign Office in April, and Signor Marliani arrived in May within a few days; I am not certain of the dates?—That is probably correct.

3101. That Treaty was in the hands of Mr. Bergne, a very efficient officer of the Foreign Office, and who would have taken very good care that the thing should not be overlooked?—Certainly.

3102. *Chairman.*] May I ask your Lordship whether you thought it right to put before Signor Marliani

The Right Hon. Earl *Russell*, K.G.

28 June 1864.

Marliani the Draft Treaty that had been forwarded by the Board of Trade?—I do not remember that I did, but he began very soon saying that, until the French Treaty was completed, he would not negociate with us.

3103. Mr. *Layard.*] Whilst Signor Marliani was in England, the negociations were going on at Paris for the Franco-Italian Treaty, were they not?—Yes.

3104. And he gave, as the reason why he would not enter into any negociations with us, the fact of the French Treaty being still under negociation?—Yes.

3105. And he positively declined to have any negociations with us, and, ultimately, left the country because the treaty was not concluded?—Yes, he did refuse to negotiate.

3106. When the Belgian Treaty was negociated, Mr. Milner Gibson and yourself were in constant personal communication with M. Van de Weyer, were you not?—We were in constant communication together; M. Van de Weyer consulted with me about many subjects, and then I referred those questions to Mr. Milner Gibson, and Mr. Milner Gibson came to the Foreign Office, and we treated together upon important questions that referred to matters of trade.

3107. Therefore, these negociations being, to a great extent, carried on by personal intercourse, a good deal of correspondence was avoided, and, therefore, does not appear in the papers which have been laid before the Committee?—No doubt; and that, I consider, is the nature of the English Government; with regard to many things before they were reduced to anything like the shape of a treaty or articles of agreement, there was a great deal always of personal communication. M. Van de Weyer used to come to me at the Foreign Office sometimes, and sometimes he used to come to Richmond Park, which was on his way to London, instead of communicating directly to the Foreign Office, and he read to me what the proposals were on the part of the Government, the Minister of Commerce, and the Minister of Foreign Affairs, in Belgium, and a great many more matters of that kind. He read to me private letters from the Minister of Foreign Affairs, stating what they could agree to, and what they could not agree to. It is impossible that these things can be discussed except by personal communication, if you mean to succeed.

3108. The fact of these negociations being thus carried on would account for the want of that correspondence which the Committee has rather been induced to believe was owing to a want of attention on the part of the Foreign Office?—Yes, no doubt. With regard to Italy, for instance, I very frequently said, and I said it personally, when there was question of a union between Tuscany and Piedmont; Tuscany is a country where there is free trade, and where they are very liberal with regard to tariff; I hope when they have a union between Tuscany and Piedmont, they will adopt the free trade principles rather than protectionist principles, and that Tuscany will not lose by the change, and go back from the old laws made by Leopold, when he was Grand Duke of Tuscany. There are, of course, many of those things which pass in private communication which are not put down in writing.

3109. Was not it the fact that until the conclusion of the treaty of commerce between Belgium and France, the Belgium Government refused to negotiate with us?—Yes, that was the case; at the same time, I think there were other reasons likewise; we had a great deal of discussion about these matters.

3110. We considered it advisable not to open those nogotiations until the French treaty was on the point of being concluded, did we not?—Yes.

3111. At that time, did not the Belgian Government put forward the capitalization of the Scheldt dues as one of the conditions upon which they would negotiate a treaty of commerce with us?—Yes; the Belgian Government said at first that they would not treat with regard to a commercial treaty, or a change in the tariff, unless we would agree to give a compensation for the opening of the Scheldt and the taking away of certain duties; such as that for pilotage and other matters, and that we refused. We said we would not make any bargain of that kind; and then they said they would not treat at all, and that occasioned delay.

3112. Did we not consider that the putting forward of that demand was rather a violation of an implied promise which they had made to us?—Yes; we thought we were ill-used.

3113. With regard to the negotiations with Prussia, it has been stated before this Committee, that if Mr. Mallet had been sent to Berlin earlier, he would have obtained the same concessions that were given to France; has not the Prussian Government given us a distinct promise that we are to have the same treaty as they give to France?—I do not think we should have obtained anything by sending to Berlin earlier.

3114. They have promised us the same treaty, have they not?—They promised us the same treaty very positively over and over again; and they said they would not give us anything more than that.

3115. Therefore, we should have gained nothing by sending Mr. Mallet earlier?—I believe nothing. They gave a number of reasons, which I thought were very good reasons; they said they had very great difficulty in obtaining this Treaty with the Zollverein; that a great many of the German Powers were ready to agree to a Treaty with France, but that if they introduced a Treaty with England at the same time, it would only add to the difficulties, and they would fail.

3116. It has also been stated that, if we had sent Mr. Mallet to Turin earlier, we should have got a better Treaty with Italy; do you think that that is so?—No; I do not believe it would have been so at all.

3117. You have answered the question with regard to Spain. With regard to Portugal: have we not, for a very long time, been pressing upon the Portuguese Government to fulfil their promises with regard to the reduction of duties on the wine trade?—Over and over again. I may be allowed to say that if we merely wanted a case to show to Parliament, we might, once every month, propose things of that kind, and get a refusal. But the object ought to be to endeavour to push these questions when we are likely to be successful.

3118. Is not it frequently advisable not to push these questions, because, the doing so, raises suspicions in the minds of foreign Governments which make it difficult to obtain what one wants afterwards?—Yes.

3119. Is

3119. Is it not to have a refusal, which may embarrass negotiations hereafter?—Yes; I think it ought to be left to the Secretary of State to decide what should be the time at which a negotiation should be set on foot.

3120. Therefore, the political considerations should, after all, be first weighed, before matters of commerce are brought before a foreign Government?—Yes.

3121. I will read a question of Mr. Cobden's "After we had arranged our treaty" (that was the Treaty with France), "that when it was known that France was going to arrange Treaties with Belgium, with the Zollverein, with Italy, and probably elsewhere; do you remember the fact that an intimation was given to me by the French Government, that they would be most happy to have a representative of the British Government to co-operate with them, and to go side by side with them in all their negotiations"? Mr. Mallet's answer was, "I remember that circumstance. The question has been repeated several times, and answered in the same way. Was such a communication ever brought to your notice?—No, I do not remember it; there may have been some general expression, to the effect of their being very willing to see us when they were obtaining a treaty; but I do not remember any specific proposal of the kind.

3122. If any such communication were made to Mr. Cobden, you would naturally suppose that it was Mr. Cobden's duty to transmit it to the Government, would you not?—I should expect Mr. Cobden to inform the Foreign Office of that proposal.

3123. If there were a department at the Foreign Office for trade, if you took the information of that department and acted upon it, of course you would consider yourself responsible to Parliament?—I should think that I had a right to make a proposal to a foreign Government at the time when I thought it likely to succeed.

3124. *Chairman.*] With regard to one of the last questions, it was stated before this Committee by one or two mercantile gentlemen, that it was their impression that if the Government had requested Prussia, at the time when she was making her Tariff arrangements, preparatory to her Treaty with France, to inform our Minister at Berlin of what she was doing, it might have been possible to have given such information as would have enabled those arrangements to be made more for the interest of England than they actually were, which it was almost impossible to get done after they had been published to the Prussian manufacturers. Was that attempt made. Was our Minister at Berlin requested to ask the Prussian Government, as a matter of friendliness, to give us information as to how far they were altering their Tariff?—I think so; we repeated several times that we should like to know what they proposed, and I think they always said that they would not inform us.

3125. Mr. *Layard.*] Did we not send Mr. Ward to Berlin on purpose to obtain all the information possible?—Yes, we did send Mr. Ward there.

3126. Mr. *Pender.*] Mr. Hammond states in his evidence that the consuls are instructed to send home reports on the trade of the particular place that they represent. I find that there are 40 consuls who have not sent home reports for this last year, and out of the 40 something like 10 are at places which we are particularly interested in, simply from the fact that cotton is grown in those particular places. I may mention, for instance, Alexandria, Algiers, Borneo, the Feejee Islands—about which there has been a great deal of talk with respect to the growth of cotton—Hayti, Havannah, and Mexico. It would be very interesting to us to have such reports. I infer from their not being sent that it is a delinquency on the part of the consuls in not having sent them?—I think we gave orders that we should have reports as to cotton especially.

3127. I am quite aware of the interest your Lordship has taken in the cotton question, because I remember a letter addressed by you to the Manchester Chamber of Commerce about the time that the American war broke out, in which you drew the attention of the Chamber to what was likely to happen, and which was very highly appreciated by the Chamber. You then offered to place the Foreign Office as much as possible at the service of the Chamber, so as to get information for them; I draw your attention to this want of reports from the consuls at those different places, because I think it is clearly a departure from the instruction which must have been given at that particular time as to these reports?—It is certainly quite true that we wished to get reports from every part of the world from which we could receive cotton. I cannot say that what we wished to be done has been always done, but that is what we wished.

3128. Mr. *Layard.*] I think there is some mistake about this matter; these consular reports are reports upon trade, published and laid before Parliament; the reports upon cotton were sent to the Cotton Association, therefore you must not infer, that because these gentlemen have not sent reports upon trade, they have not sent reports upon cotton; probably, most of them have done so?—Yes.

3129. Mr. *Pender.*] Even admitting that they have sent cotton reports, that does not justify their having neglected to send trade reports; I am not aware that the cotton reports have been received?—I cannot give an answer without looking to all those details.

3130. Mr. *Layard.*] Many of those consuls might not have had any subject upon which to report, that may have been the reason why they have not sent any reports, may it not?—It may.

ROBERT B. D. MORIER, Esq., called in; and Examined.

3131. *Chairman.*] WHAT is your position in the diplomatic body?—I am second secretary at Berlin.

3132. For how long have you been there?—I have been at Berlin since 1858.

3133. You were in the diplomatic service before that time, I suppose?—Since September 1853.

3134. Where were you before you went to Berlin?—At Vienna.

3135. Our commercial relations with Prussia and the Zollverein have come a good deal under your notice during the time since you have been at Berlin, have they not?—Yes, especially within the last two years.

3136. Mr. *Layard.*] Your present appointment as second secretary is equivalent to what was formerly an attaché, is it not?—Yes, I was formerly first paid attaché.

R. B. D. Morier, Esq.

28 June 1864.

3137. We have converted the attachés into second secretaries, have we not?—Yes, second and third secretaries.

3138. During your connection with the diplomatic service, you have found that the Foreign Office was desirous of obtaining from you all the information you could give upon matters of trade, have you not?—Very much so.

3139. You have been in constant official communication with the Foreign Office, and in personal communication with myself upon matters of trade, have you not?—Yes, since December 1862.

3140. Did not the Foreign Office, I think, request you to proceed to Munich and Vienna, and make full reports to them upon the negotiations going on between the Zollverein and Austria?—Yes, the negotiations had come to a dead lock, and the Foreign Office was anxious to know what prospect there was of their either being resumed or of some practical result respecting the French Treaty being come to, independently of those negotiations. I was accordingly sent in December 1862, to Vienna, and from thence to Munich, to ascertain the exact state of the negotiations, the views of the Governments, and the prospects of arrangement.

3141. And you made very full reports upon the subject to the Foreign Office, did you not?—I made a full report upon the negotiation of the treaty between France and the Zollverein, and upon the negotiations that had taken place between Austria and Prussia upon the subject; and besides this report I wrote from Vienna and Munich, detailing my conversations not only with the Minister of Foreign Affairs, Count Rechberg, at Vienna, and with Baron Schrenk, the Minister for Foreign Affairs at Munich; but also with commercial people, with the heads of departments, and with other persons interested in the question.

3142. Therefore, there was at that time an anxious desire on the part of the Foreign Office to obtain every information as to what was going on in Germany, with regard to commercial changes?—Certainly.

3143. At that time had the negotiations between Prussia as the mandatory of the Zollverein, and France, commenced?—They were over; the French Treaty was signed in August 1862, and I only proceeded to Vienna and Munich in December 1862.

3144. Previously to that period, I believe, Mr. Ward was sent to Berlin?—Mr. Ward was sent to Berlin in the summer of 1861, whilst the negotiations were pending between the two Governments. The negotiations between Prussia acting on behalf of the Zollverein and France, fall into three distinct periods. The first period extended from January to April 1861, during which time unsuccessful attempts were made on the part of France to get certain general principles, such as the "nivellement des tarifs," the substitution by the Zollverein of "ad-valorem" for "specific duties, &c.," adopted. The second period extended from April 1861 to September 1861, when the attempt to act upon general principles was given up, and a mere system of bargaining was entered into between France and Prussia. The third period was between September 1861 and the 29th of March 1862, at which date the treaty was "paraphé" by the two Governments. This last period was likewise devoted to bargaining; larger concessions being obtained from Prussia. Mr. Ward was present during the middle period.

3145. That is to say, during the period when the bargaining process was going on?—Yes.

3146. Do you think that we could at any time have obtained better terms than we have now obtained from the Prussian Government, as regards our commercial relations with the Zollverein?—The Prussian Government most distinctly refused to negotiate with us simultaneously with their negotiations with France. Besides, a general dislike to negotiating two treaties at the same time, and to negotiating a treaty with one person who was bargaining, and another who had nothing to offer, they urged the specific objection that the Southern States of the Zollverein were endeavouring to induce them to negotiate a simultaneous treaty with Austria, a course which for obvious reasons they were determined not to adopt. They told us, however, (I should think this had been stated officially at the time; at any rate, having been on intimate terms with the persons who negotiated the treaty, I have had this assurance repeatedly given to me since), that when they were negotiating this treaty they arranged the tariff with a view to a generalisation of what they were to concede to France, to England, and to other nations, contemplating that we should be on a footing of equality; and that they were guided in these negotiations, not so much by the concessions which they hoped to get from France, as by the general reductions which they thought fit to make in their tariff, with a view to its generalisation.

3147. Therefore, in your opinion, it would not have signified at all in the negotiations, whether Mr. Mallet had been sent to Berlin sooner than he was?—Mr. Mallet was only sent in 1862; but during the time that advice could be given, and suggestions made, Mr. Ward was there; that is to say, during the middle period which I have described, between April and September; and, if I remember rightly, he was placed in direct communication with the Chambers of Commerce in England, and, therefore, as far as mere suggestions went, he was in a position to make those suggestions at the time when they might have been useful.

3148. Did not the Foreign Office place Mr. Ward in direct communication with the Board of Trade and the Chambers of Commerce?—Yes; they did so.

3149. Therefore, you think that if Mr. Mallet had gone earlier, nothing more would have come of it?—Of course, I cannot say whether Mr. Mallet would have obtained more than Mr. Ward did, but Mr. Ward was there with the power of making suggestions, and being a person well known and highly esteemed in Germany, and looked upon as a high authority on commercial matters, his chances of success, as far as such success depended on persuasion, appear to me to have been as good as those of any other persons, however well quailfied in other respects,

3150. Do you think that the Austrian Government would have been inclined to give any concessions to England in a commercial point of view?—Count Rechberg told me positively, when I saw him at the close of 1862, that it was impossible for him to enter into any negotiations, upon commercial matters, until the relations between Austria and the Zollverein were settled.

3151. Therefore your impression is, that it would have been useless for our Government to have attempted any negotiations before that time?

time?—Yes. In fact there was a distinct refusal, because I put the question point blank to Count Rechberg.

3152. The Prussian Government have now promised to give us the same Treaty that they give to France, have they not?—The Prussian Government promised at the time, and have renewed their promise since, to give us the same advantages they have accorded to France, as soon as the other States of the Zollverein have signed the treaty.

3153. At present, some of the States of the Zollverein have not adhered to the Treaty?—At present there are four; Hanover, Bavaria, Wurtemburg, and Hesse Darmstadt, which have not adhered to it; and until they have acceded to the Treaty it does not come into force, because it is not a Treaty between France and Prussia, but between France and the Zollverein.

3154. You are acquainted with many of the junior members of the diplomatic service; you have never found amongst them any unwillingness to investigate and study questions of trade, have you?—Certainly not; on the contrary, I think the feeling amongst those of us who wish to make a serious profession of diplomacy is to devote a considerable amount of attention to matters connected with trade.

3155. You have never found that the Foreign Office discouraged any such attempts?—No; I have found just the contrary. I have ever received the greatest encouragement on the part of the Foreign Office.

3156. Therefore, if there is an impression amongst the commercial gentlemen of this country that the Foreign Office discourages the study of questions of trade, that impression is altogether false?—I should say that such an impression was altogether false.

3157. *Chairman.*] You were not personally engaged, with regard to our commercial relations with the Prussian Government, before the negotiations had been concluded, if I understand rightly?—No, I was not.

3158. You gave it as your opinion that we could not have obtained better terms than those we have, namely, a promise of the most favoured-nation clause, by any further representations, did you not?—That is my opinion.

3159. If a memoir had been delivered to the Prussian Government to this effect, that understanding that they were making fresh tariff arrangements, and altering their duties on account of the projected treaty with France, it was considered desirable to inform them in what way the trade would be increased with this country; do you think they would have refused the consideration of such a memoir?—I have no reason to suppose that they would have refused it, but the person to furnish such a memoir was there, namely, Mr. Ward; he was in communication with the Chambers of Commerce in England; and, therefore, there was no reason why the wishes of the Chambers of Commerce in England should not have been made known directly to the negotiators.

3160. Do you know the extent to which he was in communication with the Chambers of Commerce?—No, that I cannot say.

3161. You are hardly prepared, I suppose, to give an answer as to whether Mr. Ward, with all his experience, with the disadvantage of living abroad, was or was not more likely to be able to represent at Berlin the exact wishes and state the exact facts, with regard to British commerce, than a gentleman like Mr. Mallet going out direct from England?—I am unable to answer that question. But there are two sides to it. A gentleman like Mr. Ward, well acquainted with the commercial relations of Germany, and having personal influence there, would have, in so far, advantages over a person merely acquainted with England.

3162. You do not wish, I suppose, to have it stated upon your authority, that you know that Mr. Ward did furnish the Prussian Government with such information upon British interests?—No; I only know that he was placed in communication with the Chambers of Commerce; but as to what wishes were expressed by them, and what he communicated to the Prussian Government, I know nothing.

3163. With regard to the general question, you have probably heard to-day that a suggestion has been made to this Committee that it would be of advantage if members of the diplomatic body, whom we have every reason to believe, like yourself, are exceedingly anxious to further the interests of trade, were enabled to be upon purely trade questions in direct communication with the Board of Trade; do you consider that there would be any disadvantage to your other duties if that were the case?—As a merely abstract proposition, I should undoubtedly be inclined to say, that direct communication, what I might call an organic connection between the feeders and the digesting apparatus, seems to me a very great desideratum. As regards my own personal experience, however, I can only say that having had the advantage of personal friendship with Mr. Layard for many years, and of personal acquaintance with Mr. Mallet, I never have had any sort of difficulty; I have been able to communicate directly both with Mr. Layard and with Mr. Mallet, and to get every information which I required. Therefore, practically speaking, that direct communication has existed in my own case.

3164. And you have found it of advantage?—Of the very greatest advantage, because in common with the other junior members of my profession, who have had no special commercial training, there is much elementary information which, in default of such direct and personal communications, I should have been unable to obtain elsewhere.

3165. Then, supposing you were removed from any risk of collision between the Board of Trade, to whom you are not directly responsible, and to the Foreign Office, to whom you are responsible, by knowing that the communications made to you from the Board of Trade came under flying seal through the Foreign Office, do you consider that it would be of advantage to you to have that direct communication?—Yes; I should say so, certainly. It would be merely having that officially which I have hitherto had privately.

3166. Mr. *Layard.*] You draw a distinction between official and private communications?—Yes. I cannot, of course, tell what system it is intended to introduce; I can only speak to the advantage of being in direct communication. I believe I have received from you all the information which the Foreign Office could give, and the technical information Mr. Mallet has given me.

3167. That private communication exists with all the diplomatic servants abroad, if they chose to keep it up, does it not?—I presume that it does.

3168. *Chairman.*]

R. B. D. Morier, Esq.

28 June 1864.

3168. *Chairman.*] You have been, owing to the accidental circumstance of your acquaintance with some of the staff of the Board of Trade, able to get into personal communication with them, and to obtain information, and to consult them upon matters affecting trade?—Yes, I have.

3169. And you think that, supposing, by accident, you were removed from possibility of that personal private communication, it would be of advantage to secure its continuance, by the knowledge that it would arrive to you under flying seal through the Foreign Office, thereby being prevented from clashing with your communication with the Foreign Office itself?—Such communications would, I presume, be addressed to heads of missions, and I had at present so inferior a post that I should not come personally to be affected by a change of system, but in the abstract it would seem to me a very desirable simplification of the present indirect mode of communication.

3170. Mr. *Kinnaird.*] I suppose, had you had any personal acquaintance with anybody in the Board of Trade, officially or otherwise, you would have felt yourself justified in getting the information from the Board of Trade?—Most undoubtedly I should.

3171. It was a happy accident that you had such personal acquaintance or communication, but you would have got the same assistance and information from the Board of Trade without it, would you not?—Possibly; but there is this difference, there are many questions which one would have no objection to ask of a friend, or of any person with whom one stood on some definite and recognised footing; but with which, either because they displayed one's ignorance, or because they were too much questions of detail, one would not like to trouble a stranger.

3172. You believe that there exists a thoroughly cordial feeling between both offices with the object of advancing the public service, do you not?—Most undoubtedly; there is that feeling upon all sides, as far as my experience goes.

LOUIS MALLET, Esq., called in; and further Examined.

L. Mallet, Esq.

3173. *Chairman.*] I WISH to ask you one or two questions in explanation of some answers that you made to Mr. Layard on your last examination, as compared with answers that were made by yourself, and Sir Emerson Tennent to me before, in relation to the reciprocity treaty which was concluded between British North America and the United States in 1853. You will remember that you stated at first that the Foreign Office was not consulted, with regard to that treaty. Then Mr. Layard asked you some questions, with regard to some correspondence which appeared to have taken place between the Foreign Office and the Board of Trade. Was the first letter between the offices upon that subject from the Foreign Office, or from the Board of Trade?—Since I was examined on Friday, I have had an opportunity of referring to the correspondence which took place between the Foreign Office and the Board of Trade upon that subject, as to which I had previously only spoken from memory; and I believe I am now able to give the Committee the exact facts, as respects that correspondence. The first communication, so far as I am informed, which was made by the Foreign Office to the Board of Trade on that subject, was on the 13th of October, 1852.

3174. Will you state, briefly, the purport of that letter?—That letter enclosed a Despatch from Mr. Crampton, at Washington, reporting a conversation with the President of the United States, on the subject of the proposed negotiation of a commercial treaty, that treaty not to be confined to the questions pending between the United States, and the North American Provinces, but to include, generally, all subjects affecting the commercial relations of the United Kingdom and the United States; and requesting from the Board of Trade a statement of the points which the Board of Trade thought ought to form the subject of the negotiation. That letter was dated the 13th of October, 1852.

3175. Was such a statement sent?—That statement appears not to have been sent.

3176. Mr. *Layard.*] That is to say, it was not sent by the Board of Trade?—It was not sent by the Board of Trade to the Foreign Office.

3177. *Chairman.*] Was it the case, that the next day another letter was received by the Board of Trade which may account for that statement not having been sent?—Yes; the next day another letter was received enclosing a despatch from Mr. Crampton, with a copy of a memorandum submitted by him to the President, stating the conditions on which Her Majesty's Government were prepared to treat. The first of those conditions was, reciprocal freedom of trade between the United States and the North American Provinces in all natural products. When I say "all natural products," there was a certain list of natural products; it was by no means all, but there was a schedule of the natural products which were to be made the subject of that arrangement. By natural products, I mean raw products, and unmanufactured articles. It was stated in the memorandum, that Her Majesty's Government would be prepared to agree to that arrangement.

3178. Was it the case, that this letter showed to you that the Government had committed themselves to the principle of the proposed arrangement between the Canadian Government and the United States?—The construction which I should place upon that memorandum was, that Her Majesty's Minister at Washington had been authorised to communicate to the President of the United States the readiness of the British Government to conclude a treaty, including, as one of its conditions, the condition which I have mentioned to the Committee.

3179. When was the next letter?—The next letter was from the Foreign Office; I should say that the letter I have just been speaking of was not answered by the Board of Trade.

3180. Would you suppose that it was not answered because it appeared to state a conclusion that the Government had come to?—I am not prepared to state. I have no recollection of the facts; and I am not prepared to state the grounds upon which that statement was not sent to the Foreign Office.

3181. When was the next letter received?—The next letter was from the Foreign Office to the Board of Trade, of the 28th March 1853; that letter enclosed a correspondence with Mr. Crampton, showing, that on the 15th of January 1853, without consulting the Board of Trade, Mr. Crampton had been authorised to sign a treaty,

treaty, the draft of which had been prepared at Washington, by Mr. Crampton, with some slight modifications. The opinion of the Board of Trade was then asked in this letter in consequence of the refusal of the United States Government to agree to the proposed draft. I should state that this draft was confined to the pending questions between the United States and the North American Provinces, and as far as my recollection goes, did not include Imperial questions.

3182. Am I to understand from you, that up to that time the communications which you had received from the Foreign Office showed that they proposed, or rather, that the Government proposed, to conclude a treaty with the United States, without giving an opportunity to the Board of Trade to arrest such conclusion, but that an opportunity was given to you, upon the United States having refused to accede to the draft of the treaty which had been submitted to them?—An opportunity appears to have been given to the Board of Trade to express an opinion upon the subject, on the 13th of October 1852. But it appears also, that previously to that date, as far as regards the principle to which I more especially adverted in my evidence, namely, the principle of the reciprocal free admission of certain products between the United States and the North American Provinces, an intimation had been given by the British Government to the American Government, that they were prepared to concede the point. Consequently, the British Government appears to me to have been committed to accept that principle before the opinion of the Board of Trade had been taken upon it.

3183. Was the reply which you sent to this letter, asking your opinion upon the question because the United States Government had refused the draft treaty which had been laid before them, that letter to which Mr. Layard alluded in his question to you at your last examination?—The reply of the Board of Trade to the letter from the Foreign Office to which I have just adverted, is the letter to which Mr. Layard called my attention on the occasion of my last evidence, and is dated the 20th of April 1853.

3184. What was the purport of that letter?—That letter examines at great length the position of the negotiation, as represented in the correspondence submitted by the Foreign Office to the Board of Trade. It condemns the project which had been submitted to the United States on account of the unequal character of the advantages which would be derived by the two countries contracting. It advises the rejection of the United States proposals, as being "such as my Lords cannot entertain upon any grounds of advantage to the commercial interests of the British Empire," and it throws out a suggestion that the treaty should be extended, so as to include several Imperial questions, in order to restore the balance which appeared to them to be unequal, if confined solely to the questions between the North American Provinces and the United States. That is the general character of the letter.

3185. After that, there was some correspondence between the offices, which resulted, did it not, in the Foreign Office sending out instructions to America in accordance with the view of the Board of Trade?—Subsequently a letter was sent to us from the Foreign Office, enclosing a note which Mr. Crampton had addressed to the President of the United States, based upon the views contained in the letter of the Board of Trade; and on the 22nd of September 1853, the Foreign Office sent to the Board of Trade a second draft treaty, which was in point of fact a counter-project proposed by Mr. Marcy, then the United States Minister, on the part of the United States for the opinion of the Board of Trade. That was on the 22d of September 1853. The Board of Trade answered the letter from the Foreign Office on the 18th of November 1853. They state, that after consideration "It does not appear to my Lords that the counter-project is such as (viewed commercially) they can advise Her Majesty's Government to adopt." They suggest that the question of "reciprocal free trade in natural products should be dealt with by legislation in the United States and the British North American Colonies on a mutual understanding, and not by treaty." That suggestion was possibly made under the idea that the British Government would have an opportunity of so far controlling the legislatures of the Colonies as to avoid a differential character being adopted in their tariffs.

3186. What was the next communication that you received?—The next communication was from the Foreign Office to the Board of Trade on the 8th of December 1853, enclosing a letter from the Colonial Office, expressing the readiness of the Colonial Minister to act upon the suggestion of the Board of Trade, and expressing his opinion that the Colonies would be prepared to legislate in that sense upon the understanding that the United States would legislate in a similar sense.

3187. When was the next letter?—The next letter that bears upon the subject is on the 13th of January 1854, in which the Foreign Office sends a draft instruction to Mr. Crampton, stating that under the circumstances of the case it would be "fruitless to continue the negotiations on their present footing, and with the little chance of success which they hold out of coming to a satisfactory conclusion." The Board of Trade replies to the Foreign Office on the 16th of January 1854, concurring generally in the instruction; and on the 27th of September 1854, eight months afterwards, no communication having been made in the meantime, so far as I am informed, the Foreign Office sends to the Board of Trade six copies of a printed treaty signed on the 5th of June and ratified on the 9th of September 1854.

3188. Was it the case, that finally you received information that the treaty had been concluded upon a principle entirely contrary to that which the Board of Trade had represented to the Foreign Office as being the right one?—I can hardly state the thing so broadly as that. I think that the treaty ultimately concluded was decidedly inconsistent with the opinions of the Board of Trade as to what the treaty should be. Without saying whether the opinions of the Board of Trade were right or wrong, according to the views expressed in this correspondence by the Board of Trade, that treaty was not in accordance with the opinions of the Board of Trade.

3189. Mr. Layard asked you this question on your last examination, "You are not, therefore, aware that Lord Elgin negotiated the treaty entirely upon the basis furnished to the Foreign

L. Mallet, Esq.

28 June 1864.

Office by the Board of Trade?" to which your reply was, "I was not aware of that fact certainly." Now, having consulted the correspondence, I wish to ask you the question, whether you do not find that that treaty was not negotiated upon any such basis?—I think Lord Elgin may very likely have concluded that treaty upon some of the suggestions of the Board of Trade upon points of minor detail, as to including in the Schedule one or two articles upon which there had been some discussion; but it appears to me impossible that Lord Elgin could have negotiated that treaty upon a general view of the opinions of the Board of Trade, because upon two very broad points of principle that treaty was concluded upon principles which the Board of Trade had certainly not recommended. The first and most important principle was the establishment of a differential system in the British North American Provinces, and that was one as to which the Board of Trade had expressed to the Colonial Office, so far back as 1848, when the question was first mooted, the most distinct and emphatic objection to its introduction into the colonial tariffs; and it was suggested, in a letter from the Board of Trade, that Lord Elgin should be cautioned and warned to endeavour, in every way, to prevent the introduction of that principle into the tariffs. If that letter had been in Lord Elgin's hands at the time of the negotiation of the treaty (of course it is possible that it was), it cannot be said that he concluded the treaty in accordance with the opinions of the Board of Trade so expressed. The second point of principle was in reference to the unequal nature of the reciprocal concessions with respect to the fishery question.

3190. Was not it the case that the long letter to which Mr. Layard alluded in your last examination contained opinions and arguments from the Board of Trade quite contrary to the principle upon which the treaty was concluded; and that, therefore, that letter shows that the treaty was not concluded upon the basis furnished by the Board of Trade?—That letter certainly proposed a basis very different from that ultimately adopted in the treaty as it was finally concluded.

3191. Then am I to understand from you that the first replies made by Sir Emerson Tennent and yourself, without having gone back to consult the documents of the office, were incorrect to this extent: that it is true that there had been a correspondence between the two offices upon the question of a treaty, but when you come to look into the nature of that correspondence, you find that it was to this effect: that the Board of Trade was consulted, and gave its opinion, and that finally the Treaty was concluded upon a different basis, so far as principle was concerned, from that which was recommended by the Board of Trade, and that the Board of Trade were never informed of the reasons why it was so concluded, nor was an opportunity given to them to consider such reasons, or to express an opinion upon them?—That is very much the character of the transaction. The statement made by Sir Emerson Tennent and myself was literally correct, with regard to the Treaty actually concluded; and I think, looking at the whole correspondence, it may be said to have been substantially correct, upon the subject of the treaty, although it was incorrect so far as it led the Committee to think that no correspondence had passed between the departments relating to the subject.

3192. Mr. *Layard.*] You do not adhere to this answer: "The Board was not consulted with regard to that treaty, until the whole of the principles and details had been settled"?—I think that answer is given too generally and broadly; I cannot say that it is strictly accurate.

3193. You stated that you did not answer the letters from the Foreign Office for two or three months sometimes, because you inferred that arrangements had been made which could not be overridden?—I did not make any such statement; I think I stated that I could not give any opinion as to the reason why the Board of Trade did not answer the letters.

3194. You did not read to the Committee the letter from the Foreign Office to the Board of Trade of the 28th March 1853. I will read it: "With reference to Mr. Addington's letter of the 13th October last, requesting that the Board of Trade would prepare a statement of the points which it might be desirable that Mr. Crampton should submit for the consideration of the United States Government in regard to a new commercial convention between Great Britain and the United States, I am directed by the Earl of Clarendon to acquaint you, for the information of the Lords of the Committee of Privy Council for Trade, that in the absence of the statement of the question, which has not yet been received at this office, Mr. Crampton was instructed to agree to a project of a convention proposed on the part of the United States, and sanctioned, with certain reservations, by Her Majesty's Government. The Government of the United States, however, decline to admit these reservations, and the matter remains accordingly at this moment in nearly the same position as before this project of convention was submitted by the United States Government for the consideration of Great Britain. I enclose herewith copies of papers relating to this subject; and as a change of Government has intervened in the United States, and as the question will probably be again brought forward by the new President, Lord Clarendon is desirous of obtaining a joint opinion from the Board of Trade and from the Colonial Office, upon the course which it may be desirable for Her Majesty's Government to adopt in this matter. I am accordingly to request that you will move the Lords of Committee of Privy Council for Trade to consult upon this subject with the Secretary of State for the Colonies, and to favour Lord Clarendon with their opinion upon the whole question." After having read that letter, I ask you upon what grounds can it be asserted that the Board of Trade thought that we were committed, and that it was of no use giving an opinion; is it not stated in this draft that the whole question was at an end, and that we wanted from the Board of Trade their opinion upon what should be done?—No doubt. I think my remark as to the degree to which the British Government was committed in that particular case merely applied to one point in the negotiation which was under consideration. It had merely reference to that one point of principle in the memorandum; of course there was no positive obligation whatever. All that my remark tended to show was, that a distinct opinion had been given to a foreign Government, upon a question of principle, without the Board of Trade having been consulted upon it, in a matter affecting trade; and I think that that affords

affords a strong illustration of the working of the present system, that there should have been this delay. I think that if there had been a commercial department at the Foreign Office first of all, the statement asked for by the Foreign Office in November could hardly have been withheld so long; and, on the other hand, if the Board of Trade had been directly responsible, they could hardly have avoided giving a statement upon a question of that kind. Certainly the instruction which was sent would not have been sent on the 13th of January without some correspondence and communication with the commercial department either in the Foreign Office or elsewhere.

3195. You will not now say that the Foreign Office failed to consult the Board of Trade upon those negotiations?—Not at that stage.

3196. Does not this draft, which I have read, say that the whole question was at an end, and was to begin *de novo*?—No doubt; and at that part of the negotiation the thing stood perfectly right. The Board of Trade had an opportunity, of which it availed itself, of expressing its opinion at great length, and instructions were sent to Washington in accordance with those views, but the United States Government had objections to that project, which was not finally adopted, and that was not the treaty to which Sir Emerson Tennent and I referred in giving our evidence.

3197. Was not Lord Elgin furnished with all the correspondence which had passed between the Board of Trade, the Colonial Office, and the Foreign Office, and was not he instructed to conclude a treaty upon the best terms he could on his passage through Washington?—I am quite unacquainted with the instructions given to Lord Elgin. From the time of the letter written by the Board of Trade in 1848—(I do not know what became of it)—I only know that the action of the Board of Trade was quite abortive.

3198. In dealing with a foreign nation, we may put forward a basis for negotiation, but that foreign nation may not accept it?—No doubt.

3199. Therefore, you cannot condemn the Foreign Office for not having concluded a treaty upon the basis furnished by the Board of Trade, supposing that a foreign Government refused to accept those conditions?—Certainly not, nor did I intend to condemn the Foreign Office; I only wanted to illustrate the inconvenience of the present system. The Board of Trade was, probably, quite as much to blame in the matter as the Foreign Office.

3200. In what is the Foreign Office to blame in this case. The Foreign Office referred to you the moment they received information from Mr. Crampton; you delayed giving any answer, whereas the Colonial Office gave an immediate answer; and upon that answer, not hearing anything from the Board of Trade for several months, the Foreign Office instructed Mr. Crampton to proceed with the negotiation. Afterwards, Mr. Crampton writes home to say that the thing is at an end; and then they again write to the Board of Trade to say that the thing is at an end, and that there is still an opportunity of putting forward proposals, and only then do you send your statement to the Foreign Office. How can you say that the Foreign Office was to blame in that case?—I did not say that the Foreign Office was to blame. All this had reference to a negotiation which was ultimately abandoned. The treaty ultimately signed was not submitted to the Board of Trade at all, nor were we ever informed of the grounds upon which the negotiation was resumed, and finally brought to a conclusion in 1854.

3201. After a treaty is concluded, is it usual to submit that treaty to the Board of Trade for their opinion upon it?—No; but we were informed, upon the 13th of January 1854, that all those negotiations were at an end, and that there was no prospect of any treaty being concluded with the United States; and we heard nothing more until the treaty was sent to us, signed, sealed, and delivered. I think there might have been some communication to the Board of Trade of the grounds upon which the negotiation was resumed.

3202. Did not that arise from the accidental fact of our giving to Lord Elgin, the Governor of Canada, as he was passing through Washington, *carte blanche* powers to conclude a treaty if he found an opportunity of doing so?—That I cannot say.

3203. Mr. *Somerset Beaumont.*] When was the treaty which was finally concluded signed?—It was signed on the 5th of June, and ratified on the 9th of September 1854.

3204. That was five or six months after the communication to you to which you have just referred?—Eight months.

3205. *Chairman.*] I understand you to say that you were never informed of the reason why the Government found it impossible or difficult to take your basis of the treaty, and you were never asked to consider the reasons upon which they were inclined to accept the basis offered by the American Government?—We received no information whatever as to the new basis, which was adopted after the abandonment of the negotiation in the early part of 1854.

Veneris, 1° *die Julii*, 1864.

MEMBERS PRESENT.

Mr. Bazley.	Mr. Wm. Edwd. Forster.
Mr. Somerset Beaumont.	Mr. Milner Gibson.
Mr. Butler-Johnstone.	Mr. Kinnaird.

Mr. Seymour Fitzgerald.	Mr. Charles Turner.

WILLIAM EDWARD FORSTER, Esq., IN THE CHAIR.

The Right Hon. the Earl of MALMESBURY, G.C.B., attending by permission of the House of Lords; Examined.

Right Hon. The Earl of *Malmesbury*, G.C.B.

1 July 1864.

3206. *Chairman.*] FOR how long has your Lordship been Foreign Secretary?—Two years, at two different periods.

3207. I suppose you are aware that this Committee has been appointed to inquire into the arrangements between the Foreign Office and the Board of Trade, in relation to trade with foreign countries, in consequence of a dissatisfaction amongst the mercantile community with regard to the present working of that arrangement?—I am.

3208. Two or three suggestions have been made to the Committee during the course of their inquiries, upon which we shall be very glad of the opinion of your Lordship. The first is, that commercial men, thinking that there is delay, and that there may be inefficiency in the necessity of two offices having to work together upon matters of foreign trade, suggest that it would be an advantage to have the staff of permanent officials, who are in the Board of Trade at present, and conduct the foreign commercial business there, transferred to the Foreign Office; the suggestion being simply this, that there should be a commercial department in the Foreign Office, which should give information to that office, taking away the necessity of their having to consult the Board of Trade; what opinion would you have with regard to that suggestion?—If I rightly understand it, the objection to the present system is, the delay that takes place by transmitting the despatches from one office to the other.

3209. There are two objections made: one is, that of necessity two offices having to conduct the business must cause delay; and another, and still more important objection is, that the present arrangement being that the Foreign Office has to consult the Board of Trade upon commercial negotiations, and take their opinion, the Board of Trade is not able to enforce that opinion, and, consequently, there may be inefficiency from one office getting the information, and having to give the advice, and the other office having simply to conduct the negotiation; and that the result of the information at home being obtained by the Board of Trade, and brought to bear upon the Foreign Office, which conducts the negotiations abroad, is, that that information with regard to the wants of our mercantile men does not reach the Foreign Office with the force and fulness that it ought to do; therefore some of the mercantile gentlemen suggest that the Foreign Office should be self-sufficing, as it were, and that they should be able to communicate direct with it, and that it should be obliged to form its own opinion, and to act upon its own advice. In order to do this, they suggest that there should be a commercial department in the Foreign Office?—I have not considered that proposition; but it appears to me, at first sight, that you would not gain much by there being a branch, as it were, of the Board of Trade established at the Foreign Office. I do not think that that would assist in bringing about your object. I think that much time might be spared in another way. At present, or at least when I was Foreign Secretary (I believe you have had evidence to that effect), despatches on arriving are sent to the Under Secretary of State, and he looks them over. Of course that takes some time. Having looked them over, he forwards them to the Secretary of State, and he has to read them, mixed up as they are with a great many other subjects, which must attract his attention at the time. Having read them, the Secretary of State sends them back again to the Foreign Office, where some time is spent again in copying them. I believe sometimes they were copied in my time, and sometimes extracts were made, and sometimes, I believe, but not always, the original despatches were sent to the Board of Trade. All that process took at least three or four days, I believe. I think that time might be spared. What I would suggest to prevent delay, and it is to delay only that I am now referring, would be that the consuls abroad should be instructed to divide their despatches into two categories, and that they should docket the despatches containing commercial intelligence, or referring to trading and commercial questions, "Commercial," and that they should docket the political despatches, "Political." The Under Secretary of State, therefore, when he opened the bag, at least when he received the despatches, would at once see the two categories and divide them, and send the political despatches on to the Secretary of State, and the commercial despatches across to the Board of Trade, for their observations, suggestions, and arguments, whatever they might be. Then, the Board of Trade should return those despatches so observed upon to the Secretary of State, who would then have the advantage of understanding their contents a great deal better

than he does now; because now he begins by reading a despatch upon a subject which he is not acquainted with, and he has then to refer to the Board of Trade for explanation and advice. In that way, I think, you would save time; but I do not myself see how you are to gain anything by merely having a department of clerks under one roof instead of another.

3210. Your Lordship's reply is very much in accordance with another suggestion which has been made to this Committee by several of the witnesses whom we have examined, that the present arrangement should remain as it is, the Foreign Office still consulting the Board of Trade, but that the Board of Trade should be put into communication direct with the diplomatic body abroad in somewhat the same way as your Lordship suggests; but I suppose that you would mean this communication to be not with the consuls only, but also with the ministers abroad?—Certainly.

3211. An objection has been made to that suggestion that there would be a danger of a collision of instructions from a communication being made by two departments to the same officer, and that there would be a greater possibility of evil in that communication, from the fact that the diplomatic body would of course still remain solely appointed by, and responsible to, the Foreign Office, and that they might feel themselves in a difficulty from having communications addressed to them by another department. To meet that difficulty, it has been suggested that all the communications made by the Board of Trade to the diplomatic body, and all the letters that are received from them to be sent to the Board of Trade should be sent under flying seal to the Foreign Office. Do you think that the fact of there being that arrangement, that the communications should be under flying seal, would remove the danger of such collision?—I think that what I suggested is much the same as the flying seal. On the outside of the despatch it would be docketed "Commercial," and that despatch would go straight to the Board of Trade, and the Board of Trade would then take the initiative, if I may use the word, upon the contents of that despatch. But I think it is essential that the Board of Trade should not have the power of taking action without the consent of the Secretary of State for Foreign Affairs, because policy may be intimately connected with any proposition made by the Board of Trade. It may be very desirable to make a treaty under certain circumstances, but a particular time may not be suitable politically, and therefore I do not think that the Board of Trade should have any independent power of action, though it ought to have more independent power than it has now as regards advice upon details.

3212. To return to the first suggestion that I asked your Lordship's opinion upon, namely, the transfer of the permanent officials of the Board of Trade to the Foreign Office: it has been stated, as an objection to that suggestion, that it would be necessary for the Foreign Office, even if they had a commercial department regarding foreign trade, still to consult the Board of Trade, because of the intimate connection of foreign trade with domestic trade; and, therefore, though they might have a commercial department at the Foreign Office, it would not remove the necessity of consulting the Board of Trade. Is it your opinion that that would be the case?—I think so.

3213. Then, again, another suggestion has been made, that if the Board of Trade is to remain the department which is to give advice to the Foreign Office, and also to other departments upon all trade questions, it ought to be made rather a more powerful department, and to be placed more upon an equality with the great departments, so that its advice would be more likely to be regarded and followed, unless there was some special reason to the contrary. That suggestion really tends towards this change, that instead of the Board of Trade we should have a department more like the Ministry of Commerce upon the Continent; have you any opinion with regard to that?—I should have no objection to changing the name, and, perhaps, the change of name would give the office more importance than it has now, but I do not see how it would make any difference in its practical working.

3214. For example, we find that in one or two cases the President of the Board of Trade has not been a member of the Cabinet. If it was made a department, like the Foreign Office or the Home Office, it would be almost impossible that the head of it should not be a member of the Cabinet, would it not?—I think it is a great advantage that he should be a member of the Cabinet.

3215. If it was made a department like the Foreign Office or the Home Office, would there not also be this advantage, that the Vice-President of the Board of Trade, being replaced by an Under Secretary of State, would have more definite duties?—Yes, I suppose that would be the case.

3216. Another suggestion has been made, not of so much importance as either of those which I have mentioned to your Lordship, but one upon which the Committee would be glad to have your opinion; that is, that even supposing it was thought unadvisable to have a commercial department in the Foreign Office, yet it might be advisable that there should be a special clerk appointed to superintend the correspondence upon commercial matters with the Board of Trade, in like manner as there is a special clerk in the Foreign Office for the slave trade business, instead of leaving the commercial questions to be conducted according to the geographical divisions in the Foreign Office; have you any opinion with regard to that?—I think that that might be an advantage, because at this moment certainly the despatches in reference to commerce and in reference to politics are very much mixed up, the only arrangement being, as you say, geographical.

3217. Have you any further suggestion to make to the Committee?—I have none, but that which I have just mentioned, which I think would have the effect of saving time.

3218. Mr. *Butler-Johnstone.*] Do you think that the two departments, the Board of Trade as well as the Foreign Office, communicating with our diplomatic agents and consuls abroad, would constitute an insuperable objection to that plan?—Yes, I should not advise their having separate and independent communications. I think it would create confusion and not further advance the public business or the work of either department; what I mean is, that I think the Foreign Office ought to be responsible for the carrying out of a treaty, but that it should not have to work out the details of that treaty; it should be responsible, in fact, for taking the initiative as to the time at which a treaty should be made, and

Right Hon. The Earl of *Malmesbury*, G.C.B.

1 July 1864.

the political bearing of the negotiation which might take place with reference to that treaty; but all the technical part, all the body and pith of the treaty, as far as commerce is concerned, should be, I think, managed by the Department of Trade and not by the Foreign office.

3219. Might not the details of that negotiation be carried on by correspondence between the Board of Trade and the consuls and diplomatic agents abroad; for instance, might not the correspondence with reference to those despatches which you propose to have docketed as commercial be conducted by the Board of Trade directly?—I think they ought to be forwarded through the Foreign Office, so that the Foreign Office may know what is going on, otherwise I do not see how the Secretary of State is to form an opinion himself.

3220. Supposing they were sent through the Foreign Office, you would see no objection to the correspondence being conducted by the Board of Trade in reference to those despatches which are to be docketed as commercial?—No, I do not.

3221. Mr. *Layard.*] Do you think that there would be no difficulty in dividing the commercial from the political despatches?—I should think not; it would be the consul's business to do so: but I have often thought that they mix up the two to a great extent; it depends, as you are aware, of course, very much upon the ability of the man who writes.

3222. You refer in that answer to consuls and not to diplomatic agents, do you not?—Diplomatic agents of the higher class ought to have less difficulty than the consuls.

3223. For instance, supposing a negotiation was going on in regard to a treaty of commerce in which considerable political interests were involved, there would be some difficulty in dividing the two, would there not?—My idea was this, that you keep the whole question in the hands of the Foreign Secretary; if he sees any political reason for postponing the treaty or for suggesting any remarks upon the treaty, he at once does so. I do not think there would be any difficulty in it; in fact, it would, I think, relieve the Secretary of State of business which generally, or at any rate very often, he would not be very conversant with. If he was to allow all the technical part of it, if I may call it so, to be carried on, and argued, and worked out by the Board of Trade; when that was done, he would be able to review it, and see at once whether there were any political reasons which would make it his duty to object to what had taken place, or what was recommended.

3224. Your Lordship's suggestion rather refers, I suppose, to commercial reports or any statements of matters of fact relating to changes in tariffs or regulations affecting navigation, than to questions of policy, which are bound up with questions of trade?—I was not speaking of policy at all; but of commercial matters only.

3225. You referred to purely commercial reports?—Yes.

3226. Are you aware that some of the consuls now make a distinction between their commercial and political reports, and that the reports are docketed accordingly at present?—At the time I was in office, they were mixed up very much.

3227. Then, your Lordship is not aware that now they are kept distinct?—No.

3228. I presume the Under Secretary, who is to go through the process you have described, would exercise his own judgment whether he would send a despatch on to the Secretary of State, or deal with it at once?—In my time there was a note made; the despatches used to be sent to me by the Under Secretaries, and almost all of them went through my hands, and I may add that a good many of them did no more than that. What I wanted to convey was that that roundabout way of sending a despatch before it reached the Board of Trade seemed to me to be unnecessary. I think the despatches had better reach the Secretary of State's hands after they have been to the Board of Trade, rather than before.

3229. The present way in which I manage, with Mr. Hammond, the business of the office is this: I always begin my work at nine o'clock in the morning; I get my despatches soon after nine; they always go from me before ten to Lord Russell; they come back from Lord Russell at one, and the whole business is done before two or three in the afternoon; I mean when Lord Russell is at Pembroke Lodge, or in London; when he is in the country or in Scotland it is different, of course; you do not think there is any delay there, I presume?—No; that is very rapid. It must depend upon the quantity of the despatches and their contents, if you get through them as quickly as that.

3230. Are you aware of the objections which Mr. Hammond has raised to having a separate commercial department in the Foreign Office, like the Slave Trade Department?—I do not know what his objections have been.

3231. Mr. Hammond's objection to having a commercial department upon the same footing as the Slave Trade Department is that, in his opinion, the Slave Trade Department has a good deal interfered with the discipline of the office, and that it is looked upon as a department which precludes those who are in it from having a general knowledge of the business of the office?—I never looked upon the Slave Trade Department in that light, and I had no idea that it was so looked upon. I should not certainly have consented to send any gentleman there as an inferior position, because I think there is a great deal to be learned in that department. There is as much international law to be learned in the Slave Trade Department as in any in the office. I am not sure that there is not more, and, therefore, I think it is a very great mistake, if there is such an idea existing, which I did not know before. I am surprised that it should be supposed to be a lower department than the others, because it is a department where there is a great deal of argument sometimes, as you know, used in the despatches, and, as I have said, a good deal of international law.

3232. Then you do not see any objection to the Slave Trade Department in the Foreign Office?—None, whatever.

3233. Mr. Hammond's opinion is, that the Slave Trade Department had better not have been established?—My opinion is that the Slave Trade Department is a very good nursery, and that there is a great deal to be learned in it, both in the way of stating an argument, and learning international law.

3234. If there was a question of international law raised in the Slave Trade Department, the question would be referred to the law officers of the Crown, would it not; it would not depend upon the decision of any gentleman in the department?

ment?—No; but it would be teaching the man through whose hands it passed, what international law was in its general bearings.

3235. Supposing a question of international law had been raised in any other department, it would have been treated in the same way, would it not?—Yes; but I understood that Mr. Hammond considered that department as inferior in its nature to the others; that is not my opinion.

3236. The only difference, I presume, would have been that, supposing there had been no Slave Trade Department, the business connected with the slave trade would have been disseminated amongst the different departments, instead of being concentrated in one?—Yes; I think there is an advantage in its being concentrated in one.

3237. Mr. *Cobden.*] I understand your Lordship not to object to having a clerk or clerks in the Foreign Office, who should give their attention particularly to commercial questions?—No; I object to there being a separate commercial department established in the Foreign Office distinct from the Board of Trade, because I do not see that you would gain anything by it practically. I think it might occasion some clashing, without producing any good result; it would be merely transferring a set of clerks from one house to another.

3238. It has been stated by Earl Russell, and I believe your Lordship shares in the opinion, that there would be no objection to a clerk in the Foreign Office having the immediate charge of questions of a commercial nature, with a view to being the medium of communication with the Board of Trade?—If it would hasten the business, I think it would be a very good plan.

3239. With regard to the other proposal which has been made, that the Board of Trade should be brought into more immediate contact with our consuls and ministers abroad upon matters of detail connected with commerce, you would not see any objection to that, would you?—No, I think, certainly not; I have explained how I would hasten the transmission of the correspondence, and, I think, it would very much relieve the Secretary of State of a duty which he is not always competent to perform by having the commercial despatches, which should be separate from the political ones, forwarded to the Board of Trade for the Board of Trade to take the initiative, putting their directions or suggestions upon them, so that when the Secretary of State received them he not only would receive the contents of the despatch but he would have the despatch commented upon, and, to a certain degree, explained to him by men more conversant with commerce than himself. It would then be for him to decide whether the question had any political bearings or not, he being responsible entirely for the political bearings, and he would naturally, if he agreed with the suggestions of the Board of Trade, desire that they should be carried out, but the suggestions would be carried out by the Board of Trade itself.

Right Hon. The Earl of *Malmesbury*, G.C.B.

1 July 1864.

3240. At present merchants and manufacturers are frequently going to the Board of Trade with individual grievances connected with their transactions with foreign countries, particularly with France, arising out of the working of the new treaty. The practice now is for the Board of Trade having heard the statements of those gentlemen, to send a written communication upon the subject to the Foreign Office, and the Foreign Office then communicates with the foreign minister or consul; as I understand you, you would have no objection to the Board of Trade communicating directly with the foreign consul or Minister if they sent their communication through the Foreign Office?—Certainly; under flying seal it might be done.

William Schaw Lindsay, Esq., a Member of the House; Examined.

3241. *Chairman.*] You are now, and have been for a long time, an extensive shipowner?—I am still a considerable shipowner, but not so extensive as I was.

3242. As a shipowner, very actively engaged in business, you have had the Navigation Treaties with foreign countries, and all negotiations between our Government and foreign governments relating to shipping, brought very closely under your knowledge?—Yes, upon various occasions.

3243. I think that upon two or three occasions you have yourself done what you could with foreign governments to obtain a relaxation of their restrictions with regard to navigation in the direction of free trade?—Yes; in 1860, I brought under the notice of the House the question of the differential duties which were still levied by various foreign nations upon goods imported into those countries in British shipping, in a Resolution which was adopted by the House. I afterwards saw the Board of Trade and the Foreign Office upon the subject, and had various communications, both by letter and in person, with the Board of Trade, and with the Foreign Office.

3244. You say, with the Board of Trade, and with the Foreign Office; do you yourself, and are you aware whether the shipowners, generally, find it necessary to consult both Departments upon anything affecting foreign shipping?—Upon all matters connected with dues upon shipping levied in foreign ports, they usually communicate with the Foreign Office, because they are more immediately under the control of the Foreign Office through the consuls. In cases where shipping is burdened by an extra duty levied upon goods, and upon similar questions which do not come often under the notice of shipowners, the communications are generally made with the Board of Trade upon the subject.

W. S. Lindsay, Esq., M.P.

3245. But, though those questions do not so often come under the notice of the shipowners as the others you mentioned, they are questions of great importance, are they not?—They are questions of very great importance, indeed, to the shipowners, because the effect of them upon the shipowners is, that in many cases the differential duties are so high, that British shipping is excluded entirely from particular branches of trade.

3246. Then, if the shipowners make representations to the Government to use their utmost endeavours to get rid of such differential duties, you say that the department of the Government to which they would go, would be the Board of Trade?—Necessarily so.

3247. You are aware, are you not, that it would not be the Board of Trade that would conduct the negotiation which would result upon that

W. S. Lindsay, Esq., M.P.

July 1864.

that representation but the Foreign Office?—Yes, the Board of Trade would be obliged to communicate with the Foreign Office, having no correspondents of their own at the place where the grievances exist.

3248. I dare say you are aware that the Chambers of Commerce throughout the country, and the merchants and manufacturers generally, have expressed an opinion that the necessity which they are under, in matters relating to foreign tariffs and in matters relating to foreign trade generally, of going to two offices, or the system of their going to the Board of Trade to give the information that the Board of Trade may send it on to the Foreign Office, leads to delay, and may lead to inefficiency; does that feeling exist among the shipping community, do you think?—It must lead to delay. It has often struck me that it led to greater evils than delay, because there is no department at the Foreign Office at all familiar with the subjects which the shipowners and merchants have brought under the notice of the Board of Trade, and which the Board of Trade have represented to the Foreign Office; consequently, the Foreign Office is not competent to deal with those questions, from the want of that knowledge upon the subject which the Board of Trade alone possesses.

3249. Am I to understand by that that you feel, and that you think the shipping interest generally would feel, that if you wait upon the Foreign Office to request them to carry out your wishes in a negotiation with foreign countries, you would not find in the Foreign Office that amount of information that would be necessary to do it with success?—The Foreign Office would, no doubt, be obliged to refer to the Board of Trade for a considerable amount of their information in many cases. The Foregn Office would have duplicates of the papers which the Board of Trade possess upon various subjects, though not upon all.

3250. In order to remove that evil, a suggestion has been made to this Committee that the Board of Trade should be allowed to be in direct communication with our consuls and with the diplomatic agents and ministers abroad upon trade questions, and that they should not obtain that information solely through the Foreign Office, or be only allowed to make their suggestions through the Foreign Office; what is your opinion of such an alteration as that?—Such a system as that which you have shadowed forth just now strikes me as likely to be attended with many difficulties. I understand you to say that you think the Board of Trade ought to be placed in communication, upon such questions as those to which you refer, with Foreign Governments?

3251. Not with Foreign Governments, but with our consuls and foreign ministers abroad?—Then, in fact, our foreign ministers and our consuls would be in the very awkward position of serving two masters; they would be under the control and supervision of the Foreign Office, but yet at the same time they would be under the orders, in such mattters as this, of the Board of Trade.

3252. That difficulty has been felt, and in order to meet that difficulty it has been proposed that the communications should all pass through the Foreign Office under flying seal; that is to say that they should be read at the Foreign Office, and if it was found that there was any possibility of collision between the two sets of instructions the Foreign Office should have the opportunity of informing the Board of Trade of such possible collision and of putting it in their power to remove it?—I do not understand whether it is proposed in that case that a consul or a minister to whom a communication was made by the Board of Trade should send his answer direct to the Board of Trade.

3253. It is proposed that we should send it through the Foreign Office under flying seal?—I still see a difficulty in it.

3254. Another suggestion has been made to meet the evil, and that is that the Foreign Office should be expected to be, I may say, self-sufficing in information; that it should be expected to have in its own department the knowledge necessary to conduct commercial negotiations, and that in order to do this, the permanent officials who are at present in the Board of Trade, and whose business it is to obtain or give information with regard to the details of trade and the interests of British merchants, shipowners, and manufacturers, should be transferred to the Foreign Office; what do you think of that suggestion?—I think, of the two courses, that which you have just now described is much more likely to meet the evils which are complained of than the former course; if a change is to be made I would much prefer seeing the change made in the direction which you have now indicated.

3255. An objection has been made to that suggestion, that even if a commercial department were established in the Foreign Office, still it would be necessary for the Foreign Office to consult the Board of Trade upon trade questions, because foreign trade is said to be so intimately connected with domestic trade that a commercial department in the Foreign Office would not be able to give all the information that was necessary, and, consequently, there would still remain the necessity of consulting the Board of Trade; what is your opinion upon that?—That is answered at once by the fact that there is at the present moment, and has been ever since there was a Foreign Office, I believe, a commercial department in the Foreign Office. I refer to the Consular Department; I think that might be extended with great advantage.

3256. You are aware, I suppose, that the consuls do already communicate with the Board of Trade upon matters relating to the mercantile marine?—I am aware that they do.

3257. Has the working of that communication come before you as a shipowner?—Not in a very striking manner; that is to say, I do not remember any instances at the present moment where I have had any cause for complaint of the working of that system.

3258. Mr. *Butler-Johnstone.*] Do you think that it would be more advantageous to keep the power of negotiation in the hands of the Foreign Office, and to give no executive power to the Board of Trade?—I think it would be much more desirable to keep the power of negotiating in all such matters as those to which the Honourable Chairman has referred in the hands of the Foreign Office.

3259. Upon what do you base that opinion?—My reason is, that I think the work would be done with more promptitude; and if those negotiations were entirely in the hands of the Foreign Office our diplomatists abroad would necessarily, in their training, be obliged to gain a knowledge of commercial affairs, which would be very

very useful to this country, and they would, consequently, be much more competent to deal with those questions than they are now.

3260. If they communicated with the Board of Trade upon commercial questions, that commercial education would still exist, would it not?—I speak of the knowledge which it is desirable for our ambassadors abroad to possess. I think it would be well for young gentlemen who are training for diplomacy, in passing through their examinations, to obtain greater knowledge than they are now obliged to gain of commercial matters and of our commercial relations with foreign countries, because they would be more competent to deal with foreign governments in regard to those questions than they are now.

3261. They would still have to deal with foreign governments upon those questions, whether they communicated with the Board of Trade or the Foreign Office; would not more zeal be communicated to our representatives abroad if they had to correspond with the Board of Trade, that being the department which knows most of commercial matters?—I am speaking under the presumption that a department in the Foreign Office was formed for the conducting of those commercial affairs with foreign nations.

3262. Mr. *Somerset Beaumont.*] In your communications with foreign governments, of course you have found it unnecessary to be in communication either with the Board of Trade or the Foreign Office, from having such a thorough knowledge yourself of all the details; but in your negotiations, for instance, with the French Government, if you had had to refer to either office, to which office should you have referred, the Board of Trade or the Foreign Office?—It is difficult to answer that question; any negotiations that I have had have been entirely of an unofficial character, and I must say that whenever I desired information at the Foreign Office, I always received it with great facility. Speaking of the system as it exists at the Foreign Office now, I mean the business arrangements of that office, it struck me that matters were admirably arranged at the present moment, so far as the system of the office is concerned; I have found no difficulty in gaining information, although they may have had occasion to refer often to the Board of Trade for papers or returns which were not in their possession. I have had no reason to complain of any delay, as far as my experience goes, in any communications that I have had occasion to have with the Foreign Office.

3263. Although you approve of the system of the Foreign Office, you say, do you not, that there is no special knowledge there?—That is the very thing I would desire to see; a greater special knowledge upon these particular subjects.

3264. When you say that there is no special knowledge in the Foreign Office, do you speak of the Foreign Office including our representatives abroad, or the Foreign Office in England only?—I speak more of our diplomatists abroad. It is impossible for our diplomatists abroad to be familiar with the complications of those questions of differential duties, so as to know how they affect ships and how they affect commerce, unless they are specially trained to it, which they are not; they are all questions of detail which no one can become familiar with except after considerable training.

3265. All the negotiations that you have had with the French Government, for instance about differential dues upon shipping, have been unofficial, you say, and not recognised by the Government in any way?—They have been entirely unofficial, that is to say, so far as I was concerned. The Foreign Office was good enough to recognise the fact that those questions were questions with which, after many years' experience, I was familiar. They were, no doubt, very glad to receive my services upon questions with which neither the Foreign Office nor our diplomatists could be expected to be so familiar as I have been, after my many years' experience. My position was, I need not say, entirely unofficial; the Government was in no way responsible for anything that I did or said, although I, of course, communicated to Lord Cowley all that took place at the different interviews that I had with the members of the French Government.

3266. Did you begin those negotiations at the instigation, or with the concurrence, of any Cabinet Minister?—I began those negotiations with the concurrence of Earl Russell. They were commenced shortly after the motion which I brought forward in the House of Commons, to which I have already referred.

3267. You said that you did not find our ministers abroad, generally speaking, thoroughly or even well informed upon those commercial subjects; do you say that from a recollection of communications with any particular minister, or is it a general opinion?—I have no hesitation in saying that Lord Cowley at once said, "Those are questions which it is impossible for me to understand." They are questions of a practical and technical nature, which, unless a man is trained to them, he cannot be expected to understand. I found the same thing with Lord Lyons at Washington; on my speaking to him upon these subjects he frankly owned that the questions were of a nature that he could not be expected to understand; they are really difficult questions.

3268. In both those cases there would be an English consul, would not there, both at Paris and at the American ports?—Yes.

3269. Would it not be reasonable to expect that the consul would be well informed upon those details?—It is to be expected that the consul would be always better informed than the minister, because to a certain extent a consul has a training in these matters; at the same time, as you must be aware, knowledge second-hand can never be used to the same advantage as knowledge which you yourself possess. Therefore I think that it would be desirable if some plan could be adopted whereby our diplomatists, as they pass through their different grades, would gain that knowledge, that knowledge, I conceive, being of the greatest importance to this country as a great commercial nation, having more dealings with the world than any other nation.

3270. Mr. *Layard.*] You have had a great deal of intercourse, I think, with the Foreign Office?—A good deal.

3271. And your opinion of the office is, that for the transaction of current business the machinery is very good?—The machinery, from what I have seen of the Foreign Office, is excellent; that is to say, if you wish to get information upon any particular subject which is under their immediate control, you have no difficulty in obtaining it at once; that is my experience of the Foreign Office.

3272. Would you say that with reference to the organization of any other public depart-

W. S. Lindsay, Esq., M.P.

1 July 1864.

ments?—I do not like to run down other departments, but I must say that it has struck me always that the Foreign Office is the best arranged office of all the public departments we have; I speak simply of the arrangements of the office.

3273. In your dealings with our ministers abroad, have you found that they have been anxious to give you every assistance in their power?—I must say that Lord Cowley, with whom I have had the greatest amount of dealings, has offered every facility in his power at all times and upon all occasions; but at the same time I may add, that he frankly owned to me that he could not be of the assistance that he would like to be, because they were questions which he did not understand.

3274. I think you went to Paris with a strong letter from the Foreign Office, recommending you to Lord Cowley, and directing Lord Cowley to give you every assistance in his power?—Earl Russell was good enough to give me strong letters to Lord Cowley, and he assisted me to the best of his ability; upon those questions he gave me every facility.

3275. And you found Lord Cowley anxious to put you in connexion with those persons in France who he thought would be useful in promoting the object you had in view?—Yes; at the same time, I think that if Lord Cowley had possessed that particular knowledge the result might have been different.

3276. You saw the Emperor and several official persons, did you not?—Yes.

3277. Have your visits to Paris had any result?—They have had this result, that the Emperor has appointed a Commission of Inquiry, which is still sitting, and which, I believe, from the evidence taken before that Commission, will lead to very happy results; but great changes, such as these, as you are aware, require a long time to effect.

3278. I think you have also been to Portugal and Spain, and taken the opportunity of your journeyings to communicate with the Governments of those countries?—I have, with the kind permission of the Foreign Office, communicated with the Governments of those countries, when I had occasion to be in those countries, with regard to the folly of maintaining the high differential duties, which I have always contended do them much more injury than they do us.

3279. Did not the Foreign Office give you strong letters of recommendation to the ministers in Spain and Portugal?—Yes; they have always done so when I asked for them.

3280. You have been in constant communication with Mr. Hammond and myself have you not?—Yes.

3281. You have always found Mr. Hammond and, I hope, myself, desirous of doing everything we could to promote your objects; have you not?—Always.

3282. As regards the commercial training of our diplomatic servants abroad, do you think it would be possible to give them such a commercial training as would afford them an insight into the details of tariffs and navigation, which are things that could only be thoroughly understood by a man whose life had been devoted to those subjects?—I think it could be done.

3283. How would you propose that it should be done?—I presume that our diplomatists, as attachés, are obliged to go through a schooling, and I would make a part of their education the knowledge of those matters. I would make them read up upon those questions, and make themselves familiar with them in the same way as they are familiar with foreign languages. I say that the one is almost as essential as the other, considering our relations with foreign countries.

3284. Do you think that any of our diplomatists abroad could obtain such a thorough knowledge of commercial and shipping questions as would enable them to speak with authority upon those subjects?—I think he could obtain a knowledge which would enable him to speak with more authority than he now does. I do not not mean to say that the diplomatist would gain that extent of knowledge which a man has who has been trained to these matters through life, but he would gain a knowledge that he does not now possess, and which might at times be very valuable to this country.

3285. Do not you think that a minister abroad would be much more competent to carry on a negotiation, with you, for instance, at his elbow, upon a commercial question, than he would be by himself, however well instructed he might be on commercial matters?—No. According to the old maxim, that a man can always do his own business best, he must work much more efficiently, possessing that knowledge himself, than he could by receiving that knowledge through a second person.

3286. Do you think it possible that any of our diplomatic agents abroad could by any amount of training possess the knowledge that you have upon commercial and shipping matters?—It is not for me to say what knowledge I possess; but I think that he might by training obtain a knowledge which he does not now possess, which would be very valuable to him and to his country.

3287. Do you not think that a general training, making a man informed upon many subjects with which he will have to deal, would be better than such a specific training as you describe?—No, I think not, because the specific training you require has become very limited upon those questions of differential dues. As you are aware, all nations except France, Spain, Portugal, Holland, as regards the East India Company and America, as regards the coasting trade, have abolished all differential duties as affecting English shipping. Consequently, so far as regards the interests of British shipping, our diplomatists would only require to gain a knowledge of the differential dues still levied by those five countries.

3288. You now speak as a shipowner; a merchant would say that a diplomatist ought to be educated so as to deal with questions affecting him; do you not think that it is almost impossible to give any man who has the vast number of duties to perform which a foreign minister has such a specific knowledge of any particular subject, as to enable him to speak with authority upon it. I agree that it is very important to give a man a general knowledge to deal with those subjects when information is given him; but I ask whether you think that the special information could by any amount of training be given him?—The special information that he would require would not be very extensive, because the shipowners' and the merchants' interests are exactly the same upon those questions to which you refer. By the differential duties levied by foreign nations,

nations, the shipowner is prevented from entering a port; by those same differential duties, the merchant is prevented from sending his goods to that port. So that the knowledge required in the one case is exactly the same as the knowledge required in the other; the interests of both are alike and are confined to one particular question. A knowledge of those high differential duties levied by foreign nations, which we desire to remove for our own interest, and which we say those nations ought to remove for their own interest, is the whole commercial knowledge that our diplomatists would require; and I for one must say that I would rather see our diplomatists employed in impressing those great facts upon foreign nations, than employed as they sometimes are.

3289. Will you have the goodness to give your definition of what you mean by "employed as they sometimes are"?—I mean interfering very often with matters in which England has really no interest, matters affecting the Government of the country to which they are attached. They would, I think, be better employed in bringing under the notice of that foreign Government those questions in which we were interested, than in bringing under their notice questions in which we have really little or no interest.

3290. That is a mere matter of opinion, is it not?—That is a mere matter of opinion.

3291. Are you aware whether our agents abroad are constantly employed in endeavouring to impress those very views upon foreign Governments?—I do not know anything specifically. *W. S. Lindsay, Esq., M.P.* 1 July 1864.

3292. Have you ever read any of the reports of our Secretaries of Legation abroad?—I have.

3293. Do you not consider that, as a whole, they show a considerable knowledge of the subjects upon which they write?—They show considerable ability, but less commercial knowledge than they might possess.

3294. Do I understand you to say that you wish that there should be a department in the Foreign Office for dealing with questions of navigation and shipping?—I do not exactly say that; I should like to see in the Foreign Office a greater knowledge than that which the Foreign Office now possesses for dealing with those questions: it might be done by extending the consular department, or in some other way.

3295. Are you acquainted with any of the foreign offices on the Continent?—I am not sufficiently conversant with them to be able to offer an opinion.

3296. You do not know whether such a department as you suggest exists in any of those foreign offices?—I am not aware.

EDMUND HAMMOND, Esq., called in; and further Examined.

3297. Mr. *Layard.*] THERE has been some misunderstanding with regard to the reciprocity treaty negotiated between this country and the United States; can you give any statement to the Committee, founded upon documents at the Foreign Office, to show to the Committee what really took place in those negotiations, and how far the Board of Trade was consulted, and how far the suggestions of the Board of Trade were carried out in the negotiation of that treaty?—Yes. On hearing that the subject had been mooted, I thought that the best way was for me to go through the correspondence for the satisfaction of the Committee; and I drew up the memorandum, which I should like to read to the Committee." The first idea of a convention with the United States, applicable not only to the fisheries but generally to our commercial relations with the United States, seems to have been broached in conversation between Lord Malmesbury and the United States Minister, Mr. Lawrence, in August 1852, and in a despatch to Mr. Crampton, of the 26th of that month, Lord Malmesbury said, that Her Majesty's Government would prefer London as the seat of negotiations, as the question to be discussed involved matters in which both the Secretary of State for the Colonies and the President of the Board of Trade were equally with himself concerned, and their presence at the discussions would be of essential importance to British interests. On the 27th September Mr. Crampton reported that the President preferred that the negotiation should be carried on at Washington, and that in compliance with his request he had informed the President that the principal commercial questions between the two Governments were the reciprocity of trade with the North American Colonies, including the fisheries, the coasting trade, as regarded the voyage from the Eastern States of the United States to California, and the admission of British-built vessels to American registers, when built or purchased by American citizens. This despatch was sent to the Board of Trade on the 13th of October, with a request that they would prepare a statement to be submitted by Mr. Crampton for the consideration of the President of the United States, and another despatch on the same subject was sent to them on the following day. The Colonial Office, to whom a similar reference was made, replied on the 29th of October, but no statement was received from the Board of Trade up to the 15th of the following January, when an instruction was, with the concurrence of the Colonial Office, sent to Mr. Crampton, in reply to a report from him of his communications with the United States Government, and enclosing the draft of a convention, which, with the exception of an article providing for the registration in the United States on the footing of American-built vessels, of vessels built in Great Britain or the British Colonies, related entirely to colonial fisheries and trade. This instruction enclosed an amended draft of a treaty the object of which was stated in the preamble to be to settle questions of fishery, and to regulate the commerce and navigation between their respective territories and people, and more especially between Her Majesty's possessions in North America and the United States. The only article in this draft also bearing on general British interests was one relating to registration of British and colonial-built vessels. The proposed draft, however, was not accepted by the United States, and President Fillmore retiring from office, the question of a treaty between the two countries remained in abeyance. On the 28th March 1853, the statement requested from the Board of Trade on the 13th of October previous, not having yet been supplied, the whole of *E. Hammond,* Esq.

E. Hammond, Esq.

1 July 1864.

of the correspondence with Mr. Crampton since the latter date, was referred to the Board of Trade, with a request that in communication with the Colonial Office they would advise Lord Clarendon as to the course which it might be desirable for Her Majesty's Government to adopt. On the 20th of April the Board of Trade sent a full statement of the various points which they considered should be raised in discussion with the United States, and the Colonial Office, having on the 12th of May signified their concurrence, copies of the letters from both departments were sent to Mr. Crampton on the 20th May 1853, with instructions to shape his language strictly in conformity with the views therein set forth. On the 22d of September, Mr. Crampton's report accompanied with a counter project given him by the Secretary of State of the United States, was sent to the Board of Trade and Colonial Office; and the former on the 18th of November, and the latter on the 23d of November replied that the American proposals were not such as could be properly accepted; Lord Elgin, who was at that time in England, having been shewn the papers, and consulted by the Duke of Newcastle on the subject. In conformity with those opinions a draft of instructions to Mr. Crampton was prepared and forwarded on the 13th January 1854 to the Board of Trade for consideration, and on the 16th they signified their general concurrence in the draft instruction, adding two remarks upon it, and the concurrence of the Colonial Office, having been subsequently obtained, the despatch was sent to Mr. Crampton on the 2d of February. In this despatch the objection entertained to the American proposals having been stated, and the conclusion which had been arrived at, as to the fruitlessness of continuing the negotiations on their present footing, Mr. Crampton was instructed to state that Her Majesty's Government thought it best to suspend for a while the pending negotiations until they could see their way more clearly towards an approximation of the divergent views; but they hoped that the moment of such approximation was not far distant. Only the most material letters in the correspondence between the two offices have been specifically alluded to in this statement; but it appears that between June 1852 and April 1854 no less than 26 letters passed between the Board of Trade and the Foregn Office, 27 between the Admiralty and the Foreign Office, and 94 between the Colonial Office and the Foreign Office on the subject of the American Fisheries and Commercial Convention with the United States. The opportunity for renewing negotiations with the United States appeared to arise when Lord Elgin was returning to Canada in May 1854; and he was accordingly directed to visit Washington on his way, and if he should find a favourable opportunity for renewing the negotiations suspended a short time before, he was empowered to conclude a treaty. He was furnished with the whole of the correspondence with Mr. Crampton, the Board of Trade, and the Colonial Office on the subject. Lord Elgin having found a suitable disposition on the part of the Government of the United States, concluded on the 5th of June a treaty, which, as I am assured by the librarian, is, as far as it goes, strictly in conformity with the suggestions contained in the letters from the Board of Trade and the Colonial Office. The treaty, however, is purely confined to Colonial interests."

3298. Have you prepared a memorandum to show exactly the relative action of the Foreign Office, the Board of Trade, and the Chancellor of the Exchequer, and other departments concerned in the negotiation of the treaty of commerce with Paris?—Yes, "It was arranged between Lord Cowley and M. Thouvenel that the settlement of the details of the tariff should be left to Mr. Cobden and Mr. Rouher with their respective assistants. This arrangement was made, as stated by Mr. Cobden in a letter to me of the 22d September, when the French Government having finished their preliminary inquiries announced their readiness to proceed to the settlement of the tariff. On the 11th of September, Lord Cowley reported that the negotiations between the second plenipotentiaries for the revision of the tariff were so far advanced that the first supplementary convention was ready for signature, and he asked whether he might sign it without reference home, Mr. Cobden being of opinion, that such reference would involve a useless waste of time without any concomitant advantage, and Lord Cowley being himself of opinion that no further modifications could be obtained. This despatch was referred to the Board of Trade on the 12th of September, the day that it was received in London, and their opinion asked on the suggestion, but no opinion seems to have been officially given by them up to the 15th of September, on which day Lord Cowley was informed that Her Majesty's Government would prefer that the draft of supplementary convention should be sent home for consideration before it was signed, in order that it might be seen whether there was any practical difficulty in carrying the provisions of it into effect, although Her Majesty's Government were ready to take for granted that the specific duties of the convention were in conformity with the original duties of the treaty. It may be as well to mention in this place that according to the additional article of June 27, the first supplementary convention was to comprise only iron, steel, machinery, tools, and mechanical instruments. On the 18th September, Lord Cowley sent home the draft as received from Mr. Cobden, having been agreed upon that day by the four plenipotentiaries; but no English version either of the convention or of the tariff was sent over and indeed had not been sent over up to 26th of September, which as regards the tariff was especially necessary in order that the meaning of the French terms might be correctly appreciated. By this draft it appeared that the tariff instead of being an annexe, was to form part of the first article of the convention, and consequently, as the case was submitted to Her Majesty's Government, one could not be dealt with dissociated from the other. The draft was sent on the 19th, as soon as it was received, to the Board of Trade, with a request that no time might be lost in examining its provisions, and in deciding whether Her Majesty's plenipotentiaries might sign it or not. This would have been done at all events, if circumstances admitted, but it was especially necessary to do so in the present case, in as much as by previous agreement the communications between the Government and the British Commissioners had been made over to the Board of Trade, and that department was therefore alone competent to decide whether their views had been carried into effect. On the 21st September the Board of Trade replied that they had with the Treasury given such attention as time permitted to the draft convention,

tion, and the protocols giving a detailed account of what had passed in the conferences at Paris, and that they had come to the conclusion, that they could not express any opinion whatever without much more ample materials than they were in possession of, and without considerable delay; and they, therefore, left it to the Secretary of State to determine whether the convention should be signed on the authority of the Commissioners, so as to admit of its coming into operation on the 1st October (on which date, according to the original treaty, the tariff as regards articles of iron was to take effect), or be delayed for a considerable period. A reply was sent on the same day to the Board of Trade acquainting them that Lord Cowley was on that day told that whatever reliance Her Majesty's Government might justly place on the judgment and sagacity of the British Commissioners, the matters treated of were so important in their bearing on the manufacturing interests of the country, that Her Majesty's Government would not be justified in adhering to the conclusions of the Commissioners without first satisfying themselves by inquiry and examination that those conclusions were correct. Lord Cowley was further told that the Commissioners might, in the mean while, proceed with the remainder of their work, namely, the arrangement of the details of the tariff as affecting other articles besides iron, and send home for consideration the drafts on which they might agree; and having thus completed their work in Paris, the Commissioners would be at liberty to come to England, if their presence should be required to clear up difficulties and remove any doubts which might suggest themselves. The Board of Trade were further told to proceed as quickly as possible with the examination so as to satisfy their own minds as to the chief articles referred to in the convention then before them, and as to the advantage or disadvantage of allowing the convention and tariff to be accepted in their present shape or as to the alterations which it might be desirable to propose. It may be mentioned here, that in a letter, dated the 22d September, Mr. Cobden said that he hoped no vague fear of responsibility would be allowed to delay the acceptance of the French drafts as agreed to after close and serious attention on the part of himself, Mr. Mallet, and Mr. Ogilvie. They were ready to accept all the responsibility of the task. It was obvious, however, that although the Commissioners might be ready to take upon themselves responsibility for what they had done, neither Parliament nor the country would hold Her Majesty's Government irresponsible if the acts of the Commissioners were not acceptable. It is not the person who negotiates, but the Government who accept and sanction this act of the negotiator, who is accountable to Parliament and the country for the result. On the 26th September the Board of Trade stated that they were satisfied that the examination and revision of the Convention would be difficult, useless, and very likely to be mischievous, and giving their reasons for this conclusion, and for declining to undertake the revision of the convention and tariff, they pressed whether the convention should not be adopted without further delay on the authority of the Commissioners. They nevertheless enclosed a memorandum on points raised by the convention, which they thought might be usefully submitted to the Commissioners, though they did not think the points of sufficient importance to justify the rejection, or even the postponement of the convention, if the Commissioners were of opinion that no alteration was necessary or possible. The points adverted to by the Board of Trade occurred in the 1st, 2d, 3d, 4th, 5th, 6th, and 7th articles, and they further observed that no English translation of the tariff or convention had been sent from Paris, and expressed their opinion that a formal and sanctioned translation should be adopted by the Commissioners. On the 26th of September a conference was held at Paris, a short report of which was sent by telegraph on that day, though the detailed account was not received till the 28th, between Lord Cowley and Mr. Cobden on one side, and M. Thouvenel and M. Rouher on the other, in which was discussed the course that should be taken, seeing it was improbable that the convention should be signed, so as to admit of the tariff coming into operation on the 1st of October; and M. Thouvenel suggested that a protocol should be signed, or notes exchanged, setting forth that in order to give time for Her Majesty's Government to accept the convention and tariff, the lengthened discussion on which in Paris had prevented its being submitted to Her Majesty's Government until very lately, it had been agreed to extend the period for promulgating the tariff for a time, to be fixed by Her Majesty's Government. The Board of Trade too, on the 27th, wrote that they understood from the Commissioners at Paris that the French Government would not object to postpone for consideration the articles of the convention objected to, provided the tariff could be brought into operation on the 1st of October; and they pressed that instructions should be immediately sent to Lord Cowley to sign the convention, on the understanding that the 4th, 5th, 6th, and 7th articles, the only articles which appeared open to any substantial objection, should be referred for further consideration. Lord Cowley was accordingly informed by telegraph, on the 27th, that the tariff would be accepted as sent over, but that the Convention required alteration. This instruction had been already sent off, when a telegram was received from Mr. Cobden, dated also the 27th, and saying that any part of the text of the Convention which might lead to controversy, or cause delay, might be omitted, and I had previously received from Mr. Cobden a letter dated the 26th (in reply to an explanatory letter from myself, of the previous day, having reference to the necessity of the opinion of the Board of Trade being obtained before the Foreign Office would sanction the Convention), and begging me to understand that he was not advocating the principle of signing treaties, the text of which had not been verbally criticised at home; that he had from the first moment drawn a distinction between the text of the treaty and tariff, which was a sort of schedule or appendix [the tariff however was originally to form part of the first article of the treaty], and that it was the tariff alone that he contended ought to be accepted on the authority of those who had been sent by the Board of Trade and the Customs to assist at its arrangement. The telegram to Lord Cowley, of the 27th, above referred to, was expanded in despatches, bearing date the 28th of September, which stated that the tariff was accepted, but that on account of the objection stated by the Board of Trade to the 4th, 5th, 6th, and 7th Articles of the Draft Convention, that Convention could not be accepted in its present shape. The main objec-

E. Hammond, Esq.

1 July 1864.

tions turned on the opening afforded to the French Government for arbitrarily increasing the duty on refined sugar, on the manner in which the umpire was to be named to decide differences of opinion as regards the value of goods, and the fine for undervaluation; and objections were also entertained to the extent of power given to French consuls, in regard to certificates of origin. An amended Draft of Convention was sent to Lord Cowley, but he was told that if the French objected to it, he might sign such a protocol as had been suggested by M. Thouvenel. Copies of the despatches to Lord Cowley were sent to the Board of Trade on the 29th of September, and they were told that whether the French Government agreed to sign the Convention with the omission of the fourth, fifth, sixth, and seventh articles, but with an understanding that those articles were to form matter for more deliberate discussion between the two Governments, or preferred to allow the Convention to stand over altogether till the points in dispute could be settled, it would be necessary to inform the British plenipotentiaries of the nature of the modification required by Her Majesty's Government, and the Board of Trade were accordingly requested to say in what manner they wished the articles to be amended. On the 29th of September Lord Cowley reported that Mr. Cobden dissented from the views expressed by Her Majesty's Government on the articles objected to, and would communicate with the Board of Trade with the view of removing the objections felt by that department. In order, however, to prevent any inconvenience from delay, it was determined that the plenipotentiaries should confine themselves to affixing their signatures to that part of the tariff which related to iron, so that it might come into operation on the 1st of October; and as no *ad valorem* duties would be involved in it, the difficulty respecting experts and umpires would not arise. On the 1st of October the Board of Trade sent to the Foreign Office an amended draft of convention, repeating, however, their opinion, expressed on the 26th of September: that as it was of the utmost importance to get the tariff accepted and brought into operation at once, if the French Government should refuse to adopt all or any of the proposed amendments, the plenipotentiaries should be at once instructed to sign the draft convention as originally proposed, rather than endanger or postpone the tariff. The amendments suggested by the Board of Trade applied to seven of the original articles, and proposed two new ones. On the 3d of October, in anticipation of the French Government objecting to sign a convention in which the fourth, fifth, sixth, and seventh articles of the original draft were omitted, an amended draft of convention was sent to Lord Cowley. This draft first made the tariff an annexe to the convention, instead of embodying it in the 1st article; 2d, defined more clearly the part to be taken by French consuls in regard to certificates of origin and value; 3d, provided for estimating the manner in which duties on warehoused goods should be levied; 4th, omitted the proposed penalty for undervaluation; 5th, improved the mode of appointing umpires; 6th, provided for the cost of arbitration; 7th, provided against arbitrary duties being raised on refined sugar. Lord Cowley was instructed to bring these points under the early consideration of the French Government, in the event of a convention not being already concluded, the object of Her Majesty's Government being to make the arrangements so clear and precise as not to leave room for any doubt or discussion hereafter; but while Her Majesty's Government were as anxious as that of France to arrive at a satisfactory conclusion, such conclusion must nevertheless be as satisfactory to the British as to the French Government. On the 4th of October Lord Cowley reported that the French plenipotentiaries had immediately accepted the minor alterations and additional articles proposed by Her Majesty's Government, but would not accede to the proposed restriction of the powers of French consuls. They made some difficulty about the sugar article; and the arrangement about umpires could not be placed on the footing most desired by Her Majesty's Government. On the 5th Lord Cowley was apprised by telegraph, and also by despatch, that Her Majesty's Government agreed to accept the French proposals as to the consular interference; would accept the proposed modification about umpires under a condition, which, however, was eventually not insisted upon; and preferred that the article respecting refined sugar should be wholly omitted. The several points in the convention were discussed and settled in Paris on the 8th of October, and reported by Lord Cowley in a despatch dated the 10th. The assent of Her Majesty's Government was signified the same evening, accompanied with some suggestions for slight verbal alterations; and the Convention was signed on the 12th, a few verbal alterations being made in Paris with the view of rendering the sense more clear, and bringing the French and English texts into greater harmony. It is clear from this statement that it cannot justly be imputed to the Foreign Office that it alone interposed difficulties to the conclusion of the supplementary Convention. Its action in the matter was principally ministerial, with the view of enforcing and carrying out objections entertained by those most competent to form a correct opinion as to what should be done. I find by a report I made to Lord Russell on the 27th of September that, equally with the Board of Trade, Lord Palmerston, although agreeing to the tariff, objected to three articles of the Convention, while the Board of Trade objected also to a fourth, and Mr. Gladstone and Mr. Laing continued to urge their objections to the penalty proposed to be levied for undervaluation. On the other hand I find, in a letter which I wrote to Mr. Cobden on the 25th of September, the assurance that, "as soon as the Board of Trade have made up their minds, and their conclusions are accepted by Lord Palmerston, no delay shall take place in this (the Foreign) Office in apprising Lord Cowley and yourself of the course the Government decide to take, and no delay shall take place here in the formal part of preparing ratifications when the convention is signed and sent home."

3299. The Chambers of Commerce, from the evidence of the chairmen who have been examined before this Committee, would seem to wish that the Foreign Office should act at once upon their representations; has Mr. Cobden, in a letter, expressed a different opinion?—I have here a letter from Mr. Cobden, which was officially communicated to us by the Board of Trade, so that I may, of course, use it; the letter related to a question, which was submitted to us by the Huddersfield Chamber of Commerce. I will only read the part that applies to this subject; it is a letter dated the 16th July 1863: "As a general

general rule, I should say that recommendations emanating publicly from our own commercial bodies must afford very disadvantageous grounds for the Foreign Office in attempting to move other Governments to reduce their tariffs. I can understand that our diplomatists abroad might, in a quiet way, by keeping Foreign Governments well informed of the benefit which a free-trade policy has conferred, not only on the prosperity of our people but (what is still more precious to rulers) on the interests of the public revenue, induce them from motives of self-interest to follow our example; but from the moment that it is known that our diplomacy is set in motion by our Chambers of Commerce to urge a reduction in the tariffs of other countries, it places Foreign Governments, which are generally more enlightened and disinterested on economical questions than their people, in the disadvantageous position of appearing to move under foreign influence for the benefit of aliens; and thus the most seductive arguments are furnished to the protectionists, who can appeal to the prejudices and even the patriotism of the public in defence of what they call the rights of native industry. I have, whenever an opportunity has offered, expressed these views to the members of our Chambers of Commerce."

3300. Did not that letter relate to a memorial from the Huddersfield Chamber of Commerce, seeking a reduction of duties upon woollen goods?—Yes.

3301. Can you state what took place upon that memorial, in order to illustrate how a case of that kind would be dealt with by the Foreign Office in connection with the Board of Trade?—The case was this: a memorial was sent from Huddersfield, seeking a reduction of duties upon woollen goods. That memorial was received at the Foreign Office on the 15th of May 1863; it was referred to the Board of Trade on the 21st, who answered on the 1st of June. Lord Cowley was instructed on the 4th of June, and he applied to the French Government on the 6th of June; their answer was dated the 29th of June, and was sent home by Lord Cowley on the 1st of July, and communicated to the Board of Trade and to Huddersfield on the same day, the 6th of July. I mention this to illustrate the fact, that the delay in deciding a point rests very often with a foreign government, and not with the Foreign Office.

3302. In that instance there was some little delay; can you mention another case; for instance, that of the sewing-machines, in which that which the parties asked for was obtained at once, or within a short time?—Yes; a collateral point with reference to the sewing-machines was raised the other day. Messrs. Pitts wrote to us in great alarm, to say that they understood that the Custom-house at Boulogne was going to confiscate their sewing-machines, or take some prejudicial action against them. We received that letter on the 18th of June, last month, and it was sent off that very evening to Lord Cowley, with instructions to see what he could do in the matter. On the 20th Lord Cowley reported that he had obtained a suspension of the proceedings, and we communicated with the parties on the 21st. I mention this in justice to the French department, either the Foreign Office or whatever it may be, to show that sometimes they move quickly.

3303. Mr. Mallet, in answer to Question 2683, suggests that the matter referred to there (I think it was with regard to the fluid magnesia, mentioned by Mr. Cobden), might be disposed of by private correspondence alone; do you think it is, in general, advisable to settle matters of that kind by private correspondence without having what takes place put upon record in the office?—I have a very great objection to any private correspondence of that kind upon official matters; it is necessary that such communications should remain upon record in the office. I speak of the general principle; I think that it is very inconvenient to attempt to deal with a matter which involves an official communication with a foreign government by private correspondence; the communications ought to be official so that they may be upon record hereafter. A question may be easily disposed of at the moment, but a similar question may arise years afterwards; and if there is no record kept of what has passed in regard to the first, you may be very much perplexed in dealing with the second.

E. Hammond, Esq.
1 July 1864.

3304. Have you endeavoured to ascertain from Lord Cowley whether the way of transacting business at Paris between the foreign ministers and the Foreign Office and other departments of the French Government is nearly the same as that which takes place in this country; can you give the Committee any information upon that subject?—Yes; I made the inquiry of Lord Cowley, and I received a letter from Lord Cowley upon that particular point this morning. I knew the fact from a conversation I had with Lord Cowley, but I thought it would be more satisfactory to the Committee if I asked him directly, and obtained the information direct from him. His statement is to this effect: The Minister of Commerce very seldom communicates directly with Lord Cowley; formerly it was different, but that was quite exceptional, and the practice would not have been sanctioned by the Minister for Foreign Affairs if he had been aware of it. Even as regards the admission of English students to the veterinary college at Alfort, Lord Cowley has been told that his application should go through the Foreign Office, and not directly through the Minister of Public Instruction; all official communications, of whatever nature they may be and whatever department they may regard, must be addressed to the Foreign Department.

3305. Therefore, according to the information that you have received, the mode of carrying on business at Paris is the same as that which takes place in this country?—Just the same.

3306. Is not the department in the French Foreign Office, which is called the Commercial Department, in fact, similar to our Consular Department in the Foreign Office?—I apprehend that it has more extensive functions; it would resemble our Consular and Treaty Departments combined, you may say, because in the French Commercial Department they draw up commercial treaties, and they likewise manage the telegraphs. I am not sure whether they do not also manage the railroads; they manage the telegraphs, certainly.

3307. They are not competent to give an opinion about matters of commerce without referring to the Minister of Commerce, are they?—No; they act in constant concert with the Minister of Commerce; that was the information I obtained from Paris.

3308. Mr. Cobden, in Questions No. 2667 and

E. Hammond, Esq.

1 July 1864.

2671, says that the Foreign Office "avows and confesses its ignorance with regard to questions of commercial policy;" have you ever stated anything which would lead the Committee to believe that you avow or confess that the office is ignorant with regard to questions of commercial policy?—I certainly did not mean to convey that impression to the Committee; what I meant to convey was, that we could not deal with the details of commercial policy. All drafts of commercial treaties drawn up in the Foreign Office, in my division, are submitted to me, and I alter them whenever I think necessary; and the same is the case in regard to Mr. Layard's division. I consider myself competent to deal with the drafts of all treaties; but as to the details of the tariffs, I admit my inability, and the inability of the Foreign Office generally, to do so. With respect to the treaties by which validity is given to the tariffs, I think I am perfectly competent to deal with them. No treaty goes through the Foreign Office relating to my Department (and probably Mr. Layard would say the same thing) which I do not go through, article by article, and alter, if necessary. There was a draft treaty the other day under consideration, not with a very important State, certainly, with Madagascar; but there were certain things that I saw which I considered objectionable, and those I struck out, after consideration; I had them altered because I thought them impolitic.

3309. What I may deduce from your evidence is this, that as regards questions of tariff, that is to say, questions altogether connected with matters of trade, such as the value of goods, the amount of duty to be placed upon goods, and similar questions of detail, the Foreign Office can have no knowledge; but that as regards our general commercial policy, the Foreign Office is as well able to judge as any other Department in the State?—Certainly; both of the policy as to the time, and the policy as to the manner in which the treaties are to be negotiated.

3310. All that you say is that the Foreign Office would not admit that they can have any responsibility in dealing with the mere details of a tariff?—Exactly; we certainly should not.

3311. Mr. Mallet, in answer to Question 2644, suggested that although the Board of Trade might communicate with our Ministers abroad and with the Foreign Ministers in this country, their communications should pass through the Foreign Office, who should stop them if necessary; is there any practical difference between that system and the present state of things?—No, I do not see that there is; if we are to judge of the letters addressed by the Board of Trade to the consuls, I do not see any difference between that system and our sending letters ourselves to the consuls; we should have to consider and take copies of the letters of the Board of Trade, and there would be no saving of time. It scarcely applies to the consuls, however, because, if you write to the consuls, it is merely to send you information. A consul has no action with a foreign Government to which any instruction emanating either from the Foreign Office or from the Board of Trade would apply; he has no means of acting; but if you wanted information, you would desire the consul to send it home; the object that you would write to a consul for would be, to furnish you with information.

3312. Do the observations which you have made apply also to communication with the diplomatic servants of the Crown?—Yes, certainly, in just the same way.

3313. Mr. *Seymour Fitzgerald.*] In reference to the answer you gave just now, namely, that the consuls could take no action, and that the only communication which could pass between the Board of Trade and a consul would be with the view of obtaining information, what would be your objection to having a direct communication between the Board of Trade and the consuls, merely for the purpose of obtaining information?—Simply because the object to be attained is not commensurate with the inconvenience which would result from having the consuls corresponding with two Departments.

3314. How would it be a correspondence with two Departments?—If the consuls were to correspond with the Board of Trade in reference to this mere commercial information, and to correspond with us upon all other points connected with our commercial duties, they would then be corresponding with two Departments. I do not think the advantage of merely transmitting to the Board of Trade direct commercial information, while the consuls continued to correspond with us upon all other matters connected with their duties, would be worth the while of having the inconvenience of the consuls being subject, you may say, to the directions of two Departments.

3315. If the correspondence were such as you indicated in your answer just now, namely, a correspondence with the view of obtaining information only, what is the practical inconvenience which would be felt from the consuls so corresponding with two Departments, with the one giving information upon commercial subjects, and with the other carrying out instructions, or giving information upon political questions?—I must answer that by asking another question; what good would there be in it? I can see no good myself.

3316. Is not there, practically, a delay more or less caused by the communication between the Board of Trade and the Foreign Office, which would be saved by direct communication from the Board of Trade to the consuls?—After all, supposing there was a delay of 24 or 48 hours, the communication to the Board of Trade of commercial information is, perhaps, not of that very urgent importance in ordinary cases. For example, whether so many ships have come in and so many ships have gone out, whether there have been so many tons of goods imported or not, is not of such very urgent importance as to make the delay of a few hours objectionable. If the Board of Trade want any information from us immediately, there is no delay. If I had received this morning, when I went to the office at half-past 12, a letter from the Board of Trade, saying they wanted from the consul at Cadiz such and such a piece of information at once, I should not have stopped to write a letter, but I should have telegraphed to him immediately, and I should probably have received the information this evening or to-morrow morning. If, however, no telegram was required, I should have found a letter ready for my signature when I got back to the office. It is quite a bugbear to suppose that there is any practical inconvenience in the delay which occurs. Let me say that if any Department or individual (for I do not limit it to a Department) wants to put us in motion, and wishes us to obtain information for them quickly, it is done on the spur of the moment; the

the paper does not leave my hands, if I have opened it, without an order for it to be acted upon instantly.

3317. My later questions to you have replied to your questions to me, but you have not yet replied to my question, What is the inconvenience of a consul communicating information upon details directly to the Board of Trade?—I think it is an inconvenience generally, that one public servant should be corresponding with two Departments.

3318. In what respect?—It is a practical inconvenience which it is very difficult to define exactly. We ought to know exactly in the Department what our consuls are doing; they ought to do nothing without our knowledge. It is very hard to define or explain what the inconvenience is, but we who are working the Department feel it.

3319. Mr. *Layard.*] It has been suggested to the Committee that the consuls and our diplomatic agents abroad might communicate with the Board of Trade, and the Board of Trade with them, under flying seal; do you see any objection to such a system?—There would be nothing gained by it if letters are to be sent under flying seal to us, and if we are to pass judgment whether we shall allow those letters to go forward or not. If those letters contained anything of the least consequence they would have to go in their regular course, as a letter from the Board of Trade would have gone, directly to the Secretary of State. If it were a mere matter of getting information upon a commercial detail, I should of course not send that to the Secretary of State.

3320. Lord Malmesbury has suggested to the Committee that there might be established a distinct class of communications from our diplomatic agents and from our consuls, docketed "Commercial," so as to separate the commercial correspondence altogether from the political; have you any objection to such a system?—I have not the least objection to our consuls or anybody else docketing the despatches "Commercial" or "Political" generally. We do that in some respects with some of our eastern consuls; the commercial part goes into the Consular Department, and the political part goes into the Political Department, as political correspondence. But then I should say that the consuls in the East are more or less political agents; and the system therefore applies only to some of our consuls; but, even limited as it is, we find that it very often puzzles the consuls; they constantly write upon commercial subjects in their political despatches, and upon political subjects in their commercial despatches; then the correspondence of that particular consul gets into confusion in the office.

3321. At the present moment, then, there is that system prevailing to some extent in the office?—At the present moment there is that system as regards the Eastern consuls and some others; there are exceptions. Mr. Perry, at Venice, I believe, divides his correspondence.

3322. In fact, those consuls who have political functions do make a distinction now, and docket the despatches "Political" and "Commercial?"—They docket them "Political;" they do not put "Commercial" on the outside; everything that is not marked "Political" goes into the Consular Department.

3323. Do you see any objection to that system being extended to all diplomatic servants and consuls?—I confess I would rather not encourage the consuls to write what we call political despatches, because they would immediately think themselves political agents, and we should very quickly get into hot water all over the world.

3324. Lord Malmesbury's suggestion was founded upon this: he thought that if despatches were thus docketed, the Under Secretaries would have no difficulty in the morning, when they received the despatches, in putting aside at once those which were docketed "Commercial," to send them on to the Board of Trade, before sending them to the Secretary of State; that then the Board of Trade would be able to make remarks or suggestions upon those despatches, so that they would go to the Foreign Secretary with those suggestions, and thus save the double process of going first to the Secretary of State, then to the Board of Trade, and then returning to the Secretary of State?—I should very much object to sending out a despatch containing any valuable information to the Board of Trade, without the Seretary of State seeing it; because, if we were to send it to the Board of Trade before the Secretary of State saw it, in the hope of getting remarks from them, they might not see occasion to remark upon it, or perhaps they might delay making remarks upon it (I am not imputing any blame to them), because they might wish to make inquiries upon it, and it might be some time, perhaps weeks or months, before it came back to the Foreign Office. Therefore, there might be a despatch from one of Her Majesty's Ministers coming into the Foreign Office, of which the Secretary of State would have no cognizance until it came back from the Board of Trade, whenever that might be. I do not think that a good arrangement.

3325. You do not think it would save time?—In one way it might; but it would be a very injurious thing for the general work of the Government, as connected with the Foreign Office. I cannot conceive anything more injurious than a system like that which would pass the Secretary of State by. Even now, when Lord Russell has been a great deal occupied with those conferences, and I have often taken upon myself to pass things on without submitting them first to him, I always find it necessary to tell his Lordship of them, that he may be perfectly aware of them.

3326. That is done by both of us, is it not?—Yes; that is done by both of us, with a view to expedite business.

3327. Lord Malmesbury stated it as an objection to the present system, that the Under Secretary has to read the despatches when they are received, which takes some time; that then they are sent on to the Secretary of State, who sends them back to the Under Secretaries, and thus three or four days are lost. Is it not the case at present with regard to yourself, and myself also, that we generally send all the despatches on in the morning, by ten o'clock, to Lord Russell, and get them back from him by one or two o'clock, and then any despatches which ought to go to the Board of Trade, would go either that evening, or early the next morning?—If there were anything urgent for the Board of Trade, it would probably be there before the Board of Trade closed that afternoon; of course, if a matter is not of great importance, there may be other things of more importance, and it takes its course with the rest of the business of the De-

E. Hammond, Esq.
1 July 1864.

partment. But anything that required their decision immediately, would be sent at once to the Board of Trade, as would also anything of immediate interest. I may mention as an illustration, that last Sunday there came to me, at my own house, between one and half-past one, a telegram, which I saw would interest the Board of Trade very much, announcing the intention of the Danish Government, as regards the blockade. I had no clerk with me, but I sat down and wrote a letter, and sent it off by two o'clock. This morning a telegram came in, and when I got to the office I found a note from Mr. Layard saying, "Pray look after that." I asked what had been done with it, and I found that it had gone to the Board of Trade already. I think that shows that a thing requiring immediate attention is despatched promptly.

3328. Mr. Mallet stated, in his answer to Question 2457, "The Foreign Office has, on being asked the question, expressed a wish that as a rule we" (the Board of Trade) "should not make public any information which may reach us in any other way, except through them; and, as a rule, we observe that principle." Are you aware that any such intimation has been given by the Foreign Office to the Board of Trade?—I have made every possible inquiry I can, and I can find nothing of the kind; but I think I may explain it. In fact, the only thing we have of the kind, is an objection raised by the Board of Trade itself to publishing things of this sort. The Board of Trade, in March last, asked us about the publication of some decree, with respect to Spanish wool, which had appeared in the "Moniteur." They stated to us that, in the opinion of the Board of Trade, "the decree in question ought to be made public in this country, without further delay, if it has been received from Her Majesty's Minister at Madrid." Therefore implying that their opinion was, that though this appeared in the "Moniteur," it ought not to be published unless it had been received through the diplomatic channel. I should be glad to explain the matter, because it involves the principle which has been raised in this Committee. The Board of Trade, in April, sent us a communication, which had been made to that Department by the Russian Consul General, stating that, with the concurrence of Earl Russell, they proposed to notify it in the "Gazette." Our answer to that was, that "no report has been received from Her Majesty's Ambassador at St. Petersburg, as to the establishment of a Custom-house at Sebastopol," and that Earl Russell was of opinion "that it would not be advisable for the Board of Trade to publish any communication from a foreign agent, unless it is transmitted through this office in accordance with the established custom." The Board of Trade replied upon that, on the 19th of April, by sending another communication from the Russian Consul General, and in that letter they stated, "With reference to Lord Russell's suggestion, as to withholding from publication information derived from foreign agencies, other than communicated direct to this Board by the Foreign Office, my Lords are desirous to recall Lord Russell's notice to the existing practice of this department, of inserting in the 'Gazette' for the guidance of the mercantile body, such decrees and laws affecting trade, issued or passed by foreign Governments, as they find in the official gazettes of those Governments, before they have been received through the Foreign Office, or which have not been furnished by that department to this Board. In the event of his Lordship considering this practice objectionable, and that such publication should await the arrival of intelligence through diplomatic channels, my Lords would suggest that this Board should receive from the Foreign Office, official notice of such commercial laws, with as much promptitude and punctuality as possible, in order to ensure to the commercial community in this country, the earliest information as to matters affecting their interests abroad." In that letter the Board of Trade stated what they would do if we did not object to it. In the answer to that letter, we renewed our objection to the publication of anything received from a foreign agent, except through the Foreign Office; but we neither assented to nor dissented from their publishing anything from the "Moniteur." If the Board of Trade have any doubt about what we meant to say, a letter shall be written to them at once, saying that they may publish anything they find in the "Moniteur," but not information derived from a foreign agent, because it is clearly understood that no foreign agent has a right to, or can properly communicate with, the British Government, except through the Foreign Office. In this particular instance it was greatly irregular, and I have spoken about it, and the Foreign Minister to whom I spoke being the superior of the gentleman who made the communication to the Board of Trade, entirely concurred in my view, that it was not right that any subordinate agent of a foreign Government, should make a communication to the British Government, unless through the regular diplomatic agent of his court, who would make it to the Foreign Office. If we were to admit the consuls of foreign Powers to communicate with the Foreign Office, except through the diplomatic agents, we should get into all sorts of confusion and trouble.

3329. It has been stated to the Committee that a report upon the trade of Zanzibar was not published by the Foreign Office until two years after it had been received, whereas an extract from that report had been published in the Slave Trade Papers presented to Parliament by the Foreign Office; can you explain to the Committee how that omission took place, if it were an omission?—The fact was, that that report was not addressed to the Foreign Office at all; it was addressed to the India Office, and sent in copy by the Secretary of State for India to the Foreign Office; then it got into the Slave Trade Department; the Slave Trade Department naturally only looks to what concerns itself, and they took notice of that part which referred to slavery, and did not send it into the other departments of the office. That is rather an illustration of the objection which I raised to having any separate departments. If it had gone in as a consular paper to the Consular Department, they would have disposed of it by sending the commercial part to the Board of Trade, and the slave trade portion to the Slave Trade Blue Book.

3330. The consul at Zanzibar is a consul appointed by the East India Government, and paid by the East India Government, and is not under the Foreign Office in any way?—I do not even know whether we correspond with him; he is in our list, but he is not our servant.

3331. We correspond with him only upon slave

slave trade matters?—That may be; he is not our servant.

3332. Therefore the omission to publish his report was from no want of attention upon the part of the Foreign Office?—No; I do not know whether what I have here is, strictly speaking, evidence, but I have been enquiring a good deal about the matter, and this is what the head of the Slave Trade Department tells me about it. "Colonel Rigby's Report of 1st May 1860, upon the trade of Zanzibar (addressed to the Secretary of State for India), was communicated to the Slave Trade Department, because there were several matters connected with slave traffic mixed up in it. I had the whole of the report printed, but only those parts of it which were connected with the slave trade were given to Parliament with the Slave Trade Papers. I cannot say how the papers were communicated to the Board of Trade, for I cannot find any trace of a letter to that department sending the report, either in the Consular or Slave Trade Departments. My impression, however, is that the report was sent in the first instance, in original, to the Board of Trade from the Consular Department, and I have a perfect recollection of having myself given one or more copies of the report in print to a gentleman from the Board of Trade, who applied for it. A second application was made (if I mistake not) to me for further printed copies, which I was unable to furnish."

3333. Is it not the fact that the India Office ought to have communicated that despatch to the Board of Trade, and not to the Foreign Office?—Certainly; as a rule we do not consider ourselves bound to communicate to one office information we have received from another office. We consider that the Colonial Office, if they have information that interests the Foreign Office and the Admiralty, will send copies to both offices; it is our practice to do so, and I believe it is the practice of other offices. As a general rule, we do not think it any part of our business to send copies to the Admiralty of a letter received by us from the Colonial Office, the Colonial Office would do that themselves.

3334. In answer to Question 2732, Mr. Mallet has given a list of the consulates from which no commercial reports have been published, I suppose for last year, but he did not state for what period; can you explain to the Committee how that came to pass?—No; certainly it appears that a great number of those consuls have not reported; some have sent home their shipping returns in detail. At a good many places mentioned in that list there were vacancies; in some places the consuls were absent on leave; some are rather political than commercial agents, and do not generally report. I might state, perhaps, to the Committee, that we have only recently had occasion to look very closely to the omission of consuls sending home reports, because we have only recently undertaken the publication of the consular reports for Parliament. When we send our next volume out, which will be probably in about a month hence, to the consuls, containing the monthly collection of reports, we shall accompany it with an intimation that some of the consuls have not reported, and beg that more attention may be paid in future to doing so. There may be various causes; in some places they may not have anything to report, although that does not excuse them for not saying that they have nothing to report.

3335. I believe all these consulates and a good many more, have made full reports upon cotton, which have been sent to the Cotton Association?—That is true of all the consulates in cotton-growing countries. I will not be quite certain whether we did not in 1857 send a general circular to all the consuls; but since that we have confined our communications to cotton-growing countries, as far as regards that point.

3336. You do not happen to know how many reports we have received upon cotton, do you?—No, we are receiving them every day; as we receive them they go regularly to the Cotton Association, and the Cotton Association express themselves very grateful for the assistance we give them. We give them all the assistance we can; we feel as much interest in it as they do themselves.

3337. Mr. Behrens has stated that the consul at Paris has been done away with, and that his business has been handed over to the librarian at the Embassy; is that the case?—The consul at Paris still exists; Mr. Pickford is there, and has been there for 30 or 40 years.

3338. What do you suppose Mr. Behren's statement was founded upon?—It was a misapprehension, certainly.

3339. There has been, I think, a plan proposed for changing the present consular establishment at Paris?—Yes; it is not considered necessary to keep a consul at Paris, and some years ago it was thought that as we had a permanent officer there, in the way of a librarian (the present librarian is acting as Lord Cowley's private secretary, but he will, if Lord Cowley retires, eventually be only the librarian), that such duties as attestation, and so on, could be executed by the librarian, instead of charging the country with the expense of a consul at Paris.

3340. There is no necessity, in fact, for a consul at Paris?—We consider there is no necessity for a consul at Paris; Mr. Pickford's salary is 100*l.* a year, besides the fees; he has been a long time in the public service, and if we were to retire him now, it would be rather a hardship upon him, because we could only give him his superannuation upon a proportion of 100*l.* a year, which would be about 60*l.*, and he is an old man, I believe, of about 70 years of age.

3341. What is the rule of the Foreign Office as to the time of publishing the consular and the secretaries' commercial reports?—The rule is to publish them at the close of the Session; for instance, every report which came in from consuls up to yesterday will be laid before Parliament at its close, in fact, as soon now as they can be printed; a great portion of the Consular Reports are printed, and will be laid before Parliament as soon as we can get the rest set up in type, and can look through them; and the same with the secretaries' reports; everything received up to the 30th of June will be published at the same time; a great part of them are already revised, and in the printer's hands, and as soon as the rest have been set up, and I have had time to look through them, they will be distributed to Parliament, and to the Chambers of Commerce.

3342. You have heard the testimony which Mr. Lindsay has borne before the Committee to the good departmental arrangements of the Foreign Office, have you ever received a similar testimony

E. Hammond, Esq.

1 July 1864.

timony from any of the foreign agents in this country who have had an opportunity of communicating with the Foreign Office?—I mentioned one the other day, and I received another from the same person two days ago. I took down the expression, because I thought it was fair to the Foreign Office that it should be known; it was from Baron Brunnow; of course any one who knows Baron Brunnow knows from his previous experience that he is one of the best judges of what a Foreign Office can or cannot do. His words were, "I am perfectly astonished at the perfection of the work completed by the Foreign Office in so short a time." That only instances the organization of the department; but it is fair that I should explain what that remark applied to: it referred to the long annexe to the last protocol of the Conferences, the first portion of which Baron Brunnow brought to me between two and three o'clock in the afternoon of Friday; he sent me the second portion not much before six that evening. At 11 o'clock that night it was clearly printed off and sent to the Under Secretaries, and to such of the foreign Ministers as required it. Although that was done, you may say, by mechanical process, yet it required great organization in the office to manage it. It was necessary also, in order to lay it before Parliament to have it all translated; I did not get it from Baron Brunnow as a perfect paper till about one o'clock the next day, and it was not in print till Monday, because of Sunday intervening; the original French, previously to its being presented to Parliament, had to be re-set entirely in new form, and yet it was all ready to be distributed with the rest of the protocols on the morning of the Tuesday, the protocol itself not having been finally settled and signed till two o'clock on the Monday. I think I may say it required a good deal of organization on the part of the Department to manage that, and that we deserved Baron Brunnow's enconium.

3343. *Chairman.*] In the early part of your examination to-day, you quoted a letter from Mr. Cobden with regard to the disadvantage of public communications to the Foreign Office, expressing the wishes of the manufacturers; I suppose you are aware that an opinion similar to that was expressed in a memorial that was sent in by the Association of Chambers of Commerce to the Foreign Office in February of this year?—Yes, I have no doubt, if you have the paper before you, it was so; I do not remember it.

3344. The memorial says: "The present movement throughout the Continent of Europe towards free trade (consequent on the reduction of its tariff by the French Government) makes it especially necessary that our Government should give constant and unremitting attention to all questions connected with foreign tariffs (especially to any changes that may be contemplated in them), and should be ready to take prompt action on information obtained: while at the same time it makes it especially undesirable that English manufacturers should find themselves compelled, by want of such prompt action, to make in Parliament, or through the press, such public expression of their wishes as tends to their defeat, by alarming manufacturers abroad:" are you aware that one great reason why the mercantile community think that there ought to be a better arrangement between the two offices is, that they are compelled to that publication of their wishes, which they feel is an injury, by the defects of the present arrangement?—I do not know why a thing is more public if it goes to the Board of Trade, than if it goes to the Foreign Office; both Departments are equally confidential.

3345. Are you aware that there is a general concurrence of opinion in the mercantile body in accordance with the letter of Mr. Cobden, that it is a disadvantage that there should be public action, and that one reason why they were anxious for this Committee was, that they hoped there will be a removal of the necessity in future for such publication?—I am aware of the statement; how far the statement is a sensible one, is quite another thing.

3346. I understood you to say in reply to Mr. Layard, that you have ascertained that the mode of carrying on the commercial business at the Foreign Office in Paris, was similar to the mode in which it is carried on by your office?—What I said was that they were in constant communication upon all matters with their Board of Trade. I did not say that there was not a commercial branch in the Foreign Office; what I believe I said in my former evidence, and what I am ready to repeat now, is that they do not decide upon any general commercial question without communication with the Board of Trade; they are constantly in communication with their Board of Trade; I mean by their Board of Trade, the Ministry of Commerce.

3347. I understood you to give an answer with regard to their carrying on business in the same way as your office does to the effect that they have the same arrangements in regard to communication with a foreign Minister, requiring, for instance, that our Minister in Paris should be only in communication with the Foreign Office, as you do here?—Yes; I say so on the authority of Lord Cowley, and I think I could have no better authority.

3348. I am not to understand that you meant your answer to say that they have any regulation in their Foreign Office which prevents the Ministry of Commerce corresponding with the consuls, or diplomatic agents?—The Ministry of Commerce does not correspond with their diplomatic agents, nor with their consuls.

3349. Are you sure of that?—I have a letter here which authorises me to make that statement. The French Foreign Office is alone authorised to correspond directly with French diplomatic agents abroad, or with foreign representatives accredited in France. In all questions, whether commercial or not, which involve the necessity of communicating with a foreign power, even if it be only for the purpose of obtaining some simple piece of information, the Ministry of Commerce, as well as every other Department of the Administration, is obliged to have recourse to the Foreign Office, which decides whether such communication is advisable or expedient. One Department alone, the Ministry of Marine, has the power of corresponding directly with the agents of the French Government abroad on the subject of certain special matters which concern the merchant service, such as questions of salvage, compensation for damages, payment of seamen's wages, &c."

3350. Am I to understand from that, that you give it as your belief that the French Office does not correspond with the French consuls or with the French diplomatic body upon matters connected

nected with trade?—Yes, certainly; this is, I may say, information that we have obtained from our Embassy at Paris: "There is in the French Foreign Office a Department specially charged with matters of trade. This department is called 'La Direction des Consulats et Affaires Commerciales,' and is divided into three sub-departments (sous-directions), namely, first, The sub-direction for the south and the east; second, The sub-direction for the north; and third, The sub-direction for America, India, and China. The staff of the Commercial Department is accordingly composed of one director-in-chief, and three sub-directors. To each sub-director there is attached one principal clerk, called a 'rédacteur,' two senior clerks, three assistant clerks, and a certain number of supernumeraries. The business of the Commercial Department of the French Foreign Office is to examine and watch all commercial questions arising abroad; to draw up, and if necessary, to interpret treaties of commerce and navigation, and all conventions relating to copyright; to the connection of French with foreign railroads; to international telegraph, and to the fisheries; to submit to the Minister such measures as may be deemed essential for the protection of French commerce with foreign countries; and to investigate and report on all claims or representations on commercial matters which may be addressed to the French Government by that or other countries. The financial accounts of the consulates and of consular agents and dragomans, are also under the control of the Department. In all the above questions (with the exception of that last mentioned) the Foreign Office acts in concert with such other Departments of the Administration as may be concerned in the matter. For instance, it acts in concert with the Ministries of Commerce and Finance in questions relating to the negotiation of interpretation of treaties of commerce and navigation; with the Ministry of the Interior in questions relating to literary property or copyright, and to international telegraphs; with the Ministry of Public Works in questions relating to French and foreign railroads; and with the Ministry of Marine in matters concerning the fisheries."

3351. Is that information contained in an official publication?—It has been printed privately at the Foreign Office. The title of this paper is "Reports from Her Majesty's Ministers at the Principal European Courts as to the Relations between the Foreign Office and the Ministry of Commerce in the Countries in which they reside." When this Committee was first moved for, we thought that that particular point would interest the Committee very much, and we sent instructions to our Ministers at the various Courts to obtain information upon it.

3352. Will you hand in that paper?—Yes. (*The paper was handed in: vide* Appendix.)

3353. The correspondence of the consuls and of the diplomatic body is entirely with the Foreign Office upon matters of trade in France; but there is the fact that the Foreign Office has within itself a commercial department?—Yes, it is a mere departmental arrangement.

3354. In that respect the Foreign Office in France is different from the Foreign Office in England?—Yes.

3355. Consequently there could be no reason why the consuls and the diplomatic body should correspond on trading matters with the Minister of Commerce in Paris, inasmuch as there is a commercial department in the Foreign Office at Paris?—Yes. I presume that they communicate regularly with their Minister for Foreign Affairs. That, after all, is a question of mere departmental arrangement as to the way in which each country may think it desirable to manage the department. In addition to that, of course, in this country, there is always a little question about expense. The clerks in the Foreign Office at Paris, I believe, amount to nearly 100; ours are, all told, 57. Of course their salaries are not so high, but still their numbers are enormously superior to ours.

3356. I think, in reply to the question of Mr. Layard, in which you stated that you did not wish the Committee to suppose that you did not consider it was the business of the staff of the Foreign Office to have full information upon commercial questions, and that you considered that they had such information, you stated that you did not think it was necessary for them to have information with regard to the details of tariffs?—Yes, they are not competent to acquire it.

3357. Could you inform the Committee what there is of importance in anything relating to a tariff that is not detail?—If you look at that commercial convention which I handed in just now, you will see there some stipulations of extreme importance; take this supplementary treaty with France, for instance; it contains, to begin with, a very important arrangement, how a certificate of origin should be given; that was a very important arrangement for every person having to do with commerce. Then there is a very important arrangement providing that the importer of machines and mechanical instruments, and articles of that description, should be exempt from the obligation of producing at the French Customs models or drawings, that having been felt to be a very vexatious thing, I believe. Then there was a very important arrangement providing for the manner in which duties should be levied upon warehoused goods; that was not in the tariff. Then there was a very important arrangement about the settling of disputed questions of valuation by experts, and the choice of an umpire in disputed cases; all these matters could only be provided for in the Convention.

3358. Am I to understand that such a question as that with regard to warehouses, you would not consider one of detail upon which the Foreign Office was bound to have information?—It was a question of principle which we should look after in the Foreign Office. As it happened, I believe that particular article was put in at the Board of Trade, but it was one of those matters which, if it had not been put in by the Board of Trade, we should have put in ourselves.

3359. In such a case as that, you would consider that you had within your own department a knowledge sufficient to meet it?—I should imagine that we should have considered that a provision of that kind was necessary, but we should have communicated with the Board of Trade for their opinion, whether it was necessary, and probably have stated the grounds upon which we thought it was so.

3360. Are you not aware that, important as those provisions may be, they are of far less importance in that supplemental Treaty than the tariff that was levied upon the goods?—I think that the two hang very much together, because disputes may arise in the carrying out of the tariff, and those disputes must be judged and determined by the text of the Treaty. It is that very

E. Hammond, Esq.

1 July 1864.

very particular point about the text of the Treaty which is now in issue in the case I quoted the other day, with respect to the petroleum and the sewing machines. That question turns upon an article of the Treaty. We communicated with the Board of Trade upon it, and the Board of Trade asked us to take the opinion of the law officers upon it. It is now before the Board of Trade to know what shall be done on the opinion given by the law officers. The question all turns upon those two articles about experts and umpires.

3361. I understand you to say, that supposing the plan was adopted of the Board of Trade being put into direct communication with the diplomatic body under flying seal through the Foreign Office, there would be no real alteration from the present system?—Certainly; there would be no real alteration, so far as regards expedition of business; I think it would not expedite business at all, but very much the reverse probably.

3362. Do you send on the letters you receive from the Board of Trade, making inquiries respecting details, the information about which is to be given by the Ministers abroad, as they are written, or do you put them into your own words?—With respect to a question asking merely for information about an article of a tariff, in all probability we should put it into our own words. In respect to a letter from the Board of Trade of a more general character, we sometimes send the copy of the letter from the Board of Trade for information and guidance; but as I said in my evidence before, I consider that a very idle way of doing it; I think it is much better to turn the letter into a despatch from the Secretary of State than to send a copy of that letter abroad. If we do turn it, we treat it just as we do the law officers' reports; we take it textually. It only goes directly from the Secretary of State. The difference is this: if we were to send a letter from the Board of Trade we should say, "I transmit herewith, for your information and guidance;" whereas, if we turn the Board of Trade letter into a despatch, we should say, "I have to acquaint you that Her Majesty's Government have considered the matter," so and so, copying really textually the letter of the Board of Trade. That, again, is a question of mere departmental form.

3363. For instance, in the first page of the correspondence with regard to the commercial treaty with Italy, there is a long and very important letter from the Board of Trade of 18th February 1862; was that letter sent on in its original form?—I really cannot undertake to say how a particular letter was disposed of at this distance of time.

3364. You cannot tell me when and how the information contained in that letter was sent on?—Without referring, it is perfectly impossible for me to do it. If I was to attempt to carry in my head every letter that passed through my hands in the course of a day, I should be driven mad in a week. If you want the information, I will find it out and furnish the information, but I will not answer a question as to a date or a special fact of that kind, without referring to the register.

3365. Mr. *Layard.*] As a general rule, communications from the Board of Trade, which relate to a matter pending with a foreign country, are sent to the Minister representing this country in that State, are they not?—As a general rule it is so; but whether any official paper has been sent on, or how or when it has been sent on, till you let me see the registers, it is impossible for me to say. The letter which was alluded to was written two years ago.

3366. *Chairman.*] I understood you to say in reply to Mr. Layard that the rule was, that the communications which had to be forwarded to the Board of Trade were sent on the day you received them?—I do not think I said that, exactly. I said that if a matter was important it would be sent on immediately, but that if it was unimportant it would take its turn with the rest of the business of the office.

3367. You will remember, that in reply to Mr. Layard you stated, that "the Bradford Memorial with regard to the Franco-Swedish Treaty was received at the Foreign Office on the 14th November 1863, and sent to the Board of Trade on the 5th December"?—Yes.

3368. You will also remember, probably, your answer to the next question of Mr. Layard, in which you say that the Spanish Bill or project of law, with regard to Customs reform was sent home and received at the Foreign Office on the 1st of February, and sent to the Board of Trade on the 26th?—Yes.

3369. Referring to the correspondence with regard to Italy, I find on looking over this correspondence, that generally speaking three or four days appear to have elapsed between your receiving despatches and forwarding them to the Board of Trade?—There may be three or four days; but the question is, was the thing of such very urgent importance, that all other business at the time should be put aside in order to despatch that particular letter; in addition to that, the Bradford memorial which you quoted, was a sort of thing which I should not send on to the Board of Trade without its being submitted to the Secretary of State, and the Secretary of State may have been pressed with other business at the time; but as a general rule, there is no delay in executing the business of the Foreign Office. I do not mean to say, that in the mass of papers that pass through our hands, considering the occasions of great pressure which come upon our department, there may not be a delay of one, two, three, or even more days in the case of any particular paper; but as a general rule, papers are forwarded immediately to the departments which they concern. I can only state that as a general rule; it is impossible to say it of every paper.

3370. Mr. *Turner.*] I do not quite clearly understand how it should not facilitate the business of the country generally, if the diplomatic agents and consuls abroad were to divide their correspondence into heads, as Lord Malmesbury suggested, indorsing some "Political" and others "Commercial," so that as soon as the Foreign Office received those commercial despatches which concern the Board of Trade, the Under Secretary might be able at once to forward them to the Board of Trade without referring them to the Secretary of State?—The primary objection to that would be, that you would entirely debar the Secretary of State from all knowledge of what was passing with regard to commerce in foreign countries, if you passed him by in sending on the despatches as they were received.

3371. If it was a matter of very great importance, I apprehend that you would stop that despatch and send it to the Secretary of State; but

but if it was a matter of minor importance, and there are a great many such matters, it would be forwarded at once by you, possibly, to the Board of Trade, and a good deal of time would be saved by that arrangement, as compared with the system by which those despatches are all referred to the Principal Secretary of State, and then come back to you, and then you have to pick out the commercial from the political part of them, and send it on to the Board of Trade?—The picking out takes very little time, because the despatches come to me in the morning, and, as I read them, I mark them "Board of Trade," and, directly they come back from the Secretary of State, they go into the department, and are disposed of as soon as the business of the department permits, without any delay. I do not think that it would be right or proper, or what the country would expect, that the details of a printed paper, saying that such and such a thing had been done, should be kept from the knowledge of the Secretary of State. There was a case the other day in point: a notice appeared in the "Moniteur" a few days ago, saying that the treaty which has been in negotiation between France and Switzerland had been what they call "*parraffé*," that is to say, not exactly signed, but agreed upon. It would be very desirable for the Board of Trade to have notice of that announcement, and yet it would not have done to keep it from the Secretary of State. But according to this proposal, it would have come in a despatch marked "Commercial," and then it would never have gone to the Secretary of State; it would have gone at once to the Board of Trade. The Secretary of State would therefore have been ignorant of it, and he might have been asked in Parliament that night, "Is the treaty signed?" and would have known nothing of it.

3372. The suggestion was that those despatches should come open through the Foreign Office, and of course if there was anything of this sort that required communicating, it would be communicated before the despatches were passed on to the Board of Trade?—That would cause so very trifling a saving of time that it would be hardly worth while to alter the system.

3373. One of your observations was that a matter of great importance was forwarded the same day, and, in fact, almost immediately; the feeling in the country is that there are very often matters of urgent political importance which come by the same despatches as matters of trade of considerable importance, and that in such cases the political matters are attended to, and the trade matters are pushed on one side. Supposing they came in separate despatches, would not the matters be divided in your mind, and in the mind of the Secretary of State, better than if they came in the same despatches?—I can only answer for my own mind, certainly not.

3374. *Chairman.*] I think I understood you when you were first examined to state that it was a very strict rule of the Foreign Office that no minister or consul should write on two subjects in one report; is that altogether consistent with what you have just stated in answer to the last question?—I understood the question to apply to a bundle of despatches relating to two subjects; not to one despatch relating to two subjects. For instance: take a bundle of despatches; one despatch relates to political and another to commercial matters; the rule is as you stated it, that each despatch should be confined to one subject.

3375. Sir *Minto Farquhar.*] Which of the under Secretaries particularly looks after the consular department in the Foreign Office?—The Assistant Under Secretary has the immediate superintendence of the consular department, but anything beyond mere routine comes to the respective Under Secretaries, according to the countries to which it relates, just as the political business does.

3376. As the great desire of all the witnesses who have been called on the part of the commercial bodies seems to be to accelerate the communications between the Foreign Office and the Board of Trade, do you not think that it would be possible in the Foreign Office that all commercial communications should be marked "Commercial," and sent to the Assistant Under Secretary, who has the superintendence of the consular department, and that he should be able at once to forward anything which was marked "Commercial," which did not require the instant supervision and knowledge of the Secretary of State, to the Board of Trade?—If that plan would throw more labour on the consular department than it has now, I should think it objectionable, for it has quite enough to do, and that additional labour would break it down. To revert to what I said before, I think it is very undesirable to let a habit grow up in the office, generally, of thinking that the several divisions have no concern in matters of commerce; that directly they see the despatches from Paris, or anywhere else, marked "Commercial," they are to throw them into the consular department, and never know anything more of them.

3377. You do not think that the communications would be hastened in the least degree by having any fixed department or division of the Foreign Office to deal with these matters specially?—On the contrary, I think it would have a tendency to prevent despatch. The Foreign Office is now divided into six political departments, and each of those departments can deal separately with anything that may come in, in the course of the day. But supposing that a number of commercial reports from different missions were to come in and to be thrown upon one consular division to be attended to, in addition to their ordinary work, it would be necessary either to delay sending on such reports at once, or allow all the rest of their work to get into arrear. It is a mere question of division of labour. We now put six departments to do the work which it is sought to saddle one department with. I maintain that 24 men will do the work quicker than four.

3378. Supposing that there were one particular individual in the Foreign Office whose particular interest it should be that upon all questions of commerce that came to the office he was responsible for seeing that the communication was immediately sent on to the Board of Trade, what do you consider would be the effect of such an arrangement?—I do not see that we should gain in that way; we have now six men each severally responsible for the same thing in their respective divisions. In each division each senior clerk is responsible for doing the work that you want to throw upon one.

3379. You mean that in each separate division there are persons whose duty it is when they get a despatch marked "Commercial" at once to send it on?—What I mean is this; the senior clerk in each division is responsible for the execution of the entire duties which devolve upon that division.

E. Hammond, Esq.

1 July 1864.

I look to him, I do not look to the junior clerks to see that those duties are discharged.

3380. Mr. *Butler-Johnstone.*] You say that it is undesirable that the clerks in the Foreign Office should not have cognizance of and knowledge upon commercial matters, but if all action upon commercial matters was taken out of the hands of the Foreign Office and given to the Board of Trade, why would it matter if they had not that knowledge?—Commerce and politics are a good deal blended together in our relation to foreign countries.

3381. Sir *Minto Farquhar.*] Did I understand you to say that you think that the clerks should not have a knowledge of commercial matters?—Quite the contrary, I contend that they should.

3382. Mr. *Butler-Johnstone.*] It has been suggested by Lord Malmesbury, and others, that the despatches should be docketed "Political," and "Commercial," and that those docketed "Commercial" should be sent to the Board of Trade. And there is another proposition of a similar kind, as far as this point is concerned, by which it is proposed that the Board of Trade should take action in these matters. What objection is there to leaving the clerks without any cognizance of commercial matters, the object of both these propositions being to hand over such matters to the Board of Trade for them to take action upon them?—I do not think that it is desirable to limit the knowledge of the clerks in the Foreign Office. Everything that passes in a foreign country ought to come more or less within the cognizance of the clerks. By the course which you describe, you would naturally bring about that which, as I understand, this Committee deprecates as much as possible, namely, that the Foreign Office shall have no knowledge of, or interest in, commercial matters.

3383. At present the Foreign Office takes action in commercial matters, does it not?—Yes; directly we begin to communicate with a foreign government, the matters must come through the Foreign Office; and, therefore, if the clerks come upon the thing in perfect ignorance of commercial questions, it would be attended with disadvantageous results.

Mercurii, 6° *die Julii*, 1864.

MEMBERS PRESENT:

Mr. Bazley.
Mr. Somerset Beaumont.
Mr. Cobden.
Mr. Seymour Fitzgerald.
Mr. William Edward Forster.
Mr. Milner Gibson.
Mr. Kinnaird.
Mr. Layard.
Sir Stafford Northcote.
Mr. Pender.
Mr. Charles Turner.

WILLIAM EDWARD FORSTER, Esq., IN THE CHAIR.

The Right Honourable EDWARD CARDWELL, a Member of the House; Examined.

Right Hon. *E. Cardwell*, M.P.
6 July 1864.

3384. *Chairman.*] WHEN were you President of the Board of Trade?—In 1853 and 1854.

3385. Had you been Vice President before that?—No.

3386. I have no doubt that you are sufficiently aware of the object of our Committee to know that it results from a feeling in the mercantile community that the necessity of having to consult both the Foreign Office and the Board of Trade upon foreign commercial questions leads to some delay, and possibly to inefficiency. The object of our Committee has been to discover whether there is that feeling, and if so, how it can be removed. In the evidence that we have had before us, some of which I believe you have read, Mr. Mallet, who is a very well-informed official of the Board of Trade, made a statement with regard to your views at the time when you were President; have you read that statement?—Yes.

3387. I understand from it that at that time you thought it was desirable that the Board of Trade should be made less a consultative office, and that the Foreign Office should contain in its own department the information which it now obtains from the Board of Trade?—My view was this: in an earlier period of our commercial history (I speak chiefly of the time when the late Mr. Deacon Hume was the Secretary of the Board of Trade) the office of the Board of Trade was extremely useful, but rather peculiar. The policy of the country at that time was protective, and the feeling of the Board of Trade was in favour of freedom. The consequence was, that there was within the Government one department which preached the doctrines of good policy and good sense against the prevailing current of opinion in the Government and in the Legislature, which at that time was in favour, as I said, of the protective system. In the autumn of 1852, the House of Commons almost unanimously adopted the principle of free trade, which, from that period, might be considered to be definitely and permanently settled as the principle of our commercial legislation. I came into office immediately after that resolution had been adopted, and it appeared to me that the principal function of the consultative portion of the Board of Trade had terminated with that resolution. Mr. Gladstone and Mr. James Wilson managed the Treasury, and Lord Russell managed the Foreign Office; and it appeared to me that it would be a great waste, both of my time and, what was of much greater importance, of theirs, for me to enlighten them upon the proper mode of applying the principles adopted by Parliament to the management of their respective departments. There was a very important change in the tariff in the year 1853. As a Member of the Government, I was perfectly aware of all that was taking place, and had a full opportunity of expressing, if I liked, an opinion upon the subject; but I do not remember that Mr. Gladstone and Mr. James Wilson thought it at all necessary to consult the Board of Trade, departmentally, as to the changes which they made in the tariff. I believe that they considered, and justly considered, that they perfectly well understood the application of the principle of free trade to the British tariff, without any assistance from me. And similarly, with regard to the Foreign Office, I believe that the present Foreign Secretary, or any other Foreign Secretary, will, speaking generally, perfectly well understand what is the true principle to apply to the foreign relations of this country, with a view to their bearing upon commercial interests, and that they do not need to consult any other department, generally speaking, with a view to the application of those principles. Those were my views when I was President of the Board of Trade.

3388. I understand you by that to state, that you consider that, upon questions of principle, it would not be necessary for the Foreign Office to consult any other department; but this question comes before us: it is very difficult for the Foreign Office to conduct any negotiation or intercourse with foreign countries upon commercial matters in which details are not concerned; details of tariff, for example. Upon those points do you think that they might be able to obtain information from their own staff, or that it would be necessary for them to go to another department, and if to any other department, of course to the Board of Trade, for such information?—One great advantage of the principles of free trade is, that they are so exceedingly simple. There were complicated questions continually arising before, when there was a protective system, subject to perpetual exceptions, and it was quite an art and a mystery to read the Navigation Laws, and the numberless exceptions that had become gradually adopted into that system, and associated with it; but nothing is more simple than to apply the principles of freedom.

3389. I will take such a case as this as an illustration:

Right Hon. *E. Cardwell*, M.P.

6 July 1864.

illustration: when the kingdom of Piedmont was enlarged into the kingdom of Italy, a temporary tariff was applied to the whole of Italy; that tariff was, in some respects, higher upon British products, as regards part of the countries to which it applied; it was a case in which, without any interference with the principle of free trade, our Government had a right to make representations to the kingdom of Italy, to the effect that the result of Italy becoming a kingdom ought not to be to increase the duty upon English goods, at any rate without representation. In order to put that before the Italian Government, they required an exact knowledge of the mode in which those duties affected English goods; in such a case, do you think that the Foreign Office ought to have a staff within itself to be able to give them information, or do you think it necessary for them to consult another department?—My opinion is, that with respect to the principle, it is quite obvious that the Foreign Office would endeavour to obtain for British imports into Italy the greatest freedom they could. They would know, without the assistance of the Board of Trade or anybody else, how much freedom they could obtain, and, in my opinion, they would be much better judges of that themselves than any other department could be.

3390. In answer to arguments of that kind which have been brought before us, it has been stated by one or two witnesses, Mr. Hammond amongst others, that it was almost impossible for the Foreign Office to obtain that information within their own staff, and that they must know what the statistics are, and not only the statistics, but also the details of any particular trade that was affected, and of one trade in relation to another, before they could tell how to make their representations with that knowledge which would be likely to be effective with foreign countries; and that statement was that, even supposing a commercial department was established at the Foreign Office, it would not take away the necessity of still consulting the Board of Trade, in order to find out how any question of foreign trade was affected by domestic trade; you would not consider that that question would involve much practical difficulty?—No; I own that I do not feel much pressed by it. It seems to me that the inquiry must be made by somebody in either case, and it is quite as easy to have it made directly by the department which has to make use of the information, as to have it made by another department which has to communicate it to the department which is to make use of it.

3391. Are you aware that one complaint which has been made by the merchants and manufacturers, and chambers of commerce, throughout the country is, that they fear that the system being for them to give information to the Board of Trade, and for that information to be conveyed from the Board of Trade to the Foreign Office, the information does not arrive with that amount of force at the department which has to conduct the negotiation, which it would have if it was conveyed directly?—I was not aware that any such complaint was made; but without implying the slightest censure upon any department, I think you may take it for granted that, to put into the hands of two people that which can be done effectually by one, is almost a certain way of rendering the transaction of the business less rapid and effective.

3392. Another suggestion that has been made before the Committee is, that if it be found from general reasons difficult to make the Foreign Office self-sufficing, and that it would be still necessary for them to consult another department, then that other department should have more authority to make its representations listened to, than it has at this time, or, in other words, that the Board of Trade should be elevated into a greater equality with the other departments of the State; have you any opinion upon that, supposing that the Board of Trade still remains a consultative body?—I should say that there was a great difficulty in giving to a second department anything like a control over the servants of the first. There is a remarkable instance in which two departments work very well in the Board of Trade itself, because the Customs officers render very essential and valuable service in the working of the Merchant Shipping Act. They correspond with the Board of Trade upon that subject; but great care is taken that the Custom House officers always regard themselves as being what they really are, the servants of the Board of Customs and the Treasury, and not subject to direct authority and control from the Board of Trade.

3393. My last question chiefly applied to this; it seems to be brought out in evidence that the Foreign Office consults the Board of Trade upon a commercial matter at its discretion, it is its rule to do so; but it is at its discretion that it consults it; it follows its advice at its discretion; it gives it the reasons why it does not follow its advice at its discretion; all that seems to imply that the Board of Trade is not considered upon an equality with the Foreign Office, and if they have an opinion upon commercial matters which the Foreign Office has not, it is not made a Cabinet question whether that opinion should be followed or not. The suggestion has been made that if the Board of Trade remains the consulting body, which is to give advice to the Foreign Office upon trade matters, it ought to be put more upon an equality with the Foreign Office, and that, at any rate, it should have to give to the Board of Trade the reasons why it does not follow its advice; what is your opinion upon that?—I think it is very important that the public servants should have a distinct responsibility to a single department; I should exceedingly deprecate any change which made our Foreign Ministers and our Foreign Consuls think that they were responsible to anybody except the Secretary of State.

3394. The proposition is this: the Secretary of State for Foreign Affairs has to conduct some negotiation; he wishes for information and advice; he consults the Board of Trade; he receives its reply either by letter from a permanent official, the Secretary of the Board of Trade, through his own Under Secretaries, or he receives it personally, or by letter from his colleague, the President of the Board of Trade, but it does not appear to become a Cabinet question; if, after having received that information, the Secretary of State for Foreign Affairs does not think it right to act upon it, do you not think that the Board of Trade should be put upon an equality with the Foreign Office, so that if it has its own opinion upon commercial matters, and that opinion differs from that of the Secretary of State for Foreign Affairs, there should be an appeal to the Cabinet?—I do not know that the Cabinet is a sufficiently recognised official body to be made the subject of a discussion of this kind; I think

it

it must depend entirely upon the relations between the Foreign Secretary and the President of the Board of Trade how far they will communicate with each other, and how they will decide any question on which their opinions may happen to differ.

3395. Do you think that there is any advantage in that department which looks after the interests of trade being a Board rather than a secretaryship?—In point of fact it is not a Board; it is nominally a Board. I forget whether the Colonial Secretary is a member of it or not; he probably is; but in reality it is as much the department of the President of the Board of Trade as the Foreign Office is the department of the Secretary of State for Foreign Affairs.

3396. Is not there one result of its being a Board, that the second officer of the department, the Vice-President, has less definite functions than he would have if it was a secretaryship, and he was the Under-Secretary, and that, although in some respects his position is higher, yet he has less to do, and his services are made less available?—I do not think that it signifies very much by which of the two names you call him. He is technically President of the Board of Trade, in the absence of the President; but he is practically in the relation of being subordinate to the President, and has no authority at all antagonistic to, or enabling him to take any view different from that of, the President of the Board of Trade.

3397. Is it not the fact that he has less definite duties in his department than the Under-Secretary of any one of the departments, at the head of which is a Secretary of State?—Yes; I think it is rather so in practice.

3398. I understood you to say that you thought there would be a great objection to putting the Consuls or Foreign Ministers, in any respect, under two masters; that objection seems to have been felt by almost every well-informed person who has given evidence upon the matter; but it has been thought that that objection would be practically removed by the correspondence between the Board of Trade and the diplomatic body, whether Consuls or Ministers, being conducted through the Foreign Office, and under flying seal, so that if the Foreign Office found that there was any collision whatever, they could state so to the Board of Trade, and prevent it; do you think that that would meet the objection?—No; I think that anything which diminishes the responsibility of the Secretary of State for the conduct of foreign negociations, or divides that responsibility, would be objectionable.

3399. Sir *Stafford Northcote.*] The Board of Trade has, of late years, become a much more executive department than it was formerly, has it not?—Yes, very much.

3400. Do you think that it is convenient, as regards the internal administration of the Board of Trade itself, that it should be divided into two departments, one distinctly consultative and the other distinctly executive?—No, I think certainly not.

3401. Mr. *Layard.*] Have you read the evidence which has been given before this Committee by Mr. Hammond, and others who have given evidence in favour of having a commercial department in the Foreign Office?—No; I have had no opportunity of reading any portion of the evidence taken before this Committee, except a small portion to which the Chairman was kind enough to direct my attention, in which my name is mentioned, and to which I have referred this morning.

3402. Therefore, you are not aware of the objections which have been submitted to the Committee on the part of the Foreign Office to having a commercial department there?—No; so far as my evidence is of any value, from special acquaintance, it is exclusively derived from my knowledge of the Board of Trade.

3403. The Chairman put a question to you with regard to the change in the Italian tariff; there may have been two distinct questions concerned in that case; there may have been a question of principle and a question of detail: upon the question of principle the Foreign Office would be well able to judge; as regards questions of detail, for instance, whether jute, which is one of the articles mentioned before the Committee, was to be admitted at a less rate or not, could the Foreign Office be supposed to give an opinion?—Of course the principle, that we should get everything as low as possible, is admitted on all hands, and my opinion is, that if the Board of Trade gave an opinion as to the value of some particular concession, they would derive that opinion from one of three sources, either from diplomatic and consular papers, which they would have received from the Foreign Office, or from the Statistical Department, or from communications with commercial bodies. My opinion is, that any one of those three sources of information is just as open to the Foreign Office, acting directly, as it is to the Foreign Office acting intermediately through the consulting department.

3404. Would you suggest that the Foreign Office should have under it the Statistical Department of the Board of Trade?—No, certainly not.

3405. Is it your opinion that the Foreign Office should consult the Statistical Department, without going through the official form of consulting first, the President of the Board of Trade, or the officials of the Board of Trade?—They have no need to consult the Statistical Department at all. What they have to consult is, the statistics which are printed and published by the Statistical Department.

3406. With regard to the commercial bodies of this country, do you think it advisable that the Foreign Office should be in direct communication with them upon matters of trade?—Yes.

3407. Do you think that the Foreign Minister, whoever he might be, would hold himself responsible for deciding upon questions of trade of that kind?—I think that the Foreign Minister would be much more likely to come to a right conclusion, and to give full effect to that conclusion, if he acquired his knowledge directly from the parties interested, than if he acquired it indirectly through another channel, and as the result of official correspondence.

3408-9. Do you think that that part of the Board of Trade which is to be left, after this disjunction takes place, should have the power of communicating directly with the Consuls and Diplomatic Agents abroad?—No.

3410. Are you in the habit, at the Colonial Office, of consulting the Board of Trade?—Yes.

3411. Would you propose that a similar arrangement should be made at the Colonial Office to that which you propose at the Foreign Office?—My opinion, with respect to the Colonial Office, I trust, may be given with some diffidence, inas-

Right Hon. *E. Cardwell*, M.P.

6 July 1864.

much as my connection with it is very recent; but my opinion is, without at all disparaging the Board of Trade, that the Colonial Office ought to be able to come to its own conclusions upon commercial subjects, without consultation with anybody.

3412. Do your suggestions apply equally to questions of navigation and shipping, and to those connected with trade?—If you mean the commercial bearings of navigation and shipping, certainly; if you mean those detailed and multifarious executive arrangements which the Board of Trade in the Merchant Shipping Department transacts, I do not understand that they are in question here at all.

3413. Our commercial relations with foreign countries include matters of navigation and shipping, which are now dealt with by the Board of Trade, and upon which the Foreign Office consults the Board of Trade; would you have a department in the Foreign Office able to give advice and information upon those subjects?—I think experience has shown that the principles of freedom are just as applicable to shipping as to any other branch of commerce, and that there is no more difficulty in dealing with those parts of our commercial system which relate to shipping than with those which relate to the tariff.

3414. We are all agreed upon the principle of free trade, whether applied to commerce or navigation, and upon those questions the Secretary of State for Foreign Affairs would be as well informed as the President of the Board of Trade; but I speak now of the thousand small questions of detail which must arise in applying the laws of other countries to navigation, shipping, and trade; upon those points ought the Foreign Office to have a department able to advise and inform it?—If you mean questions which arise in foreign ports under foreign navigation laws, those are not questions of commerce at all. We are compelled to submit to their laws, however bad they may be, and I do not understand that the Board of Trade can give any more efficient assistance to the Foreign Office in unravelling any questions of an international nature which may arise from a bad law relating to shipping, than from a bad law relating to anything else.

3415. Take, for example, the case of a question arising with regard to a certain article in a tariff; mixed goods, for instance when a certain amount of cotton and a certain amount of worsted, or some other materials are mingled together, and the duties differ according to the relative proportion of the two materials. Questions continually arise of that kind; a merchant abroad writes to the Foreign Office, and complains of the duty raised upon those goods, asserting that they are not included in the class subject to such duty. Upon questions of that kind the Foreign Office transmits the complaint to the Board of Trade, and asks its opinion upon the nature of those goods. Do you suggest that, in the Foreign Office, there should be a department which could at once instruct the Secretary of State upon the nature of those goods, without referring to the Board of Trade?—The word "department" is a large word, and implies a great many people. I should think that if Mr. Mallet was at the Foreign Office he would be able to give as much advice to the Foreign Secretary upon that subject as would probably be wanted.

3416. Mr. Mallet has had the advantage of having been for many years in an official position at the Board of Trade, and having been educated there; would any other person who had not had that advantage be able to do it?—Mr. Mallet, in my opinion, would be able to do it much more efficiently if he were in the department, and if, upon any question that arose, there were no necessity for the delay and the circumlocutory process of official correspondence, than he is now, when he is on the other side of Whitehall, and when that correspondence is obliged to take place. And when Mr. Mallet shall no longer be in this world, any person who succeeds him would, in my opinion, do it infinitely better if he stood in that relation to the office than if he were placed in the Board of Trade.

3417. Do you mean that every successive officer in that department of the Foreign Office should be taken from the Board of Trade?—No, certainly not. If my advice were taken, the Consultation Department of the Board of Trade would cease.

3418. Sir *Stafford Northcote.*] You do not exclude, of course, the idea that the various departments would have to consult each other upon matters falling especially within the functions of those departments?—Certainly not. Take, for instance, the Colonial Office. We have continually to consult the Treasury upon financial matters, the Secretary for War upon military matters, and the Foreign Secretary upon affairs which raise questions of international relations. What I object to is the existence of a department which has no executive functions, and has nothing to do but to write dissertations and give opinions; that I hold to be exceedingly objectionable. I think that the persons who are responsible for giving effect to opinions are the persons who should mature, and form, and express those opinions.

3419. Then I presume that, if the Board of Trade continued as an Executive Department for the management of the mercantile marine, whenever a question arose at the Foreign Office, or the Colonial Office, affecting the mercantile marine, upon which it is desirable to have information from the Board of Trade, you would apply to them for that information?—Certainly.

3420. When you were at the Board of Trade, you were consulted, I think, upon the subject of the alteration of the sugar duties, were you not?—Yes.

3421. By whom were you consulted?—By the Colonial Office.

3422. Did you give an opinion upon that point?—A very able Governor, Sir Henry Barkly, wrote from British Guiana, of which he was then Governor, a Despatch expressing objections to the then existing graduated scale of sugar duties. The Colonial Office consulted the Board of Trade upon it, and we gave expression in strong terms to Sir Henry Barkly's objection, and gave advice to the Colonial Office to consult the other Colonies before coming to a conclusion, and also to remember that there was a great trade in refining, which yielded a large revenue in this country. I believe it was very good advice, but it appears to me that the Colonial Office were capable of discovering that they should communicate with the other Colonies, and of remembering that there was a large revenue raised from the refineries without any assistance from the Board of Trade. I may mention that, in the following year, when the Government unitedly came to a different opinion from Sir Henry Barkly's, though, as a Member

Member of the Government, I was perfectly aware of the change which Mr. Gladstone and Mr. James Wilson were going to make in the sugar duties, and entirely concurred in it, I do not remember, and I think it extremely improbable that the Treasury departmentally consulted the Board of Trade at all upon the subject.

3423. Mr. *Bazley.*] You have stated that, in the event of your needing information from the Statistical Section of the Board of Trade, you would not deem an interview requisite because you would obtain that information from a tabulated arrangement that exists in the department; but I would beg to ask how you would proceed in the event of new circumstances having arisen, and the information which you were seeking not being tabulated in the Statistical Department of the Board of Trade?—The able head and the able officers of the Statistical Department are always extremely ready to tabulate any information in any form that any department of the Government may desire. It would be the simplest affair in the world for the Foreign Office to write to the President of the Board of Trade a letter containing a statement of the information that they wished, and they would immediately receive that information. It would be information, in fact, and it would have nothing whatever to do with the opinion which, in my judgment, the Foreign Office would be quite capable of forming for itself.

3424. *Chairman.*] With regard to the Statistical Department, it is in a separate building from the rest of the department of the Board of Trade, is it not?—Quite.

3425. Was not it the case when you were at the Board of Trade, and is not it the case now, that it is merely under the Board of Trade as a branch office, and quite separate, in fact?—Yes; I think that is a very fair description of it. I think that, though it was connected with the Board of Trade, and though there is no reason that I know of why it should be connected in future with any other department, instead of being, as now, connected with the Board of Trade, it is a very fair description of it to call it a separate department.

3426. Then, there is a great distinction between a communication between any one of the departments and the Statistical Department for the purpose of getting facts, and the communications which you have been asked about between the Foreign Office and the Board of Trade upon matters of opinion?—Yes; I think that the whole Government is so constituted, that there must be communications when any department requires to obtain information from any other department, but that has nothing at all, in my judgment, to do with the retaining of one department which has no executive functions, and has no other duty than to give advice to other people.

Right Hon. *E. Cardwell*, M.P.

6 July 1864.

3427. For instance, if the Board of Trade were confined to its executive functions, which are now very considerable, it would be very likely that the Foreign Office and other offices would have to consult it, just as the Foreign Office and the Colonial Office have to consult one another?—Certainly. I may add, as you have spoken of the Executive Department of the Board of Trade, that I believe every year is adding most usefully to the functions ably discharged by that department; for instance, the Admiralty has recently parted with the jurisdiction over harbours, and given that jurisdiction to the Board of Trade. Its jurisdiction is growing, and if there were any changes to be suggested, it appears to me that the arduous labours of the Home Office are now unnecessarily increased by various branches of inquiry very cognate to those which are conducted by the Board of Trade, and it might be a very fair subject of consideration whether the Board of Trade might not usefully transact a larger part of those duties, for the relief of the Home Department.

3428. Mr. *Layard.*] I understand you to say that what you suggest is, that the consultative part of the Board of Trade should be abolished, and the executive part retained, and, if possible, ameliorated?—My suggestion certainly is that the Consultative Department of the Board of Trade, as a separate department of that office, should not continue, and that the policy which Parliament has hitherto adopted, of from time to time increasing the executive duties of the Board of Trade, is a sound policy, and very well worthy of being carried further.

3429. You would retain the present administrative form of the department by the President?—I think it is a matter of entire indifference, in regard to the discharge of the duties, whether you call the head of the department President, or whether you call him Secretary; he is, to all intents and purposes, the head of a large and most valuable Executive Department.

The Right Honourable THOMAS MILNER GIBSON, a Member of the Committee; Examined.

3430. *Chairman.*] YOU are now President of the Board of Trade?—Yes.

3431. How long have you been so?—Since 1859; since the formation of the present Government.

3432. You were at one time Vice-President of the Board of Trade, were you not?—Yes, in 1846 and 1847 I held that office.

3433. Your only connection with the Board of Trade has been your having been President now for some time, and having been Vice-President once before?—That is all.

3434. Your having been both President of the Board of Trade and Vice-President, enables you to state what is the precise relation of the President to the Vice-President of the Board of Trade?—The relation between the President of the Board of Trade and the Vice-President of the Board of Trade, in theory, I believe, is this; that formerly there was a Board which was to be presided over by the President, and in his absence, by the Vice-President, and I suppose that when the President was present the Vice-President was considered to be merely a Member of the Board. The actual relation now in practice is what may be arranged between the President and the Vice-President. The system of having Boards no longer exists; I did not find that there were any Boards when I came to the Board of Trade; but, by arrangement, certain business is placed more specially and more immediately under the care of the Vice-President, and other business under the care of the President.

Right Hon. *T. M. Gibson*, M.P.

3435. Were you present when Mr. Hammond gave to the Committee an account of the arrange-

Right Hon. *T. M. Gibson*, M.P.

6 July 1864.

ment that exists in the Foreign Office between the Chief Secretary and the Under Secretaries?—I think I was.

3436. Do you remember that in that arrangement it appeared that all the business that was conducted by the Foreign Office came in some measure under one of the two Under Secretaries; I understood that letters, or despatches, or business, came before one of the Under Secretaries, and that he reported upon it to the Chief Secretary, and that it came back to him again; is there any such arrangement between the President of the Board of Trade and the Vice-President of the Board of Trade?—To a great extent that system is carried on now at the Board of Trade, in consequence of the understanding that has been come to between myself and the present Vice-President. Most of the papers go before Mr. Hutt, and he makes his Minute, if he pleases, upon them before they are brought to me, but that has not always been the case. It depends upon the arrangement that the President may make. I think that the practice has been of later years to hold the President to be responsible, and to take his directions as to how the business shall be conducted, and as to the arrangements made between himself and the Vice-President.

3437. Is not the relation rather this, that in the Board of Trade the second officer is more in the position of being a Vice-President ready to take the place of the President when he is absent, than as he is in the Foreign, or Home, or Colonial Office, an Under Secretary who has his definite functions, subordinate to the Chief Secretary?—Quite so. The Vice-President of the Board of Trade has a sort of co-ordinate authority with the President. I have no authority over the Vice-President whatever that I am aware of.

3438. Would not the result of that relation be that the Vice-President would have less definite duties, and we may say less work necessarily to perform, than an Under Secretary of either of the departments?—It might be so sometimes. It might happen, from a legislative measure being under consideration in the office, that the Vice-President might have a good deal of work; it depends very much upon the arrangements made between the President and the Vice-President, and the business that has to be transacted.

3439. We have had a good deal of information given us as to the consultative functions of the Board of Trade, but the Committee would be glad to know from you, as its present President, to what extent the Board of Trade is a Consultative Department?—I have not a very clear idea of what is meant by a Consultative Department: but it appears to me that the President of the Board of Trade ought to be a Member of the Cabinet, and I think that he ought to have in his office the means of getting good information upon commercial questions, so that he can bring those questions under the notice of his colleagues with effect. If you have a President of the Board of Trade at all, that office to a certain degree resembling, I think, the Ministry of Commerce which exists in other countries, you ought to consider him as a person whose duty it is to promote and to put forward, as it were, the interests of the commercial body; and, in order to do so, he should be provided with persons in his office capable of giving him good information; not that he is to be guided and controlled by those persons, but he is to take information from them, and then to act and advise his colleagues upon his own responsibility.

3440. Is the Board of Trade consulted, and is its opinion taken by the Foreign Office much more than it is by any other department?—I think it is.

3441. More than it is by the Colonial Office?—Yes.

3442. Or by the Treasury?—Yes, I think so.

3443. By the India Office you are consulted scarcely at all, are you?—Not at all. It sometimes happens that I have a communication by letter from the Secretary of State for India requesting me to give him some information that he requires, and which he may think I have facilities for getting in my office, but officially the Secretary of State for India does not consult us at all. I do not know that he has ever done so in the sense of consulting the department since I have been there.

3444. We have had it stated before this Committee that there appears to be a tendency towards a dimunition of the consultative functions of the Board of Trade, and that the Report of the Commission that was issued by the Treasury in 1853, contemplating that diminution, suggested that, instead of there being two Secretaries—one of them conducting the executive business, as Mr. Booth does at this moment, and the other, what may be called the consultative business, as Sir Emerson Tennent does—there should in future be only one Secretary; was that the case?—That was the proposed organization of the office, which was agreed upon in 1853, I think.

3445. Was it the case that the Commission which was issued last year recommended not that that arrangement should be adhered to, but that, in place of it, in case of the removal of any one of the Chief Secretaries from his office, there should after that time be only those two Secretaries, and no Assistant Secretary conducting the mercantile marine business, which Mr. Farrer conducts now, but that that should be a part of the business of the two Secretaries?—At the present time we are in a sort of transition state at the Board of Trade, as your question would seem to indicate. At present it is settled that, when that transition state is over, the office will have two Secretaries and four Assistants. The distribution of the business between those two Secretaries of course would have to be settled by the President for the time being. The probability is, that one Secretary would take the marine business, which forms almost one-half of the whole business of the Board of Trade, and the other Secretary probably might take the rest; but it would depend upon the wishes of the President of the Board of Trade for the time being how the business would be arranged.

3446. Supposing that that was the case, then the Secretary whose business is at present confined to fulfilling what is called the consultative functions would have other executive business to transact as well?—Yes, he might.

3447. My object in asking you these questions is to ascertain whether the arrangements that have been making for some time in the Board of Trade, and are still making, do not contemplate a diminution of the consultative functions of the Board of Trade?—The consultative functions of the Board of Trade at the present time occupy a very small portion of the whole staff, in addition to one of the Secretaries; I do not think it could ever

ever occupy much less than it does at present; to be exact, I had better state to the Committee what is to be the constitution of the office. With regard to the Secretaries, there are to be two Secretaries who should respectively undertake the direction of the whole business of the office, according to such arrangement as should from time to time be made between them, with the approval of the President, so that until that time comes it is very difficult to say what it might be. The amount of their consultative business might at that time be less than it is now, or it might be greater, according to the policy that might be adopted of either taking Mr. Cardwell's view of doing away with the consultative business altogether, or taking the view of others who think that it should be increased.

3448. Do you consider that you are the Minister whose business it is to reply to questions in the House of Commons with regard to negotiations with foreign countries, or intercourse with foreign countries, upon trade matters?—Not exactly. So far as the question relates to the actual communications that are carried on between the Foreign Office and a foreign country, I do not know that the President of the Board of Trade is the proper person to answer it; but there can be no objection to asking him, because of course he is in communication with the Secretary of State for Foreign Affairs, and if he did not possess the information which was sought, he could at once obtain it from his colleague.

3449. Do you think that your office is the one to which the deputations of commercial bodies should come upon questions of foreign trade, or not?—I think it is useful that they should come to the Board of Trade. I think it is the duty of the person who is the President of the Board of Trade to press on questions, and to investigate matters that are exciting the interest of the commercial classes, to see how far any requests made are reasonable and right to be entertained, in reference to other interests, and to endeavour to bring the attention of his colleagues to the subject.

3450. My object in asking this question is to ascertain upon what department specially there is the responsibility of these matters; I am perfectly aware that the whole Cabinet and the whole Government must be considered responsible for negotiations upon trade, or communications with Foreign Governments upon trade, as they are upon every other governmental act: but there is always one department which is especially the responsible department; do you consider that your office, and that you, as its President, are specially responsible for the governmental action with foreign countries upon matters of trade, or that the Foreign Secretary is so?—I do not think that the Board of Trade is responsible for the action of the Foreign Office. The Board of Trade is responsible for having allowed any question to sleep in the sense that it has not been brought before the Foreign Office, but if the Foreign Secretary thinks that from political considerations the moment is not favourable for pressing upon any Foreign Government any proposed commercial changes, I do not think that the Board of Trade is so responsible in that matter as the Foreign Office. But, in point of fact, there ought to be no divided responsibility; because if the President of the Board of Trade is a Member of the Cabinet, the Secretary of State for Foreign Affairs would confer freely with him, and point out to him what were the political difficulties of pressing any given point at any particular time, and they would agree as to whether it should be done or whether it should not be done. In point of fact, it seems to me to be a responsibility very much like the commercial responsibility, or pecuniary responsibility, that persons undertake, which is called a joint and several responsibility. I think they are jointly responsible, and each responsible. I do not think the department is responsible. In either case I think that the Minister at the head of the department is to be held responsible, and what the State does for him is to provide him with means of forming his opinion and arriving at just conclusions.

Right Hon. *T. M. Gibson*, M.P.

6 July 1864.

3451. When the Secretary of State for Foreign Affairs consults you as the President of the Board of Trade upon any one of those questions, and you obtain information upon matters of detail, or even guidance upon the general principles from the permanent officials whose business it has been to acquire it, in what manner do you convey this information to the Secretary of State for Foreign Affairs?—Sometimes by an official letter, which is initialed by me, and which is a letter from the department, but for which, of course, I am responsible; sometimes, and indeed frequently, when the matter is urgent and important, I have verbal communications with the Secretary of State; occasionally I call upon him; and sometimes he sends for me, when he has had representations from other quarters as to the necessity of moving in any particular matter, and we confer together.

3452. Are you always informed when an opinion which has been given by the Board of Trade, through you, is not followed?—I always know it; I do not exactly understand what you mean by "informed."

3453. Have you always an opportunity of laying before those of your staff whose business it is to have information, the fact that the Foreign Office thinks that it is undesirable to follow the advice that has been given, and are you able to consult with them as to whether you should acquiesce in the decision of the Foreign Office?—If the President of the Board of Trade does his duty he never need be in ignorance of what is going on upon those questions, because he knows that a letter has gone to the Foreign Office; and if the subject is pressing and he finds that there appears to be delay or want of information as to what is going on, it is his duty to look after it, and I never found the slightest difficulty at the Foreign Office, when I have gone there myself, in obtaining the fullest information upon any subject that I was desirous of inquiring into. I think very much depends, in these matters, upon the activity and the zeal of those who are at the head of the departments. An office is a thing that will never do much of itself, it gets into a mechanical routine mode of transacting business, and unless those who are responsible look after things, whatever your machine may be, there will be delays and there will be complaints.

3454. You have heard the reasons that have been given by Mr. Cardwell, that whatever be the efficiency and the energy of the heads of the two departments, yet that there may be a great disadvantage in the Foreign Secretary finding it necessary, by the arrangement of the machinery of the administration, that he should receive

Right Hon. *T. M. Gibson*, M.P.

6 July 1864.

information from the permanent officials of the Board of Trade through yourself, or else through the Secretaries of the Board of Trade and his own Under Secretaries, and therefore not directly?—Yes.

3455. What is your opinion of the suggestion to meet this difficulty of having a Commercial Department in the Foreign Office?—I think, if you were to establish at the Foreign Office a Commercial Department, it would be a virtual abolition of the Board of Trade in the sense of promoting the general interests of the commercial classes in regard to foreign trade. I think, the two could not very well co-exist; I think that if a gentleman, for instance, like Mr. Mallet, were established at the Foreign Office, he would gradually get around him a staff of clerks, and he would be looked upon as the person with whom all the Chambers of Commerce and others should communicate. The Secretary of State for Foreign Affairs would be looked upon also as the President of the Board of Trade, so far as the foreign trade is concerned. I think that it would not be worth while, if you had that arrangement, to keep up in the Board of Trade the department that is called the Commercial and General Department, and I think that the President of the Board of Trade would have a wrong nomenclature, which would be likely to mislead. You ought to alter the office in that case entirely and give it some other character. The President of the Board of Trade must not be required, if you have that Commercial Department at the Foreign Office, to take the responsibility of promoting those commercial interests in connection with our foreign trade that I have adverted to.

3456. Do you or do you not think that it would still be necessary for the Foreign Office to consult the Board of Trade, on account of the intimate connection of foreign and domestic trade?—No, I do not think it would. I think that if a Commercial Department were established in the Foreign Office, in the way proposed, they would have it in their power to carry on all their ordinary correspondence with foreign countries, without any reference whatever to the Board of Trade. Although I think that the Foreign Office could carry on its correspondence with Foreign Governments upon commercial matters, if they had such a department there as has been proposed, still I have some doubts whether it would work upon the whole so beneficially for the trade of the country as having a Minister, as they have now, whose duty it should be to press his colleagues upon commercial points. I dare say it might work very well generally, but it seems to me that there are occasions when the commercial world would not think itself so well represented or so well cared for if the Commercial Department were a sort of branch of the Foreign Office, as if they had a Minister, as it were, of their own, who should be made to feel it his duty to press forward their interests, and who, if they were allowed to sleep, would be held, unless he could give some very good explanation, to be responsible, or at least primarily responsible.

3457. That brings me to the question I was going to ask, which of course I do without reference to individuals. I am to understand, am I not, that it is your opinion that the interests of trade would, at present, and for some time, be better protected in this country by the Board of Trade continuing as the protector of those interests in the Government, and giving its opinion and its advice to other departments when they are affected?—I think that that would be the general opinion of the commercial classes, not only in reference to our commercial relations with foreign countries, but with reference to the mode in which revenue is raised in this country, and matters of that kind, where mere trading interests might, perhaps, be considered a little secondary, if they were not defended by some one whose duty it was primarily to take that course.

3458. The Committee are also to understand that it is your opinion, that if the Foreign Office was made self-sufficing on matters of trade, so much of the consultative functions of the Board of Trade would be taken away from it, that it would be difficult for it to remain as a department, looking after the interests of trade in the Government, and giving its opinion?—Yes; I think it must be limited entirely to its executive duties, and its head would not have the information supplied to him upon foreign commercial questions, because all the world would go to the Commercial Department in the Foreign Office. I think that the President of the Board of Trade would be a man who would have no authority or weight with his colleagues upon these matters. At least, I will not say no authority or weight, but he would not have the authority or weight which he ought to have, and which he would have when it was known that he was supplied with a staff who could give him good information, and when it was also known that the Chambers of Commerce and the commercial classes communicated with him, and told him their wants and difficulties.

3459. You stated that you thought it impossible that the Board of Trade should remain as a department looking to the interests of trade, in order for it to be consulted by the Treasury; is it not the case that upon questions of revenue, or alterations of duty undertaken by the Treasury, the Board of Trade is not at present consulted?—It is not departmentally much consulted, but Mr. Gladstone has constantly communicated with me upon measures that he has in his mind in reference to the revenue; it is difficult in a matter of that kind to communicate freely with a great department, because all proposed changes of duties ought to be kept quiet until they are proposed to Parliament; but I know that the present Chancellor of the Exchequer is in favour of being in free communication with the President of the Board of Trade upon any fiscal changes that he may be contemplating. I know that I have been requested to attend at the Chancellor of the Exchequer's office upon those subjects, and then I have had an opportunity, without stating publicly to the whole department what I meant, of acquiring in the department the information which it was necessary for me to have in order to give him my opinion, although it might not appear upon the face of any official documents, because the communications were not what you would call departmental. In point of fact, very often these departmental communications are matters of form; the real business is very frequently done by verbal communication, or by private letters; therefore, it is not to be supposed that, because there are not those official communications, the department is not being made use of. The department is a depository of knowledge. The department has in it some very able men, and they are talked to, and advised with; but the course that the President, who is responsible, afterwards

afterwards takes, it is for him to decide, having digested the information that he has received from the officers in his department.

3460. That brings me to the other suggestions which have been brought before the Committee, a very important one of which is, that if the Board of Trade is to remain the protector of trade interests in the Government, and if its opinion is to be taken by other departments, it should be made an office of rather more authority, like the Ministry of Commerce abroad; what is your opinion with regard to that?—I really have not a very strong opinion upon it.

3461. I think I understood you to say, that you thought that the President of the Board of Trade ought to be a Member of the Cabinet?—I think he ought to be so always. I think the President of the Board of Trade may make his office an important office, or let it be an unimportant one if he is inactive. I think a good deal depends in all offices upon the man; the machinery is not the most important part of the matter. Of course you must have a good working machine, but very much depends upon the men, both in the department and at the head.

3462. Do you not think that it would be an improvement in the present machinery, if that suggestion which has been made to the Committee were carried out, that the Board of Trade was enabled to obtain more speedy and more accurate information with regard to foreign trade, by being put into direct communication with the diplomatic body abroad, of course through the Foreign Office?—I think the Foreign Office would object to any direct correspondence being carried on between our Foreign Ministers and the Board of Trade. I think they would feel that it might give rise to a clashing policy, because political matters and commercial matters sometimes mix themselves together very much, and a Foreign Minister might find it difficult to know how to guide his policy if he were instructed, perhaps, in two different senses. I think that if there were a direct correspondence allowed between our Foreign Ministers and the Board of Trade, it might not work well; but I thought that, as a practical matter, Lord Malmesbury's suggestion deserved consideration, namely, that the commercial despatches should be docketed and forwarded at once to the Board of Trade. In that way there could not, therefore, be any delay in the Board of Trade receiving all commercial information that came from foreign conntries. If the Minister abroad separated the political from the commercial matters, and the commercial despatch was at once forwarded to the Board of Trade, I think that that would prevent any delay being possible. As a practical arrangement, so far as I am competent to judge, it appears to me to be a reasonable one.

3463. I understood Lord Malmesbury also to state that he thought that the suggestion which was brought before him, as having been made by Sir Emerson Tennent, that the Board of Trade should be able to communicate with the Diplomatic body abroad through the Foreign Office, but under flying seal, would meet the objection which you spoke of; do you not think that that would take away the danger of any collision between the two departments?—Perhaps it might.

3464. There has been one other suggestion brought before the Committee upon which we should be glad to hear your opinion; and that is, whether you think it might lead to a better arrangement of business between the two departments if there was an officer at the Foreign Office whose special business it should be to superintend such communications as far as they were carried on between the departments?—I think that it might be very useful if there were some gentlemen at the Foreign Office whose especial duty it was to put forward, as they term it, all commercial business.

3465. Mr. *Cobden*,] The Board of Trade carries on its proceedings in the name of a Committee of Privy Council, does it not?—Yes.

3466. Could you give us the names of that Committee?—Perhaps I may state how I understand the matter to be. The original Board of Trade was abolished in Mr. Burke's time. I and the members of the Privy Council were to carry on the business which had been carried on by the Board of Trade, without any fee or salary whatever. That went on for a short time, and afterwards, by an Order in Council, a Committee of the Privy Council was formed, to be called the Lords of the Committee of the Privy Council for Trade. Then an Act was passed, giving a salary to the Vice-President of that Committee of Council, and then some years afterwards an Act was passed giving a salary to the President of that Committee of Council. It has been the practice, I believe, at the commencement of every reign since that time for the Crown to form a new Committee of Council. The Committee are supposed to consist of the Chancellor of the Exchequer, the Secretaries of State, I think, and others; but I really forget who they all are. If you have got a book that gives you the public officers, you will see of what the Committee of Council consists; they never make their appearance at the Board of Trade.

3467. Is the Archbishop of Canterbury one?—Very likely.

3468. You do not know who your colleagues are over whom you preside at the Board of Trade?—We do not preside over them. The Board of Trade really consists of the President, the Vice-President, the Secretaries, and the staff of the office.

3469. The Committee are never summoned, I believe?—The Committee are never summoned. Very often we find that names and forms exist a long time after there have been substantial alterations.

3470. And all your proceedings are carried on in the name of the Lords of the Committee of Privy Council?—Yes; that is the name that is given to the Committee.

3471. But it is only a fiction?—It is certainly a fiction.

3472. If it were more than a fiction, and these parties who are never summoned to your proceedings, and who know nothing of what is going on, were liable at some time to come in and give a voice upon some questions in hand, might not that be rather inconvenient and rather an evil than otherwise?—As far as the executive duties of the Board of Trade are concerned it could answer no useful purpose for them to come, and I do not think they ever will.

3473. There would be no impediment or practical inconvenience in abolishing that fiction, and carrying on the business of the department in the name of the President, I suppose?—No, I do not know of any.

3474. Or in the name of a Secretary of Commerce?—

Right Hon. *T. M. Gibson*, M.P.

6 July 1864.

merce?—No, it is a Committee of the Privy Council. That is all I can say about it; but, practically, it is a Committee that never meets.

3475. Mr. *Bazley.*] Do you get information respecting the foreign commerce of the country without the intervention of the Foreign Department?—Yes, I do; but it may be rather considered in the light of private than official communications. No Foreign Governments or Ministers communicate with me officially as President of the Board of Trade.

3476. Then such information would be deemed irregular, to some extent, if it were obtained without the intervention of the Foreign Office?—Yes; they would not communicate officially with any one but the Foreign Office.

3477. Do you obtain information with respect to the trade and commerce connected with India at all?—I do not think we do. The Indian Department has kept itself entirely independent of all other departments in the State, I believe, so far as they have been able to do so. We sometimes supply them with information; but the communications between the Secretary of State for India and the Board of Trade are infrequent.

3478. In the Colonial Department do you exercise any jurisdiction in reference to commerce?—Yes; there are Acts of the Colonial Legislature, and Ordinances, and other matters taking place in the Colonies which affect commerce, and which may require the approval of the Crown here. Before that approval is given, frequently they are sent to us, and we offer an opinion as to what should be done, and occasionally suggest that despatches should be sent, pointing out anything at variance with the Imperial policy which has been adopted in this country with regard to trade.

3479. Do you ever feel it your duty to remonstrate against some of the heavy duties that are exacted upon British manufactures entering British Colonies?—Probably there may have been official letters upon that subject; most undoubtedly, it would be quite the duty of the President of the Board of Trade to press such a matter as that upon the Colonial Secretary, in order that he might use his influence as far as he could to get those duties reduced.

3480. You are aware that the duties in Canada are very excessive upon British exports?—Yes.

3481. And also in Australia upon some of our manufactures?—Yes.

3482. Would it not be a great advantage to a commercial community, such as that which we constitute in this country, if there were a department, whether it was called the Board of Trade, or by any other name, that would include the whole of the commercial relations as regards trade both with Foreign Countries, with the Indian Dependency, and with the Colonial possessions. Should not there be a system so comprehensive connected with trade and commeree that when we enter the Commercial Department in connection with the British Government, there we should find everything received in the way of information, and all the facts which are likely to be useful?—Yes, no doubt, so far as statistics are concerned; the more comprehensive they are, of course, the more useful they would be. I think that the Statistical Department should be the depository of information upon all those branches.

3483. Should not there be something beyond the mere accumulation of information; should not the head of the Department have the means of obtaining direct information from Foreign Countries trading with this country, as well as from India and from the British Colonies?—Of course; the old question arises as to whether the Foreign Office would allow direct communications to be carried on with Foreign Governments, except through the agency of the Foreign Office. I think it is, in theory and in practice, better that those communications should be carried on by the Foreign Office exclusively; I think that every facility should be given for commercial information being promptly communicated, but I think the conduct of the correspondence between Foreign Ambassadors and Foreign Governments and this country should be through the Foreign Office.

3484. That reason will apply also to the Indian and to the Colonial Departments?—Yes, as regards correspondence.

3485. Does the Indian Minister ever apply to you for information connected with the wants of the Home Trade of this country?—It would be quite competent to me, and I should not discharge my duty, if I omitted to do it, to press the wants of the Home Trade upon his notice; he would, of course, hear me upon that subject. If any complaints were made to the Board of Trade of any laws in India that were considered to be prejudicial to the interests of trade here, and to be impolitic laws, it would be the duty of the President of the Board of Trade to communicate with the Secretary of State for India, who, I am quite sure, would take the subject into his consideration.

3486. Has the Indian Minister ever informed you that sheep's wool and flax, and silk and cotton, could be very generally supplied from India, if home markets could be found for those various products?—I do not know that he ever has.

3487. It is only of late years that supplies of sheep's wool have been received from India, especially since the mutiny, and that supply is continually increasing; you are aware of that fact?—Yes.

3488. During the last three years, the great industry in this country connected with the manufacture of cotton has been in a state of great depression and distress from the want of a supply of the raw material; in this state of things, has the Indian Minister frequently made applications to you, or consulted with you, in reference to the necessity which exists of obtaining a larger supply and better quality of cotton?—I may say that all the departments of Government have been alive to the importance of that question of cotton supply. There has been certainly amongst the heads of the various departments a great deal of intercommunication. We have received information from various quarters as to probable new sources of supply, and we have given our opinions, when it seemed to be necessary, as to what should be done, in order that advantage might be taken of the information. I cannot mention any special case, but I think it is sufficient to say generally (and I do not overstate the matter at all in doing so) that the subject has occupied the attention very much indeed of all the departments, I may say, of the Government; certainly, of all the departments at all connected either with the Colonies or with India, or with foreign countries; in fact, generally of the Government.

3489. The Board of Trade takes cognizance now

now of the public works of the country. Have you had any communication from the Minister for India connected with the establishment of Indian railways?—I do not know that we have.

3490. You are aware that, from the want of internal communication in India, the facilities of commerce are very much contracted?—Yes.

3491. Have you had any communication in reference to the importance of irrigation in India, with a view to obtaining larger supplies of cotton from India?—No. I imagine that upon all these matters the Indian Office itself is capable of doing all that is necessary.

3492. Have you, during the period of distress that has existed, made any direct application to the Indian Department concerning the development of the resources of India, particularly with respect to the obtaining of increased supplies of cotton?—I have conversed upon the subject with the Secretary of State for India, but I do not think, really, that it was at all necessary for me to urge the importance of that subject upon him, because I am quite certain that he has always felt the importance of it. There has been some controversy upon which I do not wish to offer any opinion as to certain measures of administration, and so forth, in India; but, upon the importance of getting increased supplies of cotton in India, he could have no other object but to do all he could in promoting the obtaining of those supplies, and I think it would have been superfluous in me to have urged such a matter as that upon him during these times of pressure for the want of cotton, for the whole Government has been alive to the importance of that question.

3493. If we had a Department of Trade in this country upon a more comprehensive system than that which exists at present, would not the department be more effective if the head of it were a Minister of Commerce, and had more authority connected with all the ramifications of trade and commerce?—I think, provided the President of the Board of Trade for the time being is a Member of the Cabinet, he is placed sufficiently upon terms of equality with the rest of the Cabinet, and if he does his duty, he has the means of making known to the Government the wants of commerce, and can get those wants attended to.

3494. In the commercial world an opinion prevails that obstacles exist, not only in our Indian Empire, but in our Colonial Possessions, to the production of various articles that would find good markets in this country, and that would also tend to extend our relations with those Colonies, and with the great dependency in the way of increased exports. How are those obstacles to be removed under the existing relations of the Colonial Office, the India Office, and the Board of Trade. Is not some central authority necessary for the purpose of promoting the removal of those obstacles that are understood to exist, and the removal of which would lead hereafter to a full development of the resources of the Empire?—With reference to our Colonies the question is a difficult one, because the Colonies have so much power of their own, and their legislation, of course, is their own affair to a great extent. It is a difficult thing, and a very delicate matter, to be interfering with the rights of taxation, and so forth, in the Colonies, and to be dictating to them how they should raise their revenue.

3495. Those Colonies are very costly to us, and, if they enjoy privileges, have they not duties to perform?—No doubt they have. To interfere by the power of the Executive Department here would, I think, not be right to the extent suggested.

3496. We do not appear to have any representative of trade and commerce in the departments who has sufficient power to correct the evils that prevail, both in India and the Colonies?—With regard to the question of duties upon exports going into our Colonies, of course those duties are raised by the authority of the Colonial Legislatures, and I imagine that the only way in which the Crown here could deal with the subject would be by refusing its consent to particular Acts; but that would be a very strong proceeding, and, in point of fact, the principle having been to give our Colonies the independent government, to a great extent, of their own local affairs, it is difficult to interfere in such matters now. No doubt we should, from the Board of Trade, point out objectionable regulations and duties to the Colonial Office; and no doubt also the Colonial Office (I agree with Mr. Cardwell in that matter) would at once of themselves see it, if a Colonial enactment was at variance with the Imperial policy, and they are quite competent to take what course is necessary.

3497. Do you think that it is possible to give a concentrated power to a department in this country which shall take cognizance of the Foreign and Indian and Colonial relations of the Empire as regards commerce?—I do not think it would be, in the sense which you mean; I think that they would find themselves very much hampered if they could not act without the authority of some great central department. I think, as I said before, that whether as regards the Colonies, or as regards India, it is quite competent for the President of the Board of Trade to bring under the notice of the head of the Colonial Department, or the Secretary of State for India, any objectionable duties or regulations that may exist, and to press the matter upon the attention of those who have authority to act.

3498. Men of business complain now that when they apply to the Foreign Office for information connected with foreign trade, they are sometimes referred to the Board of Trade, and sometimes when they apply to the Board of Trade they are referred to the Foreign Office, and there can be no doubt that difficulties arise out of the joint administration of the departments that ought to control the foreign trade of the country; we have men of business also who complain that between the Board of Trade and the Indian Department difficulties arise which compel them to seek information rather from the commercial world without than from a department of Government, and when they go to the Colonial Department they find similar difficulties; there does, therefore, seem to be a great deficiency in our commercial regulations under the Government, the difficulty being that, by a divided responsibility, there is no unity of action, and that men are left to obtain information connected with the rules of the various Governments, and the regulations of foreign trade, Indian trade, and Colonial trade, as they best can; would it not be better, under those circumstances, for the country to have a Commercial Minister who should be responsible to the whole commercial world, and to this country, for a good and perfect organization with

Right Hon. *T. M. Gibson*, M.P.

6 July 1864.

with trade and commerce?—Your question is rather long, and I do not see the precise point of it. You might have a Minister responsible for doing his best to bring about those changes that are sought in foreign countries; but you cannot make him responsible for the bad laws of other nations. I think you ought to view, more than we have viewed in this Committee, the Government, as a whole, as responsible for the general policy of the nation, for the commercial policy as well as for all other kinds of policy. I think that you ought to hold them responsible for doing all that in them lies, and not allowing any fitting opportunity to pass for urging and pressing upon Foreign Governments the policy of adopting the principles of free trade and so forth. I believe that a great deal may be done by the dissemination of good information. It appears to me that the changes in foreign tariffs must take place from the same cause that brought about the change here, namely, a change of opinion in foreign countries; and it is not always clear that importuning them to make changes in their tariffs, for our interest, is the best way to get them to do it; the dissemination of facts, and our own example, leaving the importunities to be less than they have been, I think is more likely to be a successful policy. We should never have done much in this country, except by addresing the reason of the people, and by changing opinion and forming men's views upon facts, and reasonings drawn from those facts. Great changes took place in our policy; but those changes were not brought about, and never would have been brought about by any importunities on the part of foreign countries urging us to make those changes.

3499. When the men of business are aware of the necessity of the changes that are requisite, does it not impede the progress of improvement when they have to apply to a department under Government that is called a Board of Trade, which has not sufficient power to give effect to commercial improvements?—It is difficult to say what you mean by "commercial improvements."

3500. Commercial facilities and commercial extension?—If you mean by that getting foreign countries to reduce their tariffs, so as to increase the markets for our manufactures, nobody really has the power to do anything in it; it is all a mere question of pressing the matter upon the consideration of those Governments. There is no power here to do anything in the matter, and there cannot be that power in any department.

3501. Unless we have the materials from which we can make our manufactures, the markets become of secondary importance; and, therefore, in relation to the present state of things, in the cotton trade in particular, has it not been the duty of the Government to ascertain, through the Colonial Department and the Indian Department especially, whether more might not have been done to have mitigated the distress that has prevailed, and to have put the whole trade upon a much more solid foundation than it has ever hitherto been placed upon?—I think in those matters you must not expect Governments to initiate or to be in the van as pioneers. They seldom have been; I do not say that they ought not to be so when they are impressed with the importance of any subject; but they are generally engaged in dealing with the policy of the country at the time, and without perhaps seeing very far before them. The changes that are effected are generally brought about by individuals, in the first instance, acting as pioneers, and others following them, until a change takes place in public opinion, which at last acts upon Parliament and the Executive. If they could have seen before them, as many did, the importance of increasing our area for the supply of cotton, I dare say that more active measures would have been taken formerly than were taken; but, unfortunately, we do not see very far before us in this world.

3502. Mr. *Charles Turner*.] Mr. Cardwell seemed to be of opinion that it was possible that the Consultative Department of the Board of Trade should be done away with altogether, and that the Board of Trade should be left to carry on its executive functions, with regard to railways and so forth, do you agree with that?—I do not altogether agree with that doctrine; I do not see how the President of the Board of Trade is to be in a condition usefully to represent the interests of trade, if there are not gentlemen in the department who are possessed of information upon commercial subjects generally, and also if there is not in the department a great deal of what I may call stores of knowledge upon commercial subjects. It appears to me that the President of the Board of Trade would not be able, without such means at his disposal, to serve the interests of the commercial world to the extent that he is able to do now.

3503. I think you say that the Board of Trade have no direct communication either with Foreign Governments or the officials of Foreign Governments, or with the British authorities abroad?—Upon certain matters we have communications with the consuls.

3504. Not generally?—Not generally.

3505. Therefore all the information that you get from abroad, with reference to trade, comes from some department of the Foreign Office, or the Colonial Office, or the India Office?—Yes, it comes through the Foreign Office.

3506. As regards commercial information to be derived from abroad, all those departments have the same information as you have, and they get it before you, in fact?—Yes.

3507. Therefore, any advantage that you have would be with respect to information at home with regard to the home trade?—Yes.

3508. You have no other information beyond that, except what those departments have?—No.

3509. You think that it is desirable that a department should be kept up in the Board of Trade to bring the knowledge both upon home and foreign affairs to bear upon subjects of this kind?—I think it is desirable that there should be at the Board of Trade a depository of information of the character you refer to. The Statistical Department, for instance, is very necessary to be kept up for the sake of trade.

3510. As regards the Statistical Department, I think Mr. Cardwell was of opinion that it was not a department of the Board of Trade; that although it was nominally so called, it was really a department of Government generally, and had no particular reference to the Board of Trade any more than to any other department of Government?—So, in point of fact, is the Board of Trade itself; the fact is, that they are all departments of the governing body. I think there has been one fallacy in this discussion, and that is this: it is not the offices which govern; it is not the departments which govern;

govern; they, strictly speaking, are only advisers of those who govern. A department ought not to be held responsible in any way; the truth is, that very often the advice of the department is not taken. The head of the department must receive the advice of those who are in the department; he has information from them, but there are other considerations which also weigh with him in coming to a conclusion. For instance, with regard to legislation he has to consider not altogether what the department advises to be done, but he has to consider various interests, perhaps, which do not come under their notice; he has to consider what he can carry through Parliament; he has to consider the House of Commons and the House of Lords, and various other matters.

3511. I suppose, practically, it comes to this, that those consultations between the Foreign and Colonial Offices and the Board of Trade are really consultations between the Secretaries of State for those departments and the President of the Board of Trade; they are not departmental consultations?—Practically, it comes to that.

3512. It is not a departmental question put upon the paper, but you are consulted as the President of the Board of Trade by the chiefs of those two departments?—Yes, upon important points.

3513. Practically that is the consultation that takes place?—Yes; there is a good deal of routine business that nobody need be consulted about at all; in fact, that is matter of course business. The controverted questions that come before Parliament, questions upon which there is a considerable difference of opinion in our own country, and in foreign countries too, are the questions upon which the advice of the department is necessary; but those who are responsible for the conduct of the public policy must act as they think fit.

3514. You are consulted, in point of fact, as the head of the department connected with trade, and as being therefore a gentleman who is supposed to understand questions of trade generally; your advice is taken in that capacity?—Yes; but I should not be able to give my advice, unless I had in the department persons to advise me, or to give me information; I need not act upon their advice, but still I must have it. I should like to say, with regard to Mr. Cardwell's proposal, that I think there is no doubt that there is a great deal of ordinary correspondence which the Foreign Office might conduct with foreign countries upon commercial subjects without consulting with anybody else, provided that they had a commercial officer in the Foreign Office, and were communicated with through that officer by the Chambers of Commerce and other bodies in the country. There is no doubt that they might conduct the ordinary correspondence in that way; but I do not think myself that it would work so beneficially for the interests of trade upon extraordinary occasions as having a Minister of Commerce, or a President of the Board of Trade, who should represent, as it were, separately and independently, the interest of the commercial classes.

3515. Mr. *Pender.*] Are you aware that the Chambers of Commerce generally throughout the country, while they know that we have a Board of Trade, feel that that Board of Trade does not fairly represent trade interests; for instance, the manufacturing interests and the mercantile interests say, we have a Board of Trade, but we feel that the Board of Trade does not fairly represent our interests?—I do not see what is to prevent the President of the Board of Trade representing the interests of the commercial classes.

Right Hon. *T. M. Gibson*, M.P.

6 July 1864.

3516. That is just what the commercial classes want; they want the President of the Board of Trade really to represent their interests?—If he does his duty, I am prepared to contend that he can do so now, if he is a Member of the Cabinet.

3517. Could not he do it more effectively if his position was higher than it is at the present time; if he was upon the same platform as the Secretaries of State, and occupied the same position as they do?—I rather doubt whether he could. I think, if he is a Member of the Cabinet, he has it in his power to bring before his colleagues his views upon any commercial question; he has it in his power to bring before the Cabinet his views of what ought to be done. If the Secretary of State for Foreign Affairs entertains doubts whether it is a fitting time, or whether political considerations stand in the way of action at that moment, he would state those views, and they would come to a determination as to what should be done.

3518. You say that the Board of Trade have now a right to protest against anything which is unfavourable to the commercial interests of this country?—When you use the term, "Board of Trade," perhaps we are talking of it in two different senses. There is no doubt that there is a great deal of executive business which the Board of Trade has to discharge under the authority of different Acts of Parliament; but as a Minister of the Crown, provided he is a Member of the Cabinet, the President of the Board of Trade has it in his power to urge on commercial questions generally.

3519. For instance, a rather important change took place the other day in the tariff on British goods going into India, which has been advanced considerably; have you heard anything of it, at the Board of Trade, and has any remonstrance been made; you are no doubt aware that, at Manchester, it has given considerable dissatisfaction?—There is no doubt that the obvious thing for those who complain is to make their complaints to the Secretary of State for India; but, inasmuch as it affects the trading interests of this country, there is no possible objection that I can see in their also communicating with the President of the Board of Trade.

3520. Does not it weaken the confidence in the Board of Trade if they apply to you, for instance, in this question of Indian tariff; and if the Board of Trade refers them to the Indian Office?—The Board of Trade have no power whatever of interfering with the affairs of India; the President of the Board of Trade can urge upon his colleague, the Secretary of State for India, the necessity of considering certain changes or not, as he thinks fit; but we have rarely meddled with the Indian Department in any way, that I am aware of.

3521. Were you aware of this alteration which took place the other day in the Indian tariff?—No; the India Office do not communicate with us.

3522. Therefore, our trade with India is really without a department representing it in any way connected with the Government?—Certainly, without any specially representing it beyond the India Office.

3523. With regard to our Colonies, of course you

Right Hon. *T. M. Gibson*, M.P.

5 July 1864.

you are aware that free trade is now the Imperial policy; that free-trade policy has been put aside in some instances by the Colonies, and although professedly imposing duties for the purpose of the revenue, they have imposed such duties as to amount to a protection, and it is said that they are imposed in some instances avowedly for protection; in that case, you are aware that the Colonial Secretary has a positive veto upon such enactments?—Yes.

3524. If we had a Minister of Commerce, in precisely the same position as the Colonial Minister, could he not press him to the point of vetoing anything that was contrary to Imperial policy?—He could press it upon him. I do not know what their practice is at the Colonial Office, or the extent to which they have ever gone that way; but obviously it is a ground that they would tread upon with great caution, as interfering with the rights of taxation in the Colonies. But no doubt, if the Colonies were to adopt regulations or duties which conflicted materially with the Imperial policy, then it would be the duty of the Colonial Office to advise some interference, I should think. But, as far as the Board of Trade is concerned, we have nothing to do with it; we have no executive power; we could only call the attention of the Colonial Office to anything that we thought injurious to the commercial interests of this country, or which conflicted with the Imperial policy.

3525. From the present constitution of the Board of Trade, you can do nothing more than remonstrate with any other department by which changes are made which are not in the interests of the trading and manufacturing community of this country?—Certainly, we can do no more; of course, we have no executive power whatever with regard to their duties.

3526. *Chairman.*] Have you any suggestion to make to the Committee with reference to the subject we are met to consider?—No; I cannot say that I have.

3527. Are you aware whether Mr. Cardwell was a Member of the Cabinet when he was President of the Board of Trade?—He was not at that time.

Appendix, No. 1.

PAPERS handed in by Mr. *Allhusen*, 3 June 1864.

To the Right Honourable the Lords of the Privy Council for Trade, &c., &c., &c., London. App. No. 1.

The MEMORIAL of the Newcastle-upon-Tyne and Gateshead Chamber of Commerce, unanimously adopted at a Special General Meeting of the Committee of the Chamber, held on Friday, 13 February 1863, in the Guildhall, Newcastle-on-Tyne, the Mayor of Gateshead (*B. Bigger*, Esq.) in the Chair,

Respectfully showeth,

THAT the commercial community of this locality feeling a deep interest in the extension of intercourse with foreign nations, has, for a considerable period, exerted itself in common with other commercial bodies, to bring under the notice of Her Majesty's Government, that present circumstances call for some change in the conduct of negotiations for further commercial treaties, and in the management of the numerous questions which have arisen, and are daily arising, in consequence of treaties already entered into.

That this conviction having more and more forced itself upon our merchants and manufacturers, this chamber embraced the opportunity which presented itself during the autumn of last year, by the visit of an influential member of the Cabinet, the Right Honourable the Chancellor of the Exchequer, to place before him a variety of suggestions, embracing the opinions of this association on this important subject, and which were, in substance, to the following effect:—

> Suggestions respectfully submitted to the Right Honourable the Chancellor of the Exchequer, by the Newcastle and Gateshead Chamber of Commerce, for facilitating the early reduction of foreign tariffs.

Upwards of 20 years have elapsed since the first changes in the laws regulating the importation of foreign produce and manufactures took place.

It was originally intended to extend commerce by entering into treaties with foreign nations; but this principle, though it had been previously acted upon, with regard to shipping, was soon discovered to create insurmountable difficulties at home. Our ministry was not empowered to act without the consent of Parliament. It thus became a matter of necessity to legislate for this kingdom only; and to trust to foreign nations following our example.

The maintenance of the principle of protection to national industry, appeared to be the basis upon which commercial or navigation treaties were first inaugurated during the period of Mr. Huskisson. Their object was to confer, or maintain, benefits on home producers, under the supposition that foreigners paid the difference between high and low prices; whilst, in fact, the home consumer was the loser. We may consider this principle as having been abandoned in this country since the introduction of the great tariff reforms of Sir Robert Peel, when it became apparent that the public interest would be best consulted by the levying of duties for revenue purposes only.

The errors of the principle of protection, however well understood here, yet prevail, to a great extent, with many leading statesmen in continental Europe.

The success which has followed the change of our policy has proved, to the satisfaction of the country, that the removal of restrictions invariably opens out new sources of wealth; and we have at last arrived at a period which shows indications that foreign nations are willing to consider reforms in their respective tariffs. As the idea of introducing changes is now entertained by them, it is not unnatural that they should endeavour to do so by means of treaties which, whilst they provide for the removal of restrictions in their own country, should, at the same time, secure a further reduction of our import duties.

For a long period our Government adhered to the idea that each nation must legislate for itself. But at last the principle of negotiation was adopted, with regard to France; and, considering that the good effect which has resulted in this case can no longer be doubted, it may be assumed that similar negotiations will have to be conducted on future occasions. We have, since that period, witnessed the conclusion of a treaty of commerce with Belgium, and negotiations are understood to be pending with Italy; and Austria, it is to be hoped, will also reform her tariff. This state of things must naturally lead to the inquiry whether our Government organization is adapted for the

App. No. 1.

prompt management of the important questions which from time to time arise, and which must be dealt with without delay. Is it practicable to secure the requisite attention without neglect of those political and other duties which have of late years increased, rather than lessened the labour imposed upon the existing ministerial departments?

Those who have had an opportunity of observing how commercial questions are at present disposed of have come to the conclusion that a different organization might be introduced with advantage.

We have a Board of Trade, which acts under the Foreign Office; this Board thus becomes a mere channel of communication, and is unable to conduct and carry through the business to which its attention may have been directed.

The advice of this department is not unfrequently required and given on commercial matters; but whether such advice is acted upon, and has led to the desired results, can only be ascertained by application to another department.

In the ordinary affairs of life, an incentive to industry is found to be almost necessary to secure success, whilst according to the existing regulations it would appear that the duties are so divided as to deprive the executive of all interest, and the dispatch of business rests solely on the motive power of a conscientious discharge of duty.

The Board of Trade appears to be responsible to the House of Commons for the efficient administration of the mercantile, marine, and railway departments, but not for matters concerning commerce; it is, therefore, assumed that the interest of this Board is more immediately confined to the performance of the duties connected with the two first-named departments, and they, it is believed, annually require increased attention and labour.

It thus appears that the management of the commercial policy of the country virtually rests with the Foreign Office. This department, generally under the direction of most able diplomatists, appears to be overburdened with important business, which, as might be reasonably supposed, take precedence of any commercial questions; in fact, it may be broadly stated that the atmosphere of the Foreign Office is not the most favourable to the promotion of trade. It is not probable, therefore, that any member of that department would take pleasure in devoting his mind and thoughts to its extension, as they invariably belong to a class who have been debarred, as it were, by previous associations from acquiring a knowledge of matters bearing upon commerce.

If the correctness of these remarks be admitted, the desire of the mercantile community, it is hoped, will soon be realised. Their object is to provide for a system which will give Chambers of Commerce, and other commercial communities, the means of bringing their representations under the notice of some properly constituted department, which of itself shall have authority to act upon them, and be directly responsible to the House of Commons for the administration of its functions.

Whether their wishes can be best carried out by the appointment of a Minister of Commerce, or by the constitution of a Foreign Commerce Department under the superintendence of the Foreign Office, they do not pretend to decide; but they can assert with confidence that a department of this nature, presided over by one who possesses a knowledge of trade, and who would consider it his duty to watch every opportunity which might present itself for securing an extension of commerce would tend to promote progress and prosperity.

A department so constituted, with authority to communicate direct with our ambassadors or consuls, under the regulations it may be advisable to impose, would at all times be ready to avail itself of the chances which may from time to time present themselves for effecting the removal of restrictions upon foreign commerce.

It may be said with a degree of justice that the time for making commercial treaties is passed, because, having given all we had to give we can give no more; this argument, however, belongs more properly to the past than to the present, because concessions of a very moderate extent would now satisfy, whilst much more would have been required before the general advantages of Free Trade were understood by foreign governments; and it may also be observed that changes which they would deem a concession might, when made, benefit ourselves.

The same arguments were used before the commencement of the French negotiations, yet we found means to conciliate that government mainly through our consent to reduce the duties on wine, not, as it was supposed by some, at the sacrifice of a permanent revenue, but by the substitution of a low scale for a high rate of duties, a change which has increased the comforts of many, whilst at the same time there are unmistakeable indications that after the lapse of a few years this concession will be found to have laid the foundation for an increased revenue. At least so far as the past affords a guidance, it would appear to be so, seeing that the consumption of port wine has nearly doubled, whilst that of French wine has almost trebled.

In short, the argument that we have nothing to give is no longer tenable. What has held good with regard to France, may be practised at suitable periods in other countries.

The state of our revenue might permit a reduction of the duties on sugar, or some other highly taxed articles, which would afford the opportunity of concluding treaties with the Brazils and other South American Governments; it might also afford a chance of restoring a liberal tariff in the United States.

Though our power of making concessions is comparatively small, France, on the other hand, has much to give, and her active exertions in making treaties of commerce having already brought the reduction of duties under the notice of several important foreign governments, there is hardly a doubt that the tariffs of Europe generally will undergo a change.

Under these circumstances, therefore, the present period would appear to justify the conclusion that there would be ample scope of usefulness for a department such as the mercantile community of this locality, and, we believe, of the country at large, would desire to see established.

Signed on behalf of the Chamber,
C. Allhusen, Chairman.

Newcastle-upon-Tyne,
October 1862.

That

That the Right Honourable gentleman gave a very courteous reply, without, however, holding out any hope that steps might be taken to carry out the suggestion thus brought under his notice.

That this association has deemed it better to allow some time to elapse for consideration, believing that circumstances might arise which would forcibly show that the public interest required the formation of a department affording a direct and easy communication with commercial associations, and combining therewith responsibility to Parliament.

That nearly 12 months have elapsed since this Chamber was applied to by your Board for information regarding the commercial intercourse between this country and Italy, and it was considered that the object of this inquiry was to collect materials for the framing of a commercial treaty with that country. Since then the result of the pending negotiations has been watched with interest, but up to this period it does not appear that any progress has been made.

That when we contrast with this the successful efforts of the French ministry (where an organization exists such as this Chamber would desire to see established here) we are obliged to come to the conclusion, in which we trust your Honourable Board will concur, that some change in the mode of conducting such negotiations is absolutely necessary.

That a treaty of commerce has been concluded between France and Italy, and we believe England will reap the advantage of this treaty under the most favoured nation clause; but the effect of this indirect mode of proceeding is that the alterations and reductions of duties are framed so as best to promote the commercial intercourse of the two nations engaged in the negotiation, who naturally look to themselves alone; and it is only, therefore, when the interest of the British manufacturer is identical with that of one or other of the contracting parties that any increase of commercial facilities is participated in by this country.

That it may be remarked that reductions and alterations of duty, provided for by the treaty referred to, do not even now appear to be known to the commercial interests which may be materially affected by them, supposing even that they are known to any of the ministerial departments of the country.

That the same observations might be made with regard to the Belgian and Zollverein treaties of commerce, but we deem it unnecessary to multiply statements of a similar character; this Chamber remaining under the impression that commercial questions do not, under the present system, create the interest which is necessary to their advancement.

Your memorialists therefore request that your Honourable Board will carefully consider their representations, and take such early steps as may be considered most judicious and best calculated to establish an efficient organization for the management of questions bearing upon international commerce.

Signed by order and on behalf of the Chamber,

Benjamin Bigger,
Mayor of Gateshead,
Chairman.

PAPER handed in by Mr. *Ashworth*, 7 June 1864.

App. No. 2.

MEMORIAL of the Board of Directors of the Manchester Chamber of Commerce.

To the Right Honourable the Lord Viscount *Palmerston*, K.G., G.C.B., &c., &c., First Lord of Her Majesty's Treasury.

The Memorial of the Board of Dicectors of the Manchester Chamber of Commerce, by their Chairman—

Respectfully showeth,

THAT your Memorialists have long had reason to complain of the tardiness and inefficiency of the system which prevails in this country for communicating with Foreign Governments on subjects connected with trade and commerce.

That to whatever causes this may be attributable, it is certain that, when opportunities have presented themselves for re-modelling tariffs, or developing commercial intercourse, the favourable moment has usually been seized by France, or some other of our commercial rivals, and after negociations have proceeded some length, we have heard of them for the first time chiefly through the public press.

That the origin of the Board of Trade dates as far back as the time of the Commonwealth, when a council of lords and merchants formed a commission for the purpose of developing the trading resources of this country.

That since that period various changes in our commercial policy have succeeded one another.

That in the first instance the legislation of the Board of Trade was chiefly confined to protecting home industry on the old exclusive system, and to the enactment of laws which forced the colonies to buy their goods in the home market, and compelled them to sell their produce exclusively to the mother country.

That subsequently various systems of tariffs, prohibitions, drawbacks, differential duties, sliding scales, and navigation laws were adopted in succession.

That at a later period recourse was had to treaties of reciprocity with foreign nations, and later still, in accordance with a more enlightened policy, the free-trade system was inaugurated and carried into effect, sweeping away all former objectionable impositions and restrictions.

That the remodelled British customs tariff, as it has come into operation in its simplified form, requires less supervision on the part of the Government, and appears to have liberated some portion of the official staff of the Board of Trade for other duties, as from a Report presented to Parliament in 1854, it is shown that that establishment, being no longer engaged solely upon trading affairs, had been divided into the following departments, viz.:—

1. General Department.
2. Statistical ditto.
3. Railway ditto.
4. Mercantile Marine ditto.

Also The Corn Office.
The Registrar of Joint Stock Companies.
The Registrar of Designs.
The Registrar of Merchant Seamen.
And The Department of Practical Art.

That the last-named department has since been removed, and there have been added the Meteorological Department, and some minor branches, such as relate to Charters of Incorporation, Art Unions, and Fisheries.

That, following a change so sweeping, it would appear that the Government had arrived at the conclusion that the free-trade measures now in force had become sufficiently complete in themselves to put an end for ever to many of those trade and tariff questions which previously had been found so troublesome and perplexing.

That, whilst acknowledging the vast importance to commerce of the various undertakings which of late years have occupied the attention of the Board of Trade, and which previously were unknown to that branch of the Government, your Memorialists cannot refrain from expressing their conviction that that department, which ought to have watched over commercial interests, has failed to provide adequately for them in their altered position under the free-trade system, nor has it kept pace with the requirements of the enormous increase in our foreign trade.

That the constantly increasing numbers of our labouring population, who depend in a great measure upon foreign states for the disposal of the produce of their labour, coupled with the fact that, year by year, foreign nations are entering into more active competition with us in all the markets of the world, combine to show the absolute necessity of greater vigilance and more energetic action by Her Majesty's Government on behalf of the manufacturing community.

That

That this country, having been so unsparing in the repeal of duties levied upon foreign products, it is obviously incumbent on Her Majesty's Government that they should impress upon foreign states the necessity as well as the advantage of allowing to British manufactures the most favourable terms of admission into their markets.

That it appears that other nations have been unable to extricate themselves as completely and as speedily as England has done from the trammels of a protective system of long duration; but it is known that some of them have evinced a disposition to readjust their customs duties and restrictions upon trade, and there is reason to believe that an appeal from Great Britain, setting forth our claims upon them, would receive a fair and equitable consideration. Hence it is absolutely necessary for British interests that they should be strongly and specially represented abroad, whenever there are tariff alterations about to be made, in order that the most favourable terms may be obtained; and, it may be added, that the omission of such a step, or any inefficiency in conducting the negociation, might entail incalculable loss on many branches of our manufactures for years to come.

That since the Commercial Treaty with France, it is well known that that nation has been negociating commercial treaties with various other European countries for the reception of the principal articles of French produce, at an average duty of 15 per cent., in lieu of from 30 to 100 per cent., previously in force.

That in countries where France has obtained considerable commercial privileges, it appears that our diplomatists have arrived too late on the field, and have only succeeded, in some cases, in obtaining the benefits of the treaty under "the most favoured nation clause." The classification and arrangement of the tariffs, as settled between France and other countries, not unfrequently excludes British manufactures, and, as instances of this, your Memorialists would point to the recent reductions in the Italian Treaty of Commerce, also to the circumstances connected with Belgium and the Zollverein; they would further point out that there are many articles of British manufacture, nothing similar to which is produced in France, and that country having made no provision for the admission of such articles, no reduction of duty upon them has been obtained.

That it is most disheartening to the enterprise of the British manufacturer to observe that his immediate interest should be thus lost sight of by our foreign diplomatists, and it is not unreasonable that he should complain of this neglect. It may be alleged, in reply, that there has been placed within his reach the staff and influence of the Board of Trade, ever ready to give attention to his representations, and communicating, as it is supposed to do, with the Foreign Office, and thence through our diplomatists with the Governments of foreign nations.

That your Memorialists have thus placed before them, apparently, all the advantages to be derived from the action of two such powerful bodies; but the reality discloses a division of authority which, in effect, renders neither the one nor the other responsible for the discharge of the important functions relating to our commercial intercourse abroad; and, as might be expected, documents and representations, which have been prepared with great labour and have urgently demanded attention, have been referred from one department to the other, and it has not unfrequently happened that objects which might have been otherwise achieved have been allowed to slip from our grasp.

May it therefore please your Lordship to take this matter into your early and favourable consideration, and cause an inquiry to be instituted, and such steps taken as may appear most desirable for rendering the action of the departments herein referred to more direct and efficient in communicating with Foreign Governments upon commercial affairs; and, further, that your Lordship will, for the future, require that Her Majesty's representatives abroad shall devote to the subject that measure of attention which its vast importance demands.

And your Memorialists will ever pray, &c.

For and on behalf of the Board of Directors,

(signed) *Henry Ashworth*, President.
Hugh Fleming, Secretary.

Manchester,
22 February 1864.

PAPERS handed in by Mr. *Sturrock*, 7 June 1864.

App. No. 3.

Zollverein Tariff.

To the Right Honourable *T. M. Gibson*, President of the Board of Trade.

The Memorial of the Directors of the Dundee Chamber of Commerce,

Humbly showeth,

That your Memorialists, understanding a treaty of commerce is in process of adjustment between the states composing the Zollverein and France, which will also apply to the trade carried on between this country and Zollverein, beg respectfully to lay the following statements before you, regarding a large trade carried on in Dundee.

Since the present tariff of the Zollverein came into operation a new trade in this district has sprung up, viz., the manufacture of jute into yarns and cloth. The raw jute is imported entirely from the British possessions in the East Indies, and the quantity used in Dundee alone in 1861 reached to nearly 40,000 tons.

The products of jute have, consequently, no place in the present tariff of the Zollverein, and all yarns and cloth made from this fibre are classified under the head of linen yarns and linens, and the duties specified on these articles are charged accordingly.

Your memorialists have to state that the great proportion of jute yarn costs, on an average, 2½ *d.* per lb., whilst yarn made from flax costs 8 *d.* per lb. There is an equally great difference between the value of cloth made from jute and that made from flax; therefore it is evident that duties which may be fair and moderate on the products of flax will be prohibitory on those of jute. Jute cloth is extensively used in making twilled sacks for containing corn, &c. &c., and these are now charged at the rates of linen goods. Besides, the yarns and cloth made from jute, being of a coarse and heavy description, are, whilst treated as manufactured from flax, additionally taxed by the duties in the Zollverein tariff being levied by weight.

Your memorialists would also bring under your notice the peculiarity of jute carpeting' which is presently charged with the duty of carpets made from wool. They particularly do so, as there was a very strong desire in Prussia and several of the States of the Zollverein to be supplied with this article from this district, but which has been entirely prevented by the prohibitory duty already alluded to, the duty in this case being actually more than the value. An objection may be raised, that were the duties on these carpets lowered in proportion to their value, carpets made from wool might be introduced in their stead. Your memorialists have, however, to point out that jute, being a vegetable substance, can, by the simplest possible process, be distinguished from wool or animal substances; and this simple mode of distinguishing the one from the other can as easily be applied to yarn and cloth of jute or wool, the process showing at once whether in jute cloth there is any mixture of wool, or *vice versâ*. Sir James Edward Smith, President of the Linnæan Society, on botany, in the first chapter of his work on the distinction between animal and vegetable substances, says, "The simple experiment of burning will decide the question; the smell from animal substances is so peculiar that it can never be mistaken, nor does any vegetable give out the same odour."

Your Memorialists beg to append a classification and rate of duties for the products of jute, which have been under the consideration of the traders of the district, and approved of by them.

In conclusion, your memorialists beg to point out that it is absolutely necessary for the advantage of the trade, that the products of jute be specially named and classified in any tariff which may be entered into, and duties fixed in proportion to their value.

Signed, in name and on behalf of the Directors of the Dundee Chamber of Commerce, by

(signed) *W. W. Renny*, President.

Dundee, 12 May 1862.

Transmitted

App. No. 3.

Transmitted from Dundee to the Right Hon. *T. Milner Gibson* on the 20th May 1863.

The following are the classification and duties which have been fixed in the New Commercial Treaty between France and Italy on the importation of linen yarns and linen cloth into Italy, viz. :—

	Kils.	*Fr.*	*c.*
Fils de lin, simple, ecrus, lessives ou blanchis	100	11	55
Ditto teints	100	23	10
Tissus de lin, ayant moins de 6 fils en chaine dans l'espace de 5 millimètres, écrus ou blanchis	100	23	10
Ditto, de 6 fils et au dessus, écrus ou blanchis	100	57	75

Looking at the low value of jute yarns and jute cloth in comparison with linen yarns and linen cloth, the Directors of the Dundee Chamber of Commerce beg respectfully to propose that the following classification and duties be arranged in any treaty that may be entered into between this country and Italy on the importation of jute yarns and jute cloth into Italy. These duties have been calculated in proportion to those to be exacted (stated as above) on linen manufactures.

This arrangement would then place the products of jute on a similar footing as the products of flax, viz. :—

				In Treaty between France and Italy
Fils de jute, mesurant au kilogramme (écrus)—	*Kils.*	*Fr.*	*c.*	*Fr.*
2,900 mètres ou moins	100	3	—	
de 2,900 mètres à 4,800	100	3	70	7 to 20
Plus de 4,800 mètres	100	5	10	
Blanchis ou teints:				
2,900 mètres ou moins	100	3	90	
de 2,900 mètres à 4,800	100	4	62	10 to 27
Plus de 4,800 mètres	100	6	50	
Tissus de jute presentant, en chaine moins de 6 fils, dans l'espace de 5 millimètres, unis ou croises, and sacks made therefrom	100	5	10	13 to 21
Ditto de 6 fils, et au dessus, unis ou croises, and sacks made therefrom	100	7	55	30
Jute carpeting—Rugs and matting	100	10	20	32
Matting made from jute along with other fibres	100	10	20	—
Matting made from all other fibres	100	10	20	—

(signed) *W. W. Benny*, President.
William G. Don, Vice-President.

(4.) Plain Jute Goods:				
Having less than 6 threads in 5 millimètres	0.22	5 10	0.87	20 –
Having more than 6 threads in 5 millimètres	0.33	7 55	2.18	50 –
(4.) Twilled Jute Goods:				
Having less than 6 threads in 5 millimètres	0.22	5 10	0.87	20 –
Having more than 6 threads in 5 millimètres	0.33	7 55	2.18	50 –
(5.) Jute Carpeting:				
Rugs and Matting	0.44	10 20	2.18	50 –
Matting made from jute and other fibres	0.44	10 20	2.18	50 –
Matting made from jute and all other fibres	0.44	10 20	2.18	50 –

Mixed Goods.—When jute predominates in weight, the duties on jute.

(1.) No change proposed.
(2.) Charged at present same rates as linen yarn.
(3.) Duty on dyed yarn; the bleached is charged the same as unbleached.
(4.) Charged at present same rates as linen cloth.
(5.) Charged at present same rates as woollen carpets.

Note.—Double warp, or two-fold twisted, to be counted as single threads.
Striped sacking not to be charged as dyed or printed, but as plain.
A few threads of cotton yarn to be allowed in the selvidge of jute cloth.

Appendix, No. 4.

PAPERS handed in by Mr. *Hammond*, 14 June 1864.

STATEMENT showing the effect of a Diminution in the Import Duties on certain Articles upon the Amount of Revenue received on those Articles. App. No. 4

		Rate of Duty.	Quantity Consumed.	Amount of Revenue.
		s. *d.*		£.
Sugar	1821	27 – per cwt.	3,530,362	4,077,706
	1831	24 – „	4,233,509	4,650,589
	1850	11 – „	6,229,094	3,900,663
Coffee	1801	1 6 per lb.	750,861	56,315
	1811	– 7 „	6,390,122	186,378
	1821	1 – „	7,327,283	384,283
	1831	– 6 „	21,841,264	583,751
	1849	– 4 „	34,399,374	566,822
			gallons.	
Brandy	1821	22 7½ per gallon	1,013,400	1,031,217
	1849	15 – „	2,187,801	1,640,488
			lbs.	
Excise Duty on Paper	1821	– 3 per lb.	48,204,927	579,867
	1849	– 1½ „	132,132,659	859,575
Excise Duty on Soap	1821	– 3 „	92,941,326	1,023,530
	1849	– 1½ „	197,632,280	1,026,080

	£.
Customs and Exise Duties collected in 1821	38,765,814
Deduct Duties repealed and reduced between 1821 and 1849	27,801,667
Leaving to be collected	10,964,147
But the unrepealed Duties actually produced in 1849	34,622,284
So that the sum received beyond the computed amount was £.	23,658,137

Note.—The amount of revenue in each of the foregoing statements will not be found to agree with the quantities at the given rates of duty. The rates as respects Sugar and Coffee represent the duties chargeable on the produce of British Possessions only; whereas some part of the duty is paid at higher rates on the produce of foreign countries, whereby the amount of revenue is increased. On the other hand, it frequently happens that allowances have to be made to the merchant, which reduce the revenue below what it would appear by computation.

App. No. 4.

Effects of the Free Trade Policy recently inaugurated in *England*, as indicated by its Practical Results.

(Originally published in the "Moniteur" of 23 July 1855, and now continued to the latest period.)

1. Imports. The official value, which amounted in 1842 to 65,200,000 *l.*, had increased in 1858 to 138,100,000 *l.*, or more than double.

2. Exports (British). The real value of exports increased in the same time from 47,300,000 *l.* to 116,600,000 *l.*, or two and a-half times as much.

3. Shipping. The tonnage of British shipping that entered and cleared with cargoes in 1842 was 5,415,821 tons; in 1858 it was 11,114,330 tons.

The tonnage of foreign shipping increased from 1,930,983 to 7,645,631 tons.

The total tonnage therefore increased from 7,346,804 to 18,759,961 tons, or more than two and a-half times as much.

4. Customs and Excise Revenue. The revenue from these sources amounted in 1842 to 33,542,791 *l.* Between that date and 1858 taxes of customs and excise were repealed or reduced to the extent of no less than 11,100,000 *l.* net (*i.e.*, in excess of similar taxes imposed). If, therefore, there had been no increase from other articles, the revenue in question would only have amounted in 1858 to 22,400,000 *l.*, whereas it actually produced as much as 40,087,703 *l.*, or upward of 6,500,000 *l.* more than in 1842, notwithstanding the above enormous reductions.

5. National Debt. The National Debt, which amounted in 1842 to 791,250,440 *l.*, decreased continually till 1853, when it only amounted to 771,335,801 *l.* In consequence of the Russian war it had increased again to 808,000,000 *l.* in 1856, but once more diminished to the extent of 3,500,000 *l.* by 1858.

6. State of the National Finances. In 1842 the expenditure exceeded the income by 3,979,539 *l.* In the 11 years between that date and the Russian war, there were only two years when the expenditure was greater than the income; in the other nine, the surplus of income was on the average between 2,000,000 *l.* and 3,000,000 *l.* a year. The Russian war caused a deficiency for three years, in one of which (1855) it was as great as 21,140,000 *l.* In 1858 the income again exceeded the expenditure by 1,127,657 *l.*

The expenditure in 1858 was 9,739,729 *l.* greater than in 1842, but the income was 14,846,925 *l.* greater.

7. Ship-building. The tonnage of ships built in 1842 was 129,929 tons, of which 13,716 tons were steamers. In 1858 there were built 208,080 tons, of which 53,150 tons were steamers.

8. Bank of England. The deposits in the Bank of England at the end of 1842, amounted to 9,063,000 *l.*; at the end of 1858 to 20,490,000 *l.*, or much more than double. Its assets increased in the same time, from 30,890,000 *l.* to 45,083,000 *l.*

Effects on the Social Condition of the People.

9. Savings Banks. The capital of savings banks in 1842 was 25,319,336 *l.*; in 1858, 36,193,400 *l.*, an increase of nearly one-half. This is a conclusive proof of the increased prosperity of the working classes since the introduction of free trade.

10. Pauperism. In the year 1842 (ending March 1843), with an estimated population of 16,194,000, the amount expended in England and Wales for the relief of the poor was 5,208,027 *l.*, being at the rate of 6 *s.* 5¼ *d.* per head. In the year 1858, with a population of 19,578,000, the amount expended was 5,558,689 *l.*, or 5 *s.* 8¼ *d.* per head. Had the poor-rates increased in proportion to the population, they would have amounted in the latter year to 6,250,000 *l.*

11. Crime. The number of committals for trial in England and Wales in 1842, amounted to 31,309. In 1858, notwithstanding an increase to the population of 3,400,000, the committals had fallen off to 17,855. In the former year, 193 persons out of every 100,000 were therefore grave offenders against the law; in the latter, only 91, or less than half. It should be stated, however, that a portion of this most satisfactory diminution in the number of committals, is owing to the Criminal Justice Act of 1855, which authorizes magistrates to convict summarily in certain cases, with the consent of the prisoner,—and to the Juvenile Offenders Act.

Effects on Producers.

(*a.*) Wheat. The quantities of home-grown wheat returned as sold in our markets in 1842, were 4,091,235 quarters, and in 1858, 5,203,948 quarters, exhibiting an increased demand for English corn under Free Trade, to the extent of more than 1,000,000 quarters. The average price in the former year was 57 *s.* 3 *d.* per quarter; in the latter, 44 *s.* 2 *d.* That farmers

farmers can get as high a price under Free Trade while the country is prosperous, as under protection while it is badly off, is shown by the fact that the average price in two recent years (1854 and 1855) was 72 *s.* 5 *d.* and 74 *s.* 8 *d.* per quarter, or considerably higher than the average for any year since 1819.

(*b.*) Silk.

The duty on foreign silk manufactures, which formerly amounted to 30 per cent., has been reduced to 15 per cent. The exports of British manufactured silks, which amounted in 1842 to 590,189 *l.*, increased in 1858 to 2,096,300 *l.*, and in 1856 and 1857, were as much as 2,900,000 *l.* Until 1826, foreign silks were entirely prohibited; but although the British manufacturer had a complete monopoly of the home market, the trade was far from being prosperous, the exports only averaging about 350,000 *l.* per annum.

(*c.*) Wool.

In 1842 foreign wool was subject to a duty of from ½ *d.* to 1 *d.* per pound, while colonial wool was admitted duty free. In that year, 18,486,719 lbs. of colonial, and 27,394,920 lbs. of foreign wool were imported. The protection with which it was thus attempted to nurture the home and colonial producer was entirely abolished in 1844; and in 1858, while the importations of foreign wool had increased to 41,527,624 lbs., or only one-half as much again as in 1842, the importations of colonial wool increased to 85,211,099 lbs., or between four and five times their former amount, despite the loss of all protection. The production of wool at home has also largely increased at the same time. But so great is the power of consumption under Free Trade, that notwithstanding all this increase of supply, the demand has raised the price from 10 *d.* or 11 *d.* per lb. in 1842, to 1 *s.* 6 *d.* or 1 *s.* 8 *d.* per lb. in 1858, of course to the great advantage of the producer. The exports of British woollen manufactures also increased in that time from 5,185,045 *l.* to 9,776,944 *l.*, and of woollen yarn from 637,305 *l.* to 2,966,923 *l.*

(*d.*) Sugar.

Foreign sugar remained prohibited in 1842, colonial sugar paying 25 *s.* 2 *d.* per cwt. Since then foreign sugar has been admitted to compete with colonial, and the duties on all sugar have been greatly reduced, and the consumption, which amounted in 1842 to 193,423 tons, increased in 1858 to 424,523 tons. Of that amount, 156,128 tons were foreign sugar, which it was predicted would drive colonial sugar entirely out of the market, the remaining 268,395 tons coming from our own colonies, which, instead of being ruined by competition, sent us nearly 50 per cent. more than ever.

It would be easy to multiply illustrations to swell the above figures. In fact, the difficulty rather is, to select from the vast mass of evidence of every kind that has accumulated, and that continues to accumulate, to testify to the incalculable benefits that in the short space of 15 or 16 years have accrued to this country from the practical adoption of the principles of Free Trade, or, to speak more accurately, from the reversion to the simple precepts of nature, which have been so well epitomised by a great Frenchman in five short words: "*Laissez faire et laissez aller.*"

App. No. 4.

CIRCULAR.

Foreign Office,
24 February 1857.

HER MAJESTY'S GOVERNMENT being desirous to encourage the junior members of the Diplomatic Service to turn to account the opportunities of observation afforded to them by their employment in foreign Courts, have determined to assign a specific duty to Her Majesty's Secretaries of Embassy and Legation, which will not only tend to their own improvement in their profession, but which may, if properly performed, be productive of great public advantage.

The duties to be thus specially assigned to the Secretaries of Embassy and Legation are, the collection of information relating to the commercial movements in the country where they reside, and the compilation of periodical reports on the industry, trade, and general statistics of that country. The bearing which those elements of national prosperity in the one country have on its intercourse with foreign nations, and more particularly with Her Majesty's dominions, is so important that too much pains cannot be bestowed on furnishing to Her Majesty's Government the means of forming a correct opinion upon the subject.

Her Majesty's Consuls at the outports furnish, indeed, ample reports of matters which come under their immediate observation, yet those reports are necessarily in a great measure local in their character. But Her Majesty's diplomatic servants, residing at the capitals, have opportunities for arriving at a more general appreciation of the commercial progress of the several countries, and of ascertaining the grounds on which legislative interference with the course of trade is resorted to, and the effect which such interference is calculated to have, not only on local or general interests in the countries themselves, but also on the commercial relations of those countries with foreign nations.

Her Majesty's Secretaries of Embassy and Legation, with a view to the same result, might occasionally, and with the sanction of their chiefs, visit the great manufacturing towns, and also, in maritime countries, the outports, and witness the course of business there, and if necessary suggest, from personal experience, the adoption of measures by which the trade of British subjects might obtain facilities, or be relieved from burdens and obstructions.

But while assigning this specific duty to Her Majesty's Secretaries of Embassy and Legation, it is not intended in any way to release them from the superintendence and control of the heads of missions. They will remain, as now, wholly subordinate to their chiefs, and they will report exclusively to them. On the other hand, Her Majesty's Government expect that the heads of missions will give effect to the object which they have in view, by obtaining for their secretaries access to all sources of information, by encouraging them by their support and advice, and by pointing out to them the matters to which their attention may most usefully be directed.

Her Majesty's Government will expect to receive from the heads of missions copies of the reports made to them by their secretaries, accompanied with any additional observations which they may themselves see occasion to offer. No particular form is prescribed in which such reports should be drawn up; but it may be useful to the secretaries to have before them, in the first instance, specimens of consular reports * which, in the arrangement of subjects and explanation of details, may be taken as good models for imitation.

The reports should be made at stated periods; namely, on the 1st of January and 1st of July of each year, and should be sent home by the heads of missions as soon as possible after those days.

It is unnecessary for me to dwell on the advantages which this system, if fairly executed, will carry with it; it will benefit the secretaries by giving them habits of attentive observation; it will assist the heads of missions by affording them additional facilities for arriving at a just knowledge of the resources of the countries in which they reside; and it will place Her Majesty's Government and the public at large in the possession of valuable materials on which to frame commercial legislation and to regulate commercial enterprise.

I am, &c.
(signed) *Clarendon.*

CIRCULAR.

Foreign Office,
22 July 1858.

WITH reference to the Earl of Clarendon's Circular Despatch of the 24th of February 1857, requiring that Her Majesty's Secretaries of Embassy and Legation should make periodical reports on the industry, trade, and general statistics of the country in which they reside, I have to instruct you to state to Her Majesty's Secretary of at , that in the report which he will have to furnish on the 31st of December next, he will be expected specifically to advert to the effect produced on the commerce of by the vine disease, from its first appearance to the latest moment.

The industry and trade of France (and, doubtless, of other vine-growing countries) have been, for the last few years, seriously affected by the partial destruction of the vintages, owing to the repeated appearances of the vine disease in the wine districts; and Her Majesty's Government would wish to obtain the fullest information as to the extent of the calamity, and its effects on the particular branches of commerce affected by it. Its consequences have been felt in this country, not only in the import of French wines, but in the export of distilled spirits to France, to supply the deficiency of brandy in the districts that have been visited by the disease.

CIRCULAR.

App. No. 4.

CIRCULAR.

No. .

Foreign Office,
24 January 1860.

WITH reference to the Earl of Clarendon's Circular Instruction of the 24th of February 1857, requiring that Her Majesty's Secretaries of Embassy and Legation should send in half-yearly reports on the commerce, industry, and statistics of the country in which they reside, I have to state to you that, in addition to, and distinct from these reports, the Secretaries of Embassy and Legation will be expected henceforth, within 30 days from the commencement of each year, (the date of your receipt of this Despatch being taken to be the commencement of the year 1860, for the purposes of this instruction,) to send in a concise report, accompanied by such tabular Returns as they may be able to procure, of the finances, public credit, shipping, commerce, manufactures, and agriculture of the several countries in which they have resided during the past year.

It may possibly happen that the yearly Returns on these subjects, which Foreign Governments are more or less in the habit of publishing, may not be issued at the time prescribed for these reports; but I can have little doubt that by duly taking advantage of the opportunities which, if sought for, may be obtained in every capital, and by availing themselves of the facilities which Her Majesty's Ambassadors and Ministers can, doubtless obtain for them, Secretaries of Embassy and Legation will be able to comply with my instructions in this respect, which you will at once convey to the secretary attached to your mission, wherever he may be.

I take this opportunity to observe, though I do not intend the observation specially to apply to any particular Embassy or Legation, that very slight attention is, in many cases, paid to the injunction contained in Lord Clarendon's Despatch as to the reports being made on the specific dates of the 1st of January and 1st of July of each year; as a proof of which, I may say that only three reports have yet been received from any Embassy or Mission for the half-year ending the 31st of December last.

Now, I wish that heads of missions would point out to their secretaries that these omissions do not pass unnoticed; and that the impression which they are calculated to produce on the Secretary of State for Foreign Affairs, and on the public at large, who, from the reports being laid before Parliament, have an opportunity of judging of shortcomings in this respect, is not of a nature to establish their reputation as qualified candidates for future advancement in the diplomatic career. The duty and attention required in this respect of secretaries are not onerous; and, indeed, are rather such as, if they are desirous of becoming really useful public servants, they ought to perform zealously and without grudging.

The object which was contemplated by Lord Clarendon's Despatch, was to give secretaries encouragement to improve themselves in general knowledge, in regard to matters with which in the course of their subsequent career they might have to deal; and opportunities of showing to Her Majesty's Government, and to the public, how far they were qualified for any duties which might be entrusted to them.

I have reason to suppose that some misapprehension prevails in regard to the obligation on the part of secretaries to furnish reports in that capacity when acting as Chargé d'Affaires, or when absent on leave, or only recently appointed to a post. I have, therefore, to desire that it may be understood that Secretaries of Legation are not exempted from the duty of reporting in consequence of being, for the six months preceding the date of their report, or, for any portion thereof, acting as Chargé d'Affaires.

2dly. That absence on leave does not exempt a secretary from making his reports at the stated times; he must obtain materials for those reports from the place at which he holds the appointment.

3dly. That although a secretary may not be able to make his first report unless he has actually resided at the place where he holds the appointment for three months from the date of his nomination, yet, in the case of a transfer, such secretary will be expected to make his half-yearly report as from the place from which he has been transferred.

4thly. I have to observe that, for the future, the half-yearly reports must be completed by the secretaries at the Courts of Europe, and despatched so as to arrive in the Foreign Office by the 1st of February and 1st of August in each year.

I have also to notice another misapprehension which, I believe, prevails in regard to the clause in Lord Clarendon's Despatch, which authorises occasional visits to great manufacturing towns, or to seaports. Such visits are not, as is supposed by some, an indispensable requisite for making a report. On the contrary, the Circular distinctly contemplated that the reports should be the result of inquiries made at the capitals, where it might be supposed that all information of interest would centre; and permission to visit outlying places was merely given as affording, if required, additional means of obtaining knowledge, but certainly not with the view of superseding the knowledge which might be derived from a proper use of the general information which the capitals of countries furnish the best opportunity for acquiring.

I have to instruct you to impress upon the secretary attached to your mission the obligation of strictly attending to the rules laid down by Lord Clarendon, and in my present Despatch; and that those rules may be patent, and at all times present to the secretary, I furnish you with copies of the two instructions, which are to be permanently fixed in the diary of the correspondence of the mission; and you will send a copy of this Despatch without delay to the secretary of your mission, if he should not be at his post.

I have further to instruct you, in reporting to me that this last direction has been complied with, to acquaint me what part of the public business of the mission is undertaken by the secretary; and whether he is in daily attendance at the Diplomatic Chancery, the business of which, as ranking next to the minister, it is his special duty to superintend, in order to see that the same is duly conducted according to the instructions and wishes of his immediate official superior, and the general practice of the public service.

I am, &c.
(signed) *John Russell.*

App. No. 4.

CIRCULAR.

No. .

Foreign Office, 31 March 1860.

FROM representations and excuses which I have received from several of Her Majesty's Secretaries of Legation in regard to their half-yearly reports, I perceive that much misapprehension prevails among them as regards the principle on which they are required to make those reports by the 1st of February and 1st of August in each year.

It is very generally alleged that they cannot make a report by the 1st of February, because the statistical information which they desire to work up into their reports is not usually forthcoming at that time. This would be a very reasonable excuse if the reports were annual instead of half-yearly; but it is not so as the case stands.

The object for which Secretaries of Embassy and Legation are required to make periodical reports is not so much to obtain by that means the latest statistical information, but to impose upon the secretaries the duty of keeping their attention constantly alive to all matters connected with the industry, commerce, and resources of the country in which they reside, and of reporting either generally upon the whole or specifically upon any branch of them. I will not give particular instances in which secretaries have clearly apprehended the object which Her Majesty's Government have in view, and have furnished in accordance with it most valuable and interesting reports. The secretaries who have misapprehended the object, on reference to the collection of reports periodically sent to the missions, will have no difficulty in perceiving to what I refer: and I should wish secretaries generally to understand, that without setting aside altogether detailed statistical information, which in many cases is very valuable, that to which they should particularly direct their attention, is a half-yearly review of the industrial movements in the country where they reside, either general or confined to any particular branch of industry.

If the statistical tables and other public documents which they desire to append to their reports, are not issued in time to be adverted to in the February report, they may be reserved for notice in the August report; but I cannot admit the delay in the issue of such documents to be pleaded in excuse for delay in making the reports at the specific half-yearly periods stated in my Circular No. , of the 24th of January last.

You will furnish Her Majesty's Secretary of Legation with a copy of this Despatch.

I am, &c.
(signed) *John Russell.*

CIRCULAR TO MINISTERS ABROAD.

Foreign Office, 25 April 1863.

IT being of great importance to the commercial interests of this country that the fullest and earliest information should be conveyed to the British commercial community regarding all matters relating to the commerce of Foreign countries, not only with respect to the direct commerce between such countries and Her Majesty's dominions, but also to their commerce with other foreign countries, I have to instruct you to pay particular attention to all official announcements which may be made in any manner in the country in which you reside, bearing upon either description of commerce; and to forward to this office, in duplicate, by the earliest opportunity after such publication, copies of any notices affecting tariffs, or relating to commerce, navigation, and currency, whether such notices solely relate to the trade of the country in which you reside, or are notices regarding the trade of other countries.

The object of this instruction is to enable Her Majesty's Government to make such information known, without loss of time, to British trading interests, through the "London Gazette."

The secretary of your mission should take special charge of this subject.

I am, &c.
(signed) *Russell.*

CIRCULAR.

No. .

My Lord,
Sir, Foreign Office, 23 May 1864.

I WISH to direct the attention of Her Majesty's representatives at foreign courts to the adoption in their respective chanceries of a practice similar to that which Secretaries of Embassy and Legation are now required to conform, and to suggest to them the expediency of requiring the junior members of their several chanceries, as often as opportunity may arise, to draw up reports on matters of public interest, more especially those relating to the commerce and industry of the country in which they reside, upon which it is necessary that heads of missions should be accurately informed, in order that in their turn they may keep Her Majesty's Government fully acquainted with all matters bearing on the commerce and industry of the country.

The general occupations of heads of missions may prevent them from devoting to the examination and digestion of materials, the amount of time and attention which may be absolutely necessary in order that they may be presented to Her Majesty's Government, and through them to the trading and manufacturing interests of the country, in a clear and practical shape.

But this may be done by the industry and ability of the junior members of missions, if rightly encouraged and directed; while, on the other hand, those gentlemen will derive great advantage from having their minds exercised, and their attention engaged on subjects requiring more thought and consideration than the ordinary routine business of a chancery.

I have dwelt more particularly on questions of commercial industry, to which the attention of the junior members of the diplomatic service may be directed, because they generally involve details which it requires time and industry to reduce into shape; but I by no means desire to exclude matters of general political interest. My object is, that every encouragement should be held out to those gentlemen to improve the opportunities which are afforded to them in foreign countries of acquiring knowledge and habits of observation which may qualify them hereafter for the higher duties to which they aspire.

I am, &c.
(signed) *Russell.*

Her Majesty's Ambassador,
or Minister at

Regulations for the Examination of Attachés in Her Majesty's Diplomatic Service.

Candidates for the situation of Attaché in Her Majesty's Diplomatic Service must be prepared to undergo an examination before the Civil Service Commissioners within six months after their nomination, if they elect to undergo only one examination (which single examination will, in that case, exempt them from any further examination previously to their receiving commissions as secretaries); or within three months if they prefer to undergo two examinations as heretofore. In the latter case the second examination may be deferred until the candidate is prepared to undergo it.

Candidates on presenting themselves for examination on their nomination must have completed the twenty-first year of their age, and not have exceeded the twenty-sixth.

In the case of candidates electing to undergo only one examination, such examination will comprise the following matters:—

a. Orthography and handwriting.

b. General intelligence, as evinced by the manner in which the candidate acquits himself, and specifically by the quickness he may show in seizing the points in papers read to him, or read over by him, once or twice.

c. Précis.

d. The candidate must satisfy the examiners that he is thoroughly well grounded in the Latin grammar, and that he is able to construe and parse a portion of some good classical Latin author, and to give the derivations of words.

e. An accurate knowledge of French grammar, fluency in French conversation, correctness of translation from French into English, and from English into French, and French composition.

f. An accurate knowledge of German grammar, a tolerable degree of fluency in German conversation, and correctness of translation from German into English, and from English into German.*

g. A fair knowledge of the political history of Europe, and of North and South America, from the year 1660 to 1860 inclusive, and of the most important international transactions during that period.

h. A general knowledge of geography.

i. The first four rules of arithmetic and decimal fractions as given with examples in Colenso's arithmetic.

j. The first book of Euclid.

k. A general knowledge of maritime and international law, to be acquired from Wheaton's "Elements of International Law," and the first volume of Kent's "Commentary."

l. Candidates will be allowed, at their option, to be examined in Spanish and Italian, in addition to the above subjects.

In the case of candidates electing to undergo two examinations, the first examination will comprise the following subjects:—

1. Orthography; 2. Handwriting; 3. Précis; 4. Latin; 5. Arithmetic; 6. Geography.

7. General intelligence, except as regards specific tests.

8. An accurate knowledge of French grammar, correctness of translation from French into English, and such a facility of speaking French as may show aptitude for acquiring fluency after a residence abroad.

9. An accurate knowledge of German grammar.

10. A general knowledge of the political history of Europe, and of North and South America, from 1790 to 1815, comprising an acquaintance with the most important international transactions of that period.

In either case, candidates who have passed the first public examination in classics at one of the Universities in Great Britain or Ireland will be exempted from being examined in Latin.†

Candidates who shall have elected to undergo two examinations must, on their second examination, be prepared to satisfy the examiners, if required to do so, as to their acquaintance with the various matters which come within the single examination (except as regards Latin, geography, and arithmetic, in which such candidates are exempted from being re-examined); and they will, moreover, be required, for their second examination, to draw up a report on the general commercial and political relations of the several countries in which they may have resided; and on the internal polity and administration, the social institutions, and the character of the people of such countries.

If a candidate offering himself for the single examination should fail to satisfy the Commissioners to the required extent, but should evince such a knowledge of the subjects on which he may have been examined as would have obtained for him a certificate of fitness if he had only offered himself for a first examination, the Commissioners will, in such case, give a certificate as for a first examination; and the candidate will eventually have to present himself again before the Commissioners for the second examination.

Foreign Office, 15 September 1862.

Bradford Chamber of Commerce.

9 April 1864.

The English Government and Foreign Commerce.

Sir,

On the 15th of April instant, Mr. Forster, the Member for Bradford, will "call the attention of the House of Commons to the arrangement between the Foreign Office and the Board of Trade in reference to trade with foreign nations, and move for a Select Committee thereon."

The accompanying statement was prepared for the use of the Associated Chambers of Commerce at their meeting held on the 23d and 24th February last; I am instructed by the Council of the Chamber to transmit a copy to you, and to express

* If a candidate going up for his second examination should not, in the interval between the two examinations, have resided a reasonable time, twelve months for instance, in Germany, he shall be at liberty, if he should so desire it, to substitute for conversation in German conversation in some other foreign language besides French.

† In this case the candidate, on going up for examination, must exhibit to the Civil Service Commissioners a certificate from the duly-constituted authorities, examiners or others, as the case may be, in each University, that he has passed the first public examination in classics, in whatever manner that examination may have been conducted, and to whatever points it may have been directed.

App. No. 4.

express a hope that its perusal will induce you to support the motion, of which Mr. Forster has given notice, and which he was requested to move by a unanimous vote of the Association of British Chambers of Commerce.

I have, &c.
John Darlington, Secretary.

BRADFORD CHAMBER OF COMMERCE.

31 December 1863.

THE Bradford Chamber of Commerce has given notice to the Standing Committee of the Associated Chambers, of the intention to propose, at the next annual meeting, the following resolution:—

> That the Association take immediate steps to obtain an inquiry in Parliament, into the present manner of conducting the public business, having reference especially to all commercial questions which require the action of Her Majesty's Government in foreign countries.

In accordance with the 9th rule of the Association, the Bradford Chamber of Commerce has desired the Standing Committee to circulate amongst the Associated Chambers the following facts and reasons in support of the proposed resolution:

Particular attention was drawn in last year's Report of the Association:—

To the unsatisfactory state of the tariff rates in many foreign countries.

To the unfair restrictions yet imposed by some maritime states upon British shipping; and,

To the necessity for an improved system in the Government offices now charged with the duty of representing the interests of the English manufacturers and shippers in their relations with foreign countries.

Though the tariffs and differential duties on shipping have for the most part undergone no change during the past year, it is gratifying to observe many signs of an almost universal desire on the part of European Governments to adopt a more liberal system of import duties, to abolish obsolete regulations, and to afford greater facilities for international intercourse.

The principal changes to be noticed are the following:—

The Commercial Treaty with Italy, to which allusion was made in the last report in connection with that between Italy and France, has been signed and ratified; and England is now placed upon the footing of the most favoured nation. Satisfactory as it is to know that our productions will in future be admitted into Italy on no worse conditions than those of other countries, it is still a matter of serious moment that we have been obliged to accept a mere reciprocity treaty, while France has been engaged in minute and protracted discussions upon the details of the future Italian tariff, the rates of which will ultimately be imposed upon French and English goods alike, possibly, in some instances, to the detriment of the British trader.

Before the conclusion of this treaty, and at the request of the Associated Chambers, a distinguished official of the Board of Trade was sent to Turin to give weight to the observations which had been made by several chambers upon the terms of the Franco-Italian Treaty, but he was obliged to return without having accomplished his object, because his mission had been deferred until the time for useful action had passed away.

It is understood that the Italian Government will be ready to listen to the representations of England for the remodelling of their tariff, after the ratification of their treaty with France, and thus it may yet be possible to obtain an alteration of those rates which are injurious to some branches of British industry, if our Government be not again too dilatory in urging them upon the attention of the Italian Cabinet.

The English Government may not have had the power, and decidedly never had the desire to bargain in the same manner as France for commercial advantages, but there cannot be a doubt that it is the duty of Government to watch the negociations between friendly powers from their very commencement, with the view of preventing, by every legitimate means, such tariff rates as might otherwise be agreed upon to the injury of British interests.

Sweden, which during the past year has made a most important move towards free trade by abolishing the duties upon exports, is at this moment negociating a commercial treaty with France. The importance of our Government taking advantage of the opportunity thus offered to benefit British commercial interests, will be appreciated by the Chambers if they consider that the imports from Sweden into this country in 1861 amounted to 2,620,720 *l.*, whilst our exports to Sweden of British productions were only 608,954 *l.*

In a memorial which the Bradford Chamber of Commerce has recently presented to Government upon this subject, the cause of this disproportion is ascribed to the operation of a tariff which is one of the highest in the world, the Russian alone excepted.

Austria, whose treaty with the Zollverein expires with the next year, will most likely be prepared to make great changes in her tariff, and in her general commercial policy; and a circular has lately been issued by the Austrian Government to the Chambers of Commmerce of the Empire, asking for their opinions upon these changes, "from the point of view of the interests of their respective districts;" such reports to be sent to the Minister of Commerce not later than the last day of February.

Prussia and the Zollverein will be obliged to re-arrange their whole custom dues system, owing to the Franco-Prussian Treaty, which will come into operation on the 1st January 1865.

Spain has during the past year shown signs of a fixed intention to abandon the excessively high protective duties by which she has isolated herself from the rest of the world; and this country also may be expected to make a steady, though perhaps slow, progress towards free trade.

The Papal Government has likewise entered upon the path of fiscal reform.

Even Russia has made some changes in her tariff which, though not of great importance, are all in the right direction; and there is reason to believe that if the British Government had exercised sufficient vigilance at the Court of St. Petersburg, the reductions which have been made might have been more to the benefit of English productions than they actually are.

Portugal and some other countries have made changes only important in so far as proving that they all feel the necessity of adapting their tariffs to sounder principles, and it is evident that the

the movement towards perfect liberty of commercial intercourse begun by Great Britain, and vigorously followed up by France, is rapidly spreading all over the world. No change can be made in any country without affecting British interests either beneficially or otherwise, and the chambers of commerce will no doubt continue to study tariffs, regulations, and treaties, for the purpose of informing Her Majesty's Government of their probable effects upon the trade of their special districts.

The Associated Chambers, and the Chambers individually, may claim credit for not having heretofore neglected this duty; but they have to complain, not of any want of courtesy, but of a great want of efficiency on the part of Government in making use of the information thus given, and of not making use of it at the proper time and in the proper place.

The Bradford Chamber of Commerce is anxious to direct the most serious attention of the association to the necessity of finding a remedy for this defect, the cause of which may be distinctly traced to the double machinery and the divided responsibility of the departments now entrusted with the duty of protecting England's commercial interests.

The Board of Trade, under its present organization, is too much occupied with the administrative duties connected with shipping, lighthouses, railways, and other important interests to attend duly to the many questions constantly arising from the vast foreign commercial transactions of the country, and it has a valid excuse for this neglect in the fact that it possesses no power for efficient external action.

The public business connected with foreign commerce is actually conducted by the Foreign Office through the consuls and diplomatic agents abroad, whom it appoints and corresponds with. These agents have no direct official connexion with the Board of Trade, which nevertheless is ostensibly responsible for the whole commercial interests of the country. A simultaneous and joint action of the two offices would be necessary for the due discharge of this important duty, but the business of the country suffers, because such united action is incompatible with the present system.

Thus it frequently happens that important questions to which the attention of the Foreign Office has been called are referred to the Board of Trade, or *vice versa;* sometimes both take action at the same time, the one being ignorant of the other's proceedings, or, more frequently still, entire inactivity is the consequence of each department expecting the other to take the initiative.

The evils arising from this divided responsibility have become of such frequent occurrence and of such magnitude that it is hoped the meeting will not separate without deciding upon a line of action for the removal of this grievance.

The Bradford Chamber of Commerce feel assured that a motion for a Committee of Inquiry, if supported by the united approval and influence of the association, could be carried in the House of Commons, and that evidence would be given before that Committee of sufficient weight to convince the House and the country of the necessity and expediency of entrusting one department of Government only with the responsibility of attending to all questions relating to foreign trade, and of giving to that department the necessary organization for the efficient discharge of this important duty.

H. W. Ripley, President.
John Darlington, Secretary.

MEMORANDUM.

AT the commencement of the year 1861, the Foreign Office circulated abroad, at the instance of the Board of Trade, a printed Memorandum in support of an unrestricted trade in rags.

The policy advocated in that Memorandum has subsequently been adopted by Sweden, and partially by Italy. France and Belgium, in the same period, have imposed duties in the place of prohibition, and a reduction of duty has been effected in Holland.

Spain is now the only country in which the export of paper-making rags is entirely prohibited.

The highest duty is levied by the Zollverein, and very heavy duties are still imposed by the tariffs of Austria, Russia, Portugal, France, Belgium, Holland, and Denmark.

The free importation of rags is now permitted in the United Kingdom, Sweden, Norway, and Hamburgh, and under the recent treaties between Italy, and England and France respectively, a similar exemption is extended to rags exported from the former to the latter countries, while only moderate duties are levied in Switzerland, Greece, and Turkey.

In renewing a representation in favour of an unrestricted trade between all countries in the raw material of a very important manufacture, it may be stated that after an interval of three years there is no reason to believe that an incorrect view was taken of the operation of an export duty upon rags in the Memorandum circulated by the English Government in the year 1861. In acknowledging the receipt of that Memorandum, it was admitted on the part of some of the foreign Governments that the rates of duty were excessive, and encouraged smuggling. There can scarcely be a doubt that in contiguous countries, where high duties prevail, rags are smuggled to a considerable extent from one country to the other, and pass in transit through the second country as foreign produce.

The high export duties upon rags are held to be objectionable, not only on account of encouraging a contraband trade, but also because they are believed to operate injuriously upon the production and consumption of paper in the countries which so restrict the export of rags. No country is dependent upon any other country for the supply, or even a considerable part of the supply of its raw material for the manufacture of paper.

The paper manufacturers will, as a rule, obtain their chief supply of rags in the home markets from the home supply. There can be no apprehension, therefore, that a free trade in rags would occasion the markets of any particular country to be stripped of any considerable portion of the home-produced rags for the supply of any foreign country.

If the paper makers obtain an advantage in the price of the home-produced rags because of the high export duties, they must gain that advantage at the expense of the collectors and producers of rags, and they enjoy it probably without affording an equivalent cheapness to the paper consumers.

An artificial depression of price must check production, and if the export duties upon rags were removed, the production would probably be so far increased under the freedom of trade, as in the course of time to afford a sufficient supply for the home and foreign demands.

An increased supply of rags would, it is believed, be advantageous for all countries. It is not

App. No. 4.

possible to ascertain the fact from the commercial return, but, as rags appear in the accounts of the general imports of nearly all countries, it is probable that there is scarcely a country in which there is not now a home consumption of some quantity of foreign rags. It is not probable that the supply of home-produced rags, at an artificially reduced price, is equally available to the paper makers located in different districts of large countries.

The paper manufacture is probably carried on in parts of many counties where a supply of rags from a foreign but adjacent market would be a matter of convenience and saving, in comparison with a supply from a distance at home. The removal of the restrictions upon the export of rags is desirable also, because of the different qualities of rags produced in different countries where the strong and superior kinds are chiefly produced, a portion might be exported, and an inferior quality imported for mixing without detriment to any interest.

In several of the countries which impose a duty upon the export of rags, no other export duty remains upon the tariff. The removal or reduction of the duty in question will help to place the general supply of the raw material of an important manufacture upon a better footing than it is at the present time.

(Confidential.)

Sir *J. Emerson Tennent* to Mr. *Layard.*

(Received January 13).

Office of Committee of Privy Council for Trade,

Sir, Whitehall, 11 January 1864.

As it is understood that a conference will take place in Berlin during the present month upon the provisions of the Zollverein Tariff, it appears to this Board that an opportunity may be afforded for urging upon the Prussian and other Governments concerned, the adoption of a more liberal policy as regards the exportation of rags and other materials for paper making.

The retention of a high export duty upon the principal material of paper by the tariffs of the Zollverein States and other countries in Europe has been a source of great dissatisfaction and frequent remonstrance upon the part of the English paper makers since the repeal of the import duty upon foreign paper.

The opening of our markets has been followed by considerable and increasing importations of paper.

It is doubtful whether the foreign makers enjoy the advantages in manufacturing paper for our markets, attributed to them by their English rivals, in consequence of the existence of export duties upon rags. But as the maintenance of such duties is clearly injurious to our paper makers in restricting the sources of their supply of rags, and affords an unwise protection to the foreign paper makers themselves, my Lords are of opinion that no revision of a foreign tariff should be allowed to take place without an effort on the part of the English Government to procure the removal or modification of the duties in question.

I am, therefore, to request that you will submit to Earl Russell the enclosed Memorandum, which has been prepared in this Department, in continuation of that which was transmitted to the Foreign Department in my letter of the 5th of January 1861, and circulated among several foreign Governments; and that you will suggest to his Lordship that a communication on the subject should be at once addressed to the several Governments of the Zollverein States, and that corresponding representations might be also made to the Government of each country in which, as already mentioned, a heavy export duty upon rags is still levied.

My Lords conceive that the French Government might probably be found disposed to support the representation to the Zollverein and other Governments, as it was understood that France would be ready to abolish the duty upon rags when the neighbouring countries would agree to do the same.

I have, &c.

PAPERS handed in by Mr. *Hammond*, 1 July 1864.

CORRESPONDENCE with the ASSOCIATION of CHAMBERS of COMMERCE. App. No. 5.

No. 1.

Memorial from the Association of Chambers of Commerce of the United Kingdom.

To the Right Honourable Earl *Russell*, K.G., &c., &c., Her Majesty's Principal Secretary of State for Foreign Affairs.

The Memorial of the Association of Chambers of Commerce of the United Kingdom (of which are members the Chambers of Commerce of Belfast, Birmingham, Bradford, Bristol, Coventry, Dewsbury, Gloucester, Goole, Halifax, Huddersfied, Hull, Kendal, Leeds, Middlesborough, Nottingham, Newcastle-on-Tyne, Sheffield, Staffordshire Potteries, and Wolverhampton), assembled at their annual meeting this 24th day of February 1864,

Humbly showeth,

THAT your memorialists understand that the arrangement between the Foreign Office and the Board of Trade is at present as follows:—

That the Foreign Office takes action in commercial matters solely in concert with the Board of Trade.

That, consequently, communications from Her Majesty's Ministers and Consuls abroad on commercial matters are forwarded by the Foreign Office to the Board of Trade, in order that through such Board they may (if deemed desirable) be communicated to commercial men; and that, on the other hand, the suggestions of such commercial men for action by the Foreign Office in commercial matters are expected to be made to the Board of Trade.

That while gratefully acknowledging the desire, both on the part of your Lordship, of the President of the Board of Trade, and of the staff of both offices, to promote the interests of commerce, your memorialists have found by experience that this double action tends to defeat the fulfilment of that desire.

That the present moment throughout the continent of Europe towards free trade (consequent on the reduction of its tariff by the French Government), makes it especially necessary that our Government should give constant and unremitting attention to all questions connected with foreign tariffs (especially to any changes that may be contemplated in them), and should be ready to take prompt action on information obtained; while at the same time it makes it especially undesirable that English manufacturers should find themselves compelled, by want of such prompt action, to make in Parliament or through the press such public expression of their wishes, as tends to their defeat by alarming manufacturers abroad.

That, therefore, your memorialists cannot but think that the interests of trade would be greatly promoted, if commercial men in this country were put in immediate and direct communication with those who are responsible for the action of Government in commercial matters with foreign countries.

And your memorialists will ever pray, &c.

Signed on behalf of the Association in pursuance of an unanimous vote of the Annual Meeting.

(signed) *Sampson S. Lloyd*,
Chairman.

Office of the Association,
22, Abingdon-street,
24 February 1864.

No. 2.

Mr. *Hammond* to Mr. *Lloyd*.

Foreign Office,
Sir, 10 March 1864.

I AM directed by Earl Russell to acknowledge the receipt of the Memorial of the Association of the Chambers of Commerce of the United Kingdom, dated the 24th of February, stating that while acknowledging the desire both on the part of his Lordship, of the President of the Board of Trade, and of the staff of both offices, to promote the interests of commerce, the memorialists have found by experience that the double action of the two departments, as in the main correctly described by them, tends to defeat the fulfilment of that desire; and that the memorialists therefore think that the interests of trade would be greatly promoted, if commercial men in this country were put in immediate and direct communication with those who are responsible for the actions of Government in commercial matters with foreign countries.

Lord Russell directs me, in the first place, to state to you that he fully shares in the opinion of the memorialists, that it is essentially necessary that Her Majesty's Government should give constant and unremitting attention to all questions connected with foreign tariffs, and particularly to any changes contemplated in them, and should be ready to take, when requisite, prompt action on information obtained; and I am to assure you that such constant and unremitting attention is given by Her Majesty's Government to those matters, and such action taken when circumstances appear to warrant or to call for it.

App. No. 5.

I am in the next place to state to you, that the Secretary of State for Foreign Affairs has always been, and will continue to be ready to receive either from mercantile associations, or from individual merchants, any communications on commercial matters which they may desire to address to him directly; and upon all such subjects the Foreign Office and the Board of Trade fully interchange information and opinions with a view to arrive at sound and definite conclusions.

I am, &c.

(signed) *E. Hammond.*

INSTRUCTIONS addressed to Her Majesty's Ministers at the Principal Courts of Europe.

(Telegraphic.)

Foreign Office, 16 April 1864.

REPORT shortly by telegraph, and as soon as possible in detail by post or otherwise, on the relations between the Foreign Office and the Ministry of Commerce in the country where you reside; whether the Foreign Office, in dealing with foreign countries on commercial questions, acts independently of, or in communication with, the Ministry of Commerce; what are the precise duties of the commercial branch in the Foreign Office, where it exists, and whether it supersedes reference to the Ministry of Commerce; whether the latter corresponds directly with, and gives directions to, ministers at foreign courts in regard to commercial matters and negociations irrespective of the Foreign Office.

(Circular.)

Sir, Foreign Office,
My Lord, 19 April 1864.

A COMMITTEE of the House of Commons will shortly be appointed to inquire into the relations between the Foreign Office and the Board of Trade, with the view of ascertaining whether some change might not be made in the manner of conducting the business of those departments with regard to the correspondence on commercial questions carried on by this office with their diplomatic and consular agents abroad.

The practice now observed in these departments is this:—

Her Majesty's Ministers and Consuls abroad are required to forward to the Foreign Office the fullest information upon the commerce of the country in which they reside, not only with the United Kingdom, but with other countries, and to give the earliest notice of any change that may be contemplated in its commercial relations.

These

These reports are at once sent to the Board of Trade, where they are fully considered with reference to existing commercial treaties, and to their bearing upon the general trade of this country.

If it should appear desirable to make any communication with reference to them to foreign Governments, the Board of Trade points out the nature of the communication to be made, and the Foreign Office sends instructions accordingly to Her Majesty's agents abroad.

Representations addressed to the Foreign Office upon matters concerning our commercial relations with other countries, by commercial associations or by individuals, are, excepting in such cases when such reference is palpably unnecessary, referred to the Board of Trade for their consideration and advice.

As a general rule it is held that the Board of Trade, being fully conversant with the commercial interests of the country, and being in constant communication with the industrial classes, is most competent to form a just opinion upon matters of trade, and to determine how far it may be expedient to suggest to the Foreign Office to call the attention of a foreign Government to any special subject connected with them. There is no department in the Foreign Office specially charged with matters of trade, which are dealt with by the divisions according to the countries to which such matters may relate. The only exception is that of the preparation of drafts of commercial treaties, which devolves upon the department which is charged with the preparation of all treaties and conventions.

You will understand from what has been said in this Despatch that the point on which information is principally required is, the relative action of the Ministry of Foreign Affairs and of the Ministry of Commerce in the country in which you reside.

I shall, moreover, be glad to receive from you any information as to the course pursued by the Government to which you are accredited, when negotiating a question of trade with other countries, and as to any arrangement that may exist for dealing with commercial questions in the Ministry of Foreign Affairs or of Commerce.

I have only to add that, as the Committee will meet shortly, such information as you can supply must be transmitted with as little delay as possible.

I am, &c.
(signed) *Russell.*

REPORTS from Her Majesty's Ministers at the principal European Courts as to the Relations between the Foreign Office and the Ministry of Commerce in the Countries in which they reside.

No. 1.

Mr. *Grey* to Earl *Russell.*

(Received April 25.)

My Lord, Paris, 24 April 1864.

IN reply to your Lordship's Despatch, marked Circular, of the 19th instant, to Earl Cowley, asking for information as to the relative action of the Ministry for Foreign Affairs and of the Ministry of Commerce in France, I have the honour to report as follows:—

There is in the French Foreign Office a department specially charged with matters of trade. This department is called "La Direction des Consulats et Affaires Commerciales," and is divided into three sub-departments (sous-directions), namely,

1. The sub-direction for the south and the east.

2. The sub-direction for the north; and,

3. The sub-direction for America, India, and China.

The staff of the Commercial Department is accordingly composed of one director-in-chief, and three sub-directors. To each sub-direction there is attached one principal clerk, called a "rédacteur," two senior clerks, three assistant clerks, and a certain number of supernumeraries.

The business of the Commercial Department of the French Foreign Office is to examine and watch all commercial questions arising abroad, to draw up, and, if necessary, to interpret Treaties of Commerce and Navigation, and all conventions relating to copyright, to the connection of French with foreign railroads, to international telegraphs, and to the fisheries; to submit to the Minister such measures as may be deemed essential for the protection of French commerce with foreign countries; and to investigate and report on all claims or representations on commercial matters which may be addressed to the French Government by that of other countries. The financial accounts of the consulates and of consular agents and dragomans are also under the control of the department.

In all the above questions (with the exception of that last mentioned), the Foreign Office acts in concert with such other departments of the Administration as may be concerned in the matter; for instance, it acts in concert with the Ministries of Commerce and Finance in questions relating to the negotiation or interpretation of Treaties of Commerce and Navigation; with the Ministry of the Interior in questions relating to literary property or copyright, and to international telegraphs; with the Ministry of Public Works in questions relating to French and foreign railroads; and with the Ministry of Marine in matters concerning the fisheries.

But the French Foreign Office is alone authorized to correspond directly with French diplomatic agents abroad, or with foreign representatives accredited in France. In all questions, whether commercial or not, which involve the necessity of communicating with a foreign Power, even if it be only for the purpose of obtaining some simple piece of information, the Ministry of Commerce, as well as every other department of the Administration, is obliged to have recourse to the Foreign Office, which decides whether such communication is advisable or expedient. One department alone, the Ministry of Marine, has the power of corresponding directly with the agents of the French Government abroad on the subject of certain special matters which concern the merchant service, such as questions of salvage, compensation for damages, payment of seamen's wages, &c.

I have, &c.
(signed) *W. G. Grey.*

App. No. 5.

No. 2.

Sir *A. Buchanan* to Earl *Russell.*

(Received April 17.)

(Telegraphic.)

Berlin, 17 April 1864.

MINISTER of Foreign Affairs and Minister of Commerce act in concert in foreign commercial questions. Two Commissioners are generally named to negotiate treaties; one from Ministry of Commerce, and one from Commercial Department of Foreign Office. Approval of Minister of Commerce always asked before nomination of Consuls, but final decision rests with Foreign Office.

If the two departments were to disagree on questions of commercial policy, the decision would probably be referred to the Cabinet and the King. The commercial section of foreign affairs is entirely subordinate to the Minister of Foreign Affairs, and has no action of its own. Minister of Commerce cannot communicate with diplomatic or consular agents abroad except through Foreign Office.

No. 3.

Sir *A. Buchanan* to Earl *Russell.*

(Received April 21.)

My Lord, Berlin, 19 April 1864.

WITH reference to my telegram of the 17th instant, I shall now, in conformity with your Lordship's telegraphic instructions of the 16th, proceed to report in detail the result of my inquiries as to the duties of the Commercial Department of the Foreign Office, and the relation of the Minister for Foreign Affairs with the Minister of Commerce, with respect to the treatment of commercial questions with foreign countries. I may, however, observe, that while the business of the English Foreign Office may be said to be divided according to geographical considerations, the principle upon which the Prussian department is organized is derived from the character of the objects to be dealt with. The office is divided into two departments, the one being charged with the transaction of politcal questions, and the other, styled the Commercial Department, having under its direction all questions which are not of a purely political nature, of which those relating to trade are the most important; and it is again sub-divided into sections for commerce, for railways, for the consular service, for judicial questions, and for accounts. Both departments are under the supreme direction of the Minister of Foreign Affairs, but a great deal of the business appears to be carried on without the formality of submitting the correspondence to his Excellency, and I understand that of 300 letters or despatches which daily arrive at the Foreign Office, it is seldom considered necessary to take his orders upon more than from twenty to thirty of the most important ones.

Such being the constitution of the Foreign Office, the relations of the Minister for foreign affairs with the Minister of Commerce do not appear to differ essentially from those of Her Majesty's Principal Secretary of State for Foreign Affairs with the President of the Board of Trade. There are, however, functionaries in the Prussian Foreign Office who, from their previous education, and their attention during many years to commercial questions, are as competent as the functionaries of the department of commerce itself to form correct opinions upon questions relating to trade.

The initiative in bringing before the consideration of the Government proposals or memorials emanating from local Boards and Provincial Chambers of Commerce rests with the Minister of Commerce, who is alone in relation with the representatives of the commercial and industrial interests of the country, and it is only through him that any information respecting them reaches the Minister for Foreign Affairs.

On the other hand, the latter alone communicates with the diplomatic and consular agents of the Government abroad, and it is only through his department that any information from foreign countries is received by the Ministry of Commerce.

The two departments are in constant communication with each other, and work together harmoniously each within its own sphere; and in cases of consular appointments, the name of the person selected for a vacancy by the Minister for Foreign Affairs is communicated to the Minister of Commerce, in order that he may point out, after communicating with the Chambers of Commerce, or with persons interested in the trade of the country where the vacancy exists, whether there is any objection to the nomination being confirmed. If, however, such objections are made, it remains for the Minister for Foreign Affairs to decide how far they should be attended to.

Again, in cases of negotiations for commercial treaties, or the revision of tariffs, a commissioner is appointed from the commercial department of the Foreign Office and another by the Ministry of Commerce to negotiate with the agents of the foreign country interested; and in some cases, and more particularly in questions affecting the Zollverein, a Commissioner from the Finance Department also takes part in such negotiations. These gentlemen receive their instructions from their respective departments, and the representative of the Foreign Office, in cases of difficulty, refers to the chief of the commercial department, who, if unable to solve the difficulty himself, takes the orders of the Minister with respect to it. The general rule, therefore, it may be said is, that the Minister for Foreign Affairs is the only member of the Prussian Government who corresponds with the diplomatic and consular agents of the Government in questions relating to trade, and the Minister of Commerce alone communicates on such subjects with local Boards or Chambers of Commerce. All questions at home, therefore, must, before coming before the consideration of the Minister for Foreign Affairs, have undergone a preliminary examination in the Ministry of Commerce, and any information required from abroad by the Ministry of Commerce must be obtained through the Minister for Foreign Affairs, by whom alone also representations can be addressed to foreign Governments with reference to questions of trade.

I have, &c.
(signed) *Andrew Buchanan.*

No. 4.

Lord *Bloomfield* to Earl *Russell.*

(Received April 18.)

(Telegraphic.)

Vienna, 18 April 1864.

In reply to your telegram of yesterday, the Austrian Foreign Office does not deal with foreign countries on commercial matters, except in communication and concert with the Ministry of Commerce. The duties of the commercial branch of the Foreign Office are to correspond with the Imperial consuls abroad after conferring with the Ministry of Commerce. It does not supersede reference to latter. The two Ministries always act in concert on commercial affairs; when there is a difference of opinion between them, it is settled by reference to Council of Ministers. The Ministry of Commerce, as a rule, does not correspond directly with ministers at foreign courts. It may, however, address them in cases of urgency, but always gives notice thereof to Foreign Office.

No. 5.

Lord *Bloomfield* to Earl *Russell.*

(Received April 25.)

My Lord, Vienna, 17 April 1864.

In obedience to the instructions conveyed to me in your Lordship's telegram of the 16th instant, I have the honour to forward herewith, in original, with a translation by Mr. Barrington, the explicit answers returned by the Imperial Ministry of Foreign Affairs to the questions submitted in your Lordship's telegram, with reference to the official relations subsisting between that department and the Ministry of Commerce.

These replies are but an amplification of those forwarded in my telegram to your Lordship of the 17th instant. They show that the Imperial Foreign Office act in commercial questions only after communication and concert with the Ministry of Commerce; and that the latter holds no direct communication with the Imperial embassies and legations abroad, and only communicates directly with the Imperial consulates abroad in cases of urgency.

I have, &c.

(signed) *Bloomfield.*

Enclosure in No. 5.

Memorandum.

(Translation.)

Question. General report on the relations between the Imperial Ministry for Foreign Affairs and the Ministry of Commerce.

Answer. The Ministries of Foreign Affairs and of Commerce are placed on an equal footing with regard to their mutual relations. Their communications are, as a rule, conducted in writing. In the event of difference of opinion between them on matters of common interest, the point is decided by a majority at the Council of Ministers, or by his Majesty the Emperor.

Q. Does the Foreign Department in dealing with foreign countries in commercial questions act independently of or in communication with the Ministry of Commerce?

A. The Ministry for Foreign Affairs enters into no foreign negotiation with regard to commercial matters, without first coming to an understanding with the Ministry of Commerce as to the aim and object of the negotiation. It remains in continual correspondence with the Ministry pending the negotiation.

Q. What are the precise duties of the commercial branch in the Foreign Department?

A. Formation and organization of, and nomination to, Austrian consulates abroad, recognition and sanction of foreign consulates in Austria; direction of the correspondence with the Imperial legations at foreign courts, with the Imperial consulates abroad, and with foreign missions at the Imperial Court, on all commercial matters; negotiation and conclusion of commercial, navigation, and customs treaties, as also of railway, telegraph, postal, and highway conventions.

Q. Does it supersede reference to the Ministry of Commerce?

A. On all important matters, such as the abovementioned, it only acts in concert with the Ministry of Commerce; it cannot set aside or supersede it.

Q. Does the Ministry of Commerce correspond directly with and give directions to Ministers at foreign courts in regard to commercial matters and negotiations irrespective of the Foreign Department?

A. The Ministry of Commerce carries on no direct correspondence with the Imperial missions at foreign courts; it can, however, in cases of urgency communicate directly with the Imperial consulates.

No. 6.

Lord *Bloomfield* to Earl *Russell.*

(Received May 2.)

My Lord, Vienna, 28 April 1864.

With reference to my Despatch of the 17th instant, forwarding the answers which I had obtained from the Austrian Ministry of Foreign Affairs respecting the relations subsisting between that Department and the Ministry of Commerce, I have the honour to supply some further information in regard to the last paragraph in your Lordship's Despatch circular, of the 19th instant, in which you inquire as to the course pursued by the Imperial Government when negotiating on questions of trade with other countries, and as to the arrangements that may exist for dealing with commercial questions in the Ministry of Foreign Affairs or of Commerce.

All commercial communications from Austrian agents abroad are addressed to the Imperial Foreign Office, and thence forwarded to the Ministry of Commerce. All questions connected with commercial negotiations are discussed between the two Departments.

Drafts of new treaties are drawn up in the Foreign Office, and then submitted to the Ministry of Commerce; they are revised and settled together, the Foreign Office undertaking the final instructions.

App. No. 5.

Affairs connected with the tariffs come under the cognizance of the Ministry of Finance, and are discussed between the two Departments.

All consular appointments are submitted by the Austrian Foreign Office to the Ministry of Commerce, and none take place without its approval.

There is a division in the Austrian Foreign Office for carrying on the correspondence with the eastern consulates, in addition to that charged with the general consular and commercial business of the Departments.

I have, &c.

No. 7.

Sir *H. Howard* to Earl *Russell.*

(Received April 25.)

My Lord, Hanover, 22 April 1864.

With reference to your Lordship's circular Despatch of the 19th instant, I beg to state that I have this day addressed an application, founded upon it, to the Hanoverian Minister of Foreign Affairs, for the information desired by your Lordship respecting the relative action of the Ministry of Foreign Affairs and of the Ministry of Commerce in Hanover, and the other points referred to by your Lordship.

I have at the same time explained to Count Platen the reason which makes your Lordship desirous of receiving the information in question with as little delay as possible.

I beg to observe that it is only from the Minister of Foreign Affairs that I can obtain the particulars asked for by your Lordship, as the subordinate Government officers would not be authorised in furnishing me with them.

I have, &c.
(signed) *Henry F. Howard.*

No. 8.

Sir *H. Howard* to Earl *Russell.*

(Received May 23.)

My Lord, Hanover, 20 May 1864.

With reference to my Despatch of the 22d ultimo, I have the honour to transmit herewith a copy and a translation of a note of the 16th instant, which I received on the 19th from Count Platen, as well as of the memorandum enclosed in it, containing the information which your Lordship, by your circular Despatch of the 19th ultimo, directed me to procure respecting the relative action of the Ministry of Foreign Affairs and of the Ministry of Commerce in Hanover.

I have, &c.
(signed) *Henry F. Howard.*

Enclosure 1 in No. 8.

Count *Platen* to Sir *H. Howard.*

(Translation.)

Hanover, 16 May 1864.

In the note which you did me the honour to address to me on the 22d ultimo, you acquainted me with the desire of his Excellency Earl Russell to obtain information as to the relative action of the Royal Hanoverian Ministries of Foreign Affairs and of Commerce, and the relations existing between them.

Having, in compliance with this wish, in concert with the latter Ministry, caused a memorandum to be drawn up explanatory of those relations, I hasten to transmit to you herewith, for communication to Her Britannic Majesty's Government.

I have, &c.
(signed) *Platen-Hallermund.*

Enclosure 2 in No. 8.

Memorandum.

(Translation.)

It is the duty of the Minister for Foreign Affairs, as representing the Royal Government abroad, and in the German Confederation, to conduct and be the vehicle of the correspondence with foreign Governments or with their diplomatic agents accredited to this Court, as also with the German Confederation. On the other hand, the diplomatic agents accredited abroad by the Royal Government are placed under his exclusive jurisdiction; they receive their full powers and instructions from him, and address to him their despatches, inquiries, and reports.

In contradistinction to these permanently appointed diplomatic agents, commissioners sent charged with special missions abroad, on affairs relating to commerce and navigation, or with conducting negotiations relating to Customs, also receive their full powers and instructions from the Minister for Foreign Affairs; but in this case they are given, after concerting with the Minister of Commerce, who has a decisive voice in the choice of the persons, and who draws up the draft embodying the substance of the instructions which they are to receive.

Copies of the reports of these Commissioners, which are addressed to the Ministry for Foreign Affairs, are immediately communicated to the Ministry of Commerce, as are also, whenever it may seem expedient to do so, extracts from the reports of diplomatic agents, and from the notes of envoys accredited to this Court.

The drafts of replies and instructions requiring documents or reports are drawn up by the Ministry of Commerce, and sent to the Ministry of Foreign Affairs for transmission. Whenever on general political grounds a draft would seem to require any alterations or additions, such modifications are introduced into it by the Ministry for Foreign Affairs, after previous consultation, if necessary, with the Ministry for Commerce.

Correspondence relating to the current affairs of the Zollverein forms an exception to the foregoing rule. According to the mode of transacting business in the Zollverein, this correspondence does not pass through the hands of the Ministry for

for Foreign Affairs, but is carried on directly between the different Commissioners of Customs and Taxes, and between them and the Ministry of Commerce.

Differing from diplomatic agents, the consuls appointed by the Hanoverian Government, in respect of their general official duties, and of their functions as commercial agents, are placed entirely under the jurisdiction of the Minister of Commerce, and are not invested with any diplomatic character.

All consular agents are selected by the latter from among suitable persons residing at the place or port where the seat of the consulate may be, and they receive their appointment and official instructions from him. They address their reports (annual and special) to him, and send him their commercial summaries, shipping accounts, and other returns. The Ministry of Commerce communicates such of these documents to the Ministry for Foreign Affairs as he deems expedient.

As an exception, however, to the above rule, all information and communications relating to matters of succession, and to cases calling for intervention, viz., cases in which the private interests of Hanoverian subjects require negotiation with the higher authorities or with the government of the country where the consulate is seated, must be addressed to the Ministry for Foreign Affairs, and he, after communicating with the Ministry of the Interior, issues the requisite orders and instructions to the consuls himself.

There is no special department for commercial affairs in the Ministry for Foreign Affairs.

No. 9.

Sir *A. Malet* to Earl *Russell.*

(Received April 25.)

My Lord, Frankfort, 21 April 1864.

WITH reference to your Lordship's Despatch of the 19th instant, marked Circular, requiring information regarding the conduct of commercial negotiations by the Government to which I am accredited, I have the honour to state that Electoral and Grand Ducal Hesse and Nassau, being members of the German Customs Union, leave commercial negotiations in the hands of Prussia.

The diet takes no cognizance of any matters relating to the affairs of commerce.

I have, &c.

Mr. *W. Ward* to Earl *Russell.*

(Received April 18.)

(Telegraphic).

The Hague, 18 April 1864.

THE Minister of Finance transacts affairs relating commerce. The Foreign Office, after consultation with the Finance Department, instructs its agents in foreign countries. The Finance Minister does not correspond with them directly.

No. 11. App. No. 5.

Mr. *W. Ward* to Earl *Russell.*

(Received April 20.)

My Lord, The Hague, 18 April 1864.

I HAD the honour to forward to your Lordship this morning the following telegraphic Despatch in answer to the instructions conveyed to me by telegraph on the 16th instant:—

"The Minister of Finance transmits affairs relating to commerce. The Foreign Office, after consultation with the Finance Department, instructs its agents in foreign countries. The Finance Minister does not correspond with them directly."

There is no Ministry of Commerce in the Netherlands. All commercial business, accordingly, is transacted by a division of the Finance Department; nor is there any special commercial branch in the Foreign Office.

Except in matters of detail, on which the decision of the Finance Department is already known by precedent, the Foreign Office does not instruct the agents of the Netherlands in foreign countries without communication with the Minister of Finance. On the other hand, all instructions, after such communication, emanate from the Foreign Office, and no correspondence is carried on between the Finance Department and Ministers at Foreign Courts, nor are any directions given to them from that Department in regard to commercial matters or negotiations.

I have, &c.
(signed) *William R. Ward.*

No. 12.

Mr. *W. Ward* to Earl *Russell.*

(Received April 25.)

My Lord, The Hague, 23 April 1864.

I HAVE the honour to acknowledge the receipt of your Lordship's Despatch of the 19th instant, instructing me to report, with as little delay as possible, on the relative action of the Ministry of Foreign Affairs and the Ministry of Commerce in the Netherlands.

In addition to the information contained in my Despatch of the 18th instant, I have only a few observations to make respecting the practice of the Netherland Government when negotiating a question of trade with other countries.

Up to a recent date, on such occasions the gentleman at the head of the division of the Finance Department which is charged with the affairs of trade and navigation, being a person of great experience on those matters, himself prepared and drafted all commercial treaties. Since his death, his successor proposed to follow the same precedent; but this gentleman, M. Nyttenhooven, has been recently transferred to the office of Secretary General of the Department of Foreign Affairs. In this new character he still continues to perform the same duties with regard to commercial negotiations with foreign countries as while he occupied his former post, and, accordingly, the commercial treaty lately concluded between the Netherlands and

App. No. 5.

the kingdom of Italy was prepared by him, though negotiated by the Netherlands' Minister at Turin.

There is, then, no department specially charged with business of this nature; but when any proposal is made to the Netherlands Government to enter into any arrangement or treaty on commercial matters, it is the practice to consult the different Chambers of Commerce in the country, and to invite their opinion, in the first place, as to the necessity of the step proposed, and next, their suggestions as to the stipulations which should be made.

The constitution of these Chambers of Commerce was provided for by a Royal Ordinance in the year 1851. They are established in those communes where, according to the judgment of the communal authorities, the appointment of such a corporation is expedient, subject, however, to the Royal approbation. Their members are elected by such inhabitants of the commune as are rated to the tax called "Patentregt," on account of any industrial or commercial business, at a sum to be fixed in each case in conformity with the advice of the communal and provincial authorities.

The correspondence between the chambers of commerce and the several departments of the State is direct, when consulted by those departments; but when, on the other hand, they have occasion to address any representation to the departments of State, the correspondence passes through the representative of the Royal authority in the province.

The Foreign Department of the Netherlands does not require commercial reports from their secretaries of legation, whose attention is not supposed to be particularly directed to such questions. Information of this description is furnished by the consular officers, whose residence in centres of trade gives them peculiar opportunities for acquaintance with details, the knowledge of which may be serviceable to their Government and the commercial body of the country.

I have, &c.
(signed) *William R. Ward.*

No. 13.

Mr. *J. Ward* to Earl *Russell.*

(Received May 2.)

My Lord, Hamburgh, 29 April 1864.

In conformity with the instructions conveyed to me by your Lordships' circular Despatch of the 19th instant, notifying the appointment of a Parliamentary Committee to inquire into the relations between the Foreign Office and the Board of Trade, and desiring information as to the action of the Ministry for Foreign Affairs and that of Commerce respectively in the country where I reside, I have the honour to state to your Lordship as follows: —

In small states, like the Hans Towns, the organization of the Departments of Foreign Affairs and of Commerce is of course less elaborate than in Prussia and other large monarchies; but care is taken that no measure affecting trade shall be adopted by the Government without first consulting the body especially charged with watching over the commercial interests of the community. In Hamburgh, when the Senate desires to negociate a treaty of commerce or navigation, or when such a treaty is proposed to it by a foreign State, the course is, first, to refer the whole question to the "Commerz Deputation," a body which is analogous to the Board of Trade in England, and is composed partly of Senators and partly of members of the burghership and leading merchants. If the report of the Commerz Deputation is favourable to the proposed measure, the senior Syndic (who is equivalent to a Minister for Foreign Affairs) takes charge of the negociations in the name of the Senate, prepares the draft of a treaty, or makes his observations upon the draft submitted to him, and issues the requisite instructions to the diplomatic agents of Hamburgh at foreign Courts. The treaty, when ready for conclusion, is signed by the Syndic, or by the diplomatic agent abroad, on behalf of the Senate. The Commerz Deputation has nothing to do with the negociations, or with the signature of the treaty. Its functions are consultative only. It has, indeed, occasionally happened that a member of, or the Secretary to, the Commerz Deputation has been appointed to represent the senate in commercial transactions, as in the instance of the Elbe Navigation Commission, which sat at Hamburgh in the years 1862 and 1863, when the Hamburgh Commissioner was Dr. Soetbeer, the able and experienced Secretary of the Commerz Deputation; but he acted in that matter under the direction of the Syndic, Dr. Merck, and received his instructions through the last-mentioned functionary, and not immediately from the Department of Trade.

In the other Hans Towns the practice in regard to the negotiation of Commercial Treaties is the same as that of Hamburgh. At Lübeck there is a Deputation of the Senate for matters of trade, but all negotiations with foreign States are conducted by the Senator charged with Foreign Affairs (at present Dr. Curtius). At Bremen there is likewise a Deputation for matters of trade with consultative functions, whilst the negotiations with foreign Powers on commercial as well as other questions are conducted by one of the Burgomasters (M. Duckwitz), assisted by two other Senators, who form the Committee of the Senate for Foreign Affairs.

No. 14.

Lord *Howard de Walden* to Earl *Russell.*

(Received April 17.)

(Telegraphic.)

Brussels, 17 April 1864.

There is no Ministry of Commerce in Belgium; commercial affairs are directed by the Ministers of Foreign Affairs and Finance. General policy and initiative, as regards commerce, come under Minister of Foreign Affairs; mere fiscal, administrative and executive details at home under Minister of Finance. The Minister of Finance has no independent intercourse with either foreign Governments or Diplomatic Agents.

No. 15.

Lord *Howard de Walden* to Earl *Russell.*

(Received April 20.)

My Lord, Brussels, 18 April 1864.

In reply to your Lordship's telegram of the 16th instant, I have to explain that there is no special Minister of Commerce in Belgium. The general political

political direction of all matters connected with commerce and navigation constitutes an important branch of the attributions of the Minister of Foreign Affairs. Under this head are comprehended,—

Section I. Internal Commerce:

1. Commercial legislation, and tariffs of import, export, and transit duties. 2. Maritime establishments, navigation dues, government of harbours in all matters affecting commerce. 3. Navigation, fisheries, chambers of commerce, and tribunals of commerce. 4. Commercial halls of exchange, stock-brokers and other brokers. 5. Commercial, provident, and insurance societies. 6. Regulations affecting internal trade.

Section II. Foreign Commerce and Consulates:

1. Consulates; their organization and regulation; Belgian consular establishment; its relations with foreign consular agents. 2. Negociations of treaties and other public acts concerning commerce and navigation; commercial questions as bearing on political treaties. 3. Relations with foreign governments in commercial matters. 4. International means of communication, post-office and telegrams, as affecting commerce. 5. Belgian establishments abroad, and measures to be taken in order to develop maritime movement and export trade.

The direction of the Custom-house, however, and decision on questions bearing on administrative fiscal proceedings, appertain to the Minister of Finance, and constitute a branch of the duties of a division in the Finance Department designated as "Direction des Douanes et Accises."

Although such as above detailed constitutes the practice and relative participation of the two Departments in the direction of commercial matters, yet there are matters, such as alterations in the Tariff, in which the consent of the Minister of the Interior is required (for instance, as regards modification of protecting duties affecting local industrial interests), in which the authority of no single Minister is supreme. There is, however, no distinct law under which any separate classification of attributes as ascribed to the several Departments is defined.

The correspondence between the different Departments is conducted by letter, exactly on the same principle as between the Foreign Office and the Board of Trade, varying only in the form of being usually direct between the Ministers, instead of through the Secretaries of the respective Departments.

Lord *Howard de Walden* to Earl *Russell.*
(Received April .)

My Lord, Brussels, 24 April 1864.

I HAVE the honour to acknowledge the receipt of your Despatch, Circular, of the 19th instant.

My Despatch of the 18th instant in reply to your Lordship's telegram of the 16th will, by anticipation, have afforded the essential information desired by your Lordship.

Baron Lambermont, the Secrétaire Général of the Foreign Office, has obligingly prepared for me a memorandum on the same subject, a copy of which, as an authoritative document, I herewith enclose. App. No. 5.

I have, &c.
(signed) *Howard de Walden* and *Seaford.*

Enclosure in No. 16.

MEMORANDUM.

Q. EXISTE-T-IL quelque Loi, Arrêté Royal, ou ouvrage sur la Constitution Belge qui définisse pleinement les attributions et les devoirs de chaque Ministère?

R. Les attributions générales des Ministères ont été originairement définies par l'Article 54 de la Constitution de l'an VIII. aux termes duquel les Ministres procurent l'exécution des lois et des réglements d'administration publique.

Les Ministres exercent leur pouvoir sur les matières que les lois confient à leur sollicitude. (Lois du 25 Mai, 1791, et du 10 Vendémiaire, an IV.)

D'après la Constitution Belge du 7 Février, 1831, dont le texte est ci-joint, le pouvoir exécutif appartient au Roi (Article 29). Aucun acte du Roi ne peut avoir d'effet s'il n'est contresigné par un Ministre, qui par cela seul s'en rend responsable (Article 64). Le Roi nomme et revoque ses Ministres (Article 65). Le Chapitre II, s'occupe exclusivement du Roi et de ses Ministres.

Q. Comment sont définies les attributions du Département des Finances en matières commerciales en tant que distinctes de celles du Ministre des Affaires Etrangères?

Jusqu'où va l'autorité du Ministre des Finances en matière de Tarifs?

R. Le Ministère de l'Intérieur a dans ses attributions l'agriculture et l'industrie. Le Ministère des Affaires Etrangères, le commerce, la marine, les relations internationales, le Ministère des Finances, l'établissement et la perception des impôts.

Il résulte de là que trois Départements concourent, chacun à son point de vue différent, à l'élaboration des Tarifs Douaniers. C'est le Ministère des Finances qui formule le travail définitif et le présente aux Chambres Législatifs.

Lorsqu'il s'agit de modifier les Tarifs par voies de Traités le Ministère des Affaires Etrangères consulte les deux autres Départements, et s'entoure de tous les renseignements qui peuvent lui procurer les Chambres de Commerce, les fabricants, les armateurs, ainsi que les Agents, Diplomatiques et Consulaires; il dirige les négociations, et soumet les Traités aux débats Parlementaires.

Q. Quel Ministre soumet aux Chambres de Commerce des propositions pour modifier les Tarifs?

R. Les Chambres de Commerce sont dans les attributions du Département des Affaires Etrangères. Toutefois le Ministre des Finances, s'il le juge nécessaire, communique directement à ses collégues les projets de loi destinés à modifier le Tarif des Douanes. Il en est de même du Département de l'Intérieur pour les questions qui intéressent l'agriculture ou l'industrie. Comme on l'a dit plus haut, le Ministère des Affaires Etrangères puise des lumières à la même source lorsqu'il s'agit de négociations internationales;

App. No. 5.

mais dans tous les cas, et en principe, la résolution finale est prise de l'accord commun des trois Départements.

Il ne sera pas sans intérêt d'ajouter que, depuis quelques années, il a été institué un Conseil Supérieur du Commerce et de l'Industrie, qui est composé de Delégués des Ministères des Affaires Etrangères, des Finances, et de l'Intérieur, et de toutes les Chambres de Commerce. Ce Conseil donne son avis sur les affaires qui lui sont soumises par le Gouvernement, il discute les vœux émis par les Chambres de Commerce, et il délibère sur les propositions émanant de l'initiative de ses propres membres.

Q. Les changements ou modifications aux réglements commerciaux sont-ils faits par un seul Ministre à l'exclusion des autres, ou sont-ils déférés au Conseil des Ministres pour obtenir la sanction générale, et sont-ils promulgués par l'Arrêté Royal ou autrement ?

R. La réponse précédente s'applique en grande partie à cette question.

Déjà concertés entre les Départements compétents, les projets de loi douanière ou de Traité passent, comme toutes les affaires de quelque importance, par le Conseil des Ministres, et ils sont enfin soumis à la haute approbation de Sa Majesté.

Les lois apportant des changements au Tarif des Douanes sont promulguées de la méme manière que les autres lois. Elles sont obligatoires le dixième jour après celui de la publication.

Les Traités sont accompagnés lors de leur publication officielle d'une loi spéciale qui les sanctionné.

Il arrive rarement que des changements soient apportés au Tarif par Arrêté Royal. Cela ne peut avoir lieu qu'en vertu d'une autorisation donnée au Gouvernement par une loi expressé. Les Arrêtés Royaux sont également obligatoires le dixième jour après celui de leur publication, à moins qu'ils ne fixent un autre délai.

No. 17.

Lord *Napier* to Earl *Russell.*

(Received April 17.)

(Telegraphic.)

St. Petersburgh,
17 April 1864.

There is no Ministry or Commerce in Russia. The Department of Commerce is a distinct branch of the Department of Finance, and is administered by a Director, who is however quite subordinate to the Minister of Finance. There is no commercial branch in the Foreign Office; never acts in commercial matters without consulting the Minister of Finance. The latter sometimes corresponds directly by permission of the Foreign Office, for convenience, with Diplomatic Agents abroad, but only on matters of detail.

No. 18.

Lord *Napier* to Earl *Russell.*

St. Petersburgh,
My Lord, 18 April 1864.

In conformity with your Lordship's telegraphic instructions, I had the honour to transmit to your Lordship yesterday a brief report by telegraph concerning the relations which exist in Russia between the Department of Foreign Affairs and that of Commerce. I have scarcely matter for an expanded statement.

There is no Ministry of Commerce in this empire. The interests of foreign trade are treated in a Department of the Ministry of Finance, which is placed under a "Director," a functionary of importance, but who has not by any means the quality of a Minister, and who is altogether subordinated to the Minister of Finance, who is the real Minister of Commerce.

There is no commercial branch in the Foreign Department, nor does the Foreign Department take any resolutions in commercial affairs without referring to the Ministry of Finance. When questions of commerce are raised by Foreign Powers, they are first entertained by the Minister of Foreign Affairs, who refers them to the Minister of Finance, who advises with the Director of Commerce. If the question affects existing international engagements, the advice of a "counsellor" is taken, who is attached to the Foreign Office, and is charged with the Treaty Department. This functionary is a kind of "law officer," to whom matters affecting the construction of treaties are referred; his decision is, however, not authoritative, and his opinion is occasionally discussed and reversed in a "Council of the Foreign Department," in which the Minister of Foreign Affairs presides, and to which functionaries of special aptitude and learning in the department are called.

The opinion of the "counsellor," or of the Minister of Foreign Affairs, in matters affecting commerce, is imparted to the Minister of Finance, who exchanges his views with the Foreign Department.

Matters of high importance affecting the commercial relations of the empire with foreign countries are also discussed in the Cabinet, and are submitted by the Minister of Foreign Affairs and the Minister of Finance to the Sovereign.

As a general rule, the Minister of Finance does not correspond directly with diplomatic agents abroad; but occasionally, for the convenience of business, the Minister of Finance is empowered to do so by the Minister of Foreign Affairs, and a direct correspondence is established, of which the substance is imparted to the Foreign Department. This only occurs in matters of detail.

I have, &c.
(signed) *Napier.*

No. 19.

Mr. *Elliot* to Earl *Russell.*

(Received April 18.)

(Telegraphic.)

Turin, 18 April 1864.

The Italian Foreign Office, dealing with foreign countries on commercial questions, acts independently of the Ministry of Commerce. There is a commercial branch of the Foreign Office, the duty of which is to negotiate treaties of commerce, to watch their execution, and to examine the questions arising out of them. The communications of the Ministry of Commerce with Italian Ministers at Foreign Courts are made through the Foreign Office.

No. 20.

Mr. *Elliot* to Earl *Russell.*

(Received April 21.)

My Lord, Turin, 18 April 1864.

With reference to my telegram of this morning, I have the honour to enclose the copy of a memorandum I have procured from the Director General of the Italian Foreign Office, giving further details of the relations of that department and the Ministry of Commerce.

I have, &c.

(signed) *Henry Elliot.*

Enclosure in No. 20.

Memorandum.

Le Ministère des Affaires Etrangères s'occupe directement et indépendamment des autres départements des questions commerciales avec les états étrangers; toutefois lorsque ces questions peuvent de quelque façon intéresser les autres Ministères, et notamment ceux du Commerce, des Finances, et de la Marine, il tâche avant tout de se mettre d'acord avec eux.

Il existe au Ministère des Affaires Etrangères, et précisément dans la division des Consulats, un Bureau Commercial, dont les attributions sont de négocier les traités de commerce avec les pays étrangers, et ensuite d'en préparer et d'en contrôler l'exécution, notamment en éclaircissant les doutes qui pourraient surgir dans l'interprétation des stipulations intervenues.

Ce Bureau se trouve naturellement placé comme intermédiaire entre les Agents Diplomatiques ou Consulaires du Roi à l'étranger, et les Départements qui ont aussi des intérêts nationaux à étudier ou à protéger hors des limites du Royaume. Par conséquent le Ministère du Commerce, de même que tous les autres, fait parvenir ses communications aux Légations du Roi près les Cours étrangères au moyen du Ministère des Affaires Etrangères, où le Bureau susdit du Commerce est aussi chargé de ces transmissions.

No. 21.

Mr. *Elliot* to Earl *Russell.*

(Received 17 May.)

My Lord, Turin, 13 May 1864.

With reference to your Lordship's despatch of the 19th ultimo, I have the honour to enclose a copy and translation of a memorandum I have obtained from the Italian Foreign Office, explaining the relations existing between that department and the Ministries of Commerce and Finance.

(signed) *Henry Elliot.*

Enclosure in No. 21.

Memorandum.

Prima del 1848 ogni competenza in oggetto di traffico all' estero, e di Trattati di Commercio e Navigazione con esteri Stati, era raccolta nel Ministero per gli Affari Esteri, che interrogava per semplice informazione od autorevole avviso gli altri Ministerio o Segreterie di Stato, e segnatamente quella delle Finanze, da cui dipendevano le diverse autorità non solo doganali, ma anche commerciale.

Dopo il 1848 fu fondato, quindi soppresso, e poscia nuovamente attivato, uno Speciale Ministero di Agricoltura, Industria, e Commercio, che anche presentemente esiste nel Regno. Si riconobbe quindi che il nuovo Ministero aveva à raccogliere e ad esaminare ogni documento di commerciale importanza che si compilasse nell' interno o giungesse dall' estero. Si riconobbe altresi che quel Ministero aveva ragione di iniziativa nel Reale Governo per indicare ciò che nella sfera commerciale, e fatta pure estrazione da politiche considerazioni, gli sembrasse opportuno all' effetto di promuovere nell' interno e nell' estero lo sviluppo del traffico nazionale, tanto più che avendo sotto la sua diretta dipendenza le Camere di Commercio ed Arti numerose in tutto il Reame, può meglio d'ogni altro Ministero apprezzare convenienze e bisogni.

Ma siccome le considerazione politiche prevalgono necessariamente ad ogni altra, nei rapporti coll' estero, ed il solo Ministero degli Affari Esteri può essere giudice delle opportunità e dei momenti propizi ad accordi con Governi stranieri, e d' altronde il solo Ministero dell' Estero è conservatore nato dei metodi e delle costumanze diplomatiche, così quella iniziativa del Ministero di Commercio non si considerò estesa di guisa che essa potesse insinuare o conchiudere trattativa alcuna. Che anzi si mantenne rigorosamente il principio che le correspondenze coi Ministeri e coi Consolati nell' estero seguissero esclusivamente per mezzo del Ministero degli Esteri, e che ogni negoziazione si conducesse in ogni caso dallo stesso Ministero dell' Estero, in cui le Convenzioni ed e Trattati vengono ridotti nelle forme consuete a documenti di Stato. In tutto ciò il Ministero del Commercio non ha altra azione se non quella di un consulente continuo o rispettato, il cui Capo per l' essere membro del Consiglio dei Ministri non ha una posizione di dipendenza, che gli vieti di far conoscere e fors' anco prevalere in consiglio, quando questo caso si presentasse, la sua opinione personale a fronte di quella dello stesso Ministro degli Esteri. Non si sono del resto per l' identità degli scopi, e per l' essere attualmente del tutto vittoriose presso il Governo Italiano le massime di libertà commerciale, presentasi casi di attrito o di gravi difficoltà.

Reassumendo, adunque, i Trattati e le Convenzione Commerciali si iniziano per la massima parte al Ministero d' Agricoltura e Commercio, il quale raccoglie ogni elemento necessario, studia le possibili concessioni a farsi, i vantaggi a chiedersi, e le clausole a stipularsi, redige i progetti e li trasmette al Dicastero dell' Estero. Quivi vengono i progetti stessi ripresi in esame poste in confronto coi Trattati gia esistenti e con ogni politica esigenza, finchè approvati in Consiglio dei Ministri sono dallo stesso Ministero dell' Estero trasmessi ai Plenipotenziari incaricati di curare le negoziazioni, colle istruzioni occorrenti pel regolare andamento delle medesime.

Al quale scopo appunto trovasi istituito presso il Ministero dell' Estero un apposito Ufficio Commerciale, il cui incarico si è di sovvegliare e dirigere le negoziazioni riflettente la stipulazione dei Trattati coi paesi stranieri, di curarne l'esatta interpretazione, di sciogliere i dubbi e le difficchià che in ordine alla medesima vennero sollevate e di promuoverne in ogni migliore modo la precisa osservanza. Allo stesso ufficio è pure affidata la

App. No. 5.

cura di raccogliere notizie e documenti statistici sulla nostra navegazione e sul nostro commercio all' estero, e di procurarsi ragguagli sulle stipulazioni commerciali che vengono conchiuse da altri Stati, e che potrebbero anche riuscire a noi vantaggiose. Di queste notizie ed informazioni, alcune vengono direttamente rese di pubblica ragione, o nel Bollettino Consolare od in altre opere, e le rimanenti si comunicano al Ministero di Agricoltura e Commercio, che le dirama, nell' interesse dei nostri commercianti od industriale, alle Camere di Commercio e d' Arti del Regno, o le conserva per ogni possibile emergenza di futuri negoziati.

(Translation.)

Prior to 1848, all questions upon traffic abroad and upon Treaties of Commerce and Navigation with foreign States were referred to the Minister of Foreign Affairs, who, upon mere inquiries for information or for authorised instructions, applied to the other Ministers or Secretaries of State, but chiefly to the Ministry of Finance, in whom was vested all authority upon matters both commercial and of the Customs.

After 1848, a special Ministry for Agriculture, Industry, and Commerce was founded, then suppressed, and again reinstated, and now extant. The new Ministry was next required to collect and examine all important commercial documents emanating from the interior, or received from abroad. It was also admitted that this Ministry was entitled to the initiative for indicating whatever might appear opportune in the commercial sphere for promoting both at home and abroad the development of the national traffic, all political considerations abstracted; more especially so as with the immediate control of the Chambers of Commerce and Arts throughout the kingdom, it would be more able than any other Ministry to appreciate their convenience and necessities.

But as political considerations prevail more than any other in relations with foreign countries, and as the Ministry for Foreign Affairs is best able to judge of the opportune moment for treating with Foreign Governments; and, moreover, as the Ministry for Foreign Affairs is charged with the preservation of the methods and diplomatic usages, the Ministry for Commerce was not held to be authorised to "insinuate" (broach) or conclude any treaty whatever. On the contrary, the principle that the correspondence with Ministers and Consuls abroad should be carried on exclusively by the Ministry for Foreign Affairs was rigorously maintained, and every negotiation, under any circumstances, conducted by the same Ministry for the Exterior, in which conventions and treaties are drawn up in the usual form of State papers. In all this the Ministry for Commerce has no other share than that of a counsellor, whose chief, from being a member of the Council of Ministers, holds an independent position, which enables him to give and even press his opinion in Council, when opposed to that of the Minister for Foreign Affairs. But from the identity of views and from the freedom of trade now prevalent in Italy, hitherto no instance of serious difficulty or contention has occurred.

Assuming, therefore, that commercial treaties and conventions are chiefly initiated by the Ministry for agriculture and commerce, which collects every necessary element, makes a study of possible concessions, of the advantages to claim, and of the conditions which are to be stipulated for, and draws up the projects which it transmits to the Foreign Department, it is there that these projects are re-examined and confronted with existing treaties and every political requirement, and when finally approved in the Council of Ministers, are by the said Ministry for Foreign Affairs transmitted to the plenipotentiaries charged with their negotiation and the needful instructions for carrying them out.

To this end at the Foreign Ministry there is an appropriate commercial department which is entrusted with the supervision and direction of negotiations having reference to stipulations of Treaties with foreign countries, with their careful interpretation, the solution of doubts and difficulties which may arise, and with the furtherance of the best means of ensuring their fulfilment. At the same office the charge of collecting notices and statistical documents is entrusted, both as regards our navigation and our commerce abroad, as also of procuring information upon commercial stipulations concluded between other States, and which might lead to our advantage. Of such notices and information some reach us by the public press or by the "Bollettino Consolare;" the remainder is communicated to the Ministry of Agriculture and Commerce by our Chambers of Commerce and Arts, and it is preserved for any possible emergency in future negotiations.

Sir *A. Magenis* to Earl *Russell.*

(Received April 18.)

(Telegraphic.)

Lisbon, 18 April 1864, 4.30 P.M.

FOREIGN Office here always acts in communication with Ministry of Commerce on commercial matters. There is no commercial branch in Foreign Office Department of Commerce, as rule, does not correspond with Portuguese diplomatic agents abroad, but does with consular.

No. 23.

Sir *A. Magenis* to Earl *Russell.*

(Received April 26.)

My Lord, Lisbon, 20 April 1864.

I MADE to your Lordship a short report by telegraph on the 18th instant on the relations existing between the Foreign Office and the Ministry of Commerce in this country, in obedience to the instructions contained in your Lordship's telegram of the 16th, which instructions were repeated verbatim in a second telegram of the 19th.

I shall now, in obedience to those instructions, report more fully on the same subject.

I learn from M. de Monteverde, the Under Secretary of the Foreign Office here, that that Department, in treating with foreign countries on commercial questions, always acts in communication with the Ministry of Commerce, to which all matters of a commercial nature are previously submitted for advice; and he further informs me that there exists no commercial branch in the Foreign Office.

The Ministry of Commerce does not, as a rule, correspond directly with, or give instructions to, Portuguese

Portuguese diplomatic agents abroad. In cases admitting of no delay it may at times, and exceptionally, take upon itself to do so. Under ordinary circumstances, however, instructions respecting commercial questions are sent to those agents by the Foreign Office, in conformity with the recommendations of the Ministry of Commerce.

Portuguese Consuls at foreign ports correspond directly with the Department of Commerce on commercial affairs.

I have, &c.

Sir *J. Crampton* to Earl *Russell.*
(Received April 17.)

Telegraphic.

Madrid, 17 April 1864.

THERE is no separate Minister of Commerce in Spain, the commercial business of the Government being intrusted to one of the Departments of the Ministry of Public Works. All negotiations with foreign powers or communications with them are, however, carried on by the Minister of Foreign Affairs independently of the Ministry of Public Works, except in so far as the Minister for Foreign Affairs may apply to the commercial department for information. The Foreign Department exclusively corresponds with and gives directions to Spanish Ministers abroad on commercial subjects. The precise duties of the commercial division in the Foreign Office are stated in the foreign regulation which has been furnished to me by that Department. The direction of commerce employs itself in this branch of business, as regards foreign relations and in regard to the appointments, the rights, obligations, and jurisdiction of Consuls; it examines the expenses of all the Departments of the Ministry, keeps accounts of all its contingent revenues, and forms the budget of the same. Moreover, all negotiations of treaties and conventions of Commerce and Navigation, and everything relating to fisheries, extradition, naval deserters, health, charitable succours, consulates, and couriers, are carried on in it.

No. 25.

Sir *J. Crampton* to Earl *Russell.*
(Received April 25.)

My Lord, Madrid, 21 April 1864.

THE result of the inquiries which I have made since the date of my telegram of the 17th instant respecting the attributions of the Foreign Department, and other Departments of the Spanish Government, in dealing with foreign countries in regard to commercial questions, has not furnished me with much additional information on this subject, but confirms the main fact that the Minister for Foreign Affairs, exclusively, with the assistance of a "division" of his Department especially entrusted with the preparation of the necessary information and data, negotiates all commercial questions with foreign countries, and directs Spanish Ministers abroad in regard to all such questions.

There exists, it is true, a "division" in the Department of Public Works charged with the consideration of matters regarding agriculture and commerce; but I understand its functions proceed no further than the collection of information, and that the Department in no case takes the initiative in recommending negotiations with foreign countries, and is never charged with superintending such negotiations.

It has been customary for the Minister of Finance, from time to time, to name a Commission composed of persons employed in his own Department to consider and report upon certain commercial subjects; but the decisions of such a Commission are, as I had the honour of stating on a former occasion (*vide* my telegram of 15 March 1863), advisary and confidential, and in no way obligatory or legislative.

I have, &c.
(signed) *John F. Crampton.*

No. 26.

Rear-Admiral *Harris* to Earl *Russell.*
(Received May 3.)

My Lord, Berne, 30 April 1864.

IN conformity with the instructions contained in your Lordship's Despatch, circular, dated 19 April, I addressed a Despatch to the President of the Confederation, asking for information on the subject of the relative action between the Federal Departments of Politics and Commerce in conducting the public business of this country. In order to set forth more clearly the nature of the information required, I transmitted to his Excellency a copy of your Lordship's Despatch.

I have the honour to enclose the President's answer. In addition to the information contained therein, I may add that the Federal Departments of Politics and Commerce issue annually reports containing in detail the several occurrences of the preceding year relating to commerce, such as treaties, conventions, alterations of tariffs at home and abroad, and other matters affecting Swiss commercial interests. These I have had the honour to forward to your Lordship as soon as they were printed. In the official "Feuille Fédérale" are occasionally published reports on commercial matters from the legation and consulates, such as that of M. Brennwald on the commerce of Japan, which I transmitted to your Lordship.

But the consular reports are few and far between; probably from the reason that the Swiss consuls, who are solely remunerated by fees, are generally persons whose private business absorbs their time. However, the active, industrial habits of the commercial community in Switzerland appear to keep them amply informed, through private correspondence with their fellow-citizens widely scattered over the globe, in all matters relating to trade.

I have, &c.
(signed) *E. A. J. Harris.*

Enclosure in No. 26.

The Federal Council to Rear Admiral *Harris.*

Berne, le 27 Avril 1864.

PAR sa note du 22 courant, son Excellence M. le Ministre de Sa Majesté Baitannique a exprimé au Conseil Fédéral le désir de recevoir des

App. No. 5.

renseignements sur le mode de procéder du Département Politique et du Département du Commerce et des Péages de la Confédération Suisse, en ce qui concerne les questions commerciales et les négociations qui s'y rapportent, soit à l'intérieur ou à l'étranger.

Pour satisfaire autant que possible à ce désir, le Conseil Fédéral a l'honneur de transmettre ci-joint à M. le Contre-Amiral Harris un exemplaire de la Loi Fédérale sur l'organisation et la mode de procéder du Conseil Fédéral du 28 Mai 1849, et du Réglement pour les Consuls Suisses du 1 Mai 1851.

Conformément à l'organisation du Conseil Fédéral, la direction du Département Politique est toujours dans les mains du Président de la Confédération. A teneur de l'Article 23 de la Loi ci-jointe, le Département Politique est chargé de l'examen préalable ou du soin des affaires suivantes:—

1. Les relations avec les Etats étrangers et leurs Représentants; la conclusion de Traités de toute espèce, sauf la co-opération des autres Départements lorsque ces Traités concernent des affaires de leur ressort.

2. Les relations avec les Chargés d'Affaires et les Consuls de la Suisse à l'étranger.

Il existe un Département spécial pour la Commerce et les Péags, qui est chargé de l'examen préalable et du soin des affaires suivantes:—

1. L'encouragement du commerce et de l'industrie en général, y compris les relations avec les Consuls de commerce, en tant qu'elles ont rapport au commerce.

2. Le maintien de la liberté du commerce à l'intérieur de la Suisse.

3. Les Traités de Commerce et de Péages avec l'étranger.

Les Départements adressent, conformément à l'Article 20 de cette Loi, leurs Rapports au Conseil Fédéral, attendu que toutes les décisions émanent de lui comme autorité.

Le Conseil Fédéral n'a pas la co-opération d'une autorité commerciale correspondante à l'autorité Anglaise "Board of Trade." Dans quelques Cantons, toutefois, les Départements respectifs sont en rapport avec des Chambres de Commerce Cantonales, et dans certains cas le Département Fédéral du Commerce et des Péages s'adresse aussi à ces Chambres de Commerce pour en obtenir des renseignements et des informations. Il y a de ces Chambres de Commerce à Bâle, St. Gall, Zurich, et Glaris; et il n'est pas rare qu'elles s'adressent au Conseil Fédéral dans l'intérêt du commerce et de l'industrie, et qu'elles attirent son attention sur des inconvénients et des irrégularités, soit en ce qui concerne les Tarifs Suisses ou étrangers ou dans les affaires de trafic général. Ces exposés sont ensuite renvoyés au rapport du Département du Commerce et des Péages, après quoi le Conseil Fédéral prend les dispositions qui lui paraissent convenables dans l'intérêt du commerce et de l'industrie du pays.

La Suisse n'a pas de consul salariés, mais seulement des Consulats de Commerce, qui ne reçoivent pas d'indemnité, de sorte que ce qu'on peut exiger d'eux ne doit pas être porté trop haut.

Les affaires que les consuls doivent soigner sont: diplomatiques là où la Suisse n'a pas d'autres représentants, de commerce, politiques, et notariales.

Dans toutes les affaires de cette nature, les consuls peuvent s'adresser directement au Conseil Fédéral ou aussi au Département Politique. La plupart du temps, les consuls s'adressent directement au Conseil Fédéral; en affaires commerciales toutefois souvent aussi au Département du Commerce et des Péages. Les affaires qui parviennent au Conseil Fédéral sont immédiatement renvoyées pour examen et rapport aux Départements respectifs: les affaires politiques au Département Politique, les questions d'état civil et juridiques au Département de Justice et Police, les affaires d'émigration au Département de l'Intérieur, les affaires commerciales au Département du Commerce et des Péages.

Quant aux négociations avec des autorités étrangères, le Conseil Fédéral nomme des Plénipotentiaires *ad hoc* et leur donne des instructions. Pour celles qui concernent des affaires commerciales, il demande le préavis du Département du Commerce, qui, suivant les circonstances, consulte des experts spéciaux, et se fait donner un préavis par les consuls et Chambres de Commerce des Cantons.

Les rapports et les propositions de ces Départements sont ensuite soumis au Conseil Fédéral. S'il se constate alors qu'un autre Département soit intéressé dans la question, les actes lui sont aussi renvoyés, afin que, s'il le juge convenable, il puisse aussi présenter ses propositions.

Le Conseil Fédéral désire que ces explications puissent être de quelque utilité au Département des Affaires Etrangères de Sa Majesté Britannique, et il a, &c.

Au nom du Conseil Fédéral,
Le Président de la Confédération,

Le Chancelier de la Confédération,
Schiess.

No. 27.

Mr. *Gordon* to Earl *Russell.*

(Received May 2.)

My Lord, Stuttgardt, 2 May 1864.

With reference to your Lordship's Despatch, Circular, of the 19th ultimo, I have the honour to report that I lost no time in making the necessary inquiries here as to the relations between the Departments of Foreign Affairs and of Commerce in the Kingdom of Wurtemberg, and I have, in consequence, now received replies which enable me to furnish your Lordship with the information required by the above Despatch, and especially by the two antepenultimate paragraphs of it.

I have the honour to sum up this information as follows:—

There is no special Department of Commerce in Wurtemberg. The matters of business, which in other countries are submitted to such a Department, are here distributed between the Departments of the Interior and of Finance, in such a manner that matters of trade, handicraft, and commerce as such are brought before the former, and means of intercourse and communication, together with what relates to Customs duties, belong to the operations of the latter. The Foreign Department has to occupy itself with these matters only in such cases wherein any correspondence upon

upon them has to be opened either with foreign Governments, or with the Legations and Consulates depending from it. In these cases the correspondence is conducted in understanding with both the above-named Departments, to which also the Foreign Department communicates regularly the replies received by it, as well as the reports on politico-commercial matters from the Legations and Consulates, taking care to distribute the same to the two Departments in question, in accordance with the division of the subject-matter under their several competence, as explained above.

In its correspondence abroad on the subjects in hand, however, the Foreign Department never addresses itself to a Foreign Minister of Commerce, but always either immediately to the Foreign Department of the country in question, or to the same by the intervention of the Wurtemberg envoys or consuls. In the same manner, of course, the communications of foreign Diplomatic Agents accredited here respecting commercial matters are always addressed to the Foreign Department in Stuttgardt, by which the same are distributed to the Home and Financial Departments, according to the above-mentioned subject division.

From what precedes, it would appear that the mode of proceeding in the cases referred to by your Lordship's circular in this country, is very similar to that adopted by Her Majesty's Government.

I have not yet received from Mr. Baillie, to whom I forwarded, on its receipt, your Lordship's instruction of the 19th instant, the Report which I expect from him on the above subject as regards the Baden Government.

I have, &c.
(signed) *G. J. R. Gordon.*

No. 28.

Mr. *Gordon* to Earl *Russell.*

(Received 9 May.)

My Lord, Stuttgardt, 4 May 1864.

With reference to my Despatch of the 2d instant, I have the honour to forward herewith Mr. Baillie's Despatch of the 2d instant, transmitting the reply which he has received from Baron Roggenbach to his inquiries as to the relations between the Departments of Foreign Affairs and Commerce at Carlsruhe.

I have, &c.
(signed) *G. J. R. Gordon.*

Enclosure 1 in No. 28.

Mr. *Baillie* to Mr. *Gordon.*

Sir, Carlsruhe, 2 May 1864.

In conformity with the instructions contained in your Despatch of the 23d ultimo, forwarding copy of Earl Russell's Despatch Circular of April 19, requesting information respecting the relative action of the Ministry of Foreign Affairs and that of Commerce in the Grand Duchy of Baden, I addressed a note to Baron Roggenbach on the subject, and I have now the honour to enclose a copy of his reply.

I have, &c.
(signed) *Evan P. M. Baillie.*

Enclosure 2 in No. 28. App. No. 5.

Baron *Roggenbach* to Mr. *Baillie.*

(Translation).

The Ministry for Foreign Affairs in the Grand Duchy of Baden, in accordance with its organised position, as fixed by the Edict of 1809, is intrusted with every kind of negotiation with foreign Sovereigns and Governments, with the single exception of the Papal Court; negotiations with which are necessarily reserved for the co-operation of the Department of the Interior as the Ministry of Public Worship. In course of time a second exception to the rule respecting the competency of the Ministry for Foreign Affairs to deal exclusively with all international negotiations was made, by which all questions between the different Governments of the Zollverein, concerning the fulfilment of the provisions of the Treaties upon which that union is founded, are discussed and settled by direct correspondence between their respective Ministers of Finance. The fundamental idea of the Zollverein, that the States of the Zollverein form a united whole in respect of those matters which are regulated by the Zollverein Treaties, has caused such questions to be regarded as internal affairs; and in the interest of a more rapid and easy despatch of business, has led to the adoption of the now universally received practice of allowing the necessary correspondence respecting the carrying out of the existing Zollverein Treaties to be conducted by the Departments specially conversant with the subject. This exception, however, only holds good within the above-named limits. With all cases in which there is a question of restoring or establishing relations with Foreign Powers, or of constitutionally fixing a new or changing an existing treaty relation, the Ministry for Foreign Affairs is exclusively competent to deal though dependent naturally on the sanction of the Sovereign and on the necessary consultation with other Departments.

In matters of commerce and trade, as well as in other affairs, the Ministry of Foreign Affairs represents the Government abroad in conformity with its organisation; and the Ministry of Commerce, which is specially concerned with all business connected with trade and industry, can only give formal expression to its views and wishes on such matters abroad, and to Foreign Governments, through the organ of the former Ministry.

The Grand Ducal Missions, Consuls and Consular Agents abroad are under the Ministry of Foreign Affairs, and only receive their instructions from thence; and that Ministry is the channel through which any communications which other Departments may wish to make to the above-mentioned Diplomatic and Consular Agents are forwarded, and through which all reports, propositions, &c., from such agents are transmitted to other Ministries for their consideration and advice.

The questions proposed may be answered as regards the Grand Duchy, as follows:—

1. The Grand Ducal Ministries for the internal administration, as well as the Ministry of Commerce, must, in all matters connected with their Departments, with the two above-mentioned exceptions, make use of the Ministry of Foreign Affairs, as the medium of communications of whatever kind with foreign Governments; and similarly with the above reserve, all communications from foreign Governments, even on commercial affairs, must be adressed to the Department of

App. No. 5.

Foreign Affairs, which, as far as necessary, acts upon them in concert with those Departments more specially conversant with the subject.

2. Commercial questions are brought under the notice of foreign Governments through the Ministry of Foreign Affairs, upon a resolution having been formed by the Grand Ducal Government after consultation with the other departments.

The formal management of such international negotiations is reserved for the Ministry of Foreign Affairs, which Ministry is always in a position to allow other Ministries their due influence, by appointing Plenipotentiaries and persons conversant with the subject from them; and in general the preparation of, and final decisions for such international Conventions are always submitted to the common consideration of all the Ministries occupied with the question.

3. No division of labour in matters of trade and commerce accordingly exists between the Ministries of Foreign Affairs and Commerce.

The latter is by its constitution entrusted with the care of these interests at home.

Whenever there is a question of any change in the commercial relations with other countries, either as regards the entering upon a new alliance, or improving existing relations, which gives rise to discussions with foreign Governments, and renders it necessary to make communications to them, the Ministry of Commerce has recourse to that of Foreign Affairs for holding official intercourse with those Governments; the latter department being the appointed authority over Grand Ducal Missions, Consuls and Commercial Agents has made it a special duty to become fully conversant with the general movements of trade and commerce as far as they have any bearing on the commercial interests of Baden.

In conclusion, the undersigned begs to add to this brief notice, that it is only since the creation, but a few years ago of the Ministry of Commerce, now specially charged with matters of trade which previously devolved on the departments of Foreign Affairs and the interior, that the Grand Ducal Government has been awakened to the necessity and advantage of making every effort to extend and improve its commercial relations with the great commercial countries.

The undersigned, &c.
(signed) *Roggenbach.*

No. 29.

Mr. *Bonar* to Earl *Russell.*

(Received May 4.)

My Lord, Munich, 1 May 1864.

With reference to your Lordship's Despatch, marked Circular, of the 19th instant, addressed to Lord Augustus Loftus, with regard to the relative action of the Departments for Foreign Affairs and of Commerce, I have given myself the trouble to ascertain, in conformity with your Lordship's instructions, the mode of proceeding customary in this country.

I spoke upon the subject in every detail, with Baron de Schrenk, who himself holds here the two portfolios of Foreign Affairs and of Commerce, and learnt that the practice of the Bavarian Government is seemingly in all respects identical with that of Her Majesty's Government.

There is no commercial department forming part of, or specially attached to the Bavarian Foreign Office.

All information addressed from abroad to the Ministry of Foreign Affairs at Munich is at once communicated to the special Department for Commerce. It is there taken into consideration, and if deemed advisable, it is from thence again reported or commented upon to the Foreign Department, which latter branch of the administration, however, is the sole organ of further communication on the subject with the Bavarian Representatives, whether Diplomatic or Consular, abroad.

In the case of the negociations of a commercial treaty, all documents relating to it would be laid before the Ministry of Commerce, requiring their opinion on the technical matter, and the Department for Foreign Affairs would be guided in its action by that opinion, but would itself alone appear in the negotiation.

Although the Foreign Ministry contains no special department devoted solely to commercial matters, it is true that there is in it one person who, in preference to any other, would be employed on such questions, supposing his frequent cognizance of them to give him greater experience and knowledge in transacting them.

Thus, when the various phases of the proposed Treaty of Commerce, now still under consideration, between France and the Zollverein, were reported to the Foreign Department at Munich, M. Weber belonging to the Ministry for Foreign Affairs, was specially selected to meet a member of the Department of Commerce in deliberation thereupon; the latter department named, in the first instance, from its own body a commission, to whom all matters concerning that treaty should be referred for discussion; it then called in the opinions of all the Chambers of Commerce and Trade Unions of the Kingdom; and lastly, a succinct Report was drawn up by the Department of Commerce, embodying these various opinions or deduced from them, and was sent in to the Foreign Office, which latter sent its instructions in that sense to its representatives abroad.

The utmost deference is of course paid by the Foreign Department to the technical information afforded by the Department of Commerce, but in all other respects the Ministry for Foreign Affairs forms its own decision, independent of every other branch of the Administration, and the custom prevalent here appears to me to differ in no particular from that of Her Majesty's Government.

I have, &c.
(signed) *A. G. G. Bonar.*

No. 30.

Mr. *Lytton* to Earl *Russell.*

(Received May 9.)

My Lord, Copenhagen, 3 May 1864.

I have the honour to enclose a copy of a note which I have received from M. Vedel on the subject of the questions contained in your Lordship's Despatch of the 19th ultimo to Sir A. Paget, respecting the manner in which commercial questions with foreign countries are treated in Denmark.

I have, &c.
(signed) *R. Lytton.*

Enclosure in No. 30.

M. *Vedet* to Mr. *Lytton*.

Copenhague,
Monsieur, le 2 Mai 1864.

En réponse à la communication que vous avez bien voulu me faire pour me demander des renseignements sur notre administration commerciale, j'ai l'honneur de vous adresser les observations suivantes:—

Nous n'avons pas en Danemark un Ministère à part pour le commerce; mais les questions y afférentes sont selon leur nature distribuées entre le Ministère de l'Intérieur, celui des Finances, et celui des Affaires Etrangères.

Ainsi tout ce qui a trait au commerce comme métier est du ressort du Ministère de l'Intérieur; l'administration des douanes et des autres taxes indirectes, ainsi que les travaux de statistique, appartiennent au Ministère des Finances; mais la direction des rapports immédiats du commerce national avec l'étranger, ainsi que la correspondance avec les Consuls du Roi, est confiée au Ministère des Affaires Etrangères.

Le Département du dit Ministère que se trouve chargé des affaires en question, dirige de plus les négociations des Traités et Conventions de Commerce et de Navigation, et redige les textes des projets y relatifs, qui avant d'être presentés à l'approbation Royale sont invariablement soumis à l'examen préalable des autres Ministères, surtout de celui des Finances, et, s'il y a lieu, des Chambres de Commerce de la Monarchie.

En me livrant à l'espoir que vous trouverez satisfactoires les renseignements qui précèdent, je profite, &c.

(signé) *P. Vedel.*

No. 31.

Mr. *Jerningham* to Earl *Russell*.

(Received 12 May.)

My Lord, Stockholm, 6 May 1864.

With reference to my Despatch of the 29th ultimo, I have the honour to enclose a copy of the reply of Count Manderström to my letter requesting information regarding the relations between the Ministry of Foreign Affairs and the Ministry of Commerce.

Your Lordship will observe that his Excellency offers any further information which the Parliamentary Committee may require.

(signed) *G. S. S. Jerningham.*

Enclosure 1 in No. 31.

Count *Manderström* to Mr. *Jerningham*.

Monsieur, Stockholm, ce 24 Mai 1864.

J'ai eu l'honneur de receovir la note du 29 du mois passé, par laquelle vous m'avez demandé de la part du Gouvernement de Sa Majesté Britannique des renseignements sur les régles établis dans les Royaumes Unis à l'égard de la correspondance des Agents Diplomatiques et Consulaires avec les autorités Suédoises et Norvégiennes concernant les affaires commerciales et sur la manière dont les négociations commerciales avec d'autres pays sont traitées par le Gouvernement du Roi.

App. No. 5.

En réponse à ces demandes je me fais un plaisir de vous communiquer, Monsieur, les informations suivantes:—

Toute la correspondance des Agents Diplomatiques du Roi est adressée au Ministère des Affaires Etrangères, soit qu'elle regarde les affaires purement politiques, soit qu'elle concerne des questions exclusivement commerciales ou Consulaires. Par contre, la correspondance des Agents Consulaires est divisée en deux catégories, savoir: celle comprenant les affaires communes aux deux Royaumes et celle qui ne regarde qu'un seul d'entre eux. C'est au Ministère des Affaires Etrangères que doivent être adressés les rapports sur des affaires rentrant dans la première de ces catégories; mais la correspondance sur les matières de la seconde catégorie est adressée au Collège de Commerce Suédois, si elle concerne seulement la Suède, ou bien au Département de l'Intérieur de Norvège si elle regarde exclusivement les intérêts de ce dernier pays. Pour plus ample information, j'ai l'honneur de ci-joindre une traduction Anglaise de notre Réglement Consulaire, dont le § 1 et les Articles V et VI (§§ 29-56) traitent plus particulièrement le sujet en question.

Les affaires commerciales communes aux deux Royaumes (et les négociations des Traités ou Conventions de Commerce ou de Navigation sont censées faire partie de cette catégorie) sont, en thèse générale, décidées par une Résolution du Roi; mais avant de soumettre l'affaire à la décision Royale, le Ministre des Affaires Etrangères doit avoir pris d'abord l'avis des autorités compétentes, lesquelles sont dans ce cas le Collège de Commerce de Suède et le Département de l'Intérieur de Norvège, et ces avis sont référés en même temps que l'affaire elle-même au Conseil du Roi. S'il s'agit de négociations avec les Puissances Etrangères pour la conclusion d'arrangements de commerce ou de navigation, le Département des Finances ou bien celui de l'Intérieur, selon la nature de la question, pourra également rapporter l'affaire à la décision du Roi, et en tout cas l'avis de ce Département doit avoir été entendu avant la décision finale. Il faut encore remarquer que toute Résolution Royale à l'égard de ces questions est prise en Conseil d'Etat composé de Membres des Conseils des deux pays. Il y a au Ministère des Affaires Etrangères une division spéciale pour les affaires commerciales et consulaires, et dont le chef doit s'occuper plus particulièrement des questions des cette nature.

Les affaires commerciales qui ne touchent que les intérêts d'un seul des Royaumes sont décidées par le Collège de Commerce en Suède et par le Département de l'Intérieur en Norvège, à moins que la gravité de la question n'exige qu'elle soit soumise à la décision du Roi, qui alors arrête sa résolution en Conseil formé exclusivement de membres du pays dont les intérêts sont affectés. Ces autorités pourront également prendre l'initiative dans les questions sur lesquelles elles croiront devoir fixer l'attention spéciale du Gouvernement du Roi. Elles ont aussi à poursuivre devant les tribunaux les Agents Consulaires qui auraient failli à l'exécution de leurs devoirs de service et les affaires litigieuses sont traduites par elles au tribunal compétent du pays.

Si les informations que je viens de vous communiquer ne paraîtront pas suffisantes à la Commission Parlementaire qui aura à examiner ces questions, je vous prie, Monsieur, de vouloir bien

App. No. 5.

m'indiquer les points de détail sur lesquels on désirerait être plus spécialement renseigné, et je m'empresserai d'y faire une réponse satisfaisante.

Je saisis, &c.
(signé) *Manderström.*

Enclosure 2 in No. 31.

EXTRACTS from the Regulations for the Swedish and Norwegian Consular Service.

Cap. I.—Superintendence and Appointment of Consuls and Vice-Consuls.

Section 1. The superintendence of the Consular Service is placed under the Minister for Foreign Affairs, in all that concerns the United Kingdoms in common; under the Swedish Board of Trade as relates particularly to Sweden; and under the Norwegian Home Department, in matters relating especially to Norway.

Cap. V.—Consular Duties in general.

Section 29. It is incumbent on every Consular Officer zealously and uprightly to promote the interests of the two kingdoms in general, and of their trade and navigation especially, and to give his best advice and assistance when called upon to all Swedish and Norwegian subjects.

Section 31. The Consul will strictly fulfil the duties required of him by the Minister for Foreign Affairs, the Board of Trade, the Norwegian Home Department, and his Majesty's mission in the country. He will correspond direct with these authorities.

Section 31. The Consul will give his careful attention to the trade and navigation of the United Kingdoms within his district, and endeavour to collect early and correct information of all political, administrative, and other circumstances that can affect the same, and report thereon to the Board of Trade and Norwegian Home Department. It is especially incumbent on him to acquaint these authorities with all laws, statutes, and municipal regulations published in the country relative to trade or navigation, and with all dues and port-charges affecting the relations of the United Kingdoms with the district. Whenever such laws, statutes or regulations are of more than usual importance, the Consul will send home copies thereof by the first opportunity, and he will in like manner forward notices of lights, beacons and buoys in the countries traded to by vessels of the United Kingdoms. The Consul will likewise report to the Minister of Foreign Affairs, or to the other above-named authorities, according to the circumstances and nature of the business, such other matters and events not connected with trade, as may be of importance to the United Kingdoms, or to either of them.

Section 32. Before the end of January the Consul will forward to the Board of Trade and Norwegian Home Department, a circumstantial Report of the Trade and Shipping of the United Kingdoms within his district during the past year, and of the prospects for the current year; and he will communicate his views as to the measures he considers best calculated to promote the trading interests of Sweden and Norway with the district. An abridgment of these reports must at the same time be sent to the Minister for Foreign Affairs.

The annual report to the Board of Trade is to be accompanied by a complete statement, according to the annexed form No. 1, of all Swedish vessels which have visited the district during the year, and a summary return of the aggregate number and tonnage of Norwegian vessels. A similar specified statement of the Norwegian ships, and a summary return of the aggregate number and tonnage of Swedish vessels, in accordance with form No. 1, must be sent with the Consul's annual Report to the Norwegian Home Department. If these papers are so voluminous that they cannot conveniently be sent by post, or if they cannot be completed before the end of January, the Consul will, within the said time, send an abridgment of them, according to the annexed form No. 2, and forward the complete shipping returns and reports as soon after as possible, by suitable opportunity.

Section 33. If the Consul, in addition to his own district, is appointed Consul General in the country, he will include in the reports for his district required by Section 32 a review of the trade and navigation of the United Kingdoms with the whole country, and of the commercial relations of that country in general, together with the laws and regulations relating thereto, that have been passed during the year. Where there is such a Consul General, the Consuls in the country, on sending in the yearly reports named in Section 32, will at the same time forward to the Consul General an abstract thereof, and a summary of the aggregate number and tonnage of the Swedish and Norwegian ships which have visited their districts during the year. The report of the Consul General should be sent to the aforesaid authorities before the end of March. Consuls General have no authority over the ordinary Consuls appointed in the country.

Section 34. Should any epidemic disease break out in the district, or the neighbourhood, the Consul, as soon as he has knowledge thereof, will report the same to the Board of Trade and to the Norwegian Home Department, and will also inform the said authorities when the distemper has ceased. With reference to the quarantine regulations of the United Kingdoms, Consuls will be guided by the special instructions given on that head. Infectious diseases among cattle are to be reported to the Board of Trade and to the Norwegian Home Department.

Section 35. When a subject of either of the United Kingdoms is charged before a foreign tribunal with any offence affecting his personal liberty, the Consul, if required by the accused, will be present at the examination and trial either in person or by trustworthy deputy.

Section 36. When any Swedish or Norwegian subject dies within the district, and the proper heirs, or their agent, are not on the spot, the Consul will, so far as the laws of the country permit, take charge of the effects. The notice of death, and of the effects of the deceased, must be reported to his Majesty's Mission, if any, as well as to the Board of Trade, if the deceased was a Swede, and to the Norwegian Home Department if a Norwegian.

Section 37. Should the Consul find that the commercial treaties or other conventions subsisting between the United Kingdoms and the country where he resides, are not strictly observed, or that any subject of the United Kingdoms is denied the rights and privileges secured to him under such treaties or by international law, he will at once report

report the same to the Minister for Foreign Affairs, and to his Majesty's mission in the country, if any. A like report will also be made if the Consul is obstructed in the exercise of his functions by the authorities of the country, or if he does not receive the assistance he may consider himself entitled to.

Section 38. In every Consulate a journal shall be kept of the letters and documents received at or despatched from the office. All letters addressed to the Minister for Foreign Affairs, the Board of Trade, and the Norwegian Home Department, shall be numbered each with a distinct set of numbers, and commencing with a new series each year.

Section 39. Vice-consuls will conform to the instructions which, in accordance with the Consular law or other regulations, are to be given to them by the Consul of the district.

Section 40. Vice-consuls correspond with the Consul of their district; but when particular despatch is required they may address themselves direct to the proper authorities in Sweden or Norway. In such case they will at the same time report to the Consul of the district.

Section 41. Vice-consuls exercise their office in general on their own responsibility; but the proper Consul is accountable for the acts of a Vice-consul so far as they are in accordance with instructions given by the Consul.

In money transactions pertaining to the office the Consul is responsible for a Vice-consul who has been proposed by him, and appointed according to Section 12. A like responsibility rests on the Consul for any person proposed or deputed by him to act during his absence as in Sections 18 and 19. Vice-consuls are in like manner answerable for persons proposed or deputed by them according to Section 20.

Cap. VI.—Duties as to Merchant Vessels and Crews.

Section 42. On the arrival of a Swedish or Norwegian vessel at a port where a Consul or Vice-consul is stationed, the master will, within the time fixed by special laws of Sweden and of Norway, appear at the Consulate and deliver his ship's papers to be examined and endorsed by the Consul. The master will report to the Consul when he is ready to leave the port. The master is bound to give to the Consul all the information he may require concerning voyage, ship, cargo, and crew. If the Consul find any irregularity in the ship's papers, or other cause for remark, he will report the same to the Board of Trade if the vessel is Swedish, and to the Norwegian Home Department if Norwegian. If the master do not comply with the duty required of him as aforesaid he is to be reported, that he may be brought to account according to law.

Section 43. On the arrival of every Swedish or Norwegian ship, the Consul will ascertain whether all the seamen entered in the muster-roll or list of crew are on board, and if any one be missing, note on the said papers the reason assigned. Any changes of master or crew that take place while the ship is in port are to be noted by the Consul on the muster-roll when the ship is ready to sail. Seamen engaged by a Swedish or Norwegian vessel while in a foreign port are to appear at the Consulate, and the Consul will certify the agreement.

Section 44. Whenever a Swedish or Norwegian ship, by reason of sale in a foreign country, has changed her nationality, the Consul of the place will take charge of the vessel's papers of nationality and give the master a receipt for them. The papers shall be cancelled and sent by the first ship to the Board of Trade if the vessel is Swedish, or to the Norwegian Home Department if Norwegian. In the latter case the Consul will see that the mark "Norsk Eiendom" (Norwegian property) on the vessel be totally effaced.

Section 45. When such a sale is made as in Section 44, the Consul will see that accounts are settled with the crew, and unless hired on the spot, that they be provided with the necessary means of returning home.

Section 46. When a foreign ship is bought for Swedish or Norwegian account, and the master intends to sail direct to Swedeh, if bought for Swedish account, or to Norway if for Norwegian account, the Consul may, after ascertaining the regularity of the purchase, provide the ship with a certificate of nationality, which must expressly state that it is in force only for the voyage home, and for no other purpose. If the master desires to sail under the Swedish or Norwegian flag on any other voyage than direct to the owner's country, no certificate of nationality can be granted by the Consul, but he will refer the parties to the Board of Trade or Norwegian Home Department, according as the vessel is bought for Swedish or Norwegian account.

Section 47. If any seaman or other person serving in a Swedish or Norwegian ship shall desert while at a foreign place, the Consul, if desired by the master, will use every means allowed by the laws of the place, and by the treaties between the United Kingdoms and the foreign country, to recover the deserter on board. All expenses attending this proceeding must be paid by the master. If a Swedish or Norwegian seaman is pressed for war-service, the Consul, on receiving notice thereof, will immediately claim his release.

Section 48. Whenever any Swedish or Norwegian vessel be wrecked or stranded within the district, the Consul will report the same to the Board of Trade if the vessel is Swedish, or to the Norwegian Home Department if she is Norwegian. If the ship become a wreck, and her papers of nationality are recovered, the Consul will dispose of them as directed in Section 44.

Section 49. If the Consul has reason to suspect that the ship has been unfairly stranded or wrecked he will investigate the matter, and, if necessary, order the crew to appear before the local authorities, to give an account of the accident. The Consul will also report the case to the Board of Trade or Norwegian Home Department, according as the ship is Swedish or Norwegian.

Section 50. When a Consul's official interference is required on occasion of the wreck or stranding of a Swedish or Norwegian vessel, he will give to the parties every assistance in his power. If the master or mate of the ship are saved, or if any other authorised agent of the owners of ship or cargo is present, the Consul will not, unless expressly applied to by the parties, take any steps for the collection or disposal of the effects saved from the ship or cargo. If the Consul find that this is improperly managed, and that manifest wrong is done, he will report the case to the owner or other parties concerned.

If the master and mate are lost, and there is no other authorised agent of the owners of the ship or cargo, the Consul will either go himself to the spot or send a trustworthy agent, to see that every proper means are used towards preserving the

App. No. 5.

property. If the owner's directions can be obtained it should be done without delay; but if it be found, on examination, that the property, or any portion thereof, is liable to damage by waiting for the owner's decision, the Consul may of his own accord cause them to be sold by public auction, rather than in any other manner, and receive the proceeds for account of whom it may concern.

Section 51. If a Swedish or Norwegian ship is captured, or any part of her cargo taken by a privateer or pirate, the Consul who receives notice thereof will apply for assistance to the proper authorities for the release of the ship and cargo, or restitution of what has been taken away, and report the case immediately to the Minister for Foreign Affairs, and to his Majesty's mission, if there is one in the country.

Section 52. In case of dispute arising between the master and any of the crew of a Swedish or Norwegian ship, the Consul will summon the parties before him, and endeavour to reconcile them. If they cannot be reconciled, the Consul will settle the dispute; but no fine or other punishment can be inflicted by him, and the disputing parties must abide by the decision of the Consul until such time as the question can be legally tried at home or otherwise properly decided in the country to which the ship belongs.

If any of the crew, in consequence of such a dispute, desire to leave the vessel, or the master require that any of them shall be discharged, and the Consul is satisfied that the claim is well founded, and that, for the prevention of outrage, crime, or disaster, it is needful that the person should be discharged, he may grant his sanction, after due settlement of accounts in his presence. In both cases the Consul will determine, according to circumstances, how far the master shall pay the expense of sending the man home, provided he is not employed in some other vessel.

Section 53. Whenever the owner of a vessel orders the discharge of a master, and the master refuses to submit to this order, the Consul will take measures to enforce the order.

Section 54. If the Consul find, from the complaints of the crew or otherwise, that the master cannot, without evident danger to the crew, ship, and cargo, continue in command of the vessel, he will at once inform the owners, or their agents, if there are any at the place. Contrary to the owner's express instructions, or in opposition to his agent's orders, the Consul cannot dismiss the master; but if there is no agent, and the circumstances do not admit of awaiting the owner's directions, the Consul may, in such case, remove the master from command of the ship, and transfer it to the mate or other trustworthy person, who, except from necessity, must be of no other nation than that to which the ship belongs. The Consul will give a written appointment to the new master, and endorse the change on the ship's papers; and he will report hereon immediately, as well to the owner as to the Board of Trade if the vessel is Swedish, or to the Norwegian Home Department if Norwegian.

If, in the case aforementioned, the Consul finds that there is no sufficient ground for removing the master, and on this account any of the crew desire to leave the ship, the Consul will decide the question as in Section 52.

A Vice-consul may not of his own accord dismiss a master from his command; but when any such question arises, he will apply to the Consul for instructions, and be guided thereby, unless the owner's decision can first be obtained.

Section 55. If any offence be committed on board a Swedish or Norwegian vessel which is to be tried before a tribunal of the country to which the ship belongs, the Consul will investigate the matter, and send home the accused under surveillance, or in custody, according to the nature of the offence, in the most convenient manner, but, if possible, by a ship of one of the United Kingdoms, and deliver to the master of the ship a certified copy of the minutes of the inquiry, to be delivered with the accused to the proper authorities at the port where the vessel shall arrive. It is incumbent on the Consul not only to report the opportunity by which the accused are sent home, but to send in a statement of the case to the Board of Trade, if the offence has been committed in a Swedish, or to the Norwegian Home Department if in a Norwegian vessel.

Section 56. If the master of a Swedish or Norwegian vessel dies, or is prevented by sickness from sailing the vessel, the Consul will order the mate, or other proper person, to take the command until the owner's decision is known. With respect to the nationality of the new master, &c., the Consul will be guided by Section 54.

Appendix, No. 6.

PAPERS put in by Mr. *Hammond*, on 10 June 1864.

CORRESPONDENCE between the Board of Trade and the Foreign Office respecting the Negotiation of a COMMERCIAL TREATY between *Great Britain* and *Belgium*. App. No. 6.

No. 1.

Mr. *Hammond* to Mr. *Booth*.

Foreign Office, 4 April 1860.

Sir,

I AM directed by Lord John Russell to transmit to you, for the information of the Lords of the Committee of Privy Council for Trade, a copy of a despatch from Her Majesty's Minister at Brussels, respecting certain overtures made to France by the Belgian Government for the revision of the commercial tariffs of the two countries.

I have, &c.
(signed) *E. Hammond.*

Enclosure in No. 1.

(No. 52.)

Lord *Howard de Walden* to Lord *J. Russell*.

Brussels, 2 April 1860.

My Lord,

FOR several days past rumours have been generally prevalent of the approaching signature of a Treaty of Commerce between Belgium and France, in which concessions important to the industry of this country have been agreed to. This is not the case. It is true that overtures have been made by this Government for the mutual revision of the duties of the respective tariffs bearing on the commercial transactions between the two countries which have been well received; but I learn from M. Rogier as well as from Count de Monttessin that as yet negotiations have not commenced, and that it is not probable that any decision whatever will be taken by France until the treaty with Great Britain shall have been ratified and become law.

I have, &c.
(signed) *Howard de Walden and Seaford.*

No. 2.

Mr. *Hammond* to Sir *J. Emerson Tennent*.

Foreign Office,
20 December 1860.

Sir,

I AM directed by Lord John Russell to transmit to you, for the information of the Lords of the Committee of Privy Council for Trade, the accompanying copy of a despatch from Her Majesty's Ambassador at Paris, respecting the commencement of the negotiations for the revision of the tariff between France and Belgium.

I have, &c.
(signed) *E. Hammond.*

Enclosure in No. 2.

(No. 1609.)

Earl *Cowley* to Lord *J. Russell*.

Paris, 14 December 1860.

My Lord,

THE negotiations for the revision of the tariff between France and Belgium have commenced. M. Thouvenel has renewed the assurances which he gave Mr. Cobden and myself, that Her Majesty's Government should be informed of any points coming under discussion which may interest them.

I have, &c.
(signed) *Cowley.*

No. 3.

Mr. *Bowring* to Mr. *Hammond*.

Office of Committee of
Privy Council for Trade, Whitehall,
31 December 1860.

Sir,

I AM directed by the Lords of the Committee of Privy Council for Trade to acknowledge the receipt of your letter of the 24th instant, inclosing a copy of a despatch from Her Majesty's Ambassador at Paris, announcing the commencement of the negotiations for the revision of the tariff between France and Belgium, and stating that M. Thouvenel has renewed his assurance that Her Majesty's Government should be informed of any points coming under discussion which may interest them.

In Mr. Cobden's letter to Lord Cowley, of the 17th November last, a copy of which was enclosed in your letter to this Board of the 23d of that month, he calls attention to the omission from the tariff annexed to the second Supplemental Convention of the 15th November last, of salt and paper, the decision with respect to which had been postponed at the request of the French Government, for reasons which are stated in Mr. Cobden's letter.

He adds, that it was understood that the duties upon these two articles would be dealt with in the Commercial Treaty with Belgium, then shortly to be negotiated, and would become equally applicable to similar produce of the United Kingdom, in virtue of the most favoured nation article of the recent Supplemental Convention; and he further states that it was intended that Her Majesty's Ambassador should be invited to take a part in the negotiation of this part of the tariff, and that he would direct any documents or papers in his possession, bearing on this subject, to be deposited at the Embassy.

App. No. 6.

As the negotiations with Belgium have now commenced, my Lords would be glad to be informed whether Lord Cowley has received any communication from the French Government as to their views and intentions with respect to these two branches of trade.

The present duties in France upon salt imported from the United Kingdom are of a prohibitory character; and the substitution of duties which would admit British salt freely into French consumption is an object of great importance to both England and France.

A large and increasing market would be thus opened for a very valuable natural production of this country; and in several points of view a cheap supply of salt would have a most beneficial effect on the industrial economy of France.

The use of salt for agricultural purposes, to which it is so extensively applied in this country, is almost unknown in France, and might be introduced with great advantage.

The various chemical manufactures of which salt is the principal material, are deeply interested at the present juncture in obtaining an increased supply at a diminished cost.

And lastly, the trade in salt would be of peculiar value to French shipping in affording a ready return freight to vessels bringing merchandise to this country.

My Lords would be glad to learn whether the recent inquiry into the condition of the salt interest in France has opened any prospect of a modification of the internal tax now levied on this product. They fear that no measure short of this will lead to a very extensive consumption of salt in that country; but in any event they trust that a very moderate import duty will be placed upon it; and that when destined for manufacturing purposes it will be exempted from the internal tax, subject to any regulations which may be made in pursuance of the provisions contained in Article III. of the second Supplemental Convention.

The price of mineral salt in Cheshire, in 1859, was stated by the delegates of the Northwich Chamber of Commerce to the "Conseil Supérieur du Commerce" in August last, to have been about 6 francs 10 centimes per ton, at the place of production.

The cost of freight and other charges to be incurred in transporting it to France are stated to be about 15 francs per ton, so that the price per ton in bond in France would be about 21 francs per ton.

In estimating the per-centage of duty upon this price, it must not be forgotten that about 75 per cent. of the whole is the cost of transport, which operates in itself as a protective duty.

My Lords are informed that it is calculated that a duty of two or three francs per ton would be compatible with a trade from this country, and if it is found that the French Government are not able to reduce it below this amount, they think that this result would not be considered as unsatisfactory by British interests concerned.

But it is most desirable that whatever rate of duty be imposed, the regulations with regard to rebate and allowances for removal from bond, as well as to the payment of internal duty, should be identical with those enforced with respect to salt of French production.

On the subject of paper, Lord John Russell is aware that there is no great probability at present of a very large exportation from this country to France, even under a moderate tariff; but considering the recent legislation of the United Kingdom with regard to foreign paper, and the restrictions which are still imposed on the exportation of rags from France, my Lords hope that the French Government will think it right to admit British paper at the lowest possible rate of duty consistent with the interests of their revenue.

I have, &c.
(signed) *E. A. Bowring.*

No. 4.

Mr. *Hammond* to Mr. *Booth.*

Foreign Office,
Sir, 5 January 1861.

I AM directed by Lord John Russell to transmit to you, to be laid before the Lords of the Committee of Privy Council for Trade, copies of two letters from the Bradford Chamber of Commerce, calling attention to the position in which worsted and woollen goods, the produce of Great Britain imported into Belgium, will stand as compared with the same articles the produce of France imported into Belgium under the terms of the projected Commercial Treaty between France and Belgium.

I am also to inclose copies of two instructions which Lord John Russell has addressed to Her Majesty's Minister at Brussels on this subject, and I am to request that, in laying these papers before the Lords of the Committee, you will move their Lordships to favour Lord John Russell with such observations as they may have to make in this matter.

I have, &c.
(signed) *E. Hammond.*

Enclosure 1, in No. 4.

The Chairman of the Bradford Chamber of Commerce to Lord *J. Russell.*

Bradford Chamber of Commerce,
My Lord, 3 November 1860.

I AM desired by the Council of this Chamber to inform you that they understand that it is the intention of the Government of Belgium to make a considerable reduction in the import duties upon worsted and woollen goods, but the Council have not been informed whether this reduction is to be in consequence of a general revision of the tariff, or of the Treaty of Commerce to be negotiated with France.

In the latter case, the Council beg to draw your Lordship's attention to the fact that Belgium has repeatedly granted privileges which she has denied to England.

The Council of the Bradford Chamber of Commerce have frequently protested against this injustice, based, as the Council still persist in believing, upon an erroneous interpretation of the Treaty of October 27, 1851, between this country and Belgium.

The Council, therefore, consider it their duty to draw your Lordship's attention to this impending danger to our commerce, and they are persuaded that Her Majesty's Government will use their best

best endeavours to place at least our intercourse with Belgium upon that footing of equality with other nations to which it has so many equitable, if not strictly legal claims.

I have, &c.
(signed) *John Darlington.*

Enclosure 2, in No. 4.

The Chairman of the Bradford Chamber of Commerce to Lord *J. Russell.*

Bradford Chamber of Commerce,
My Lord, 4 January 1861.

THE Bradford Chamber of Commerce has had the honour to draw your Lordship's attention, on the 3d of November, to the alteration which Belgium was understood to be contemplating in the duties on woollen and worsted goods, and has since, on the 18th of December, referred to their former letter without having been honoured with your Lordship's answer to either.

What then was hearsay has since become a well understood fact; viz., that Belgium is on the eve of concluding a Treaty of Commerce with France, which, of course, will be as nearly as possible, upon the same terms as that between England and France.

As this Chamber has had the honour to observe on many occasions, when they have addressed the Foreign Office on this subject, the French fabrics have enjoyed a privilege on their admission into Belgium which has been denied to England.

The difference on these duties has been high enough to replace British manufactures by French in the consumption of Belgium, proofs of which have been given in the correspondence on this subject, which has extended over a period of more than five years, without producing the slightest result, notwithstanding the repeated assurances received from your Lordship's predecessors, that on every fitting opportunity the claims of the British manufacturer should be fully recognised.

The state of law of Belgium exists as before, and now that it is more than probable that French worsted and woollen manufactures will be allowed to enter Belgium at a maximum duty of 15 per cent., to be reduced to 10 in 1864, the present tariff which British goods are subject to, would be tantamount to an absolute prohibition.

British worsted goods pay at present in Belgium a specific duty, which amounts to from 32½ to 37½ per cent. *ad valorem.*

The Chamber considers that this simple fact is strong enough to justify them, without any more comment, in again strongly urging your Lordship's immediate attention to this important subject, which they cannot but feel has not received that consideration which its vast importance demands; and they also fear, from their not having received any acknowledgment of their two last letters, that they have not been brought under your Lordship's notice, and trust that their present communication may be more fortunate.

I have, &c.
(signed) *Henry W. Ripley.*

Enclosure 3, in No. 4.

(No. 1.)

Lord *J. Russell* to Lord *Howard de Walden.*

Foreign Office,
My Lord, 3 January 1861.

I ENCLOSE for your Lordship's information the copy of a letter from the Bradford Chamber of Commerce, respecting a report which has reached the Chamber that the Belgian Government contemplate making a considerable reduction in the import duties upon worsted and woollen goods, in connection with the negotiation of a Commercial Treaty with France.

I have to instruct your Lordship to take steps to ascertain what foundation there is for the report to which the Bradford Chamber of Commerce alludes in this letter.

I am, &c.
(signed) *J. Russell.*

Enclosure 4, in No. 4.

(No. 2.)

Lord *J. Russell* to Lord *Howard de Walden.*

Foreign Office,
My Lord, 5 January 1861.

WITH reference to my despatch of the 3d instant, I transmit to your Lordship a copy of a further letter from the Bradford Chamber of Commerce, setting forth the circumstances under which they apprehend that worsted and woollen manufactures, the produce of Great Britain imported into Belgium, would be placed at a serious disadvantage as compared with the same articles imported from France, under the provisions of the Treaty of Commerce contemplated between the Governments of France and Belgium.

Your Lordship will inquire into the circumstances of the case, and report to me on the subject with as little delay as possible; adding your opinion as to the course which, if circumstances require it, Her Majesty's Government may best take to secure the British manufacturing interests from the injury which the Bradford Chamber of Commerce appear to apprehend.

I am, &c.
(signed) *J. Russell.*

No. 5.

Sir *J. Emerson Tennent* to Mr. *Hammond.*

Office of Committee of
Privy Council for Trade, Whitehall,
Sir, 11 January 1861.

I AM directed by the Lords of the Committee of Privy Council for Trade to acknowledge the receipt of your letter of the 5th instant, transmitting copies of two letters from the Bradford Chamber of Commerce, calling attention to the position in which worsted and woollen goods, the produce of Great Britain imported into Belgium, will stand as compared with the same articles, the produce of France, imported into Belgium, under the terms of the projected Commercial Treaty between France and Belgium; together with copies of two instructions which Lord John

App. No. 6.

Russell has addressed to Her Majesty's Minister at Brussels on this subject.

In reply to Lord John Russell's request to be favoured with such observations as my Lords may have to make in this matter, I am to observe that, looking only to the terms of the existing Treaty of Commerce between this country and Belgium, concluded in 1851, and bearing in mind the fact that that treaty does not contain any most favoured nation clause, there appears to be no doubt that Belgium is legally entitled to confer upon the commerce of France privileges which she withholds from the commerce of the United Kingdom, and that the fears entertained by the Bradford Chamber of Commerce, that the result of the conclusion of the proposed treaty between France and Belgium may be to give French woollens an advantage over British woollens in the Belgian market, may possibly be realized. My Lords do not, however, apprehend that this country, which now treats Belgium on the footing of the most perfect equality, will in practice be exposed to treatment so manifestly injurious and unfair.

It will be in the recollection of Lord John Russell, that the existing Treaty of 1851, between the United Kingdom and Belgium, was concluded under very exceptional circumstances, at a time when the commercial system of Belgium was based upon entirely vicious principles, when differential duties formed the rule in her tariff, when the doctrines of protection continued in force, and when, moreover, she was fettered by treaty stipulations towards her powerful neighbour, France. The treaty in question was looked upon as her first step in the path of commercial emancipation, and although it contains one or two provisions involving a certain departure from the principle of absolute equality usually stipulated for by this country, and also is deficient in so far as it does not include a most favoured nation clause, Her Majesty's Government were at that time willing to assent to it as a move in the right direction on the part of Belgium, relying also on the assurances then given by the Belgium Government, that it would be followed at an early date by an entire reform in her system of commercial policy. Care was also taken to conclude the treaty for the comparatively short period of seven years, and it is now, and has been since the 10th April 1859, terminable at any time, on 12 months' notice being given by either of the contracting parties.

Experience has shown that Her Majesty's Government were not mistaken in the confidence reposed by them in the assurances of the Belgian Government, that their assent to the imperfect Treaty of October 1851, would shortly lead to important and liberal changes in the Belgian differential system, as may be seen by comparing the present Belgian tariff with that in force 10 years ago. The continued existence, however, of treaty engagements between France and Belgium, whereby each of those countries conferred upon the other exclusive tariff privileges, has up to the present time prevented Great Britain from competing upon equal terms in the markets of Belgium with their French rivals.

It has long been the desire of this department to see the treaty engagements between this country and Belgium, brought more into harmony with the sound economical principles which now happily obtain in practice in both countries, and negotiations for the conclusion of an amended treaty were entered into between Great Britain and Belgium, in the years 1858 and 1859. Those negotiations, however, led to no result, chiefly in consequence of difficulties raised by Belgium to the insertion of the most favoured nation clause, insisted upon by us as a *sine quâ non* in the new treaty, she alleging that her treaty engagements towards France prevented her at that time from assenting to such a clause. Those treaty engagements were renewed in May 1859, for a further period of two years, which will finally expire on the 12th May in the present year, and from that date (in the absence of fresh engagements entered into in the meantime) it will no longer be in the power of Belgium to plead her former excuse.

On this subject it is important to note the formal assurances more than once conveyed to Her Majesty's Government by the Government of Belgium, to the effect that, on the termination of her present treaty with France, the exclusive privileges granted to the latter country should not be renewed.

On the 28th February 1859, Her Majesty's Minister at Brussels informed Lord Malmesbury that he had received assurances from the Belgian Government that, although they were then about to renew for a limited period their existing treaty with France, their consent to do so was coupled with an intimation to France that the renewal was for the last time, "as it had become the policy of the (Belgian) Government to reduce the commercial relations of that country to one uniform system, and to henceforward abolish all distinctions of tariff in treaty engagements with foreign nations."

On the 25th March 1859, Lord Howard de Walden reported that this assurance had been repeated to him by the Belgian Government.

Again, on the 12th May of the same year, his Lordship recorded a declaration of the Belgian Government to the French Minister at Brussels, on the subject of the treaty, at that very moment being renewed for two years, that "it was not their intention to contract any new engagements with France based on the system of preferential duties."

In the face of these explicit and repeated declarations, my Lords cannot doubt that it is the full intention of the Belgian Government to accord to this country every tariff concession that they may make to France, in the treaty now being negotiated between France and Belgium.

At the same time it will doubtless be more satisfactory that such concessions should be secured to the United Kingdom by express treaty stipulations, rather than by a Belgian customs law, which may be at any time repealed. It should also be borne in mind, that the conduct of Belgium was not entirely satisfactory at the time of the abortive negotiations already referred to, as she then declined to assent to the insertion of a most favoured nation clause, even when coupled with the condition deferring the operation of such clause till after the expiration of her engagements towards France in May 1861.

My Lords would, therefore, suggest that Her Majesty's Ministers at Brussels should be instructed, without delay, to ascertain from the Belgian Government whether it is intended to grant to this country whatever privileges may be accorded to France by the treaty now in course of negotiation.

In the event (which my Lords cannot doubt) of a satisfactory answer being returned, it will,

in

in their Lordships' opinion, be desirable at once to re-open the negotiations for an amended Treaty of Commerce, in substitution for the existing Treaty of 1851, such amended treaty, of course, containing the most favoured nation clause. The conclusion of such a treaty will secure all the advantages sought for in the memorials of the Bradford Chamber of Commerce.

In the contrary event of its being found impossible to obtain a satisfactory reply to the above inquiry, my Lords have no hesitation in expressing their opinion that the time will have arrived when the Belgian Government should be made acquainted with the fixed determination of Her Majesty's Government not to consent to the grant of exceptional privileges to a third Power, such privileges being refused to us on the ground of our not being entitled to claim them under our existing treaty, and that an intimation should be simultaneously given of our intention to denounce that treaty, in accordance with its 19th clause.

In case such intimation should not suffice to secure a satisfactory result, my Lords will be prepared to recommend Her Majesty's Government actually to denounce the treaty without further delay.

I am, in conclusion, to suggest that Lord John Russell should cause the Bradford Chamber of Commerce to be informed that the subject of their two communications has not failed to receive the serious consideration of Her Majesty's Government.

I have, &c.
(signed) *J. Emerson Tennent.*

P. S.—Since the above letter was written, my Lords have received your letter of yesterday's date, inclosing copies of two despatches from Lord Howard de Walden in reply to the instructions addressed to him by Lord John Russell on this subject. Their Lordships learn with much satisfaction that it is not the intention of the Belgian Government to continue the grant of exclusive privileges to France, and trust there may now be no obstacle to the recommencement of negotiations with Belgium for the conclusion of an amended treaty.

No. 6.

Mr. *Hammond* to Mr. *Booth.*

Foreign Office,
Sir, 10 January 1861.

With reference to my letter of the 5th instant, I am directed by Lord John Russell to transmit to you, to be laid before the Lords of the Committee of Privy Council for Trade, copies of two despatches which have been received from Her Majesty's Minister at Brussels, in reply to those, of which copies were sent to you in my above-mentioned letter, respecting the apprehensions of the Bradford Chamber of Commerce as to the effect upon British manufactures of the projected commercial tariff between France and Belgium.

I have, &c.
(signed) *E. Hammond.*

Enclosure 1, in No. 6.

Lord *Howard de Walden* to Lord *J. Russell.*

My Lord, Brussels, 7 January 1861.

I have addressed myself to the Minister of Foreign Affairs, as instructed by your Lordship in your despatches of the 2d and 5th instant, on the subject of the apprehensions entertained by the Chamber of Commerce of Bradford as to the intention of the Belgian Government to establish a preferential tariff in favour of French woollens, admitting them at duties from 15 to 20 per cent., while levying a rate of 32½ per cent. to 37½ per cent. *ad valorem* on similar goods, the produce of British manufactures. His Excellency assured me that there was not the slightest intention on the part of the Belgian Government to make any such distinction, and moreover that no concession whatever in regard to duties would be made in favour of manufactures of France which would not be equally extended to those of Great Britain.

I have, &c.
(signed) *Howard de Walden and Seaford.*

Enclosure 2, in No. 6.

Lord *Howard de Walden* to Lord *J. Russell.*

My Lord, Brussels, 7 January 1861.

In the conversation that I had with Baron de Vrière on the subject of the special representation of the Chamber of Commerce of Bradford, noticed in my previous despatch, his Excellency afforded me further explanations as to the policy of the Government in regard to the Custom-house tariff. He informed me that a complete work had been terminated on the subject with a view to a general revision of the tariff; that the principle which had been strictly kept in view throughout was the removal of everything like protection; that although it had been necessary to retain certain duties on mere fiscal considerations, at rates higher than he wished, yet that the system of gradual reduction would be persevered in.

He remarked, that in the face of the constant reduction in taxes carried out by the Minister of Finance, diminutions in the resources of revenue could not be extensively risked at once; that although he had great confidence in the ulterior beneficial results of a low Custom-house tariff, yet that some immediate falling off was eventually to be expected, and this must be borne in mind by the Minister of Finance. His Excellency, however, again most distinctly declared that a very low Custom-house tariff was the object they had in view, and that the assimilation of the commercial system of Belgium, as closely as possible to that of England, constituted the *bonâ fide* policy of the Belgian Government.

I have already explained to your Lordship that the desire not to cause political agitation at this moment by arousing the passions and apprehensions of conflicting interests, is the cause of the temporary postponement of the reform of the Custom-house tariff, as well as of projects of law for other important measures which the Government have in contemplation. Baron de Vrière has repeatedly made declarations to me, especially in the spring of 1859, as reported in my despatches of the 28th February, 25th March, and

App. No. 6.

13th May 1859, that it was not the intention of the Belgian Government to grant in any future treaty preferential advantage to French imports to the prejudice of those of a similar nature from Great Britain, and I have had no reason to doubt the sincerity of his assurances.

I am at a loss to conceive from what authority the Chamber of Commerce have derived the information which has excited their apprehensions expressed in the letter of the 3d November, as at that moment the instructions of Monsieur Liedts, the Belgian Plenipotentiary, had not then been decided upon, and he was still at Brussels.

I have, &c.

No. 7.

Lord *Wodehouse* to Sir *J. Emerson Tennent.*

Foreign Office,
Sir, 23 January 1861.

I HAVE laid before Lord John Russell your letter of the 11th instant, in which you convey the recommendation of the Lords of the Committee of Privy Council for Trade, that the negotiation which was undertaken with Belgium in 1859 for the conclusion of a new Treaty of Commerce to be substituted for that of 1851, and which failed chiefly because the treaty engagements of Belgium with France would not permit her to assent to a "most favoured nation" clause, should now be resumed.

I am to acquaint you that Lord John Russell has addressed to Her Majesty's Minister at Brussels a despatch, of which I inclose a copy, instructing him to make a proposition to that effect to the Belgian Government. Lord John Russell would be glad if, during the interval which may elapse before he receives a reply to that proposition, the Lords of the Committee would have the goodness to examine the draft of treaty approved by the Board of Trade in 1859, and inform him whether they think that draft fitting to be now again proposed to the Belgian Government.

I am, &c.
(signed) *Wodehouse.*

Enclosure in No. 7.

(No. 5.)

Lord *J. Russell* to Lord *Howard de Walden.*

Foreign Office,
My Lord, 22 January 1861.

HER Majesty's Government are happy to perceive, from your Lordship's despatches of the 7th instant, that the Belgian Minister for Foreign Affairs disclaims any intention on the part of his Government to continue by the new Treaty of Commerce now under negotiation with France a preferential tariff in favour of French woollens, and assures your Lordship that the assimilation of the commercial system of Belgium as closely as possible to that of England constitutes the *bonâ fide* policy of the Belgian Government.

Your Lordship is aware that in April and May 1859 communications took place between my predecessor, the Earl of Malmesbury and M. Van de Weyer, with a view to the conclusion of an amended Treaty of Commerce between Great Britain and Belgium, to be substituted for the Treaty of 1851.

The negotiation in question came to no result, chiefly because the Belgian Government, in consequence of their treaty engagements with France, were unable to assent to the insertion of a "most favoured nation" clause in the proposed new treaty. If, as I understand from your Lordship's despatches, the differential favours hitherto enjoyed by France will not be continued under the new treaty in course of negotiation between that country and Belgium, it seems to me that the main difficulty which prevented the negotiation of 1859 from attaining a satisfactory conclusion will have disappeared. In that case, Her Majesty's Government will be happy either to renew the negotiation with M. Van de Weyer here or to furnish your Lordship with full powers to carry on a negotiation at Brussels.

I am, &c.
(signed) *J. Russell.*

No. 8.

(Extract.)

Mr. *Bowring* to Lord *Wodehouse.*

Office of Committee of
Privy Council for Trade, Whitehall,
5 February 1861.

I AM directed by the Lords of the Committee of Privy Council for Trade to acknowledge the receipt of your letter, of the 23d ultimo, stating that Lord John Russell had instructed Her Majesty's Minister at Brussels to make a proposition to the Belgian Government for the resumption of negotiations for an amended Treaty of Commerce with Belgium, and requesting their Lordships to examine the draft of treaty approved by the Board of Trade in 1859, and acquaint Lord John Russell whether they thought that draft fitting to be now again proposed to the Belgian Government.

In reply, I am to state, for his Lordship's information, that my Lords are of opinion that, looking to the altered state of circumstances since the draft in question was approved by this department, especially in the conclusion of a commercial treaty with France on an extended basis, and in the initiation of negotiations with other European powers for amended treaties, it will be better to adopt, as the basis of the proposed new negotiations with the Belgian Government, a draft treaty similar to that recently prepared by the Foreign Office and this department for submission to the Government of Austria, which draft embodied all the points for which it appears necessary to make provision. I am accordingly directed to enclose herewith, for Lord John Russell's consideration, the draft* of such a treaty.

The following Table of the rates of customs duty charged in the United Kingdom upon the principal

* This draft is not printed.

principal exports of Belgium produce to it in the years 1851, when the existing Belgian Treaty was concluded; 1859, when an amendment of that treaty was under consideration; and 1861 speaks for itself:—

	1851.	1859.	1861.
Animals	Free	Free	Free.
Apples, raw	6 *d.* per bushel	3 *d.* per bushel	Ditto.
Bark	Free	Free	Ditto.
Butter	10 *s.* per cwt.	5 *s.* per cwt.	Ditto.
Corn	1 *s.* per quarter	1 *s.* per quarter	1 *s.* per quarter.
Cotton yarn	Free	Free	Free.
Flax, undressed	Ditto	Ditto	Ditto.
Glass	3 *s.* 6 *d.* p' cwt.	Ditto	Ditto.
Hides	Free	Ditto	Ditto.
Oil seed	Ditto	Ditto	Ditto.
Poultry and game	5 p' ct. *ad val.*	Ditto	Ditto.
Seed, clover	Free	Ditto	Ditto.
Silk	Ditto	Ditto	Ditto.
Silk manufactures	15 p' ct. *ad val.*	15 p' ct. *ad val.*	Ditto.
Spelter	Free	Free	Ditto.
Sugar, refined	18 *s.* 8 *d.* p' cwt.	18 *s.* 4 *d.* p' cwt.	18 *s.* 4 *d.* p' cwt.
Wool	Free	Free	Free.
Woollen manufactures, unenumerated.	10 p' ct. *ad val.* (made up).	5 p' ct. *ad val.* (made up)	Ditto.
Yarn, worsted	6 *d.* per lb.	4*d.* to 6*d.* p' lb.	Ditto.

It will, therefore, be seen that the only two important articles of Belgian export to this country on which any customs duties at all are now levied are—corn, which pays a nominal duty of 1 *s.* per quarter, and refined sugar, the duty on which is levied for revenue purposes alone.

Lord John Russell will also be aware that the most favoured nation clause in the proposed treaty will secure to Belgium throughout its continuance the whole of the reductions and abolitions of customs duties accorded to France by the Treaty of last year. It will be for his Lordship to consider whether the amount of 15 per cent. as the maximum of duty to be imposed on British produce imported is, under all the circumstances of the case, higher than we may reasonably stipulate for in the case of British goods imported into Belgium.

No. 9.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Sir, Foreign Office, 27 May 1861.

I AM directed by Lord John Russell to transmit to you, for the information of the Lords of the Committee of Privy Council for Trade, copy of a despatch which his Lordship addressed on the 20th instant to Her Majesty's Minister at Brussels, proposing that the Belgian Government should authorise M. Van de Weyer to resume the negotiations for a new Treaty of Commerce between Great Britain and Belgium. I am also to transmit a copy of the answer received from Lord Howard de Walden, stating that the Belgian Government accede to that proposal.

I have, &c.
(signed) *E. Hammond.*

Enclosure 1, in No. 9.

(No. 31.)

Lord *J. Russell* to Lord *Howard de Walden.*

Foreign Office,
My Lord, 20 May 1861.

THE new Treaty of Commerce between Belgium and France having now been signed, and there appearing to be little doubt of its receiving the sanction of the Belgian Chambers, the time seems to have arrived when the negotiation may be resumed for a new Treaty between this country and Belgium. I have accordingly to instruct your Lordship to mention this subject to the Belgian Minister for Foreign Affairs, and to propose to him that M. Van de Weyer should, as on former occasions, be authorised to enter upon the negotiation with Her Majesty's Government.

I am, &c.
(signed) *J. Russell.*

Enclosure 2, in No. 9.

(No. 89.)

Lord *Howard de Walden* to Lord *J. Russell.*

Brussels,
My Lord, 21 May 1861.

I READ to Baron de Vrière to-day your Lordship's Despatch, No. 31, of yesterday's date, and I am authorised by his Excellency to state that he readily meets your Lordship's wishes, and will send instructions to M. Van de Weyer to open negotiations for a new Treaty of Commerce between Great Britain and Belgium.

I have, &c.
(signed) *Howard de Walden and Seaford.*

No. 10.

Lord *Wodehouse* to Mr. *Booth.*

Foreign Office,
Sir, 24 June 1861.

WITH reference to previous correspondence, I am directed by Lord John Russell to transmit to you, for the information of the Lords of the Committee of Privy Council for Trade, a copy of a Despatch from Her Majesty's Minister at Brussels, explaining the impediments which exist to the immediate extension to Great Britain of the provisions of the Commercial Treaty lately concluded between Belgium and France.

I am, &c.
(signed) *Wodehouse.*

Enclosure in No. 10.

(Extract.)

Lord *Howard de Walden* to Lord *J. Russell.*

Brussels, 21 June 1861.

I HAVE the honour to acknowledge your Lordship's despatch of the 18th instant.

Although the delay which must occur in extending to Great Britain the provisions of the Treaty between Belgium and France is very much to be regretted, and must be prejudicial to British commerce and competition with that of France, yet the principal causes were not dependent upon the Belgian Government.

The great delays which took place in the negotiation of the Treaty with France originated in fresh demands brought forward by the French Plenipotentiary consecutively, and in each instance unexpectedly; 1st, in regard to sugar; and 2d, in regard to spirits. The consequence was, that the new treaty was not concluded in time to replace the existing one on its expiration,

App. No. 6.

and a prolongation of the latter had to be the subject of a special law, while the advanced period of the Session barely admitted of the consideration and adoption of the new Treaty.

The prorogation of the Chamber did not depend upon the Government, for the dissolution of half of the Chamber of Representatives being fixed by the constitution in anticipation, those members whose seats were to be vacated had to leave Brussels even before the Senate had accepted the project of the law sent up to them for the adoption of the French Treaty.

No. 11.

Sir *J. Emerson Tennent* to Lord *Wodehouse*.

Office of Committee of
Privy Council for Trade, Whitehall,
My Lord, 1 July 1861.

I AM directed by the Lords of the Committee of Privy Council for Trade to acknowledge the receipt of your letter of the 24th ultimo, transmitting for their information, by direction of Lord John Russell, a copy of a despatch from Her Majesty's Minister at Brussels, explanatory of the impediments which exist to the immediate extension to this country of the provisions of the Commercial Treaty recently concluded between Belgium and France.

It appears from this despatch, that while the Belgian tariff of customs duties annexed to that treaty, a great part of which is already in force, will be in full execution as regards French produce and manufactures on the 1st October next, the question of extending its provisions to British productions cannot be brought before the Belgian Chambers until after their meeting in November.

My Lords have received this intelligence with much surprise and disappointment, and I am to request that you will state to Lord John Russell, that the reasons for this delay contained in Lord Howard de Walden's despatch appears to them to be in the highest degree unsatisfactory.

It is unnecessary to revert to the paramount claim of Great Britain to the fullest measure of commercial concessions made by Belgium to any foreign country. This claim, which, indeed, has never been disputed by the Belgian Government, but, on the contrary, admitted as often as it has been advanced, has been of the strongest kind for years, but since the Customs Act of 1860, under which all articles of Belgian production, with one or two trifling exceptions, are admitted duty free into the United Kingdom, it has acquired a degree of urgency which renders the continuance of preferential duties against British manufactures wholly indefensible.

It is equally unnecessary to recall to Lord John Russell's recollection the repeated occasions (recapitulated in detail, in the letter from this Board of the 11th January last) upon which Her Majesty's Government has received from the Government of Belgium the most distinct and positive assurance, that upon the expiration of the late treaty between that country and France, no new concession whatever would be accorded to the latter, which would not be equally extended to the United Kingdom.

It will be sufficient to remind his Lordship, that so late as January last, in consequence of representations which were made to the Foreign Office by the Bradford Chamber of Commerce, Lord Howard de Walden, in pursuance of his instructions, inquired of the Belgian Minister for Foreign Affairs whether there was any foundation for the apprehension of the Chamber, that French woollen and worsted goods would be admitted at preferential duties of from 15 per cent. to 20 per cent. *ad valorem*, while similar British manufactures would remain liable to the present duties, varying from 32½ to 37½ per cent. *ad valorem*, and reported his reply in the following terms:—

"That there was not the slightest intention on the part of the Belgian Government to make any such distinction, and, moreover, that no concession whatever, in regard to duties, would be made in regard to manufactures of France, which were not equally extended to those of Great Britain."

In his despatch of the 7th January last, Lord Howard de Walden reports at greater length conversations with M. de Vrière to the same effect, and concludes by recording that Minister's assurance, "that it was not the intention of the Belgian Government to grant in any future treaty preferential treatment to French imports to the prejudice of those of Great Britain." Lord Howard de Walden adds, that he had no reason to doubt the sincerity of this assurance, and that he is at a loss to conceive from what authority the Chamber of Commerce at Bradford had derived the information which had excited their apprehension.

Upon the faith of these repeated and unequivocal assurances on the part of the Belgian Government, supported as they have been by the expression of confidence in their sincerity by Lord Howard de Walden, my Lords have never doubted, that whenever the new tariff for French produce and manufactures was brought into force in Belgium, it would be made simultaneously applicable to those of the United Kingdom, and they were confirmed in their expectation by the statement contained in Lord Howard de Walden's despatch of the 21st of May, enclosed in Mr. Hammond's letter of the 27th of same month, that the Belgian Minister at this Court had received instructions to open the negotiation of a new Treaty of Commerce between this country and Belgium.

Whatever may be the ulterior intentions of the Belgian Government, it appears to them that the decision announced in the present despatch is in direct violation of the promises which have been so often given to Her Majesty's Government, and cannot fail to operate in the most injurious manner upon British interests.

They fear that after the warning which was conveyed to Her Majesty's Government by the Bradford Chamber of Commerce in November last, the present result will be received with the greatest dissatisfaction by that body, and by the whole commercial and manufacturing interest of the United Kingdom, who has been watching with much anxiety the progress of recent negotiations.

The disabilities under which British trade has so long laboured in Belgium, and against which British manufacturers have so often and so justly protested, will be prolonged in an aggravated form for an indefinite period, and when at some future day the Belgian Government feels itself compelled to adopt a measure of tardy justice to this country, our manufacturers will find the markets of Belgium forestalled, and occupied by the established connections of their French competitors.

My

My Lords fear that, serious as the result to British interests must be of this evasion of a positive understanding by the Belgian Government, the prorogation of the Belgian Chambers has deprived Her Majesty's Government of any hope of immediate redress, and they cannot but regret that earlier information of the proceedings of the Belgian Government did not reach Her Majesty's Government.

They think, however, that no time should be lost in instructing Her Majesty's Minister at Brussels to express the views of Her Majesty's Government to the Government of Belgium upon this subject, in the strongest manner, and to enter their protest against the course which has been pursued.

They further think that he should be instructed to press for the immediate commencement of the negotiation of an amended Treaty of Commerce between Belgium and Great Britain, so that upon the re-assembling of the Chambers no time may be lost in bringing its provisions into execution at the earliest possible moment.

In the event of the Belgian Government not acceding to this proposal, my Lords would suggest that steps should be taken without further delay to denounce the Treaty of 1851, as recommended in their letter of the 11th January last.

I have, &c.
(signed) *J. Emerson Tennent.*

No. 12.

(Confidential.)

Lord *Wodehouse* to Sir *J. Emerson Tennent.*

Sir, Foreign Office, 10 July 1861.

With reference to your letter of the 1st instant, I am directed by Lord John Russell to enclose, for the confidential information of the Lords of the Committee of Privy Council for Trade, a copy of a despatch which his Lordship has addressed to Lord Howard de Walden, respecting the delay on the part of the Belgian Government in extending to this country the provisions of the Commercial Treaty recently concluded between France and Belgium.

I am, &c.
(signed) *Wodehouse.*

Enclosure in No. 12.

Lord *J. Russell* to Lord *Howard de Walden.*

Foreign Office,
My Lord, 8 July 1861.

Her Majesty's Government have had under their serious consideration your Lordship's despatch of the 21st ultimo, stating that while the tariff annexed to the recent Treaty between France and Belgium (a great part of which is already in force) will be in full execution as regards French produce and manufactures on the 1st of October next, the question of extending that tariff to British productions cannot be brought before the Belgian Chambers until after their meeting in November; and I have to instruct your Lordship to state to the Belgian Government, that Her Majesty's Government consider their conduct in this matter as very unfriendly to Great Britain. In bringing before the Chambers the French Treaty, Her Majesty's Government might have expected them to have asked for powers to grant equal terms to Great Britain. You will explain to the Belgian Government, that unless you receive from them positive assurances that they will fulfil the repeated promises they have given, and conclude a Treaty of Commerce upon just and equal terms without further injurious delay, Her Majesty's Government will feel themselves, however reluctantly, obliged to give the necessary formal notice for the termination in 12 months of the Treaty of 27th October 1851 between Great Britain and Belgium.

I enclose a copy of a letter* on this subject, which I have received from the Lords of the Committee of Privy Council for Trade; and I have to desire that your Lordship will give a copy of this letter to the Belgian Minister for Foreign Affairs, together with a copy of this despatch.

I am, &c.
(signed) *J. Russell.*

No. 13.

Lord *Wodehouse* to Sir *J. Emerson Tennent.*

Sir, Foreign Office, 13 July 1861.

I am, &c.
(signed) *Wodehouse.*

Enclosure in No. 13.

Lord *Howard de Walden* to Lord *J. Russell.*

My Lord, Brussels, 12 July 1861.

As instructed by your Lordship, I communicated to Baron de Vrière yesterday your Lordships despatch of the 8th instant, and its enclosure, leaving copies with his Excellency; and I called his serious attention to the fact of French commerce enjoying at this moment great advantages over that of Great Britain under the new Treaty, a result which was practically at variance with the expectations I had been authorised to hold out to Her Majesty's Government.

Baron de Vrière admitted this to be so temporarily, but remarked that it was caused by unforeseen circumstances; that if the Treaty with France had been concluded early in the Session, as had been intended and expected, the Government would have at once followed it up by the contemplated Treaty with Great Britain; but that the Belgian Government was as much subject to the control of the Chambers as the British Government was of Parliament; that the inevitable dissolution of half of the Chamber of Representatives

* *See* No. 12. Sir J. Emerson Tennent to Lord Wodehouse.

App. No. 6.

tatives, at the epoch fixed by the Constitution, rendered it impossible to lay a Treaty with Great Britain, placing her commerce on the same footing with that of France, before the Chamber of Representatives, as it was actually dispersed previous to the adoption of the French Treaty by the Senate.

He contested there being any valid grounds, from anything which had passed, to justify the mistrust manifested in the letters from the Board of Trade, considering that it was the Parliamentary obstacle, self-manifest, which had caused the present delay, which he much regretted. Baron de Vrière added that it was not, however, worth while now to discuss these points of pending distrust, as they would be answered at once by the instructions to M. Van de Weyer to proceed with the negotiations for the treaty with Great Britain, which were actually prepared, were now before the King only awaiting his Majesty's sanction, and would probably be forwarded in a couple of days.

I have, &c.

No. 14.

Mr. *Layard* to Sir *J. Emerson Tennent.*

Foreign Office,
Sir, 22 August 1861.

I AM directed by Lord Russell to transmit to you, for the information of the Lords of the Committee of Privy Council for Trade, copies of correspondence, as noted in the margin, bearing on the questions pending regarding a Commercial Treaty with Belgium.

I have, &c.
(signed) *A. H. Layard.*

Enclosure 1, in No. 14.

Lord *Howard de Walden* to Earl *Russell.*

My Lord, Brussels, 18 August 1861.

I HAVE the honour to acknowledge the receipt of your Lordship's despatch, No. 58, of the 6th instant, communicating to me the particulars of the conference held by your Lordship, the President of the Board of Trade, and M. Van de Weyer, on the subject of the proposed Commercial Treaty between Great Britain and Belgium, and in which you instruct me to seek an opportunity of expressing the sentiments of Her Majesty's Government on the character of the propositions brought forward by M. Van de Weyer.

Baron de Vrière being absent from Brussels, I have thought it right to lose no time in communicating in writing to his Excellency the extract from your Lordship's despatch, which conveys the feelings of Her Majesty's Government on this subject.

With reference to the three heads which your Lordship recapitulates as constituting the basis of negotiations, I beg to submit the following remarks:

1st. The subject of "equivalents" to be given to Belgium has never on any occasion appeared to be contemplated by Baron de Vrière.

He has expressed a desire to obtain some concessions advantageous to Belgium; but when I have remarked that almost all their produce and manufactures were admitted free; that there were no reductions remaining to be made in our tariff, and asked what he alluded to, he never persevered.

On one occasion he alluded incidentally to the proposed new duties on chicory, in regard to which he intimated a hope that some modification might be made on behalf of that article, the produce of Belgium; but on my explaining my belief that the customs duty would be only equivalent to the excise duty to be levied on British chicory, he at once replied that if such were the case there was nothing to be said.

I am under the impression that when the present treaty was signed it was understood that Her Majesty's Government had no power, during the existence of the charter of the East India Company, to place Belgian vessels on the same footing as British vessels in East Indian ports.

This impression would account for the proposition to define clearly the right of Belgium to trade with the British colonies and possessions.

With regard to the proposed indemnity for non-imposition of tolls on the navigation of the Scheldt, I believe the object to be to lay the grounds for the capitalization of the Scheldt duties levied by Holland on vessels mounting that river to Antwerp.

The Belgian Government, with a view to the special benefit of Antwerp, in competition with Rotterdam, assumed the charge of reimbursing to vessels trading with that port the amount of duties levied at the mouth of the river by the Dutch.

Vicomte Vilain XIV., when Minister, decided to put an end to this charge upon the State.

In new treaties he concluded with foreign powers the right to this reimbursement was omitted, and in regard to the Sound and Stade dues, the payment of the Scheldt duties was made a set-off against the share allotted to Belgium in the amount of the capitalization awarded for the abolition of these tolls.

Baron de Vrière is anxious that the Treaty to be concluded with Great Britain should be of a more extended character than one merely admitting British trade on the same footing as that accorded in the Treaty to France; and if this could be effected it would no doubt be of some importance to the Government in meeting the opposition to which they will be exposed in the Chambers from those who will make "protection of national industry" an interested as well as a party cry.

I have, &c.
(signed) *Howard de Walden and Seaford.*

Enclosure 2 in No. 14.

Lord *Howard de Walden* to Earl *Russell.*

Brussels,
My Lord, 14 August 1861.

I REPORTED to your Lordship in my despatch of the 17th May, the supposed intention of the Opposition to move as an amendment to the project of law for the adoption of the Commercial Treaty concluded between Belgium and France, a resolution to the purport that the provisions of the

the said Treaty should not be extended to Great Britain.

The indisposition of many members of that party to such an unusual step caused the abandonment of this course of proceeding in the Chamber of Representatives, but the anti-free traders of the clerical party nevertheless at once commenced agitation, and they have turned to account the protectionist spirit of a fraction of the liberal party manifested during the late elections at Ghent.

A great meeting was accordingly called at Ghent, where several seats had been lost to the Government at the late elections, with a view to such a manifestation as might exercise serious pressure upon the policy of Government.

The moment when such influence as is attempted might be brought to bear with any effect upon the Government, viz., that of pending elections, having gone by what has since passed (which is, in fact, merely the echo of the election cry), is not likely to have any weight in regard to the actual negotiations with Great Britain.

I have, &c.
(signed) *Howard de Walden and Seaford.*

Enclosure 3, in No. 14.

Earl *Russell* to Lord *Howard de Walden.*

Foreign Office,
My Lord, 19 August 1861.

WITH reference to the observations contained in your Despatch No. 143 of the 8th instant, upon the subject of the proposed new Treaty with Belgium, I have to state to you, as regards the question of the position of Belgium vessels trading to our ports in the East Indies, that if there is any trade to which other foreign vessels are admitted by this country, and to which Belgians are not, Her Majesty's Government will at once concede that trade to Belgium.

Chicory is subjected to excise in this country equivalent to customs' duties, but, if any irregularity exists in this respect, Her Majesty's Government will readily listen to representations from Belgium.

But Her Majesty's Government will not capitalise the sums paid for the Scheldt Dues. If the Belgian Government, by no longer charging themselves with the payment of the Dutch Scheldt Dues, throw that payment upon the ships trading with Antwerp, and thus give an advantage to Rotterdam over Antwerp, that is a question which concerns Belgian trade and Belgian consumers more than it does British merchants and manufacturers. Her Majesty's Government will in this matter abide strictly by existing treaties.

The Belgian Government would do well to instruct M. Van de Weyer to sign a treaty containing only the most favoured nation clause. If they do so they will be entitled to all the benefits of the French Treaty so long as that treaty endures. If they decline to do so, a feeling may spring up in this country which Her Majesty's Government would regret, as respects the commercial policy of Belgium.

The delegates of the various Chambers of Commerce and mercantile bodies of the kingdom have represented to me that they do not pretend to criticise the commercial policy of a nation which declares for the principles of protection; but that if a country adopt low duties as regards French produce and manufactures, and high duties as regards British produce and manufactures, they cannot but conclude that the commercial policy of that country is based on views unfriendly to the prosperity of Great Britain. They added that they saw no reason to expect from Belgium anything unfriendly, as our conduct to Belgium had always been of the most amicable character, and was fitted to unite the two nations in bonds of friendly intercourse.

I am, &c.
(signed) *Russell.*

No. 15.

Mr. *Layard* to Sir *J. Emerson Tennent.*

Foreign Office,
Sir, 6 September 1861.

WITH reference to my letter of the 22d ultimo, I am directed by Lord Russell to transmit to you, to be laid before the Lords of the Committee of Privy Council for Trade, copy of two despatches* from Her Majesty's Minister at Brussels respecting the pending Commercial Treaty between Great Britain and Belgium.

I have, &c.
(signed) *A. H. Layard.*

Enclosure in No. 15.

Lord *Howard de Walden* to Earl *Russell.*

My Lord, Brussels, 31 August 1861.

I AM confident that mere commercial considerations have no weight with the Belgian Government in delaying the negotiations of the proposed Treaty with Great Britain.

In all my conversations with Baron de Vrière, his Excellency has invariably treated the principle of British trade being entitled to be placed on the same footing as that of France as unquestionable.

The opposition that was raised at Ghent as against the extension to British commerce of the concessions made to France, was more unexpected than if it had been directed exclusively against the treaty itself with France. This has occasioned a political complication which requires to be treated with tact.

The cry for protection, or "due consideration for natural industry," on the part of manufacturers, who are mostly liberals and friends of the Government, when supported politically by the clerical party is embarrassing.

Many of these manufacturers profess to be free-traders in principle, and are, by way of reserving only as exceptions the application to their own branches of industry, but practically they are general enemies, being ready to barter the abandonment of their opinions in regard to others, on the condition of concerted action in reciprocal support of their mutual interests.

The

* The second despatch is not printed. It contains a newspaper article.

App. No. 6.

The same spirit is believed to have prevailed on the part of some of the candidates at the late elections at Ghent, who (with a view to their seats) are supposed to have accepted, though unwillingly, the condition, opposed by a majority of the electors, of opposing the extension to Great Britain of the provisions of the late new treaty with France.

The consideration that they are actually in enjoyment of all the benefits conferred by the British tariff as well as of the protection still afforded under the Belgian tariff against the competition of British manufacturers, renders the protectionists bold in their opposition; no appeal to justice or fairness of our claim is admitted; they contend that all reductions in our tariff were conceived exclusively in the spirit of national interests, and that although they have no doubt they told advantageously on Belgium exports, this constitutes no claim on Belgium for any sacrifice, as in return they maintain that if they had not suited us, no such concession would have been made, and that Belgium after all only enjoys what has been granted to all the world.

The tendency, however, towards free-trade principles has made such progress that the opponents to the proposed treaty are sensible they are going against the feelings of the enlightened classes, and that in a struggle between the retention or abandonment of high duties, the issue could not be doubtful. For this reason they have adopted, as the delusive and convenient course for those who allow their own interests, industrial as well as political, to override their principles, the cry for "time to be allowed to test the action of the new Tariff on French imports on Belgian industry before it is extended to Great Britain." Under these circumstances the Government has to guard against the accusation of precipitancy, and to accept and go through the form of considering the representations which are laid before them, though they may in fact be convinced beforehand of the utter worthlessness of the evidence adduced in support of them.

It is, however, the opinion of some fair and moderate persons that although the great establishments in this country are well able to compete in the home market with French or English imports at the new duties, yet that many small manufacturers (particularly in the cotton business about Ghent) may be injuriously affected if exposed to a struggle against the produce of the superior mechanical advantages and experience of British establishments.

At present, under the existing scale of duties, the heads of great industrial establishments appear to be making large fortunes, and this evidently at the cost of the public; that the lowering of the rates of protection must reduce their great profits is obvious; but if it be true that some small establishments would be sensibly affected by the lowering of protection against British imports, while the greater ones can well sustain competition with them, it must be clear that working at disadvantage against their own great manufacturers, the smaller ones must succumb at last, even to the superiority of national rivals, and that it is a false policy to foster a few inefficient establishments at the expense of extorting from the public enormous profits for the great ones.

I have, &c.

No. 16.

Mr. *Layard* to Sir *J. Emerson Tennent.*

Foreign Office,
Sir, 18 September 1861.

WITH reference to my letter of the 6th instant, I am directed by Lord Russell to enclose, for the information of the Lords of the Committee of Privy Council for Trade, copies of a further correspondence with Her Majesty's Minister at Brussels respecting the pending negotiations for a new treaty with Belgium.

I have, &c.
(signed) *A. H. Layard.*

Enclosure 1, in No. 16.

Lord *Howard de Walden* to Earl *Russell.*

Brussels,
My Lord, 3 September 1861.

I HAVE the honour to inclose a copy of a note which I have received from Baron de Vrière.

I had a conversation with his Excellency today on the subject of the remarks in your despatches, when he again renewed the declaration of perfect good faith with which he was animated in regard to the pending negotiations; but he added that he claimed fair consideration for the difficulties against which the Government had to contend in meeting the opposition which was excited on the grounds of alarm at the overwhelming competition to which Belgian industry might be exposed.

I then discussed with him the groundlessness of such apprehensions, and mentioned the declarations which had appeared in the public newspapers, and the substance of information which I had received from Ghent, that Belgian manufactures were sold in England, Holland, and elsewhere, actually at lower rates than were exacted for them in the home market.

Baron de Vrière admitted this to be a fact, but he explained it by saying that this took place only occasionally, and that it was the result of warehouses being overstocked, and of distress rather than prosperity; that this was often the case in England, and that it was this very circumstance which afforded the Belgian manufacturers some plausible grounds for their representations.

He said that he was satisfied that under ordinary circumstances the industry of Belgium in general could, under the proposed moderate duties, enter into competition with that of England, but that what might be apprehended, particularly in regard to cotton, was the glutting the market at moments of industrial crises with produce disposed of at unremunerative prices.

He stated to me that he knew, himself personally, that at Ghent some cotton goods were at this time to be sold at the price the thread alone had cost.

He further instanced a special cause for apprehension on the part of the cotton manufacturers as a possible eventuality, namely, the great fall in the price of cotton on the settlement of the American civil war, and the consequent inundation of Belgium by English goods made subsequently from cotton bought at lower prices before the

the stock in hand, the produce of the present high-priced cotton had been disposed of.

I remarked to the Baron that the apprehension of cheap cotton was really chimerical; that it was notorious that the best informed and most interested parties were not only alarmed at the prospect of high prices, but at the probability of the utter insufficiency of supply for some years to come. That let the war in the United States terminate as favourably as possible for the South, the slave power must be infinitely reduced, and therefore the production of cotton lessened; that as yet all the undertakings elsewhere for the promotion of cotton cultivation had been on a very limited and only experimental scale, and therefore years must elapse, under the most favourable circumstances, before any sudden cheapness of cotton could possibly occur.

His Excellency said he mentioned these circumstances not as arguments against the proposed treaty, but as explanations of the opposition and of the genuine fears the Government had to contend with.

Baron de Vrière then alluded to your Lordship's desire that the extension to Great Britain of the tariff of the new treaty with France should be made under a simple declaratory article to that effect; he expressed his conviction that such a treaty would not be accepted by the Chambers; that it was for this reason he was anxious to connect the concession with other matters important to the commercial interests, such as the opening of the navigation of the Scheldt; that in proposing the capitalization of the Scheldt tolls levied by Holland, he had intended to combine with it the suppression of the tonnage and other dues levied by Belgium; that no country would benefit more than Great Britain by such a measure, as two-thirds of the navigation which frequented the port of Antwerp were British.

Baron de Vrière also mentioned that in regard to the general admission of British manufacturers on the same footing as those in France, that there were some exceptions, trifling to British interests, but of highest local importance to Belgium, which it is desired to make, to the purport of delaying for two or three years the application of the low duties to two qualities of thread and to certain mixed manufactures (of which the basis is cotton), which afford employment to a great number of hand looms in Flanders, and constitute an industry specially affecting the poorer classes in those provinces. The duties in question on the threads were indeed conceded entirely by an oversight of the Belgian P. P. On all these subjects, however, full instructions and information will be furnished to M. Van de Weyer.

On my referring to the comparative scale of duties to which Belgian goods and produce were subjected respectively in Great Britain and in France, the Baron entirely admitted the superior liberality of Great Britain, though remarking that France was a most important customer as receiving so much Belgian manufacture, while we took principally produce and raw material.

I was sorry to observe that Baron de Vrière seemed much more alive than heretofore to the opposition which is getting up against the treaty with England among the manufacturers, though sensible that the claims of the consumers must ultimately be satisfied, and that it is for the interest of the country to establish free trade (although the transition may be attended with temporary embarrassments), with a view to the opening of markets throughout the world for Belgian industry.

I have, &c.
(signed) *Howard de Walden and Seaford.*

Enclosure 2 in No. 16.

Baron *De Vrière* to Lord *Howard de Walden.*

Bruxelles,
My Lord, le 3 Septembre 1861.

A LA suite des communications que vous m'avez faites vers le milieu du mois dernier, j'ai addressé à M. Van de Weyer deux dépêches dont il a, d'après mes instructions, donné lecture au Principal Sercétaire d'Etat de Sa Majesté Britannique pour les Affaires Etrangères.

Il a ensuite été convenu dans une conférence entre Lord Russell, Mr. Milner Gibson, et le Ministre du Roi, que celui-ci communiquerait l'ensemble des propositions Belges au Foreign Office.

M. Van de Weyer a eu l'honneur de voir Lord Russell Lundi dernier, et de lui annoncer qu'il était muni de tout ce qui était nécessaire pour entrer immédiatement en négociations. Sa Seigneurie ayant répondu qu'elle allait passer quelque temps en Ecosse, il a été entendu que la remise des propositions n'aura lieu qu'à son retour.

Telle est aujourd' hui la situation des choses. Je ne puis donc, en remerciant votre Excellence de sa lettre du 27 Août, que me référer aux communications que M. Van de Weyer est déjà chargé de faire au Gouvernement de Sa Majesté Britannique.

Je serais néanmoins à la disposition de votre Excellence toutes les fois qu'elle jugera utile de m'entretenir de ces questions, et je la prie, &c.

(signé) *De Vrière.*

Enclosure 3, in No. 16.

(No. 63.)

Earl *Russell* to Lord *Howard de Walden.*

Foreign Office,
My Lord, 16 September 1861.

BEFORE I left London I had a conversation of considerable length with M. Van de Weyer, who called on me by appointment at the Foreign Office.

He began by saying that your Lordship had misapprehended M. de Vrière, if you supposed that he had ever offered to give to Great Britain the advantages of the French Treaty without equivalents; that the Belgian Government would be quite ready to grant to Great Britain the advantages of the most favoured nation, if Great Britain would—

1st. Redeem the tolls of the Scheldt paid by Belgium on behalf of British shipping.
2d. Reduce the duties on chicory.
3d. Place Belgium on a better footing than she now is in regard to the trade with India.

I said that we objected altogether to the principle of granting equivalents. If Belgium chose to place high duties on the manufactures of France, let her do so, and Great Britain would conform to the same tariff; but if French manu-

App. No. 6.

factured goods were admitted at a low duty, and British goods of the same kind at a high duty, such a difference could only be attributed to an unfriendly spirit.

That, in regard to Belgian manufactures, they were admitted here either at a very low duty or free of duty altogether.

M. Van de Weyer rejoined that we had made these reductions in the course of our free-trade policy, and that we could not raise the duties on Belgian manufactures without departing from our principles.

I said that it would be very hard that, because we gave the benefits of our free-trade policy to all the world, we should be punished for our liberality by narrow restrictions and arbitrary exclusions.

With reference to the Scheldt, I said it seemed to be a question rather between Antwerp and Rotterdam than between Antwerp and London. That if Belgium were to burthen British shipping in the Scheldt with tolls, she would in the same degree discourage Antwerp in favour of Rotterdam.

I had read the article in the "Observateur," and was struck with the force of its reasoning, and the value of its facts. Protection in reality meant favouring one part of the members of the State against all other parts; the monopoly price of cotton cloth, for instance, which was a benefit to the wealthy manufacturers of Ghent, was an injury to the retail dealer whose business was restricted, and to the consumer in the country who had to raise a larger quantity of corn or other produce to obtain the goods he wanted, and was thus made to swell unduly the fortunes of the Ghent manufacturers.

In opposing these partial and interested monopolists, the Government of Belgium would confer a benefit on their own people, and conciliate the goodwill of a friendly nation.

Finding we made no impression on each other, M. Van de Weyer promised to report my arguments to his Government, and we agreed to postpone till October our further conferences.

I have now to impress upon your Lordship the importance of this question to Belgium as well as to Great Britain.

The singular partiality which would deny to Great Britain advantages already granted by treaty to France, appears to Her Majesty's Government opposed to all those views of policy which ought to regulate the policy of Belgium.

I am, &c.
(signed) *Russell.*

P. S.—I hope you may be able to convince M. de Vrière that he ought to negotiate in a different spirit. If he is not prepared to do so, I see little use in any further conferences.

Enclosure 4 in No. 16.

(No. 64.)

Earl *Russell* to Lord *Howard de Walden.*

Foreign Office,
My Lord, 16 September 1861.

I HAVE received your Lordship's Despatch of the 3d instant, in which you report a conversation which you have had with Baron de Vrière respecting the negotiation of a commercial treaty with Belgium.

You will have learnt by my despatch of the 16th instant, why it was, that in the absence of Mr. Milner Gibson, I did not pursue the negotiation with M. Van de Weyer. Her Majesty's Government have no other request to make than to be treated on an equal footing with France; and Great Britain has already made to all the world, Belgium included, the most ample concessions in regard to foreign manufactures.

I am sorry to observe that M. Van de Weyer goes on repeating the old fallacy of the mercantile school, when he says that France takes manufactured goods, while Great Britain takes principally produce and raw material. The produce and raw material sent by Belgium to Great Britain employ the industry of the agricultural classes, as manufactures employ the manufacturing classes; and it would be a great mistake in Belgium to discourage her agriculture, with a view to favour her manufactures, and to impoverish her farmers and labourers in order to pamper her manufacturers and artizans.

I am, &c.
(signed) *Russell.*

No. 17.

Mr. *Layard* to Sir *J. Emerson Tennent.*

Foreign Office,
Sir, 24 September 1861.

WITH reference to my letter of the 18th instant, I am directed by Lord Russell to enclose, to be laid before the Lords of the Committee of Privy Council for Trade, copies of two despatches* from Her Majesty's Minister at Brussels, upon the subject of the commercial questions in dispute between Her Majesty's Government and that of Belgium.

I have, &c.
(signed) *A. H. Layard.*

Enclosure in No. 17.

(No. 160.)

Lord *Howard de Walden* to Earl *Russell.*

Brussels,
My Lord, 23 September 1861.

I HAVE to acknowledge the receipt of your Lordship's despatches; I believe Baron de Vrière to be fully alive to the general force of your Lordship's remarks, as applicable to the relations of commerce between Great Britain and Belgium.

With respect to the question of chicory duties, no stand is likely to be made on this point, the explanation I gave to his Excellency, as to the character of the excise tax, removed the false impression under which he had laboured, as to the custom-house duty being of a protective nature, though he expressed his regret that the heavy amount of the rate imposed should be such as to affect the interests of the Belgian chicory cultivators for export.

In regard to the trade with India, his Excellency seemed to consider the statement made by your Lordship to be sufficient.

As

* The second Despatch is not printed.

As to the Scheldt tolls, Baron de Vrière stated to me, that the proposed capitalization was not to be considered in principle as an equivalent for the admission of British produce and manufactures upon the same footing as those of France, that it would have to be judged by its own merits; that full information and instructions such as he hoped would satisfy your Lordship of the great importance to the commercial interests of both countries of his propositions, had been sent to M. Van de Weyer.

He remarked that the principle of such capitalization had been recognised, in regard to the Sound and Stade tolls, that both Denmark and Hanover had practically adopted it in regard to the Scheldt tolls in question, and that, in now bringing it forward, he was influenced by the importance of annexing such an arrangement to the new Commercial Treaty with Great Britain, as a combination which would be extending benefits to both countries, and would be sensibly appreciated by the mercantile world, and thus render the application of the tariff of the French Treaty less difficult, by modifying the opposition to it, by deputies representing industrial constituencies liable to be affected by it.

It is not the spirit of the Government, but the state of party which renders the negotiation of a treaty, such as might be accepted by the Chambers, a matter for anxious consideration.

It is true the general arguments on principles of fairness, and even of general interests, are on the side of the Government, but your Lordship is sensible to what an extent at times electoral interests outweigh personal opinions, and when, as in the present instance, the tactics adopted are not immediately objectionable in principle, the opposition being ostensibly temporary and cloaked profession of only due consideration for existing industrial establishments in the transition from protection to competition, it becomes very difficult for the Government to calculate with confidence on the support of a majority in the Chambers.

If nothing new whatever be conceded by Her Majesty's Government on the one hand, and no withdrawal of existing advantages which Belgium enjoys in common with other foreign countries is to be apprehended on the other, there remains but little resource for action on the bias of those who, as I have already remarked, from electoral considerations, might hesitate to stand by the Government in the immediate simple application to Great Britain of the tariff of the French and Belgian Treaty.

At the present moment the protectionists and free-traders are actively at work; and it is to be hoped that the demonstrations of the latter may have their due influence on deputies and their constituencies. Should your Lordship reject the propositions to be laid before you by M. Van de Weyer, I am inclined to expect that the alternative may be resorted to of proposing to delay the reduction of the duties on several heads for some fixed period, though distinctly conceding it in prospective.

This is only an inference on my part; but I have drawn it from the evident extreme anxiety of Baron de Vrière to do something to conciliate the support of some of the unwilling friends of the Government, upon whom the clamour and assertions of the manufacturers have made strong impressions.

The success last year of the beet-root interests, aided by the opposition and by the action of local influence on Liberal deputies, in obtaining the postponement of that feature of the "Town Barrier Duties Abolition Law," viz., the reform of the system of protection applicable to them, and of which the main characteristic and notorious importance consisted in the practices of fraud upon the revenue, and of dishonesty towards foreign consumers, illustrates the precariousness of the support to be relied upon by the Government on questions not actually involving dereliction of principle, when electoral considerations are brought to bear upon deputies.

Since that time the Liberals have lost six seats at Ghent, owing to the tariff of the new treaty with France.

I have, &c.
(signed) *Howard de Walden and Seaford.*

No. 18.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Foreign Office,
Sir, 28 October 1861.

I AM directed by Lord Russell to transmit to you, to be laid before the Lords of the Committee of Privy Council for Trade, a copy of a despatch from Her Majesty's Minister at Brussels, reporting a conversation he has had with M. Rogier on the subject of the negotiations of a Commercial Treaty between this country and Belgium, and on the question of the redemption of the Scheldt dues.

It would seem from this despatch that the recent change in the Belgian Foreign Office will make no change in the propositions of Belgium on the Commercial Treaty. The propositions of Belgium amount to these two demands, viz.:—

1st. That what is granted to France, in the present month of October, shall not be granted to Great Britain for two or three years; and

2dly. That Great Britain should pay half a million sterling for the redemption of the Schledt tolls, which tolls she has not hitherto paid at all.

Considering that it is not in conformity with the general policy of Great Britain to make commercial treaties involving tariff bargains, Lord Russell is inclined to think that it is not expedient to accept the terms proffered by Belgium, and that we should confine ourselves to a repetition of the offer of the most favoured nation clause.

But before the Cabinet consider the question, I am to state that Lord Russell would be glad to have the opinion of the Board of Trade.

I have, &c.
(signed) *E. Hammond.*

Enclosure in No. 18.

(Extract.)

Lord *Howard de Walden* to Earl *Russell.*

Brussels, 24 October 1861.

I INQUIRED of M. Rogier to-day whether the details of the ministerial arrangements I mentioned in my despatch of yesterday's date, were to be relied upon as correct, he replied that though he could not say they were definitively settled yet that they were more than probable.

Under these circumstances, I told him that I had

App. No. 6.

had been rendered rather anxious about M. Frere Orban's policy in regard to the Treaty of Commerce now under negotiation between your Lordship, Mr. Milner Gibson, and M. Van de Weyer, owing to an article which had appeared in the "Observateur" (of which I transmitted a copy in my Despatch, No. 167 of the 4th instant), and which had been considered as indicating the tone likely to be assumed on the subject by M. Frere Orban in the ensuing Session.

M. Rogier assured me that this was not the case, that M. Frere Orban, as well as himself, were prepared to go on with the treaty, but he added that it was important in regard to certain classes of threads and of mixed cotton manufactures to render the reduction of duties in some way gradual, and not immediate, with a view to conciliation, and that instructions in that sense had been sent to M. Van de Weyer.

He then alluded to the question of the Scheldt toll, when I told him that your Lordship was not disposed to consider it a matter which could be admitted into a Treaty of Commerce.

M. Rogier explained that it was a subject upon which very strong feeling existed in Belgium, that it was true it was a question involving, as regarded Belgium, national and political perhaps more than commercial considerations, that on this account, if a settlement of the question could be effected simultaneously, it would tend very materially to reconcile parties now disinclined to the immediate application of the tariff of the treaty with France and Great Britain.

He said he entertained the most decided sentiments, as did Belgians in general, as to the unfairness of this tax having been established at all, that in doing so the principle laid down at the Congress of Vienna of promoting the free navigation of rivers had been distinctly violated, that it had not been the restoration of any ancient national rights and privileges sanctioned by long respected usage, such as those under which tolls were levied in the Sound, on the Elbe, and the Danube, and that therefore they were more objectionable; that the origin was novel, that even after the imposition having been allowed by the British and French Grovernments in 1831, they were not actually levied till 1839.

He remarked that although the title with which Holland had been invested to levy this toll was respected, yet that its suppression by negotiation was most desirable; that in this spirit the Belgian Government were prepared on their part to meet Her Majesty's Government more than half-way by the abolition of tonnage, light, and pilotage dues, which exceeded by more than 50 per cent. the amount of the Scheldt tolls paid by British shipping, that it was incontestable the capitalization of the Scheldt tolls, which this Government did not intend to continue to pay to Holland, together with the suppression of the Belgian port dues, would be a very important benefit to British shipping; and that Belgium, in bringing forward this proposition, was only acting on the principles laid down at the Congress of Vienna, and which had been respected and carried out by Her Majesty's Government, as well as by the world in general, in regard to the Sound, the Elbe, and the Danube.

M. Rogier further told me that the subject of this capitalization had been alluded to in a conversation with M. Thuvenel, who did not seem disinclined to entertain the idea.

I took the opportunity of explaining to M. Rogier that Her Majesty's Government did not pretend to interfere with the principles either of free trade or protection, which it may be considered the policy of Belgium to observe, but that when special concessions are made to any power, as if in return for advantages or equivalents granted to Belgian interests which are withheld from British commerce, in face of the greater advantages which are afforded to the same interests under the British tariff, they must be considered as partaking of an unjust and unfriendly character, and must seriously affect the feelings of cordiality and sympathy towards this country on the part of the British public, and which consideration, in a political point of view, should not be lost sight of. M. Rogier replied that he felt this, but that he hoped everything would be arranged satisfactorily.

No. 19.

Mr. *Layard* to Sir *J. Emerson Tennent.*

Foreign Office,
Sir, 12 November 1861.

With reference to the letter from this Department of the 27th of May last and to previous correspondence, I am directed by Earl Russell to transmit to you, to be laid before the Lords of the Committee of Privy Council for Trade, a copy of a note from the Belgian Minister at this Court, submitting a draft of a Treaty of Commerce and Navigation between Great Britain and Belgium, to be substituted for that of the 27th October 1851, and for the convention relative to fishery of the 22d March 1852.

The Lords of the Committee will observe that the Belgian Government are desirous that Her Majesty's Government should take part in a plan for the redemption of the Scheldt dues, and that they propose a provisional engagement to that effect, dependent upon a general arrangement for such redemption being made before the 1st January 1863, by the various powers interested.

Detailed information respecting the propositions of the Belgian Government is furnished by their Minister in his note.

I am to request that you will move the Lords of the Committee to take the enclosed papers into consideration, and to favour Lord Russell with their opinion thereon.

The enclosures in M. Van de Weyer's note, being voluminous, are sent in original; and it is requested that they may be returned when no longer required.

I have, &c.
(signed) *A. H. Layard.*

Enclosure in No. 19.

M. *Van de Weyer* to Earl *Russell.*

Londres,
My Lord, le 7 Novembre 1861.

Apres les conférences que j'ai eu l'honneur d'avoir au Foreign Office avec votre Seigneurie et Mr. Milner Gibson, je m'empresse de vous adresser un projet de traité de commerce et de navigation entre

entre la Belgique et la Grande Bretagne (A),* destiné à remplacer tout à la fois le traité du 27 Octobre 1851, et la convention du 22 Mars 1852.

Le projet de traité est accompagné d'une note sommaire (B) qui en explique les principales dispositions.

Cette note se réfère pour ce qui concerne les alcohols, les sucres, les marins déserteurs, et la comparaison du tarif Belge au tarif Français, à quatre autres annexes, que votre Seigneurie trouvera ci-jointes sous les lettres C, D, E, et F.

La proposition relative au rachat du péage établi sur la navigation de l'escaut et de ses embouchures par la section 3 de l'article IX du traité du 19 Avril 1839, proposition sur laquelle j'ai eu l'honneur de donner d'amples explications à votre Seigneurie, fait l'objet d'un memorandum ci-annexé (G) qu'accompagnent des tableaux représentant les perceptions annuelles des péages de l'escaut et du droit de tonnage. Dans ce memorandum l'on expose les considérations qui imposent à la Belgique le devoir d'affranchir l'escaut d'un état de choses qui constitue un véritable anachronisme au dix-neuvième siècle; les principes fondamentaux qui justifient la mesure proposée; les avantages considérables qu'en retirera la Grande Bretagne; et enfin les réformes que la Belgique se propose d'introduire sur les droits de tonnage, de pilotage, et sur les droits de ports perçus par la ville d'Anvers, dès l'instant que le péage de l'escaut sera capitalisé.

Bien que, dans la pensée du Gouvernement du Roi, une connexité absolue doive être établis entre la conclusion du Traité de Commerce et la question de la capitalisation de l'escaut, il propose de consigner les engagements à prendre à cet égard dans un protocole séparé (H), qui serait signé en même temps que le traité. Cette manière de proceder offre des avantages qui n'échapperont point à votre seigneurie, qui acquerra la conviction quà la Grande Bretagne a un intérêt né et actuel à adopter le principe de la capitalisation et à s'assurer les avantages résultant de son application, lors même qu'il ne s'agirait point de conclure un traité de commerce entre les deux pays.

L'ensemble de ces pièces et de mes explications verbales me dispense d'entrer ici en de plus amples détails; mais je me tiens, my Lord, à votre disposition pour les éclaircissements ultérieurs dont ces communications pourraient vous paraître susceptibles.

J'ai, &c.
(signé) *Sylvain Van de Weyer.*

— No. 20. —

Mr. *Booth* to Mr. *Layard.*

Office of Committee of Privy Council for Trade,
Sir, Whitehall, 23 November 1861.

I AM directed by the Lords of the Committee of Privy Council for Trade to acknowledge the receipt of your letter of the 12th instant, transmitting for their consideration and opinion a copy of a note from the Belgian Minister at this Court, submitting a draft of a treaty of commerce and navigation between Great Britain and Belgium to be substituted for that of October 1851, and for the fisheries convention of the 22d March 1852, and also a plan for the redemption of the Scheldt toll, in which the Belgian Government is desirous that Her Majesty's Government should take part, accompanied by detailed information on these propositions furnished by M. Van de Weyer. App. No. 6.

With reference to this communication, I am to request that you will lay before Lord Russell the following observations :—

The propositions of the Belgian Cabinet consist,—

1. Of concessions which they are prepared to make to the trade and navigation of the United Kingdom.

2. Of the conditions which they attach to such concessions, among which, although not forming a part of the draft treaty, M. Van de Weyer states that the consent of Her Majesty's Government to take a part in the capitalization of the Scheldt toll must be included.

Under the first head, the Belgian Government proposes generally to extend to British trade and navigation "most favoured nation" treatment, which would include the complete assimilation of the British to the Belgian flag, hitherto withheld from the trade in salt from the United Kingdom to Belgium, and all the other provisions of the treaty lately concluded by Belgium with France, with certain reservations as to the date of applying the tariff of import duties to three classes of British Manufacture, viz.:—

1. Cotton twist.

2. Woollen and worsted tissues, with a cotton warp.

3. Cotton prints.

It is unnecessary for my Lords to repeat on this occasion that, led as they had been to expect that the tariff of customs' duties conceded to France, would be simultaneously and completely applied to this country, they consider these reservations, affecting as they do some of the most important branches of British trade as most objectionable; but if Earl Russell is of opinion that the Belgian Government cannot be induced to withdraw them, they could not on this ground alone, considering the great importance to the trade of the United Kingdom generally of securing access to the markets of Belgium on favourable terms, advise his Lordship to decline to entertain this part of the Belgian proposal as a basis for negotiation.

It would, however, in my Lord's opinion, be necessary, before admitting these reservations, to obtain some modification in the terms of Article XXV, as affecting the last classes of manufacture, by which the Belgian Government retain the option of continuing the duty of 150 francs per 100 kilos after January 1864.

In return for these concessions, the Belgian Government requires not only that "most favoured nation" treatment shall be secured to the trade and navigation of Belgium, but also that Her Majesty's Government shall enter into further engagements, some of which are of a novel and important nature.

It is desired that Her Majesty's Government shall, by a protocol to be signed simultaneously with

* The enclosures in these letters are not printed.

App. No. 6.

with the treaty, agree to contribute a sum of money towards the redemption of the Scheldt toll from Holland, by means of capitalization, to be estimated on the average amount received during the 10 years from 1851 to 1860 inclusive, that sum to represent the share borne by British shipping engaged in the navigation of the river during that period.

Upon this proposal I am to observe that, although, as Lord Russell is aware, by section 3 of the IXth Article of the Annex to the treaty of 19th April 1839, between Holland and Belgium and the five powers, on the occasion of the separation of the two former kingdoms, the Scheldt toll is made leviable on the shipping of all nations navigating the Scheldt, it has never in practice been levied upon British shipping, nor, so far as my Lords are aware, upon the shipping of any other nation, Belgium having in the month of June of that year passed a law by which she undertook to repay the amount to foreign shipping, reserving to herself the right of withholding such repayment from the shipping of countries with which treaties of reciprocity were not concluded, and having afterwards concluded treaties with foreign powers, of which Great Britain was one, in which this repayment was guaranteed during their continuance.

It appears, however, that these treaties are now either terminable at the option of either of the contracting parties, or shortly to become so; and my Lords have been unable to discern in the documents and correspondence on this subject which have been under their consideration, either in the form of a treaty engagement, or of an understanding with the powers represented in the conferences which preceded the separation of Holland and Belgium, anything which would prevent Belgium from revoking her law of 1839, and leaving the toll to fall upon all shipping navigating the Scheldt.

Under these circumstances, it may possibly become a future question whether in any redemption of the Scheldt toll to which Holland may be willing to agree, Her Majesty's Government may not find it expedient to co-operate, but it appears to my Lords that the subject is far too complicated and important to allow of its being entertained in connection with the present negotiation, and in any case they think that the practical immunity from this toll of the ships navigating the Scheldt, ever since it was imposed in 1839, renders it extremely difficult to find any basis for its capitalization which could be considered as at all satisfactory. That proposed by Belgium, which is calculated upon the average tonnage engaged in this navigation during the last 10 years, appears to them obviously inadmissible. Firstly, because the amount of such tonnage has been doubtless very much larger than if the toll had been levied; and secondly, because there appears no reason to confine the calculation to the last 10 years of the existence of the toll.

On all accounts, therefore, the question must, in my Lords' opinion (if the case should now arise for entertaining it), be considered on its own independent merits, and must be made the subject of a separate and future negotiation.

By Article XII of the draft treaty under consideration, it is proposed that the shipping of the two countries shall be admitted reciprocally to the coasting trade of their respective states and possessions, on the national footing.

This proposition, although in principle one to which Her Majesty's Government would be quite prepared to assent, is inconsistent with the existing legislation of this country, by which the coasting trade of each separate colony is reserved exclusively to British vessels, except in cases where this trade has been opened by order in Council, upon the application of the colony concerned.

This course has been, as Earl Russell is aware, already adopted by Ceylon, the Cape of Good Hope, Victoria, and St. Lucia, and accordingly the coasting trade of these possessions is at the present time open to the shipping of all nations on national terms. This is equally the case with the coasting trade of British India, which has been open to foreign shipping ever since the year 1850.

Upon this question, I am to request that you will refer Earl Russell to the remarks contained in a letter from this Board, 21st May 1860, transmitting drafts of commercial treaties with Spain and Portugal, and I am to suggest that Article VIII of those drafts should be substituted for the draft articles submitted by M. Van de Weyer in any treaty concluded with the Belgian Government.

By Article XV, the Belgian Government proposes certain modifications in the customs' duties of the United Kingdom upon chicory, hops, spirits, and molasses.

Upon this stipulation, affecting as it does the revenues of this country, my Lords are unable to offer any opinion until they shall have been made acquainted with the views of the Lords Commissioners of Her Majesty's Treasury respecting it.

By Article XVII, it is proposed that British and Belgian fishermen shall be mutually admitted to national privileges and treatment, within the territorial limits of the coasts of the contracting powers.

This stipulation is one which my Lords cannot advise Earl Russell to entertain as a part of the present negotiation. Her Majesty's Government could not assent to such an arrangement without being prepared to reverse the policy by which they have hitherto been guided in the regulation of the coast fisheries of the United Kingdom, a course which my Lords cannot at present recommend.

With reference to Article XXI, in which it is proposed that Her Majesty's Government should engage, not only that deserters from Belgian vessels should be arrested and sent on board the vessels from which they have deserted, as the existing Order in Council provides, but that such deserters should, at the request and expense of the Consul, be committed to prison for a limited period, I am to observe that this would render necessary an amendment of the Foreign Deserters Act, and that any attempt to extend that Act might, as Lord Russell is aware, meet with serious opposition. My Lords are disposed, however, to think such an amendment of the Act desirable if this should be considered a suitable occasion for proposing it to the Legislature.

My Lords have felt that it would be premature on the present occasion to do more than to remark upon the general features of the Belgian proposals, but, if as they hope, the Belgian Government is induced to consent to continue the negotiation in the more limited sense indicated in the foregoing observations, they will be prepared to enter

enter upon a detailed examination of the terms of the articles of the draft treaty which has been submitted by M. Van de Weyer.

With reference to your letter of the 23d ultimo, I am directed by Lord Russell to transmit to you, for the information of the Lords of the Committee of Privy Council for Trade, a copy of a note which his Lordship has addressed to M. Van de Weyer in reply to the propositions made by the Belgian Government as to the negotiation of a commercial treaty with Belgium.

I have, &c.
(signed) *A. H. Layard.*

Enclosure in No. 22.

Earl *Russell* to M. *Van de Weyer.*

Foreign Office,
16 December 1861.

The undersigned, &c. has the honour to acknowledge the receipt of the note which M. Van de Weyer, &c. addressed to him on the 7th ultimo, communicating the draft of a treaty of commerce and navigation between Great Britain and Belgium, which the Belgian Government propose should be substituted for the Treaty of 1851, and the Fisheries Convention of 1852.

It appears that in return for certain concessions which the Belgian Government are prepared to make to the trade and navigation of the United Kingdom, a condition is required, which, although not forming a part of the draft treaty, is put forward as indispensable to its negotiation.

The condition in question is, that Her Majesty's Government should consent to take a part in a scheme for the capitilisation of the Scheldt toll. It is proposed that Her Majesty's Government should, by a protocol, to be signed simultaneously with the treaty agreed to, contribute a sum of money towards the redemption of the Scheldt Toll from the Netherlands, by means of a capitilisation to be estimated on the average amount received during the 10 years from 1851 to 1860 inclusive, from British shipping employed in navigating the river during that period.

On this point the undersigned has to observe that, although according to the IXth Article of the Annex to the Treaty of 19th April 1839, the shipping of all nations navigating the Scheldt is made liable to the toll, it has never in practice been levied on British shipping, nor so far as the undersigned is aware, upon that of any other nation; Belgium having in June 1839 passed a law by which she undertook to repay to foreign shipping the amount of the toll, reserving to herself the right of withholding such repayment from the shipping of countries with which treaties of reciprocity were not concluded, and having afterwards concluded treaties with foreign powers of which Great Britain was one, in which this repayment was guaranteed during the continuance of those treaties.

It appears, however, that these treaties are terminable within a certain time, at the option of either of the contracting parties, and the undersigned is not aware of anything which would prevent Belgium from repealing the law of 1839, and leaving this toll to fall upon all shipping navigating the Scheldt.

The undersigned has, however, to observe, that the practical immunity from the Scheldt toll of the ships navigating the river since it was imposed in 1839, renders it extremely difficult to find any basis for its capitilisation which would be considered as at all satisfactory.

The basis now proposed by Belgium, and which is calculated upon the average tonnage during the last 10 years, appears to be obviously inadmissible: 1st, because the amount of such tonnage has been doubtless very much larger than if the toll had been levied; and, 2dly, because there appears no reason to confine the calculation to the last 10 years of the existence of the toll.

The subject appears, however, to Her Majesty's Government to be far too complicated and important in itself to admit of its being entertained as the Belgian Government propose, in connection with a negotiation of a treaty of commerce, and they are of opinion that it should, if it is to be considered, be weighed on its own independent merits, and made the subject of a separate negotiation.

On these grounds Her Majesty's Government must decline to enter into the question of the capitalisation of the Scheldt duties as proposed by the Belgian Government.

As, however, the IVth Article of the Convention of Navigation lately concluded between Belgium and France, stipulated that "le pavillon Français continuera de jouir en Belgique du remboursement du droit de péage sur l'Escaut tant que le pavillon Belge en jouira lui-même," the undersigned has to state that there appears no reason why Belgium should decline to agree to a like stipulation when negotiating a commercial treaty with this country. Her Majesty's Government might then be free to negotiate with the Government of the Netherlands, to whom the toll is due, as well as with the Belgian Government.

The undersigned has only to add in conclusion that, on the other topics connected with the negotiation of a treaty, of which a draft has been communicated by M. Van de Weyer, Her Majesty's Government are ready to negotiate on the principle that each country should extend to the other

* This Enclosure is not printed.

App. No. 6.

other all the benefits and advantages of the most favoured nation.

The undersigned, &c.

(signed) *Russell.*

No. 23.

Sir *J. Emerson Tennent* to Mr. *Layard.*

Office of Committee of
Privy Council for Trade, Whitehall,
Sir, 27 December 1861.

WITH reference to the concluding paragraph of the note addressed by Earl Russell to M. Van de Weyer, enclosed in your letter of the 17th instant, expressing the readiness of the Government of Her Majesty to negotiate with the Government of Belgium on the topics unconnected with the question of the Scheldt toll, to which the draft treaty submitted by M. Van de Weyer relates, on the principle that each country should extend to the other most favoured nation treatment, I am directed by the Lords of the Committee of Privy Council for Trade, to request that you will call his Lordship's attention to the great injury which will result to British trade from any further delay in the prosecution of such a negotiation.

His Lordship is aware that for years past the special favour extended by Belgian legislation to certain French products and manufactures has been a source of just complaint, and the subject of constant remonstrance on the part of this country.

These complaints and remonstrances have been repeatedly met by the most distinct assurances given by the Belgian Government, that all inequality of treatment between French and British productions should cease and determine on the expiration of the engagements then subsisting between France and Belgium.

Instead of redeeming these assurances, the Belgian Government has recently concluded a commercial treaty with France, by which the special favour granted hitherto to some is extended to all goods of French origin; the whole Belgian tariff having been revised and reduced as regards French produce and manufactures.

The evil, therefore, of which Her Majesty's Government has so long complained is not only prolonged, but most seriously aggravated; and it is impossible not to foresee that the unnaturally small amount of British exports to Belgium will be still further contracted.

Under these circumstances, my Lords hope that Earl Russell will not allow the question raised by the Belgian Government, with respect to the redemption of the Scheldt toll, to be used as the means of delaying still longer the application to British trade of the tariff already given to France; and that the influence of Her Majesty's Government will be exerted to secure this result at the earliest possible moment.

I AM directed by Lord Russell to transmit t you an extract of a Despatch from Lord Howar de Walden, reporting a conversation wit M. Rogier regarding the answer which Her Ma jesty's Government have returned to the Belgia proposals for the negotiation of a commercia treaty.

I have, &c.
(signed) *E. Hammond.*

Enclosure in No. 24.

(No. 210.)

Lord *Howard de Walden* to Earl *Russell.*

(Extract.)

Brussels, 21 December 1861.

I HAD yesterday a conversation with M. Rogie on the subject of your Lordship's reply to M. Va de Weyer, on the view which Her Majesty' Government have taken of the proposals latel made by the Belgian Government, of which a cop was transmitted to me in your Lordship's Despatc of the 16th instant.

On my communicating the substance of it, h expressed himself extremely disappointed.

I impressed on M. Rogier that the carrying o the negotiations on the basis of the condition i question, *sine quâ non*, was utter loss of time; tha I had from the first told Baron de Vrière, and ha subsequently invariably repeated to himself, tha Her Majesty's Government would not treat upo the Scheldt tolls, as a condition bearing on th question of a claim for British commerce to b placed on an equality in Belgium with that o France; that the advantages granted under th British tariff to Belgian commerce were greate than those conceded by France, and that it wa quite impossible, under these circumstances, t admit the principle of a purchase of an equalit with France to which the country felt that it wa already so manifestly entitled.

I further remarked that M. Van de Weyer ha stated to your Lordship that I must have mis understood Baron de Vrière, as it had alway been intended that "equivalents" would be re quired from us as the price for the admission o British commerce under the tariff on the sam footing as that of France, whereas, he must b aware that such a pretension had never bee touched upon with me: that Baron de Vrière ha no doubt declared to me his wish that the pro jected treaty with Great Britain should so fa differ from that concluded with France as to be o a wide basis, including some arrangement fo reducing the charges on navigation; that he neve treated such an amplification as an "equivalent," but only as desirable, with a view to overcom reluctance or hesitation, originating in electora considerations on the part of some of their friend to support the treaty in the Chamber of Repre sentatives.

M. Rogier acknowledged that I was right abou the

the principle of "equivalents;" that in fact they applied to the question of the Dutch tolls and the Belgian tonnage and pilotage charge for which the capitalisation would be the "equivalent," but that it was most important, with a view to ensure the acceptance by the Chambers of tariff concessions, that they should be accompanied by a simultaneous arrangement about the Scheldt tolls, on which there existed a strong national feeling; that if the Catholics made a party question of the opposition to it the treaty would be rejected, which would be a very grave affair« that, without making the Scheldt question a condition in principle, it was so important a one with a view to ensure the sanction of the Chambers to the tariff concessions, that he was disposed to meet any wishes of Her Majesty's Government with regard to details, as to the periods of payment of the amount fixed upon representing the capitalisation; and I am disposed to infer that the basis also on which it should be calculated would readily be reconsidered.

With respect to the comparative advantages enjoyed by Belgian commerce in France and Great Britain, under their respective tariffs, M. Rogier noticed that, in point of fact, Belgium was placed in England only on an equality with other nations, whereas, in France she benefited by exceptional preferences; but this argument was disposed of at once, by my reminding him that the exceptional preference enjoyed by Belgium in France was temporary, and that this state of things could last only till new treaties should be concluded by France with other countries, by which they would be placed upon the same footing.

strongly in the sense of the letter from the Board of Trade, of which I gave him an extract as a memorandum, embodying the substance of the representations which had been made to you, and which were adopted by your Lordship, M. Rogier replied that he had nothing to say against the general correctness of the statement; that no one desired more cordially than he did to see the commerce of Great Britain placed on the same footing as that of France; that he perfectly understood the objection of Her Majesty's Government to accept the proposal for the capitalisation of the Scheldt tolls as the condition; that in consequence of our conversation of the 20th ultimo, as reported in my Despatch, No. 210, he had sent instructions to M. Van de Weyer to separate the negotiations, though for political considerations it was of the highest importance that the principle of the capitalisation of the Scheldt tolls should be accepted by protocol, or some formal act, before the Commercial Treaty should be submitted to the Chambers, though the details of the measure, as regards the basis for calculating the amount or periods of payments, say in two or three years, would be readily left to the loyalty of Her Majesty's Government to be treated hereafter.

M. Rogier added that he would be prepared at once to allow to the commerce of all countries adhering to the principle of the capitalisation, the proposed relief in regard to tonnage, pilotage, and port dues.

His Excellency informed me that he had lately received from different countries satisfactory answers to the proposal for capitalisation, in so far as their general tenor was a readiness to follow the course which might be adopted by Her Majesty's Government.

No. 26.

Mr. *Layard* to Sir *J. Emerson Tennent*.

Foreign Office,
Sir, 22 January 1862.

WITH reference to my letter of the 4th instant, I am directed by Lord Russell to transmit to you, to be laid before the Lords of the Committee of Privy Council for Trade, a copy of a Despatch from Her Majesty's Minister at Brussels, reporting a conversation with M. Rogier on the treaty recently concluded between Belgium and Turkey, together with a copy of a Despatch which Lord Russell has addressed to Lord Howard de Walden relative to the proposed Commercial Treaty with this country.

I am, &c.
(signed) *A. H. Layard.*

Enclosure 1, in No. 26.

(No. 9.)

Lord *Howard de Walden* to Earl *Russell*.

My Lord, Brussels, 14 Jan. 1862.

I HAD a conversation to-day with M. Rogier on the subject of your Lordship's Despatch, No. 3, of the 11th instant. I expressed to him the very unfavourable impression which had been made upon Her Majesty's Government by the Commercial Treaty

App. No. 6.

lately concluded between Belgium and Turkey. I laid the greatest stress upon its character, as almost offensive to Great Britain, when not only the actual concession made to France, but every future advantage whatever which might hereafter be granted to any nation, was to be extended to Turkish commerce without an equivalent, and this in face of a general duty of 8 per cent. levied on Belgian produce and manufacture under the Turkish tariff, while the same were admitted entirely free under the British tariff.

M. Rogier argued that the amount of Turkish imports was not practically a matter of the slightest disadvantage to British commerce; that though true that the provisions of the Belgian French Treaty had been extended to Turkish commerce and navigation, there was every wish that they should be adopted also for Great Britain; that in fact the negotiations were pending, that no principle was in opposition, and that special circumstances alone had rendered it politic to treat simultaneously another question; that he had however already instructed M. Van de Weyer to separate the negotiation for the Scheldt tolls capitalisation from that of the Commercial Treaty, and to guard specially against its assuming the character of a condition for the desired commercial arrangements with Great Britain, and that he would again write to him in the same sense.

I remarked to M. Rogier that the tenor of the Vth and XIXth Articles of the treaty, according to which Turkey would be entitled to every advantage hereafter allowed to the most favoured nation, would obviously interfere with the capitalisation by other nations of the Scheldt tolls; that this right had been conceded without any stipulation (as was usual in treaties of reciprocity), for advantages similar or equivalent to those granted by the other nation; that it was self-evident that even if Her Majesty's Government admitted the principle of capitalisation as a set-off against tonnage, pilotage, and port charges, it was impossible to carry out the realisation of the project, if other countries (as France and Turkey, for instance), were in virtue of existing treaties to be admitted freely to further special advantages, though subsequently distinctly purchased at a heavy price for herself by Great Britain.

M. Rogier acknowledged that this consideration might have weight, had not his overtures to other Governments on the subject of the proposed capitalisation been favourably received; that as regarded Turkey, she had adhered completely to the principle of capitalisation, as had Greece, Portugal, Brazil, and Chili; that the French Government was willing to follow the example of Great Britain; that in Sweden, where at first an indisposition to the capitalisation had been manifested, there also they were disposed to adopt the same course as Great Britain; that Russia was decidedly favourable; that in fact the only positive ill-will which had been manifested has been on the part of Prussia, though he had reason to believe she would not isolate herself from any general measure accepted by other countries. In fact, M. Rogier added, the realisation of this measure, so important in principle to Belgium, and so advantageous to commerce and navigation in general, might be deemed to depend entirely upon the favourable disposition of Her Majesty's Government. M. Rogier then repeated that the basis for calculation of the amount of capitalisation, and the periods of payments were to be made or not, say before two years, the proposed reduction in the Belgian charges should at once be carried into operation.

On my remarking to M. Rogier that the basis proposed for the capitalisation, viz., the average of the last 10 years, was neither satisfactory nor intelligible upon any principle; that for instance an average of the whole term during which the duties had been levied, would be perhaps more obviously the reasonable one, for it must be borne in mind that in fact the relief from the Scheldt tolls afforded under special law, had avowedly for object to promote (at the charge of the country), the development of the trade with Antwerp, and that therefore the increased amount of navigation which had thus unquestionably been brought about, gave an artificial result.

M. Rogier replied, that full latitude would be given to M. Van de Weyer to treat on the question of amount and terms; that what he held to mainly was, the effacing an act of hardship and humiliation which has been made to bear on Belgium, such as was at variance not only with the principles laid down at the Congress of Vienna for the promoting the free navigation of rivers, but even of those of the early French Republic, as applicable to the Scheldt when the navigation of the river had been thrown open to the world.

M. Rogier again declared that he anxiously desired to remove the impression that the capitalisation of the Scheldt tolls was proposed as a "condition" bearing on the spirit of the commercial question; that he wished this matter to be "treated" on its own separate merits, though unquestionably as regards the attitude of the Government towards the Chambers, the prospect of the settlement of the Scheldt question would be of the utmost importance in allaying the opposition of the commercial treaty, to which the Government was exposed.

I have, &c.
(signed) *Howard de Walden and Seaford.*

Enclosure 2, in No. 26.

(No. 7.)

Earl *Russell* to Lord *Howard de Walden.*

Foreign Office,
My Lord, 20 January 1862.

I HAVE received your Despatch, No. 2, of the 2d instant; and I am sorry to find that the concession of commercial privileges to England, similar to those which have been granted to France, still meets with obstructions.

M. Rogier cannot deny the general correctness of our statement; and he says that no one desires more cordially than he does, that the commerce of Great Britain should be placed on an equal footing with that of France, yet for political considerations, not very intelligible, he still refuses this fair and just proposition.

For in the commercial treaty between France and Belgium, there is an article providing that French ships should be free from the payment of the Scheldt tolls so long as Belgian ships should continue to be so. Great Britain is quite willing to insert a similar article in a commercial treaty with Belgium.

But

But the Belgian Government refuses to grant to Great Britain what Belgium has already granted to France. The Belgian Government says, as your Lordship reports, that for political considerations of the highest importance, whatever they may be, the principle of a capitalisation of the Scheldt tolls must be accepted by protocol or some formal act, before the commercial treaty can be submitted to the Chambers.

It is on account of political considerations of the highest importance, that the British Government must decline to accept this proposition. I will proceed to state to your Lordship what those considerations are: Great Britain has adopted towards all nations the most liberal commercial policy, she has made great sacrifices of revenue in order to diminish greatly or abrogate entirely, duties of customs on foreign commodities. After adopting this large and general scheme, she cannot make fresh sacrifices in order to purchase from each State separately, the advantages which are granted by each State to other nations.

There is probably no State which cannot bring forward some case of a river toll to be capitalised, or, in other words, to be abolished at the cost of the public revenues of Great Britain. Great Britain objects to such a preliminary condition; she objects to it especially as it has not been made an obstacle to the conclusion of a commercial treaty between France and Belgium. She claims therefore for the cottons and hardwares of this country what has been granted to the cottons and hardwares of France.

She does not pretend to say whether the commercial policy of Belgium shall be a policy of protection or free trade. When Belgium adheres to a policy of protection, Great Britain submits to the exclusions such a policy imposes; but when the policy of Belgium is a policy of free trade, she claims the benefit of admission to the markets which are thus opened. To the Belgian consumer, it can only be an advantage to purchase English goods when English goods are cheaper than those of other foreign nations already admitted.

What Great Britain claims, therefore, while it is a concession due to her in principles of justice and national amity, is a benefit to the Belgian consumer.

The manufactures of Belgium are already so improved and so excellent, that the competition of France is freely allowed by a treaty ratified by the Belgian Government, and sanctioned by the Belgian Chambers.

In the name of a friendly Power Her Majesty's Government asks for equal benefits to Great Britain.

Mr. *Murray* to Sir *J. Emerson Tennent.*

Foreign Office,
Sir, 31 January 1862.

I AM directed by Lord Russell to transmit to you, to be laid before the Lords of the Committee of Privy Council for Trade, the accompanying copies of Despatches* which have been received from Her Majesty's Minister at Brussels, respecting the proposed negotiations for a commercial treaty with Belgium, and the capitalisation of the Scheldt dues. I also enclose a copy of a Despatch I have addressed to Lord Howard de Walden.

I have, &c.
(signed) *James Murray.*

Enclosure 1, in No. 27.

Lord *Howard de Walden* to Earl *Russell.*

Brussels,
My Lord, 28 January 1862.

I LEARN from M. Rogier to-day that, in pursuance of his declarations to me, reported in my Despatch of the 14th instant, he had sent instructions to M. Van de Weyer to separate the negotiations in respect to the tariff from those regarding navigation.

He said he admitted that, however important it might be to the Belgian Government that the signature of the Tariff Convention should have been accompanied by some official act, having reference to the Scheldt tolls proposition, he nevertheless was sensible that if assuming the character of a condition bearing on the commercial concessions, it would be objectionable to Her Majesty's Government for this reason, he now proposed that the several navigation questions should be treated separately upon their distinct and respective merits, and that the idea of the simultaneous conclusion of the two treaties should be abandoned.

He then proceeded to explain that he desired that the reduction in tonnage, pilotage, and basin charges should become a general measure, and should include Ostend as well as Antwerp, and he added that the practicability of affording relief to the internal navigation of the country, which had formed the subject of a representation from me (as reported in my Despatch of 5th November 1861), could be taken into consideration at the same time.

M. Rogier further informed me that he had received a satisfactory letter from Mr. Seward, evincing a most favourable disposition towards the proposal for the capitalisation of the Scheldt tolls, though reserving his official declaration on the subject until he should receive an answer to a reference made by him to the United States Minister at the Hague, with a view to ascertain how far the project was agreeable to, or not, to the Netherlands.

Enclosure in No. 30.

(No. 16.)

Earl *Russell* to Lord *Howard de Walden.*

Foreign Office,
My Lord, 10 March 1862.

I informed you in my Despatch, No. 7, of the 21st of January, that Her Majesty's Government declined, for the reasons then alleged, to make the negotiation of a commercial treaty with Belgium in any way dependent upon the capitalisation of the Scheldt dues; and in my Despatch, No. 10, of the 31st January, I told you that Her Majesty's Government were ready to negotiate a commercial treaty, provided that subject were kept entirely distinct.

In further explanation of this last-mentioned Despatch, I have to state to you that Her Majesty's Government wish to negotiate a commercial treaty on the basis of the admission of this country to the same advantages as those which France now enjoys by treaty. They are ready to consider any cases which seem to the Belgian Government to require special modifications of the French treaty.

They desire, however, to come to the consideration of the questions relating to the Scheldt dues quite free from any engagement. They cannot consent to make any condition in relation to the capitalisation of the Scheldt dues before negotiating a commercial treaty.

That subject must remain for future discussion between Her Majesty's Government and that of the King of the Belgians.

Enclosure in No. 31.

Lord *Howard de Walden* to Earl *Russell.*

(Extract.)

Brussels, 13 March 1862.

I COMMUNICATED to M. Rogier yesterday your Lordship Despatch, No. 16, of the 10th instant. His Excellency expressed strong disappointment at the resolution taken by Her Majesty's Government to postpone all the negotiation on the proposed Treaty of Navigation.

I reminded him that I had always, from my very first interview with him, impressed upon him, as I had endeavoured to do upon his predecessor, Baron de Vrière, that Her Majesty's Government could not on principle admit of the question of capitalisation being treated as a condition of that equality with France, to which they considered British commerce to be entitled in Belgium.

M. Rogier replied, that he must admit that he had at once been sensible that the capitalisation proposition should not have been made as a condition in the commercial treaty; that he had endeavoured to disengage the project from that character; that he had desired that the details of the proposed capitalisation should be treated on its own merits as a navigation question; and be considered in regard, 1st, to the origin of the tolls; 2d, to the terms offered in return; 3d, to the political influence of satisfaction in the national feeling of Belgium which would ensue from the solution of the grievance. He remarked that he did not understand why Her Majesty's Government should object to negotiate a treaty of navigation simultaneously with that of commerce with Belgium; that France was at this moment negotiating three treaties at Berlin, all bearing on each other—one for commercial matters; a second for navigation; and a third for regulating and facilitating railway intercourse between France and Germany. That since the idea of capitalisation had first been mooted, the principle had been acceded to by almost all countries with which Belgium had commercial relations; and he further laid stress upon the last proposition he had made, and which was limited to obtaining the assurance of the good offices of the British Government with other countries in behalf of the principle of the measure, leaving the details for future negotiation.

I recalled his Excellency's attention to the commercial feature of your Lordship's Despatch, and to the declaration of Her Majesty's Government in regard to their readiness "to consider any cases which seem to the Belgian Government to require special modification of the French treaty."

No. 32.

Mr. *Layard* to Sir *J. Emerson Tennent.*

Foreign Office,
Sir, 8 April 1862.

I AM directed by Lord Russell to transmit to you, for the information of the Lords of the Committee of Privy Council for Trade, copies of correspondence, as noted in the margin, relative to the negotiation of a commercial treaty with Belgium, and the capitalisation of the Scheldt dues.

I have, &c.
(signed) *A. H. Layard.*

Enclosure in No. 32.

Earl *Russell* to M. *Van de Weyer.*

Foreign Office,
M. le Ministre, 7 April 1862.

I THANK you for the communication of the speech of the Belgian Minister for Foreign Affairs contained in the "Moniteur Belge" of the 4th instant.

I am glad to take this opportunity of stating to you the decision of Her Majesty's Government on the important matters we have discussed together.

Her Majesty's Government are ready to negotiate both a treaty of commerce and a treaty of navigation with Belgium. Her Majesty's Government would be ready to consider in the treaty of navigation, or as a separate measure, upon such principles as they may deem to be equitable, any plan for the capitalisation of the Scheldt dues which the Belgian Government might propose.

But Her Majesty's Government cannot consent to allow the concession to Great Britain of privileges equal to those granted to other nations to be in any way dependent on the success of a scheme for the capitalisation of the Scheldt dues.

It has not been so with France, and ought not to be so with England.

I am, &c.
(signed) *Russell.*

No. 33.

Mr. *Hammond* to *Sir J. Emerson Tennent.*

Sir, Foreign Office, 12 April 1862.

I AM directed by Lord Russell to transmit to you, to be laid before the Lords of the Committee of Privy Council for Trade, the accompanying copies of two Despatches which have been received from Her Majesty's Minister at Brussels, relative to the projected commercial treaty with Belgium, and to the question of the capitalisation of the Scheldt dues.

I am, &c.
(signed) *E. Hammond.*

Enclosure 2, in No. 33.

(No. 64.)

Lord *Howard de Walden* to Earl *Russell.*

My Lord, Brussels, 11 April 1862.

THE accounts from Ghent are very unsatisfactory; the distress among the cotton manufacturers is increasing; subscriptions have been raised in behalf of the sufferers, and the Government, as well as the Municipality, have undertaken earthworks connected with the railway, and other contemplated town improvements, with a view to afford employment to unoccupied artisans.

These resources only afford temporary alleviation; and there being no poor law in this country, the position of the industrial classes at such moments of stagnation in business becomes most distressing, is a very serious calamity, and is a source of great danger in regard to public tranquillity.

M. Rogier told me that a new cry had been raised at Ghent among the adversaries to the admission of British cotton manufactures under an equality with those of France. They complain of the mischievous effect already caused by competition with France, though testing the inferiority of the French cotton industry as compared to that of Great Britain, by the protecting duty allowed on British cotton under the French and British Treaty Tariffs, and they claim that for certain goods no lower duties should be admitted in the new tariff than those levied in France on similar products.

M. Rogier remarked that upon certain cotton manufactures, the produce of Ghent industry, it would be quite impossible to treat upon reductions equal to those which had been conceded, perhaps too hastily, to France, except in distant prospective.

* The second of these Despatches is not printed.

Enclosure in No. 34.

(No. 75.)

Lord *Howard de Walden* to Earl *Russell.*

My Lord, Brussels, 28 April 1862.

I ASKED M. Rogier, three days ago, whether he had sent any instructions to M. Van de Weyer in reply to the communication of your Lordship's note, addressed to him on the 7th of April.

His Excellency replied that he had not as yet done so, as he was awaiting a report from M. du Jardin, the Belgian Minister at the Hague, of the result of a conference between him and the Netherlands Minister for Foreign Affairs, before he could draw up modified propositions to be laid before Her Majesty's Government by M. Van de Weyer.

The prospect at least of some arrangement for the capitalisation of the Scheldt toll continues to be practically an essential consideration bearing on the tariff negotiations, M. Rogier having declared that he desires to treat that subject in the fairest spirit, and that he is prepared to make sacrifices to meet the views of Her Majesty's Government as to the terms Her Majesty's Government may consider equitable. It would probably save much time, and facilitate an early decision, if (in case the capitalisation is admissible at all) some distinct offer were made, either as to precise terms, such as would be acceptable, or even as to the principle to serve as bases for ulterior negotiations.

I have, &c.

No. 35.

Mr. *Layard* to Sir *J. Emerson Tennent.*

Sir, Foreign Office, 2 May 1862.

I AM directed by Lord Russell to transmit to you, to be laid before the Lords of the Committee of Privy Council for Trade, the accompanying copy of a Despatch which has been received from Her Majesty's Minister at Brussels, reporting his conversation with the Belgian Minister for Foreign Affairs, respecting the proposed commercial treaty, and the question of the capitalisation of the Scheldt tolls.

I am, &c.
(signed) *A. H. Layard.*

Enclosure in No. 35.

(No. 78.)

Lord *Howard de Walden* to Earl *Russell.*

My Lord, Brussels, 30 April 1862.

LEARNING yesterday from M. Rogier that he had not yet received any report from M. du Jardin of the contemplated conference with the Netherlands Minister, I pressed him to lose no more time in furnishing M. Van de Weyer with instructions to re-open the negotiations for the treaties with Great Britain.

His Excellency replied that M. Van de Weyer had, in fact, information sufficient for that purpose. He admitted that he hardly expected that any modifications which could be obtained from the Netherlands Government, in the terms they required for the capitalisation of the Scheldt tolls, would

would be such as would be likely to meet the views of Her Majesty's Government; that, in consequence, as Belgium would have to make up the difference, he would suggest that Her Majesty's Plenipotentiaries should present at once a counter project, embodying either the terms themselves, or the principle which might appear equitable and acceptable to Her Majesty's Government for the proposed capitalization.

He remarked that, this point settled, 48 hours would be sufficient to specify the classes of cotton industry to be expected for the moment from the application of the Franco-Belgian Tariff, and to bring to a satisfactory conclusion the Commercial Treaty.

M. Rogier told me that he contemplated making exactly similar propositions to the Prussian Government. In recurring to the question of the Scheldt tolls capitalization, he laid stress upon the consideration that the proposition was not brought forward as a new idea in the character of a condition, but that the principle had been laid down and adopted by a preceding Government, and had even been acted upon so far back as 1857, as to accept by treaty for Belgium the obligation to pay Holland on behalf of Denmark, and subsequently of Hanover, the share which might be ascribed to either country under the eventual capitalization of the said tolls; that as facilities bearing on the navigation of foreign countries were under consideration, the opportunity was an obvious one for effecting at once a comprehensive arrangement from which the commerce of all would derive very material benefit, and that the desired measures, which had been communicated to other governments, had in general been perfectly well received.

(signed) *A. H. Layard.*

Enclosure in No. 36.

(No. 85.)

Lord *Howard de Walden* to Earl *Russell.*

My Lord, Brussels, 6 May 1862.

I HAVE had a conversation with M. Rogier on the subject of your Lordship's Despatch, No. 31, received this morning.

He explained that I had not correctly understood what he had said with reference to the required consent of other countries to the proposed capitalization treaty; that under their treaties they would not be entitled to claim the exemption from payment of the Scheldt tolls, though they would have a right to benefit by the reduction in the tonnage, pilotage, and basin dues, which would constitute the set-off against the capitalization arrangement in the treaty with Great Britain whenever it should take place; that on the cessation of the existing Commercial Treaty with Great Britain they could no longer claim the payment by Belgium of the Scheldt tolls on account of their vessels, and that Belgium would no longer pay them for those countries which refused to accept the capitalization project.

With regard to the impression conceived by Her Majesty's Government that the Belgian Government desired to bind Great Britain to the capitalization measure independently of the commercial concessions, he distinctly replied affirmatively to my question, whether I understood him correctly that unless the Treaty of Commerce were signed there was to be no capitalization ("pas de Traité de Commerce, pas de capitalization").

Enclosure in No. 37.

(No. 95.)

Lord *Howard de Walden* to Earl *Russell.*

My Lord, Brussels, 12 May 1862.

ON receipt of your Despatch of the 9th instant, I at once addressed myself to M. Rogier, with a view to obtain a clear declaration in reply to the question put by your Lordship.

M. Rogier's first remark was that he did not understand the object of this renewed reference; that it appeared to him that the declaration contained in your Lordship's note to M. Van de Weyer was sufficient for the Belgian Government; but on my pressing him to authorise me to convey such acceptance of it to your Lordship he hesitated, and requested time to consider the exact terms in which he should reply to your Lordship's question.

I impressed strongly upon him that Her Majesty's Government could not admit of the Scheldt toll capitalization being connected conditionally withthe tariff negotiation; that to avoid this

App. No. 6.

character, the measure must be a general and a prospective one, to be treated and considered with reference to its own distinct and peculiar nature as to origin, action on navigation and commerce, precedent as to capitalization more or less of similar character, and necessary collateral understanding between the Belgian and Netherlands Governments. M. Rogier renewed his often-repeated assurances of his desire that the question should be treated on its own exclusive merits, adding the expression of his confidence that, disposed as he was to accept such terms as might be deemed only fair and equitable, he should be confident of ulterior success if Her Majesty's Government would accept the consideration of it on principle, when there would be nothing to interfere with the immediate and separate negotiation and signature of the Treaty of Commerce.

Enclosure 1, in No. 38.

(No. 99.)

Lord *Howard de Walden* to Earl *Russell.*

My Lord, Brussels, 13 May 1862.

WITH reference to my Despatch, No. 95, of yesterday's date, I herewith transmit a copy of a note which I have just received from M. Rogier, confirming the declaration which he seemed then disposed to make to me.

I have, &c.
(signed) *Howard de Walden and Seaford.*

Enclosure 2, in No. 38.

M. *Rogier* to Lord *Howard de Walden.*

My Lord, Bruxelles, le 13 Mai 1862.

VOTRE Excellence a bien voulu me poser la question que je vais reproduire textuellement :—

"Quand M. Van de Weyer a communiqué au Gouvernement de la Reine les vues du Gouvernement Belge touchant capitalisation des péages de l'Escaut, entendait il que la négociation du Traité du Commerce serait alors poursuivie ou qu'elle serait différée jusqu'à ce que les deux Gouvernements se fussent mis d'accord sur la base de la capitalisation? Dans ce dernier cas, non seulement il pouvait en résulter des délais interminables, mais cela serait en opposition avec les précédentes communications de M. Van de Weyer dans lesquelles une promesse de négocier ou de concourir ou de prêter ses bons offices en faveur de la capitalisation des péages de l'Escaut était tout ce qui était demandé."

Je m'empresse de déclarer à votre Excellence que le Gouvernement du Roi a regardé comme satisfaisante la déclaration renfermée relativement à la capitalisation des péages de l'Escaut dans la lettre adressé par Lord Russell à M. Van de Weyer le 7 Avril dernier.

Notre intention est donc de poursuivre la négociation du Traité de Commerce et non pas de le tenir en suspens jusqu'à ce qu'on at vidé toutes les questions de chiffres qui peuvent se rattacher à la capitalisation du péage de l'Escaut.

(signé) *Ch. Rogier.*

Enclosure 3, in No. 38.

(No. 35.)

Earl *Russell* to Lord *Howard de Walden.*

My Lord, Foreign Office, 16 May 1862.

I HAVE received your Lordship's Despatch, No. 99, of the 13th instant, enclosing copy of a note from M. Rogier, in which his Excellency states that the Belgian Government consider as satisfactory the declaration regarding the Scheldt duties which was contained in my note to M. Van de Weyer of the 7th of April last.

Under these circumstances Her Majesty's Government expects that M. Van de Weyer will receive instructions to negotiate without further delay the Commercial Treaty.

No. 39.

Mr. *Hammond* to Mr. *Booth.*

Sir, Foreign Office, 17 May 1862.

I AM directed by Lord Russell to transmit to you, to be laid before the Lords of the Committee of Privy Council for Trade, the accompanying copy of a despatch which has been received from Her Majesty's Minister at Brussels respecting the commercial negotiations with Belgium, and the intention of Belgium to enter into the negotiation of a Commercial Treaty with Prussia.

I am, &c.
(signed) *E. Hammond.*

Enclosure in No. 39.

(No. 101.)

Lord *Howard de Walden* to Earl *Russell.*

My Lord, Brussels, 16 May 1862.

M. ROGIER informed me yesterday that the instructions for M. Van de Weyer were nearly ready

ready, and would be forwarded to him without delay. He expressed himself extremely anxious that the negotiations for the Treaty of Commerce should be brought to a satisfactory conclusion with as little delay as possible, on account of the advanced period of the Session. He also told me that the Belgian Government were about to open negotiations with Prussia, to be conducted on exactly the same basis as those with Great Britain, and that the instruction to be sent to M. Nothomb, the Belgian Minister at Berlin, would be the counterpart of those drawn up for M. Van de Weyer in regard to commerce as well as to navigation, including the contingency of the eventual capitalization of the Scheldt tolls.

I have, &c.

No. 40.

Mr. *Layard* to Sir *J. Emerson Tennent.*

Sir, Foreign Office, 5 June 1862.

I AM directed by Earl Russell to transmit to you, to be laid before the Lords of the Committee of Privy Council for Trade, the accompanying copy of a note which has been received from the Belgian Minister in this country, containing proposals as to the negotiation of a Commercial Treaty with this country.

I am, &c.
(signed) *A. H. Layard.*

Enclosure in No. 40.

M. *Van de Weyer* to Earl *Russell.*

50, Portland-place,
My Lord, le 3 Juin 1862.

LE Gouvernement du Roi se plaçant sur le terrain indiqué par la note de votre Seigneurie en date du 7 Avril dernier, au sujet des négociations commerciales entre la Belgique et la Grande Bretagne, a préparé et m'a chargé de remettre à votre Seigneurie le projet de Tarif transitoire ci-joint (A.),* qui, le Gouvernement du Roi n'en saurait douter, ne peut manquer de recevoir l'adhésion des negociateurs de Sa Majesté Britannique.

Dès le 1 Janvier prochain, époque à laquelle deviendrait exécutoire l'Article du Traité relatif aux fils de tissus dont il s'agit, le Tarif Belge subirait une premiére et forte réduction.

Pendant trois ans les droits continueraient à descendre successivement, pour arriver, le 1 Janvier 1866, au taux fixé par le Tarif Franco-Belge du 1er Mai.

Il n'échappera pas à votre attention, my Lord, que dans son Traité avec la France, le Zollverein a stipulé un délai de trois ans en faveur de plusieurs de ses industries.

La Grande Bretagne traitera sur le même pied avec l'Association Allemande, elle ne se montrera pas plus rigoureuse pour la Belgique, qui ne réclame de répit que pour une seule industrie, et qui se trouve aux prises avec des difficultés qui ne sont ni contestables ni contestées. App. No. 6.

Je suis chargé d'ajouter, my Lord, que la formule A ci-jointe est proposée également à l'Allemagne et à la Suisse, pays avec lesquels la Belgique est en négociations, et les seuls avec l'Angleterre contre lesquels nos fabricants aient besoin d'une sauvegarde provisoire.

Enfin je prierai votre Seigneurie de vouloir bien remarquer que si les droits d'entrée en Belgique sur les fils de coton Anglais n'arrivaient pas immédiatement à leur taux normal, ils descendront néanmoins au 1 Janvier 1866, au-dessous du chiffre des droits qu'acquittent les mêmes fils à leur importation en France. Cette inégalité de conditions à l'entrée en France et en Belgique est un des sérieux griefs allégués par nos filateurs.

Le Tableau A est rédigé de manière à pouvoir prendre place dans l'Article XIII de notre Projet de Traité. Pour en faciliter l'examen et l'appréciation j'y ai joint un Tableau B* qui indique :—

1. Le Tarif Général Belge sur les fils et les tissus de coton.
2. Le Tarif du Traité entre la Belgique et la France; et
3. Le Tarif du Traité entre la Grande Bretagne et la France pour les mêmes produits.

J'ai, &c.
(signé) *S. Van de Weyer.*

No. 41.

Sir *J. Emerson Tennent* to Mr. *Layard.*

Office of Committee of
Privy Council for Trade, Whitehall,
Sir, 11 June 1862.

I HAVE laid before the Lords of the Committee of Privy Council for Trade your letter of the 5th instant, transmitting, by direction of Earl Russell, a copy of a note from the Belgian Minister at this Court, containing a statement of the terms upon which the Belgian Government proposes to admit those articles of British manufacture from which they desire to withhold the benefit of the Tariff which they have recently conceded to France.

Lord Russell is aware that in February last the Belgian Government made proposals to Her Majesty's Government with a view to the conclusion of a commercial treaty by which that tariff would have been extended to the United Kingdom, except as regards three articles of British manufacture, viz. :—

1. Cotton twist.
2. Cotton prints.
3. Tissues of wool mixed with cotton.

Upon these manufactures it was proposed to maintain higher duties than upon the like manufactures of France until the 1st of January 1864, at which date they were to be admitted on equal terms, with an optional reservation in regard to cotton prints.

In their letter of the 23d of November, my Lords expressed the strong objection which they entertained to the principle of these exceptions, and although (limited as they were both as to number and time) they were unwilling to advise that all negotiation upon such a basis should be refused, they were nevertheless of opinion that even

* These Enclosures are not printed.

App. No. 6.

even these reservations were too important to be admitted without some modifications.

It has been, therefore, with much surprise that my Lords have received the present proposals from the Belgian Government. Instead of being confined, as the proposals of February are confined, to three branches of manufacture, differential duties of about 30 per cent. are extended to every department of the cotton trade—single yarns of all kinds, warped, bleached, and dyed yarns of all kinds, and tissues of cotton of all kinds, unbleached, bleached, and dyed; and although a progressive reduction is provided in the amount of these differential taxes, the final period of assimilation is postponed from January 1864 to January 1866.

The proposition, therefore, now before Her Majesty's Government amounts to nothing less than this: whether, after the repeated assurances which have been given them by the Belgian Government, and in face of the unprecedented liberality of the British Tariff to Belgian manufacturers, they can agree to a treaty by which every branch of the cotton industry of this country, and the most extensive department of the worsted trade, will be subjected in Belgium to heavy differential duties until 1866.

My Lords are of opinion that the wide extension, both in number and duration, given to these exceptions by the present proposal, removes all doubt as to the course which Her Majesty's Government should take with respect to M. Van de Weyer's communication.

They would have been extremely unwilling, on principle, especially with reference to future negotiations with other countries, to sanction by treaty the maintenance of differential duties against British manufactures, even if they had been confined to one or two articles for a limited time; but when these are made to apply for so long a period as three years and a-half to every branch of our greatest national industry, as well as to the mixed fabrics of Yorkshire, which constitute a large and separate interest, they can no longer hesitate to recommend the unqualified rejection of the Belgian proposals.

My Lords have on so many former occasions expressed their strong sense of the impolitic and unfriendly course which has been taken by the Belgian Government throughout these negotiations, that they can add nothing to what has been already said, but they think that the Belgian Government should now be informed that Her Majesty's Government cannot consider their refusal to conclude a treaty sanctioning a system of duties against which they have already protested, as affording any valid reason to Belgium for withholding from British trade the whole of the tariff which has been given to France, and promised simultaneously to England.

Her Majesty's Government extended unconditionally and simultaneously to Belgium the tariff reductions which they gave to France by the Treaty of 1860.

My Lords are unaware of any cause which precludes the Belgian Government from giving to this country by law the benefit of the reductions which they are prepared to make by treaty, and if, owing to the supposed necessities of the cotton industry of Ghent, the Belgian Government persists in withholding from the products of Lancashire and Yorkshire, affected as they are by the same causes, that equal treatment which Her Majesty's Government were entitled to expect for them, my Lords see no reason why that Government should not, at all events, extend by law to all other British commodities the tariff which they have given to France by the Treaty of 1861.

I have, &c.
(signed) *J. Emerson Tennent.*

No. 42.

(Immediate.)

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Sir, Foreign Office, 12 June 1862.

With reference to your letter of yesterday I am directed by Earl Russell to request that you will ask the Lords of the Committee of Privy Council for Trade whether by the unqualified rejection of the proposed treaty Her Majesty's Government will best serve British manufacturing interests.

Or whether, by offering two years' delay for—1. Cotton twist; 2. Cotton prints; before equality is established, they may not serve British woollen manufacturers, and leave cotton goods in a position at least as good as they would otherwise obtain.

I am, &c.
(signed) *E. Hammond.*

No. 43.

Sir *J. Emerson Tennent* to Mr. *Hammond.*

Office of Committee of
Privy Council for Trade, Whitehall,
Sir, 14 June 1862.

In reply to your letter of the 12th instant on the subject of the commercial negotiations with Belgium, I am directed by the Lords of the Committee of Privy Council for Trade to request that you will inform Earl Russell that in recommending the unqualified rejection of the Belgian proposals contained in M. Van de Weyer's note of the 3d instant, they understood the question before them to be whether Her Majesty's Government should or should not agree to make even greater concessions to the Belgian Government than they were asked to make in February last, the exceptions which were even then proposed having been already, in the opinion of this Board, too important to be admitted without some modifications.

Lord Russell, however, now desires the opinion of this Board as to whether Her Majesty's Government would not better serve British manufacturing interests, by offering to Belgium the maintenance of the proposed differential duties upon cotton twist and cotton prints for a period of two years; in other words, to propose important modifications in the Belgian proposals of February last.

In reply to the question my Lords can only revert to the opinion which they expressed in their letter of the 23d November last upon the proposal in question, and state that if Earl Russell is of opinion that the admission of these exceptions will not affect unfavourably any future negotiations with third countries which may claim similar concessions, and if he has reason to think that the Belgian

Belgian Government will be ready to make such remarkable deductions from their recent demands as to limit the differential duties against British manufactures, both in number and duration, in the manner suggested by Earl Russell, they would not be prepared to recommend that her Majesty's Government should refuse its assent to the proposed Commercial Treaty with Belgium.

In order to enable Lord Russell to form some estimate of the relative scope of the three different proposals which have been made, I am to request that you will call his attention to the following figures, showing the total value of the branches of our export trade which will be respectively affected by them:—

Belgian Proposals of February last.

	£.
Cotton Twist, estimated at -	1,500,000
Cotton Prints, about -	12,800,000
Mixed Stuffs, &c. - -	4,234,442
Total - - £.	18,534,442

Belgian Proposals of June.

	£.
Cotton Yarn and Twist - -	9,292,841
Cotton Manufactures of all kinds,	37,543,908
Mixed Stuffs, &c. - - -	4,234,442
Total - - £.	51,071,191

Lord Russell's present Proposals.

	£.
Cotton Twist - - - -	1,500,000
Cotton Prints - - - -	12,800,000
Total - - £.	14,300,000

It must, however, be observed that the markets of Europe are not of the same relative importance to the British cotton-print trade as to the other branches of our export trade which would be affected by any of these proposals, the bulk of the former being destined for the Indian, China, the Levant, and the South American trades.

The difference, therefore, between Lord Russell's proposal and the Belgian proposals of February last is much greater, in reality, than is represented by the figures given above.

I am to add, with reference to M. Van de Weyer's remark in his note of the 3d instant, that the Belgian Government intends to propose similar exceptions to the Governments of the Zollverein and Switzerland; that so far as regards the former Government, my Lords are informed that it is in the highest degree improbable that they will be admitted; and they apprehend that England will be the only country against which differential duties will be enforced.

They think, therefore, that if Her Majesty's Government should decide on submitting to this exceptional treatment, they should at all events insist on the removal of all the other remaining inequalities which still press with unjust severity upon British trade with Belgium.

Among these, as Lord Russell is aware, one of the most serious is the differential duty charged upon salt imported into Belgium by British ships.

By the recent treaty with France, Belgium has assimilated the French to the national flag in this respect, and if Her Majesty's Government is not prepared at once to enter upon the negotiation of the Navigation Treaty which has been proposed by Belgium, and which would have conferred an equal privilege on British shipping, my Lords would strongly urge upon Earl Russell the importance of endeavouring to secure this object by means of a stipulation to be inserted in the Commercial Treaty. App. No. 6.

I have, &c.
(signed) *J. Emerson Tennent.*

P.S.—I am to add that if the present negotiations are confined to the Commercial Treaty, it will be necessary to omit from it Article XII., by which the Treaty of Commerce and Navigation of 1851, and the Fisheries Convention of 1852 would be abrogated.

Mr. *Layard* to Mr. *Booth.*

Sir, Foreign Office, 30 June 1862.

I am directed by Earl Russell to request that you will state to the Lords of the Privy Council for Trade that although, as their Lordships are aware, Her Majesty's Government have declined the late proposals of the Belgian Government connected with the proposed commercial negotiations, his Lordship would be glad to learn the opinions of the Board on the general proposals of the Belgian Government as embodied in the drafts of conventions lately communicated to the Board of Trade. I am, therefore, to request that you will move the Board to favour Lord Russell with their views in this matter.†

I am, &c.
(signed) *A. H. Layard.*

App. No. 6.

No. 46.

Mr. *Layard* to Mr. *Booth*.

Sir, Foreign Office, 3 July 1862.

With reference to my letter of to-day, I am directed by Earl Russell to request that you will inform the Lords of the Committee of Privy Council for Trade, that M. Van de Weyer states that he is now ready to communicate M. Rogier's last proposals to Her Majesty's Government; and Lord Russell trusts that their Lordships are equally ready to give their opinion upon the proposals already before them in detail, in order that the question may be considered without loss of time.

For the more complete information of the Lords of the Committee of Privy Council for Trade, a copy* of the printed correspondence on this subject up to the latest date is herewith enclosed.

I am, &c.

No. 47.

Sir *J. Emerson Tennent* to Mr. *Layard*.

Office of Committee of
Privy Council for Trade, Whitehall,
Sir, 5 July 1862.

With reference to Earl Russell's desire, expressed in your letter of the 30th of June, that he may receive the opinion of this Board on the general proposals of the Belgian Government embodied in the drafts of conventions which were communicated to Her Majesty's Government in February last, I am directed by the Lords of the Committee of Privy Council for Trade to request that you will submit to his Lordship the following observations:—

The draft Treaty of Commerce consists of 14 articles, with an additional article having reference to the Ionian Islands.

Article I. may, in the opinion of my Lords, be admitted as it stands.

Article II., same remark.

Article III. corresponds with the articles respecting importation and exportation in the recent treaties concluded or proposed by Her Majesty's Government; and although the wording appears to my Lords not very convenient, they see no objection to its adoption.

Article IV. may be admitted.

Article V. stipulates for certain reductions in the duty upon chicory and hops in the United Kingdom, to which the Lords of the Treasury object. A copy of their Lordships' letter to this Board on this subject is herewith enclosed.

Article VI., which has reference to the transit trade, appears to my Lords misplaced, and not sufficiently comprehensive. They would propose that it should be made to follow Article II. in order, and that the terms should be as follow:—

"Equality of treatment in regard to warehousing and to the transit trade, and also in regard to bounties, facilities, and drawbacks, shall be enjoyed by the subjects of the high contracting parties reciprocally."

Article VII. may, in the opinion of this Board, be admitted.

Article VIII., stipulating for the reciprocal admission of the fishermen of the two countries to their territorial seas, is one which my Lords, for the reasons stated in their letter of the 23d November last, cannot advise Lord Russell to entertain.

Article IX., which has reference to trade marks and designs, appears to my Lords to be free from objection; but Article X., which provides for the reciprocal deposit of trade marks, models, and designs, requires a condition which, so far as regards trade marks, the present laws of this country do not enable Her Majesty's Government to impose, as there is no registration for trade marks in the United Kingdom.

Article XI. may be accepted.

Article XII. provides for the termination of the Treaty of Commerce and Navigation between this country and Belgium of 1851, and of the Fisheries Convention of 1852, ten days after the exchange of the ratifications of the proposed treaty.

Upon this article I am to observe that, unless the proposed Navigation Treaty be simultaneously concluded by Article XV., of which the objection would be met, it will probably not be desirable to forego the right to the repayment of the Scheldt toll, guaranteed to British ships by Article VII. of the Treaty of 1851, during a period of 12 months from its denunciation.

I am to add that under Article II. of the Fisheries Convention of 1852, British oysters destined for the national beds are admitted into Belgium at a duty of 1 franc per 100 francs value, and that under the tariff annexed to the Treaty between France and Belgium of May last, and which would be applicable to British oysters under the proposed Treaty of Commerce, they would be liable to a duty of 10 per cent. per 100 kilogrammes, a rate very much exceeding 1 per cent. on the value. Stockfish, which is admitted under the Convention of 1852 at 1 franc the 100 kilogrammes, would under the new tariff pay 1 franc 50 centimes per 100 kilogrammes. Some precaution should, therefore, be taken, if this Convention be abrogated, to guard against an augmentation of duty upon these articles of British export.

It must also be recollected that if Article VIII. of the present draft be rejected it will be necessary to provide for the duty upon British codfish, which is at present regulated by Article II. of the Fisheries Convention, and is not provided for in the Tariff given to France.

Article XIII. has reference to certain reservations of the Tariff which has been extended to France. Upon these my Lords have already expressed their opinion, and as they understand that they are still the subject of negotiation between the two Governments, it is not necessary to comment upon them on the present occasion.

Article XIV. is the usual formal article providing for the exchange of ratifications, and the additional article with reference to the Ionian Islands calls for no observation.

In conclusion, I am to suggest that the usual "most favoured nation" Article should be inserted in the treaty as a distinct and general stipulation.

Subject to these remarks, my Lords see no objection to the conclusion of the proposed Treaty of Commerce; but if Earl Russell is of opinion that such an attempt can be made, they would suggest

* This Enclosure is not printed here.

suggest that Her Majesty's Government should endeavour to obtain some reduction in the duties upon alkali and chloride of lime, if not its entire abolition, and also in those upon glass and earthenware, which, under the tariff given to France, are still so high as to preclude the hope of an extensive trade from this country, and which have been the subject of representations from British manufacturers.

I am also to refer to the remarks contained in my letter of the 14th June, on the subject of the discriminating duty on salt imported into Belgium under the British flag.

As regards the draft Treaty of Navigation, which consists of 19 Articles, the only Articles which appear to call for observation are Articles IX., X., XII., XIII., XVI., and XVIII.

Article IX., which relates to the coasting trade, is one which although in principle my Lords would be quite disposed to admit, is not consistent with the existing legislation of this country, in respect of the coasting trade of the British Colonial Possessions. On this subject, my Lords beg to refer to the remarks contained in their letter of the 23d November last.

Article X. is also included in the Commercial Treaty, and has been already adverted to in the preceding part of this letter.

Article XII. On this article also my Lords must refer for their remarks upon Article XXI. of the former draft Treaty submitted by the Belgian Government, which are contained in their letter of the 23d November.

Under existing legislation it cannot be admitted in its present shape; and my Lords would suggest the substitution of an article in the terms of Article XVII. of the Treaty between this country and Russia of 5 January 1859.

Article XIII. In the concluding paragraph of this article it is desirable to insert the words "de douane" after the word "droits."

Article XVI. The acceptance of this article must, of course, depend upon the course taken by Her Majesty's Government with respect to the proposed capitalization of the Scheldt toll.

Article XVIII. abrogates the Treaty of 1851 and the Fisheries Convention of 1852, and is subject to the remarks contained in this letter on Article XII. of the draft Treaty of Commerce.

Lord *Howard de Walden* to Earl *Russell.*

My Lord, Brussels, 29 July 1862.

THE Treaty between Great Britain and Belgium, signed in London on the 23d instant, will be referred to-morrow to Committees of the Chamber of Representatives. The House will be then adjourned for a short time (10 days or a fortnight) until the Reports of the Committees are ready for consideration.

The industrial interests at Ghent and Brussels, affected by the reduction of duties on cotton and mixed goods, have commenced an active agitation against the treaty, and deputations have been appointed to wait upon the Ministry and to protest against the so-called abandonment of the suffering classes employed in those branches of manufacture.

Enclosure in No. 52.

(No. 148.)

Lord *Howard de Walden* to Earl *Russell.*

Brussels,
My Lord, 14 August 1862.

YOUR Lordship will observe from the reports of the debates on the Commercial Treaty, brought to a conclusion yesterday, which I herewith enclose,* that M. Rogier accepted of an amendment to the law, to the purport that if by agreement with Great Britain the duties fixed by the Treaty for the importation into Belgium of British cotton, yarns, and tissues, the new system may be put in vigour by Royal arrêté.

I have seen M. Rogier this morning; he expressed his great anxiety that Her Majesty's Government might be disposed to receive the proposals in question favourably. He laid great stress upon the political importance to his Cabinet of conciliating the Ghent manufacturers through the modification of the temporary tariff on cotton threads as it now stands.

He explained that the precise nature of the alteration proposed was—

1st. To admit the fine classes of cotton thread, upon which graduated differential duties are reserved for two years previous to being placed on an equality with the same when imported from France, at once entirely free from all duty whatever.

2d. To raise the duty on the inferior cotton threads (lowered by the treaty from 101·80 francs per 100 kilogrammes to 15 francs) to 60 or 70 francs the first year, and 30 francs the second, falling to 15 francs in the third.

He said he thought the Ghent people entirely wrong in their view of their own interests; that he considered such an increase of duty naturally calculated to operate prejudicially on the native manufacture of the ordinary cotton goods, which constituted an important branch of their local industry; that he should not be surprised at receiving before many months passed an appeal for the total removal of all duties on the lower as is now proposed on the superior qualities of thread; but that in the meanwhile, considering the great distress which really existed at Ghent, and the strong apprehension of the effect to be produced by the general modification of the tariff as applicable to Great Britain, and the number still employed in the common thread making, it would be politic to meet the suggestions emanating from the cotton industry of that place, and thus deprive them of arms for attacking the Government hereafter, and ascribing to the treaty any of the future distress which is impending over the cotton industry of all countries, and emanating from causes entirely distinct from all tariff calculations.

Full instructions will be sent at once to M. Van de Weyer, and it is the intention of M. Rogier to return to England, accompanied by representatives of the manufacturers of Ghent interested in this matter.

I have, &c.

Foreign Office,
Sir, 25 August 1862.

I AM directed by Earl Russell to transmit to you copies of communications from M. Van de Weyer upon the subject of the concessions demanded by the Belgian Government from this country in favour of the coarser sorts of cotton thread, in return for the abolition of all duty on the finer sorts; and I am to request that you will lay these papers before the Lords of the Committee of Privy Council for Trade, and move them to favour Lord Russell with their observations thereupon at their earliest convenience.

I am, &c.
(signed) *James Murray.*

Enclosure 1, in No. 53.

(Extrait.)

M. *Rogier* to M. *Van de Weyer.*

Vous avez sous les yeux la discussion à laquelle le Traité du 23 Juillet, a donné lieu au sein de la Chambre des Représentants. Vous connaissez donc les circonstances qui ont déterminé le Gouvernement à prendre l'engagement de soumettre une nouvelle proposition au Cabinet de Londres, et le caractère particulier de cette proposition.

Il ne s'agit, en aucune manière, je n'ai pas besoin de le dire, de remettre le Traité en question.

Mais politiquement, l'Angleterre a intérêt à ce que

que le traité reçoive en Belgique l'adhésion la plus complète possible.

Et, au point de vue purement industriel, elle peut, sans se faire tort, agréer notre proposition. Nous ne demandons pas, en effet, une faveur gratuite.

Aujourd'hui les fils de coton, simples écrus, d'origine Anglaise, acquittant à l'entrée en Belgique un droit de 1 franc 1 centime par kilogramme, jusqu'au No. 140 métrique, et de 6 centimes au delà. C'est le tarif général. Par l'application du Traité Franco-Belge à l'Angleterre, le droit de 1 franc 1 centime serait remplacé par des taxes de 15 à 40 centimes par kilogramme.

Nous offrons à l'Angleterre d'affranchir de tout droit d'entrée en Belgique les fils de coton dépassant le No. 70—non point pendant deux ans, mais pendant toute la durée du traité. Il ne subsisterait donc de droit que sur les fils allant jusqu'au No. 70.

Pour les fils de cette dernière catégorie, le droit de 1 franc 1 centime par kilogramme descendrait à 70 centimes pendant la première année, et à 50 centimes pendant la seconde. A l'expiration de la période transitoire, les droits de 15 à 40 centimes sur les fils ne dépassant pas le No. 70 seraient définitivement appliqués.

En un mot, en retour d'une faveur immédiate et permanente, que nous concéderions aux fils fins, nous demandons qu'un régime transitoire, et d'ailleurs décroissant soit accordé aux fils communs.

Une autre conséquence naturelle du tarif transitoire qui serait adopté pour les fils simples écrus, c'est que le régime des tissus de cotons écrus (calicots) subirait provisoirement aussi une modification analogue.

Le droit général sur les calicots est actuellement de 2 francs 16 centimes par kilogramme. Le traité substitue à cette taxe unique des droits variant de 50 centimes à 3 francs par kilogramme d'après le poids combiné avec la finesse des tissus. Le droit de 2 francs 16 centimes subirait, comme le tarif des fils simples écrus, une réduction de 20 pour cent pendant la première année, et une autre également de 20 pour cent pendant la seconde. Au terme des deux années on arriverait au régime fixé par le traité, c'est-à-dire, aux droits de 50 centimes à 3 francs.

Que si le Gouvernement Britannique préférait la combinaison suivante, vous pourriez également la proposer.

Seconde Combinaison :—

Fils de Coton, simples écrus.

Tarif Actuel.	Ire Année.	2me Année.	Tarif Définitif du Traité.
Par kilog.	Par kilog.	Par kilog.	Par kilog.
Fr. c.	*Fr. c.*	*Fr. c.*	*Fr. c.*
1·01	0·30	0·25	0 15
1·01	0·40	0·30	0·20
1·01	0·60	0·45	0·30
1·01	0·80	0·60	0·40

Tissus.—Au lieu des tissus écrus divisés en plusieurs classes, notre demande ne porte plus que sur une spécialité : c'est celle qui dans le Tarif Franco-Belge est comprise sous la rubrique—"Piqués, faconnés, damassés et brillantés, taxés à 15 pour cent *ad valorem* par le traité." App. No. 6.

Nous proposons pour cette rubrique 22½ pour cent la première année, et 20 pour cent la seconde année, comme pour les tissus mélangés (sauf qu'il ne peut s'agir ici d'un droit facultatif au poids, la taxation au poids étant impossible pour des tissus de cette nature et de cette finesse).

Il reste toujours entendu qu'au dessus du No. 70 tout droit cesse dans les deux combinaisons ci-dessus.

Il va sans dire aussi que, les droits sur les fils simples écrus étant pris pour base, les fils tors, ourdis ou teints, seraient, ainsi que cela résulte du traité, et sans qu'il soit nécessaire de la stipuler de nouveau, supérieurs de 5, 10, et 15 centimes.

Enclosure 2, in No. 53.

M. *Rogier* to M. *Van de Weyer.*

(Extrait.)

Il est facile de démontrer par les faits que la concession que la Belgique demande aujourd'hui à l'Angleterre sur les fils de coton est tout à l'avantage des filateurs Anglais; que la suppression du droit de 40 centimes à l'importation des filés d'Angleterre sur les fils au-dessus du No. 70 doit provoquer une vente facile et considérable de ces fils sur le marché Belge, tandis que l'élévation du droit protecteur de 20 (1) à 70 centimes sur les fils communs et moyens, et ne pourra donner au filateur Belge qu'une satisfaction morale, c'est-à-dire, que le droit de 70 centimes ne sera pas plus prohibitif que celui de 20 centimes sur les numéros que l'on fait en Belgique presqu'au même prix qu'en Angleterre. En effet l'enquête publiée à la suite de l'Exposition Universelle de 1855 à Paris établit qu'en Angleterre chaque broche de filature de coton produit seulement 15 kilogrammes de fil, tandis qu'en Belgique ce chiffre a été reconnu par les mêmes documents s'élever à 25, c'est-à-dire, que la filature en Belgique ne s'est occupé jusqu'aujourd'hui que des bas numéros et qu'en général la filature Anglaise s'est attaché à la fabrication des numéros beaucoup plus fins que ceux qui se fabriquent en Belgique. Cette circonstance de la filature presque générale et exclusive de bas numéros en Belgique explique comment depuis plus de dix ans les prix de ces fils Belges, malgré un franc de droit protecteur, n'ont jamais dépassée que de 15 à 18 centimes les prix des mêmes numéros sur les marchés Anglais. La concurrence est telle entre les filateurs Belges tous appliqués à la même catégorie de produits qu'ils sont obligés de réduire leurs bénéfices au minimum, quelle que soit d'ailleurs la protection contre la concurrence étrangère.

Donc, 20 centimes sont des droits aussi protecteurs que 70 et le fil Anglais des numéros moyens ne se placerait pas plus avec 20 qu'avec 70 centimes de droit; tandis que l'affranchissement de tout droit, et par le fait la suppression d'un droit de 40 centimes sur les numéros au-dessus de 70, doit être infailliblement un grand avantage pour le filateur Anglais.

On élève le droit sur les qualités de fil qui sont pour lui les moins importantes, qui ne constituent pas sa fabrication principale, qui renferment beaucoup de matière première et peu de

0.99.

App. No. 6.

façon; et on supprime tout droit sur notre marché à l'importation des fils qui constituent essentiellement sa spécialité, et sur lesquels il y a, en raison d'une façon plus chère, un plus grand bénéfice pour le fileur.

En résumé, quelle sera logiquement la conséquence de la modification sollicitée? Vente rare et très exceptionnelle de filés Anglais de bas numéros et vente facile et beaucoup plus considérable de filés fins.

L'Angleterre a donc tout intérêt à nous faire une concession qui, nous devons bien le reconnaître, n'est en définitive qu'une satisfaction morale donnée à nos filateurs alarmés, tandis qu'elle ouvre à la filature spéciale et importante de Manchester un marché considérable et affranchi de tout droit sur le marché Belge, devenu très important par le développement du tissage des articles en coton pur et en laine et coton.

En un mot, 70 centimes snbstitués à 20 sur le numéro bas, n'entrave ni ne facilite l'importation des filés Anglais de ces numéros; la suppression de 40 centimes sur les numéros fins facilite d'une manière significative la vente de ces fils Anglais sur le marché Belge.

No. 54.

Mr. *Booth* to Mr. *Murray*.

Office of Committee of
Privy Council for Trade, Whitehall,
Sir, 27 August 1862.

I AM directed by the Lords of the Committee of Privy Council for Trade to acknowledge the receipt of your letter of the 25th instant, transmitting, by direction of Earl Russell, copies of communications from M. Van de Weyer, upon the subject of the concessions demanded by the Belgian Government from this country in favour of the coarser sorts of cotton thread in return for the abolition of all duty on the finer sorts, and requesting the observations of this Committee thereupon.

In reply, I am to request you to lay before Lord Russell the accompanying Memorandum containing their Lordships' views upon the communications in questions.

I have, &c.
(signed) *James Booth.*

Enclosure in No. 54.

MEMORANDUM on M. *Van de Weyer's* Note to Lord *Russell*, received in the Foreign Office Letter of 25 August.

THE Belgian Government desires to obtain the consent of Her Majesty's Government to introduce further modifications in the tariff annexed to the Treaty of Commerce recently signed between this country and Belgium.

Under that tariff the only exceptions to the duties given to France by the Treaty of May 1861, are those which apply to double cotton yarns, cotton prints, and mixed fabrics of wool and cotton.

It is now desired to extend the system of differential duties against British manufactures to all cotton tissues and to single cotton yarns, so that the whole combined industries of Lancashire and Yorkshire will be placed at a disadvantage in the Belgian markets for two years.

The precise nature of the present proposals is as follows:—

Two alternative courses are offered to the British Government in lieu of the existing arrangements:—

COTTON YARNS.

	Tariff annexed to recent Treaty.	Present Proposals.			
		No. 1.		No. 2.	
	Per 100 kilos.	Per 100 kilos.		Per 100 kilos.	
		First Year.	Second Year.	First Year.	Second Year.
	c.	c.	c.	c.	c.
20,000 mètres or less p' ½ kilo.	15	70	50	30	25
20,000 to 30,000 mètres „	20			40	30
30,000 to 40,000 mètres „	30			60	45
40,000 mètres and more „	40			80	60
70,000 mètres and more „	- -	Free		Free.	

This proposal amounts to this, that British yarns up to No. 70 shall be subjected to differential duties as against France and Germany, and all other countries, for two years ranging from 40 to 50 per cent.

It is, however, contended that this proposal can only be beneficial to the English spinning trade, because the Belgian spinner can already produce the low numbers as cheap as the British, and that therefore, even if there were no protective duties, few British yarns of this description could be sold in Belgium, while the higher numbers, not being produced at all, or in very limited quantities, in Belgium, will without duty be freely consumed, and largely supplied from this country.

It must be admitted that this is a very peculiar argument: "Because you cannot compete with us," it is urged on the part of Belgium, "in low yarns, you cannot care whether the duty is low or high, for it must be equally prohibitory, and a high duty will give a moral satisfaction to our spinners; while as we cannot compete with you in fine yarns, and you must command our markets whether there are duties upon them or not, your fine yarns shall be admitted free."

The converse of this argument would have been more logical; but if any adequate advantage were really to be derived for our fine yarns from this free admission, it might have been possible to entertain the question.

When, however, the present amount of the duty upon fine yarns is considered, it will be seen that the proposed boon is quite illusory.

The duty of 40 francs per 100 kilogrammes even on No. 70 must be something considerably less than 10 per cent., and on the higher numbers it is quite nominal, so that the increased consumption of these years in Belgium which would result from their freedom from duty could not be perceptible in a market in which, according to the Belgian statement, we possess an absolute monopoly, at all events as regards Belgian competitors; and it must be borne in mind that under the most-favoured nation Article in the Treaty between France and Belgium, the former must be admitted to an equal participation in the boon of free admission for yarns beyond No. 70.

Cotton Tissues.

It is next proposed that analogous differential duties should be placed upon all cotton tissues. The bearing of this proposal will be seen by the following Table:—

COTTON CLOTHS, UNBLEACHED, &c.

Tariff annexed to recent Treaty.	Per 100 kilos.	Present Proposal.	
		First Year.	Second Year.
First Class.—11 kilos. and more, per 100 m. c.:—	Frs.	Frs.	Frs.
35 threads and less (5 mill. carrés) - -	50		
36 threads and more - - - - - -	80		
Second Class.—7 and 11 kilos. per 100 m. c.:—			
35 threads and less - - - - - -	60		
36 to 43 - - - - - - -	100		
44 and more - - - - - - -	200	172	137
Third Class.—3 and 7 kilos. per 100 m. c.:—			
27 kilos. and less - - - - - -	80		
28 to 35 - - - - - - - -	120		
36 to 43 - - - - - - - -	190		
44 and more - - - - - - -	300		

Or, as an alternative, it is presumed (though the meaning is obscure) a simple augmentation of the duty upon "piqués, basins, façonnés, damassés, et brillantés" (which are taxed under our recent treaty, as well as in that with France, at 15 per cent. *ad valorum*) to 22½ per cent. *ad valorum* for the first year, and to 20 per cent. for the second.

Of the two proposals, if they are intended as alternatives, the second would be preferable, but it is difficult to conceive on what plea either can be urged.

The argument drawn from the increased duties on yarns is disposed of by the note itself, for if the price of yarns up to No. 70 is nearly the same in both countries, the duties on cloth under the existing arrangement must afford ample protection to the weaver in Belgium; the only plea for a corresponding augmentation of duty on the cloth to that proposed for the yarn being that the price of the yarn, which is the raw material of the weaver, would be raised; but the note states first, that he will not use British yarns of this quality, and, secondly, that the price of them in Belgium is scarcely higher than in Manchester.

In conclusion, it is proposed to augment proportionately to the increase on single yarns, those upon double bleached and dyed yarns.

It is unnecessary to observe that this proposition very closely resembles that put forward in May last, and rejected absolutely by the British Cabinet. It was upon the faith of its withdrawal that the Board of Trade recommended the admission of the exceptions which stand in the recent arrangement, and if these proposals are now to be discussed, the whole negotiation must be re-opened at the point from which we started in May last.

There is nothing in the present aspect of affairs to affect or modify the conclusions at which the Board of Trade arrived at that time; on the contrary, after the conditions of the Treaty have been made known to the country, it will be far more difficult to admit new exceptions than it was then.

The exceptional condition of Ghent is no sufficient ground for the serious extension of a principle which must seriously compromise all our future negotiations, and give just ground of dissatisfaction to our manufacturers.

Manchester is suffering from the same causes as Ghent, and with quite equal intensity, and to whatever extent the productive power of the latter will be impaired, it may be presumed that the competing power of the former will be equally diminished.

Board of Trade,
28 August 1862.

App. No. 6.

No. 55.

Mr. *Layard* to Mr. *Booth*.

Foreign Office, 29 August 1862.

MR. LAYARD presents his compliments to the Secretary of the Board of Trade, and is directed by Earl Russell to transmit to him, to be laid before the Lords of the Committee of Privy Council for Trade, the accompanying copy of a letter which has been addressed to his Lordship by the Belgian Minister for Foreign Affairs, containing a request for certain concessions in connection with the Anglo-Belgian Treaty.

Enclosure 1, in No. 55.

M. *Rogier* to Earl *Russell*.

Milord, Londres, le 28 Août 1862.

VOTRE Excellence connaît les circonstances qui nous ont permis d'obtenir la vote du Traité Anglo-Belge, presque sans opposition de la part de nos Chambres et même de la ville de Gand, dont on redoutait surtout l'agitation dans la position critique où se trouve la grande cité Flamande.

Les Chambres, répondant à l'appui du Gouvernement, ont voulu donner, par leur vote presque unanime, une marque non équivoque d'adhésion et de sympathie politique au Gouvernement Britannique.

Quant à la ville de Gand, la résignation dont elle a fait preuve ne s'explique que par l'espoir qu'elle a conçu d'obtenir certaines modifications au Traité, en ce qui concerne les fils de coton simples et une catégorie de legers.

En présence de la bonne attitude de la ville de Gand et de la modération de ses prétentions, le Gouvernement Belge n'a pas hésité à promettre de faire auprès du Gouvernement Sa Majesté Britannique une démarche pressante pour atteindre le but désiré.

En agissant ainsi, le Gouvernement Belge n'a pas eu un seul instant la pensée de remettre en question le Traité lui-même, mais il a considéré qu'il serait d'un intérêt très notable pour les deux pays d'établir leurs relations commerciales et industrielles sur des bases très libérales, sans l'opposition et même jusqu'à certain point avec l'adhésion de ceux-là même qui redoutaient le plus vivement et combattaient le plus énergiquement la concurrence des produits Anglais.

Il dépend entièrement de votre Excellence que cette harmonie aussi heureuse qu'inespérée ne soit pas troublée.

Au point de vue industriel, la concession que nous demandons n'est rien pour l'Angleterre, et à vrai dire ce n'est pas grand chose non plus pour la ville de Gand (c'est un remède moral plus que réel appliqué à un malade qui souffre); mais au point de vue politique, une marque de bienveillance de la part du Gouvernement Anglais répondant au bon

App. No. 6.

bon vouloir et à la confiance des Chambres Belges, serait d'un effet du plus précieux pour les bonnes relations des deux pays.

Ce bon vouloir le Gouvernement Anglais l'a montré à la France en consentant à ajourner à 1864 l'application du Tarif Anglo-Français pour un très grand nombre d'articles, au sujet desquels l'industrie Française s'alarmait.

Dans le Traité Anglo-Belge nous n'avons demande d'atermoiements que pour un ou deux articles spéciaux. Nous réclamons aujourd'hui la même faveur pour un ou deux autres, en offrant des compensations que nous voulons rendre aussi complètes que possible.

Je conserve l'espoir que votre Excellence, dont j'ai pu apprécier l'esprit pratique et conciliant, voudra bien prendre en sérieuse considération les observations qui précèdent, et je saisis, &c.

(signé) *Ch. Rogier.*

No. 56.

(Immediate.)

Mr. *Layard* to Mr. *Booth.*

Mr. Layard presents his compliments to the Secretary to the Board of Trade, and is directed by Lord Russell to transmit to him, to be laid before the Lords of the Committee of Privy Council for Trade, a copy of a letter from M. Van de Weyer, enclosing a memorandum of the fresh proposals made by the Belgian Government in connexion with the Tariff annexed to the Treaty.

Enclosure 1, in No. 56.

M. *Van de Weyer* to Earl *Russell.*

50, Portland Place, le 29 Août 1862.

Le Ministre de Belgique présente ses compliments à son Excellence le Comte Russell, et s'empresse de faire parvenir ci-joint à sa Seigneurie les nouvelles propositions du Gouvernement du Roi.

Le Ministre de Belgique saisit, &c.

Enclosure 2, in No. 56.

Memorandum.

Les propositions que le Gouvernement Belge soumet au Governement Anglais ne concernent que deux articles du Tarif,—les fils de coton simples, écrus ou blanchis, et la catégorie spéciale de tissus, désignés sous la dénomination de piqués, basins, façonnés, damassés, et brillantés.

C'est par suite d'une erreur qu'il importe de rectifier dès le principe, que le Board of Trade a cru que les concessions demandées s'étendraient à tous les tissus de coton; les droits différentiels ne s'appliqueraient qu'à la catégorie très restreinte qui est mentionée plus haut.

Ils n'auraient qu'une durée de deux ans et le Gouvernement Belge est disposé à les réduire de manière que les piqués, basins, façonnés, damassés et brillantés de provenance Anglaise n'auraient à acquitter pour la première année qu'un droit de 20 pour cent au lieu de 15 pour cent, et pour la seconde 18 pour cent au lieu de 15 pour cent. Cette surtaxe ainsi atténuée serait compensée par une concession importante que le Gouvernement Belge ferait sur les fils de coton.

En effet, il propose comme combinaison nouvelle le Tarif suivant :—

Nos.	Droit Actuel.	1re Année	2me Année.	Droit Définitif.
	Fr. c.	c.	c.	c.
20,000 et au-dessus -	1 ·01	0·22	0·20	0·15
20,000 à 30,000 - -	1 ·01	0·30	0·25	0·20
30,000 à 40,000 - -	1 ·01	0·45	0·35	0·30
40,000 à 65,000 - -	1 ·01	0·60	0·50	0·40

Au dessus de 65,000, libre (droit de balance, 10 c.)

L'avantage de ce tarif au point de vue de l'industrie Anglaise c'est que les droits seraient supprimés, pendant toute la durée du traité, pour tous les fils de numéros dépassant 65,000; tandis que la légère surtaxe établie sur ceux de numéros qui n'atteignent pas 65,000, n'aurait qu'une durée temporaire de deux ans avec une altération marquée dès la seconde année.

Cette faveur est considérable, soit qu'on l'examine dans le présent, soit qu'on l'apprécie au point de vue des résultats qui ne peuvent manquer de se produire dans l'avenir.

Déjà aujourd'hui la consommation des fils dépassant le No. 65 est assez grande en Belgique, mais cette consommation se développera nécessairement dans une très forte proportion par suite de la suppression complète des droits. Les filateurs Belges en renonçant à la fabrication de ces fils font un notable sacrifice, qui ne compense que très incomplètement la légère surtaxe temporaire demandée pour les numéros moins élevés. On ne doit pas perdre de vue en effet que dans la situation actuel de l'industrie cotonnière, la concurrence, des filatures Anglaises offre peu de danger pour la Belgique, et que cette situation se maintiendra probablement pendant toute la durée du régime transitoire appliqué aux fils communs. Les droits différentiels de ce régime seront donc plutôt nominaux que réels, tandis qu'il en sera tout autrement de la concession destinée à permettre à libre entrée des fils dépassant le No. 65, accordée à titre permanent et devant par conséquent produire ses effets lorsque l'industrie cotonnière, sortie de la crise actuelle, aura répris tout son développement; elle ouvrira aux filatures Anglaises un marché important où aucune concurrence ne pourra lutter contre elles.

En somme, les nouvelles propositions du Gouvernement Belge consistent en ceci: Liberté complète et définitive accordée à une catégoire importante de produits de l'Angleterre (fils dépassant le No. 65,000), et comme compensation, surtaxe temporaire et légère de deux ans—

1. Sur certain tissus (piqués, basins, façonnés, damassés, et brillantés).

2. Sur les fils de coton, simple et écrus, de 65,000 mètres et au-dessous.

A quelque point de vue qu'on examine ces propositions on est amené à conclure qu'elles ne peuvent avoir pour effet, quant à la Belgique, que de satisfaire un intérêt moral, en déterminant une adhésion plus complète à un Traité, qui, on ne doit

doit pas le cacher, a soulevé de nombreuses objections.

Pour l'Angleterre par contre ces propositions auront des résultats permanents et réels, d'abord en ouvrant le marché Belge à une nombreuse catégorie de produits de la Grande Bretagne qui jusqu'ici n'y avaient qu'un accès limité et en prouvant par l'expérience même que la suppression des droits de douane n'expose pas aux dangers que redoutent les industriels habitués au régime protecteur.

No. 57.

Memorandum by Mr. *Booth*.

The present proposition is less unfavourable to this country than the preceding one.

As regards cotton threads, instead of proposing a differential duty in favour of France, equal in amount to the duty under the treaty for the first year, it proposes a differential duty of half that amount, and for the second year it proposes a corresponding diminution of the differential duty previously proposed. To these will have to be added the increased differential duties imposed by Article XXII. of the Treaty.

First Year.

20 c.	instead of	30 c.	The Treaty duty being	15 c.
30 c.	„	40 c.	„	20 c.
45 c.	„	60 c.	„	30 c.
60 c.	„	80 c.	„	40 c.

Second Year.

20 c.	instead of	25 c.	The Treaty duty being	15 c.
25 c.	„	30 c.	„	20 c.
35 c.	„	45 c.	„	30 c.
50 c.	„	60 c.	„	40 c.

On the other hand, it proposes that the entire exemption from duty during the whole period of the treaty should commence at the number above 65, instead of above 70.

What may be the amount of advantage to our trade which the free admission of our cotton threads beyond 65 may afford, or whether it will be at all commensurate with the disadvantage arising from the proposed increase of duty on the lower numbers, I am not sufficiently acquainted with the details of the trade to be able to form any probable estimate. It must be borne in mind, too, that whatever advantage we derive from the admission free of the higher numbers is shared by France; so that as between this country and France we are subjected to the differential duty or the two years without any equivalent.

I am willing, however, to believe that the admission free of the higher numbers, as now proposed, may offer some advantage to our trade; and although I would rather that the treaty stood as at present, yet if there be any political considerations to render some concession desirable, we might perhaps, as regards this branch alone, yield to the pressing instances of the Belgian Minister.

It is, however, further proposed that with regard to certain classes of cotton tissues, viz., "piqués, basins, façonnés, damassés, and brillantés," there should for two years be an increase of the duty fixed by the treaty, also differential in favour of France; and although the differential duty now proposed (20 per cent. instead of 22½ per cent. the first year, 18 per cent. instead of 20 per cent. the second year) is something lower than what was proposed in the first proposition, I still see no ground upon which it can reasonably be asked.

If, as I presume is the case, the higher number of cotton threads enter more largely into the piqués, basins, &c., the weaving trade of Belgium will, in their competition with us, have the advantage (whatever it may be) arising from the free entry of the higher numbers of cotton threads, and the duty fixed by the treaty (15 per cent.) will afford a reasonable amount of protection to the Belgian weavers; whilst as a differential duty in favour of France the additional duty will be particularly objectionable, as it is in this class of tissues that she may especially be expected to enter into competition with us.

Upon this second branch of the new proposition (which seems to have no necessary connection with the other), I do not think that we ought to give way.

(signed) *James Booth*.

CORRESPONDENCE between the Board of Trade and the Foreign Office respecting the Negotiation of a COMMERCIAL TREATY between *Great Britain* and *Italy*.

App. No. 6.

No. 1.

Mr. *Layard* to Sir *J. Emerson Tennent*.

Foreign Office,
Sir, 31 January 1862.

I AM directed by Earl Russell to transmit to you herewith a copy of a Despatch from Her Majesty's Minister at Turin, reporting that negotiations are going on between Italy and France for the conclusion of a commercial treaty on free trade principles, and I am to request that, in laying the same before the Lords of the Committee of Privy Council for Trade, you will move them to inform Lord Russell whether they consider that it would be desirable, in consequence, that Her Majesty's Government should take any, and what, steps with regard to the commercial relations between this country and Italy.

I am, &c.
(signed) *A. H. Layard.*

Enclosures in No. 1.

Sir *J. Hudson* to Earl *Russell*.

My Lord, Turin, 25 January 1862.

THE Chevalier Scialoia, Under Secretary of State in the department of Finance, left this city for Paris some weeks ago, in order to discuss the preliminaries of a treaty of commerce between the empire and the kingdom of Italy.

I understand that the bases of the proposed treaty have been accepted by the respective plenipotentiaries, and that they have in view an extension of the commercial relations of the two countries on the principle of free trade.

As your Lordship is aware that the principle asserted by this country in its commercial treaties is fiscal, and not protective, I anticipate in the mutual advantages which are expected from the negotiations at Paris, a general increase in Italian commerce, trade and navigation, and consequently a particular advantage to Her Majesty's subjects trading with this country.

I have, &c.
(signed) *James Hudson.*

No. 2.

Sir *J. Emerson Tennent* to Mr. *Layard*.

Office of Committee of
Privy Council for Trade, Whitehall,
Sir, 18 February 1862.

I HAVE laid before the Lords of the Committee of Privy Council for Trade your letter of the 31st ultimo, transmitting, by direction of Earl Russell, a copy of a Despatch from Her Majesty's Minister at Turin, reporting that negotiations have been going on for some weeks in Paris between the governments of Italy and France for the conclusion of a commercial "treaty on free trade principles," and requesting the opinion of this Board whether it would be desirable, in consequence, that Her Majesty's Government should take any, and if so what, steps with regard to the commercial relations between this country and Italy.

In reply I am directed to request that you will state to Lord Russell, that it will be, in the opinion of my Lords, a subject of regret if any revision of the Italian tariff which may result from negotiations now in progress between the Governments of France and Italy should be completed without any reference to the special requirements of British trade.

The present Italian tariff, although in many respects a liberal one, is nevertheless open to considerable improvements in some particulars, and my Lords cannot but fear that any changes which are made at the instance of France will be less favourable to British interests than if they had been the result of negotiations with Her Majesty's Government, or of legislation undertaken on independent national grounds.

Earl Russell will recollect that towards the close of the year 1860, Sir John Bowring was authorised by his Lordship to make representations to the Government of Italy on this subject, and that for this purpose he was furnished with information prepared in this department as the basis of negotiations on the part of Her Majesty's Government, having for their object the improvement of the commercial relations of this country and the Italian kingdom.

My Lords are not aware whether this mission was attended with any result, or whether any steps have since been taken to bring under the notice of the Government at Turin the requirements of British trade.

On this point, as well as on the nature of the probable arrangements between France and Italy, my Lords would have been glad, if possible, to receive more information; but if no such steps have been already taken, they fear that having regard to the stage which the negotiation between France and Italy appears to have reached, that the Italian Government might find it difficult at the present time to entertain proposals for tariff modifications on the part of Her Majesty's Government.

If, however, Lord Russell is of opinion that a representation of this nature could still be made with a prospect of practical advantage, my Lords will lose no time in communicating with the commercial bodies in this country, and in preparing a statement of the changes in the Italian tariff which are required to place this branch of trade on a more satisfactory footing.

In any case my Lords are of opinion that a new treaty of commerce and navigation should be proposed to the Government of Italy in substitution for the treaties of 27th February 1851, and 29th

29th April 1845, now subsisting between this country and Sardinia and the Two Sicilies respectively, several of the stipulations contained in them being imperfect, and unsuitable to existing circumstances.

The 11th article of the treaty with Sardinia of February 1851 is the conditional form of the most favoured nation article; and although my Lords presume that the Italian Government would not hesitate to admit the claim of this country to a full share of any commercial privileges granted to any third country, it would be more satisfactory to them that a distinct assurance upon this head should be sought by Her Majesty's Government, and that the unconditional form of the stipulation should be substituted for that now in force in any new treaty which may be concluded with the kingdom of Italy.

I am also to request that you will take this occasion to call the attention of Earl Russell to the general question of the policy which it is desirable that Her Majesty's Government should adopt with regard to the commercial relations between this country and those foreign States with which France is about to negotiate commercial treaties with a view to effect a revision of their tariffs.

At the request of his Lordship, draft treaties of commerce were prepared in this department during the course of the years 1860 and 1861, for the purpose of being proposed to the Governments of Austria, Spain, Portugal, and Prussia; but, except in the case of the latter country, my Lords are unaware whether any steps have been taken to commence their negotiation.

So far, therefore, as this Board is aware, no attempt has yet been made by Her Majesty's Government to anticipate the negotiations which either have been, or may be shortly expected to be, set on foot by France with these and other countries.

My Lords are of course unable to form any opinion as to the obstacles which may oppose such attempts, or as to their probable success at the present time, but they cannot express too strongly their apprehension, if during the revision of foreign tariffs which appears to be the inevitable consequence of the policy which has been adopted by France, British interests are not carefully watched and strongly represented, that not only an opportunity may be lost, which may not be recovered for years, of securing for them important advantages, but that in some cases they may even sustain positive or relative injury from the changes which may be made in existing international arrangements.

To prevent these consequences it is of the highest importance that all the information which can be obtained connected with negotiations commenced by the principal commercial countries should reach Her Majesty's Government before they have arrived at a stage which may (as they fear is the case with respect to those between France and the Zollverein and Italy respectively) seriously diminish the prospect of successful representations on the part of this country.

I have, &c.

No. 3.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Foreign Office,
Sir, 21 February 1862.

I AM directed by Earl Russell to request that you will acquaint the Lords of the Committee of Privy Council for Trade, with reference to that part of your letter of the 18th instant which relates to the negotiation of Treaties of Commerce and Navigation with the Italian Kingdom, that he is prepared to instruct Her Majesty's Minister at Turin to enter into communication with the Italian Government on the subject so soon as his Lordship shall receive from the Board of Trade drafts of the treaties which the Board consider right and proper to be proposed, together with any observations and suggestions which they may desire to offer; and so soon also as he shall have received from the Associated Chambers of Commerce in this country, to whom, by his Lordship's directions, I have addressed the letter of which a copy is enclosed, a statement of their views as to the points which should be pressed on the Italian Government.

I am to add that Lord Russell has received no report from Sir John Bowring of the result of his inquiries into matters affecting the commerce between this country and Italy.

I am, &c.
(signed) *E. Hammond.*

Enclosure in No. 3.

Mr. *Hammond* to the Associated Chambers of Commerce.

Foreign Office,
Gentlemen, 21 February 1862.

I AM directed by Earl Russell to acquaint you that Her Majesty's Government are informed that certain negotiations which have recently commenced between France and Italy have so far advanced as to render it probable that a Treaty of Commerce on Free Trade principles and a Treaty of Navigation will shortly be concluded between those countries.

As regards the former, Her Majesty's Government understand that the tariff arrangements recently concluded between France and Belgium have been accepted in principle by the Italian Government.

Her Majesty's Government are of opinion that the time has now arrived for endeavouring to place the commercial relations between this country and the Italian Kingdom on a sound footing, and they are prepared to instruct Her Majesty's Minister at Turin to propose to the Italian Government to enter into a negotiation for that purpose.

Such negotiation, if brought to a satisfactory conclusion, would in all probability involve a revision in various material points of the tariff rates now levied on British commerce, and a removal of impediments to British navigation.

Lord Russell considers that a knowledge of the opinions entertained by the Chambers of Com-

App. No. 6.

merce in this country on these matters would be of great service to Her Majesty's Government in determining the points to be pressed on the Italian Government, with a view to the extension of British trade and navigation; and such information would be the more valuable if it could be coupled with statements showing that the concessions asked for will not only benefit British, but will also advance the interests of Italian, trade and navigation.

I am therefore to say that Lord Russell would be much obliged to the Associated Chambers of Commerce for any assistance which they may be willing to render Her Majesty's Government in this matter.

I am, &c.
(signed) *E. Hammond.*

No. 4.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Foreign Office,
Sir, 22 February 1862.

I HAVE laid before Earl Russell your letter of the 18th instant, in which, with reference to a communication from this department of the 31st ultimo, on the subject of a negotiation between France and Italy for the conclusion of a new Treaty of Commerce, you state the opinion of the Lords of the Committee of Privy Council for Trade, that that negotiation should not be suffered to come to a close without steps being taken to bring before the Italian Government the requirements of British trade. You also advert to the drafts of new Treaties of Commerce with Austria, Spain, Portugal, and Prussia, which were prepared at the Board of Trade in the course of the years 1860 and 1861.

With regard to the negotiation between Italy and France, Lord Russell directs me to refer you to my letter of yesterday.

With reference to the desire of their Lordships to be furnished with all the information that can be obtained respecting the negotiations commenced by France with the other principal commercial powers of the continent, Lord Russell desires me to say that every communication of interest on that important subject, which has reached this department, has been from time to time transmitted to the Board of Trade.

The reason why the drafts of Treaties of Commerce with Austria, Spain, and Portugal have not been formally proposed to the Governments of those countries is, that Lord Russell was of opinion, from the communications which reached him, that there would have been no chance of success; and it seemed to him unadvisable to make the proposition with a certainty of refusal.

The Lords of the Committee are of course aware that France and Great Britain have, in their commercial arrangements, gone upon different principles. The Government of France made concessions to Great Britain for certain reciprocal advantages; but France did not make similar concessions to other countries, and is now making them by way of bargain.

Great Britain gave to Austria, Spain, Germany, and Portugal, all that she gave to France, and she has now no concession to offer, so that it is of very little use to recommend concessions except to those countries which are ready to prefer free trade to protection.

I am, &c.

I AM directed by Earl Russell to transmit to you, for the information of the Lords of the Committee of Privy Council for Trade, a copy of a Despatch from Her Majesty's Ambassador at Paris, enclosing a Memorandum by Mr. Grey on the Treaty of Commerce and Tariff now under negotiation between the Governments of France and Italy. App. No. 6.

I am, &c.
(signed) *E. Hammond.*

Enclosure in No. 9.

Memorandum.

THE negotiations between the Governments of Italy and France for a Commercial Treaty and a Treaty of Navigation being still pending, no copy of either can be given. The following, however, are the general basis of the negotiations:—

Treaty of Commerce.

Extension to Italy of the advantages conceded by France to England and to Belgium in the Commercial Treaties lately concluded.

The Franco-Belgian Tariff adopted in general.

There are, however, certain specific reductions on certain articles.

Tissues of Silk.—Reduction of the duty from 10 francs to 3 francs. This reduction was agreed to with some difficulty by the Cabinet of Turin; but they have ceded the point on condition that the reduction shall take place gradually.

The Turin Government wish to fix the year 1870 for the period by which the reduction shall have been effected.

The French Government wish to obtain a shorter delay, and this point is still in abeyance.

Tissues of Wool.—In place of the existing duty of 1 franc 60 centimes per kilogramme, it is proposed to establish an *ad valorem* duty of 15 per cent. for the present, and at a future period (to be hereafter determined) of 10 per cent., on condition that these duties shall never exceed the present duty of 1 franc 50 centimes per kilogramme. This question is still undecided, and the Italian Plenipotentiaries have referred to Turin for further instructions.

A reduction is granted by France upon oils, rice, fruits, &c., abolition by France of the export duty on coals.

The French Government were desirous of obtaining the abolition of the export duties upon articles the produce of Italy, particularly on those levied on olive oil and sulphur; but the Italian Government, while recognising the value of the principle, state the impossibility of admitting it into a treaty. If agreed to, it must be effected by a law.

The Italian Government are on their part desirous of negotiating an article similar to Article XXXVI of the Franco-Belgian Treaty relating to the official quotation of stock on the respective exchanges of the two countries. This however is objected to by the French, and I have been informed that this point is the principal cause of delay in the conclusion of the treaty.

Navigation Convention.

"Traitement national" for direct commerce in the Mediterranean, Algeria included.

Reciprocal concession of the "commerce d'escale" and "cabotage" in the Mediterranean, Algeria included; to be however carried on exclusively in steam-vessels. The reason of this is, that before the annexation of Tuscany, the two Sicilies, &c., to Piedmont, the French steamers touching

* These replies are not printed, inasmuch as they have no immediate bearing on the inquiry of the House of Commons Committee.

† This enclosure is not printed.—*See* Note, No. 7.

App. No. 6.

touching at Leghorn, Genoa, Naples, &c., carried on a trade from one country to another. When the kingdom of Italy was established this trade became "cabotage," and the French Government asked that it should be allowed to continue. In the Atlantic no coasting trade is admitted at all in the present treaty.

Reduction by one-half of the duty on the Italian boats engaged in the Coaral fishery on the coast of Algeria.

Nothing changed with respect to the fishery ("la pêche"). M. Rouher seems to have made some declaration to the effect that the new treaty would contain some new regulations on this head. But no change appears to be in contemplation.

No. 10.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Sir, Foreign Office, 26 May 1862.

With reference to my letter of the 19th instant, I am directed by Earl Russell to transmit to you, for the information of the Lords of the Committee of Privy Council for Trade, a copy of a further despatch from Her Majesty's Ambassador at Paris, enclosing a second memorandum by Mr. Grey on the subject of the commercial negotiations pending between France and Italy. Lord Russell requests that their Lordships will furnish him with any proposals that they wish to be made to the Italian agent now here.

I am, &c.
(signed) *E. Hammond.*

Enclosure in No. 10.

Notes on the Commercial Treaty between France and Italy.

The tariff for imports from Italy to France is entirely based on the Franco-Belgian Tariff, with a few exceptions in favour of special products of Italy, such as olive oil, preserved fruits, oranges, lemons, &c. Some of the changes in the old tariff introduced by the new treaty are as follows:

Peaux vernies - - -	100 francs per 100 kilogrammes.
„ maroquinées - -	80 „ „
„ de mouton teintes - -	45 „ „
Autres - - - - -	15 „ „
Gants de peau - - -	5 per cent. *ad valorem.*
Bois feuillards et merrains -	Free.
Gallique - - - -	Free.
Chapeaux de paille - -	10 francs per 100 kilogrammes. (instead of 25 centimes each).
Cidre - - - - -	25 centimes per hectolitre.
Huiles d'olive - - -	3 franc sper 100 kilogrammes.
Pâtes d'Italie - - -	3 francs le quintal „ (instead of 10 francs).

It seems that the Italian Government maintain their export duty of one franc on sulphur and oils of all kinds. The French Government endeavoured to obtain the remission of this, but failed.

Tariff of Import Duties into Italy.

Generally speaking, the old Italian tariff for "metallurgie" was liberal; very little change has been made in it, and the Italian Government have promised to maintain it, but in cases where the Italian tariff was higher than the French, reductions have generally been made.

The new tariff specifies the duties as they are to be with the "additional duty" included, so that the duties may become invariable, and not subject to the fluctuations, which had been found very inconvenient.

The only change is most of the classes of iron is the specification of the additional duty, as, for instance, the duty on "Fer de première fabrication," which was five francs, plus the additional duty, and on "Fer simple de seconde fabrication," which was 10 francs, plus the additional duty, is fixed by the new tariff at five francs 75 centimes, and 11 francs 55 centimes per 100 kilogrammes.

In the case of rails, however, a reduction is made from five francs to one franc 15 centimes per 100 kilogrammes.

For "Fils de fer," there are three classes of duty in the French tariff, of which the lowest is seven francs, and the highest 13 francs per 100 kilogrammes. The Italians have only one class with a uniform duty of eight francs 10 centimes. The average is favourable to France, and no change has been made.

The duty on steel in bars was 12 francs, plus the additional duty; by the new tariff, with the additional duty included, it is fixed at 13 francs 85 centimes, which in fact represents the same thing, but is not subject to variation.

For Copper.—The Italian tariff was somewhat higher than the French. It has in general been maintained, with the exception of—

	Old Tariff.	New Tariff.
	Plus additional duty,	Per 100 kilos.
Cuivre en laiton doré ou argenté, en lingots.	50 francs	34·65 francs.
Cuivre en laiton doré ou filé sur fils ou soie.	85 „	98·15 „

In France the duty for these is 100 francs per 100 kilogrammes.

For Zinc.—The French duties as fixed by the Franco-Belgian Tariff are adopted. The duty on rolled zinc was six francs, plus the additional duty; in 1864 it will be four francs per 100 kilogrammes.

For Lead.—The Italian tariff was higher than the French, but will, like the French, be reduced to three francs in 1864.

In the case of tin, the French duties are also adopted.

On cadmium, mercury, bismuth, the duty was formerly 6, 10, and 20 francs respectively. The two first are to be now free, and the third six francs.

For "steel manufactures," the old tariff was lower than the French, and is generally speaking maintained. The only article under the head of steel in which the Italian tariff was higher than the French was—

Surgical

Surgical instruments, the duty on which is reduced from 20 francs to 10 francs.

Under the heads of Metaux Divers and "Fontes ouvrées garnies de métaux," there is no change beyond the insertion of the additional duty as above.

The duty on "Toiles métalliques en fer ou en acier" is to be reduced from 50 francs to 15 francs immediately, and to 10 francs in 1864.

Machinery and Mechanical Instruments.—The old Italian tariff as regards these was much lower than the French. The Italians have a duty of one per cent. *ad valorem*, while the French have duties varying from six to 50 francs per 100 kilogrammes. This undergoes no change. Under the head of "machines and mécaniques non dénommées *ad valorem* 1·15 per cent." the following note is made in the tariff:

"*N. B.*—Le Gouvernement Italien se réserve la faculté de dénommer dans le tarif les machines non dénommées et de les assujetir à des droits spécifiques, qui en tout cas ne pourront dépasser les droits établis dans le Tarif Français."

For textile fabrics, the old tariff is generally maintained, but a few of the changes are as follows:—

	New Tariff.
Tissus de lin, teints oufabriqués—	
Avec des fils teints ayant moins de 6 fils.	38 francs per 100 kilogrammes.
Avec des fils teints au dessus de 6 fils.	30 francs per 100 kilogrammes.
Jute—not yet determined.	
Coton, filé, écru, simple, retors de numéro quelconque—	
Tissues of cotton, cotton velvet Laines en masses et teintes	For all these there is no change beyond the specificationor insertion of the additional duty.

With regard, however, to tissues of wool, there was a difficulty which I believe was finally settled in conference yesterday, though this head has not yet been filled up in writing in the tariff. For tissues of wool the Italian tariff was much higher than the French. The former had one fixed duty of 1 franc 40 centimes, without distinction, so that coarse and fine tissues paid equally. The French pressed the adoption of their *ad valorem* duty of 15 per cent. now, and of 10 per cent. in 1864. This, I believe, has been verbally agreed to, and may be looked upon as settled.

	New Tariff.
Tissues of pure silk, 1 October 1862	9 francs per kilogramme.
Ditto - - 1 October 1864	6 ,, ,,
Ditto - - 1 October 1867	3 ,, ,,
Tissues de bourre de soie, 1 Oct. 1862	8 ,, ,,
Ditto - - 1 October 1864	6 ,, ,,
Rubans de soie ou de velours, 1 October 1867.	3 ,, ,,
Rubans de soie ou de velours, 1 October 1862.	9 ,, ,,
Rubans de soie ou de velours, 1 October 1864.	7 ,, ,,
Rubans de soie ou et velours, 1 Oct 1867.	5 ,, ,,
Autres - - 1 October 1862	9 ,, ,,
Ditto - - 1 October 1864	8 ,, ,,
Melangés - - - - -	10 per cent. *ad valorem*.
Foulards écrus, imprimés, ou teints, 1 October 1864.	3 francs per kilogramme.
Tulles et dentelles - - -	5 per cent. *ad valorem*.
Tissus, passementeries, dentelles, avec or ou argent fin.	11·55 francs p' kilogramme.

Produits Chimiques.—There is a great reduction under this head. The duty on most of the articles which used to be at 10 francs is now reduced to 4 francs and 2 francs; for instance, on iodine and brome from 10 francs to 2 francs, nitrate of potash free, lemon juice free. "Non dénommés" pay a duty of 4 francs per kilogramme.

Glaces—brutes - -	8 francs per 100 kilogrammes (instead of 25 francs).
,, polies, non etamés	15 francs per 100 kilogrammes (instead of 25 francs).
,, étamées - -	25 francs per 100 kilogrammes (instead of 25 francs).

The several catagories of "glaces" in the old Italian tariff are now done away with.

Objets en Verre.

	1862.	1864.
	Fr. c.	*Fr. c.*
Non coloriés - - Non taillés - -	6 0 per 100 kilos.	5 0 per 100 kilos.
Taillés - - - Coloriés - - -	8 0 ,,	7 0 ,,
Verre à vitre - -	7 0 ,,	5 0 ,,
Porcelaine blanche -	15 0 ,,	12 0 ,,

Articles Divers.

Fleurs artificielles - - -	5 fr. per kilo., plus 5 per cent. *ad valorem*.
Objets de mode - - -	5 fr. per kilo., plus 5 per cent. *ad valorem*.
Tresses en paille de toute sorte	5 fr. per 100 kilos.
Chapeaux de paille - - -	Free.
Caoutchouc and gutta-percha en fils pour machines et courroies.	4 fr. 60 c. per 100 kilos.

There does not appear to be any further change in articles under this head.

To judge by M. Herbet's language, the treaty will now very soon be concluded and signed. The question of the "cotes des valeurs" is not yet decided, but he did not seem to apprehend any serious difficulty on this point. Till the treaty is signed, M. Herbet said that no copy of it could be given, but he said he was quite ready to give any verbal information regarding it, or to answer any specific questions that might be put to him.

App. No. 6.

Enclosure in No. 11.

MEMORANDUM.

AINSI qu'il a été convenu dans l'entrevue que le Marquis d'Azeglio et le Commandeur Marliani ont eu au Foreign Office le 26 courant avec Lord Russell et Mr. M. Gibson, les soussignés ont l'honneur de résumer promemoriâ les Articles sur lesquels le Gouvernement Italien désirerait obtenir une réduction de droits ou bien même l'exemption de tout droit.

Réduction:—Papier, carton mince, eau de vie, genièvre, rhum importé du pays de production, rhum d'ailleurs, tafia, vins divers;

Droits actuellement perçus à la sortie des entrepôts Anglais autorisés ou libres sur les produits et marchandises de provenance Italienne, destinés à la consommation intérieure du Royaume Uni.

Exemption de Droits:—Bois à bruler, bois cercles, bois equarre, bois à lattes, bois manches de pelles, bois merrains, bois d'ébénistérie; céréales, grains, farines, et articles similaires; fruits secs, ou confits au sucre; orfèvrerie d'argent et vermeil; orfévrerie d'or; vinaigre; conserves au vinaigre; cerises séches, confiserie et patisserie sucrée, confitures séches, gingembre, confit, marmelades, pâtes d'amande, prunes confites.

Les soussignés seront heureux de recevoir les renseignements demandés sur ces divers points qui leur permettront, en se formant une opinion plus correcte, de rendre plus faciles les négociations pour la révision du Traité de Commerce et de Navigation entre les deux Gouvernements.

Ils ont l'honneur par conséquence de s'adresser à la bienveillance du Comte Russell, en le priant d'agréer, &c.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Sir, Foreign Office, 28 January 1863.

I AM directed by Earl Russell to transmit to you, for the consideration of the Lords of the Committee of Privy Council for Trade, copy of a Despatch from Her Majesty's Acting Chargé d'Affaires at Turin, inclosing a draft of a new Treaty of Commerce and Navigation between Great Britain and Italy.

I am, &c.
(signed) *E. Hammond.*

Enclosure in No. 14.

Mr. *West* to Earl *Russell.*

My Lord, Turin, 25 January 1863.

I HAVE the honour to forward herewith a draft of a Treaty of Commerce and Navigation which, after speaking to the Italian Ministers of Finance and Commerce, I have drawn up for the approval of Her Majesty's Government. This draft is based upon the treaty of the 27th February 1851, between Great Britain and Sardinia, and embodies the provisions, under existing circumstances, of the Treaty of 1847 with Tuscany, and the Treaty of 1845 with the Two Sicilies.

Articles I, II, III, V, VII, VIII, IX, XV, XVI, XIX, and XX of the proposed draft correspond with the Articles I, II, III, XIV, VI, V, VII, X, XII, and XVI of the Treaty of 1851.

Article IV, which relates to the transit trade, is based upon Article XI of the Treaty between Great Britain and Belgium of 1862.

Article VI is based upon Article XI of the Treaty of 1851, and is the most important Article in the proposed draft. I did not consider that this Article, as it stands in the Treaty of 1851, would entitle Great Britain to the advantages accorded to France by the Treaty lately signed at Paris, and your Lordship will therefore find it drafted in a form which will accord any advantages, privileges, favours, or immunities which have been or which may be granted by Italy to another power. By this Article, therefore, Great Britain, according reciprocity, will immediately enjoy the advantage of the reduction of duties accorded to France, and I may here state to your Lordship that I have reason to believe that the Italian Government are not unwilling that such should be the case.

Article X is based upon Article VIII of the Treaty of 1851 and Article VII of the Treaty with Belgium.

Article XI embodies provisions of the Coasting Trade Convention of 9th August 1854, and as far

far as colonial possessions are concerned, Article XII of the Treaty with Belgium.

Article XII, I have inserted after much conversation with the Minister of Commerce.

Article XIII is a substitution for Article IX of the Treaty of 1845 with Naples.

Article XVII is based upon Article XIII of the Treaty of 1851, and I have inserted the words "real" and "personal property."

In drawing up this draft I have adhered as nearly as possible to the Treaties with Sardinia, Tuscany, and the Two Sicilies, except where alterations and reference to other treaties appeared, under existing circumstances, absolutely necessary.

I think it right to call your Lordship's attention to Article XVII of the draft, which as it stands accords the right of holding real property in England to Italians.

I may in conclusion state that should this draft in substance meet with the approval of Her Majesty's Government, I do not anticipate any difficulty in the speedy conclusion of the treaty.

I have, &c.
(signed) *L. S. Sackville West.*

No. 15.

Sir *J. Emerson Tennent* to Mr. *Hammond.*

Office of Committee of
Privy Council for Trade, Whitehall,
Sir, 3 February 1863.

I HAVE laid before the Lords of the Committee of Privy Council for Trade your letter of the 28th ultimo, transmitting, for their consideration, by direction of Earl Russell, a copy of a Despatch from Her Majesty's Chargé d'Affaires at Turin, enclosing the draft of a new Treaty of Commerce and Navigation between Great Britain and Italy; and I am directed to request that you will submit to his Lordship the following observations:

On the 24th April last, in compliance with Earl Russell's request, contained in your letter of the 17th of that month, my Lords transmitted to you the draft of a Treaty of Commerce and Navigation which they had caused to be prepared, and which, in their opinion, might serve as the basis of negotiation with the Italian Government.

My Lords are unaware of the reasons which have led Earl Russell to substitute for that draft treaty the draft treaty which has been prepared under his Lordship's instructions by Her Majesty's Chargé d'Affaires at Turin, and now submitted for their consideration.

They have, however, carefully gone through the provisions of the latter draft treaty, and compared them with those of the draft prepared under their directions in April last; and they find so many differences between many of them, not only in form, but in substance, that they must, in the absence of further information, confine themselves, on the present occasion, to the task of pointing out to Earl Russell the nature and extent of those differences.

Articles I, II, III, IV, V, VI, XI, XIII, XV, and XVI of the Turin draft correspond with Articles I, V, XIV, X, VIII, XI, XVIII, and XIII of the draft prepared in this department, but are less satisfactory in form, and, in some cases, defective in substance. My Lords would refer more especially in illustration of their opinion to Article XV of Mr. West's draft. App. No. 6.

Article IV, which in both drafts relates to the transit trade, is framed in the draft prepared in this department so as to guard against any disabilities and charges in the case of goods in transit to or from this country through the Italian dominions by the various modes of conveyance, and may have been considered more detailed than is necessary in the case of the Italian kingdom. In Mr. West's draft the prohibition affecting the transit of gunpowder through Italy is retained, and the transit of arms and munitions of war is to take place only under special authorisation. My Lords would have been glad to know on what grounds the Italian Government desire this reservation, although, if insisted upon, they would not be disposed to object to it.

Articles VII and IX are identical with Articles IX and VII in the Board of Trade draft.

Article VIII corresponds with Article VI in the Board of Trade draft, with the addition of the word "communes," to which my Lords have no objection if its insertion serves any useful purpose.

Article X provides for the trade *en échelon.* It was not thought necessary to insert a special stipulation for this operation; but if any reason exists in Italian legislation to render it desirable, there can be no objection to its insertion.

Article XII binds the contracting parties not to prohibit the exportation of coal. There is no corresponding provision to this effect in the Board of Trade draft, and unless it is insisted upon by the Italian Government, my Lords would decidedly object to any such stipulation. It certainly should not be conceded except, as was the case in the French Treaty, with a view to obtain an equivalent concession.

Article XIV corresponds with a part of the stipulations contained in Article II of the Board of Trade draft, but is objectionable as a distinct article, from its incomplete and partial character. The obligation which it imposes on the British Colonies not to place higher duties on Italian than on British produce and manufactures goes beyond the stipulation proposed by the Board of Trade, but as it has been conceded to Belgium by the recent Treaty, my Lords cannot object to its being extended to Italy if it be insisted on in the present negotiation.

The difference of form between Article XVI of the present draft, and Article XIII of the Board of Trade Draft, is one the importance of which the Foreign Office will be better able to judge than the Board of Trade.

Article XVIII relating to the Ionian Islands, is similar in the two drafts.

Article XVII provides that Italian subjects may hold real property in the United Kingdom, a provision which is inconsistent with English law. Article XVI in the Board of Trade draft is so drawn as to avoid this difficulty, and is, in my Lords' opinion, preferable on general grounds.

In the foregoing remarks my Lords have pointed out the differences in the corresponding articles of the two drafts, and have called Lord Russell's attention to the stipulations in Mr. West's draft for which there is no provision in the Board of Trade draft.

It remains for them to specify the provisions in the Board of Trade draft for which no equivalent or substitute is inserted in the present draft.

App. No. 6.

These are:—

Articles II. and III. relating to the duties on importation and exportation.

Article XI., relating to trade marks.

Article XIV., relating to religious liberty.

Article XV., providing against compulsory service, forced loans, &c.

Article XVII., securing certain legal rights and privileges.

Article XIX., relating to the recovery of deserters.

The first two, the trade marks article, and that which provides for the recovery of deserters, my Lords consider very important, and should, they think, be inserted in any treaty which is agreed to by Her Majesty's Government.

In concluding this comparison of the two drafts, I am to state that the order and arrangement of the articles in the Board of Trade draft is, in their opinion, very preferable to that of the present draft; a matter which, with a view to facilities of reference, is not without importance.

In submitting these remarks to Earl Russell, I am to request that you will add that, whatever may be the particular form which may be adopted for a new Commercial Treaty with Italy, it is more especially to the character of the new Italian Tariff that my Lords must look for the promotion of our commercial relations with that country.

In their letter of the 18th February 1862, my Lords expressed at some length their views on this subject, and their anxiety to obtain the earliest possible information as to the nature and extent of the tariff concessions which were given to France.

In consequence of that communication, the principal commercial bodies were called upon to prepare statements of the changes which appeared to them desirable in the interest of their respective trades, and much valuable information was collected.

My Lords presume that the Italian Government had proceeded too far in their negotiation with France at that time to allow of their considering representations from Her Majesty's Government, and they fear that now they may be indisposed to make any very extensive changes in a tariff which has been so recently prepared; but they are strongly of opinion that Her Majesty's Government should not bind itself by a new Commercial Treaty with the kingdom of Italy, and especially by a treaty which, like that under consideration, contains some new concessions of doubtful expediency, without having had an opportunity of examining carefully the new Italian Tariff with reference to the claims of the Chambers of Commerce, and exerting all their influence with the Italian Government to obtain any further modifications which may be urgently required by British commerce.

With this view I am to suggest that Mr. West should be instructed to send home at the earliest possible moment the Italian Tariff annexed to the recent Treaty with France, if, indeed, that treaty has been concluded (my Lords having received no official intimation to that effect), and that the negotiation of the present Draft Treaty should be suspended until my Lords have had an opportunity of examining its provisions.

I am at the same time to recall to Lord Russell's recollection, that on the occasion of the negotiation of the present Treaty of Commerce between Great Britain and Sardinia in 1851, many Tariff concessions were made to this country by Sardinia without any special or corresponding reductions in the British Tariff.

I have, &c.

No. 16.

Sir *J. Emerson Tennent* to Mr. *Hammond.*

Office of Committee of
Privy Council for Trade, Whitehall,
Sir, 3 February 1863.

With reference to my letter of this day's date, I am directed by the Lords of the Committee of Privy Council for Trade to transmit to you, to be laid before Earl Russell, the inclosed copy of a letter from the Dundee Chamber of Commerce on the subject of the absence of any provision in the Italian Tariff for manufactures of jute.

It will be impossible, until my Lords have been enabled to examine the provisions of the Tariff which has been conceded to France under her recent Treaty with Italy, to know how far this defect may have been remedied; but in the event of the continued omission of this branch of manufacture from the Italian Tariff, my Lords are of opinion that it will afford a very proper ground of representation to the Italian Government.

I have, &c.

(signed) *J. Emerson Tennent.*

Enclosure in No. 16.

The Secretary of the Dundee Chamber of Commerce to Sir *J. Emerson Tennent.*

Chamber of Commerce, Dundee,
Sir, 28 January 1863.

With reference to a statement that has appeared in the public journals that a Treaty of Commerce has been signed between France and Italy, the directors of the Chamber beg to bring under your notice a paragraph in my letter of the 4th July 1862, when transmitting a schedule of duties proposed to be levied between this country and Italy. It was, "I have been instructed to call particularly to your attention the fact that in the present Tariff of Italy the products of jute, viz., yarn, cloth, and carpeting, are not even mentioned, and, therefore, whatever duties may be fixed, it is absolutely necessary, under any changes that may take place, this large and growing trade should specially have a place in the Tariff of Italy." The directors take this liberty, as it is believed the Italian Government are to treat us in the same manner as France.

The jute trade not being one of a like importance in France as in this country, especially in Dundee, the jute products may not be mentioned or classified in the manner which is necessary for its advancement. I beg to refer to the schedule sent on the 4th July 1862.

The

The following shows the importance of the trade :—

Jute imported into Dundee in 1862, 38,277 tons; flax and tow imported into Dundee in 1862, 38,244 tons.

I have, &c.

Secretary.

No. 17.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Foreign Office,
Sir, 4 February 1863.

I AM directed by Earl Russell to acquaint you, for the information of the Lords of the Committee of Privy Council for Trade, that his Lordship is not in possession of the text of the Treaty lately concluded between France and Italy; but their Lordships will have perceived by Mr. West's Despatch of the 25th ultimo, a copy of which was inclosed in my letter to you of the 28th ultimo, that any commercial advantages accorded to France by this Treaty will also be extended to this country.

I am, &c.
(signed) *E. Hammond.*

No. 18.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Foreign Office,
Sir, 7 February 1863.

WITH reference to your letter of the 3d instant, conveying the observations of the Lords of the Committee of Privy Council for Trade on a draft of treaty of commerce and navigation between Great Britain and Italy which Earl Russell had received from Her Majesty's Chargé d'Affaires at Turin, I am directed by his Lordship to request that you will state to the Lords of the Committee that the Italian negotiator who was sent to England last year required many reductions of duty in the British Tariff in wines, confectionery, and other articles, which could not have been granted without a considerable loss of revenue.

It appears to Lord Russell that on political grounds it is very desirable to sign a treaty of commerce with Italy. He, therefore, proposes to send to Turin the draft treaty prepared at the Board of Trade in May last, with directions to Mr. West to sign that Treaty, without any other alteration than omitting the article as to the Ionian Islands.

If any alteration be proposed by the Italian Government, Mr. West will be directed to send the proposal home, and it will then be referred to the Board of Trade.

I am, &c.
(signed) *E. Hammond.*

App. No. 6.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Foreign Office,
Sir, 16 February 1863.

WITH reference to former correspondence on the subject of a new treaty of commerce between Great Britain and Italy, I am directed by Earl Russell to transmit to you copy of a Despatch* from Her Majesty's Ambassador at Paris inclosing copies of a treaty of navigation between France and Italy, signed at Paris on the 13th June 1862, and also of a treaty of commerce between the same countries signed at Paris on the 17th ultimo, with four tariffs A, B, C, D, annexed thereto.

I am also to transmit to you copies of two Despatches from Her Majesty's Chargé d'Affaires at Turin on the subject of those treaties.

Lord Russell desires me to request that you will lay these papers before the Lords of the Committee of the Privy Council for Trade, and move their Lordships to favour him with their opinion on the question, whether or not Her Majesty's Government should negotiate with Italy a treaty on the principle of the most favoured nation, or whether such a course would be disadvantageous.

I am at the same time to call your attention to the remark of Lord Cowley, that the treaties and tariffs inclosed in his Despatch must for the present be considered as confidentially communicated, and also to the remark made by the Italian Minister as to the documents not having yet been communicated to the Italian Chambers.

I am, &c.

IN transmitting to you the inclosed copy of a memorial* from the Chamber of Commerce for the Potteries, I am directed by the Lords of the Committee of Privy Council for Trade to request that you will lay it before Earl Russell together with the following observations:—

Under the Italian Tariff recently given under treaty to France, white earthenware is charged eight francs per 100 kilogrammes, instead of nine francs 20 centimes, and painted or coloured 12 francs per 100 kilogrammes, instead of 13 francs 80 centimes, being a reduction of 15 per cent.; while on white porcelain, in which France is more interested, the new duty is, after the 1st October 1864, 12 francs per 150 kilogrammes, instead of 18 francs 40 centimes, being a reduction of 30 per cent. Under these circumstances our earthenware will be placed relatively at a disadvantage.

No. 24.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Foreign Office,
Sir, 18 March 1863.

I AM directed by Earl Russell to transmit to you to be laid before the Lords of the Committee of the Privy Council for Trade, six copies of the commercial convention concluded between Italy and France, together with a copy of the letter which has been addressed to the principal Chambers of the commerce in this country, forwarding to them a copy of that convention.

I have, &c.
(signed) *E. Hammond.*

Enclosure in No. 24.

Circulars to Chambers of Commerce.

Foreign Office,
Sir, 17 March 1863.

I AM directed by Earl Russell to transmit to you herewith, for the information of the Chamber of Commerce at ——, a copy of the commercial convention and tariff recently concluded between France and Italy, as received from Her Majesty's representative at Turin; and I am to request that the Chamber of Commerce will, as soon as it can do so, communicate to the Lords of the Committee of Privy Council for Trade any observations that they may desire to offer on these documents, with reference to the negotiations into which Her Majesty's Government are prepared to enter with the Government of Italy, with a view to the conclusion of similar arrangements between this country and Italy.

I am, &c.
(signed) *E. Hammond.*

No. 25.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Sir, Foreign Office, 2 April 1863.

I AM directed by Earl Russell to acknowledge the receipt of your two letters of the 19th instant, inclosing copies of communications from the Birmingham Chamber of Commerce, and of the Chambers of Commerce for the Potteries, calling attention to certain points in the Italian Tariff; and I am, in reply, to request that you will state to the Lords Commissioners of the Privy Council for Trade that, as matters stand, and it being the intention of Her Majesty's Government to enter into commercial negotiations with Italy as soon as the views of the different commercial bodies to whom the late treaty between France and Italy has been referred have been ascertained, it appears to Lord Russell that it would be worse than useless to make any representation to Turin on isolated points such as those referred to in those letters.

Lord Russell hopes that when the Board have acquired the necessary information, they will prepare and forward to him, in a shape to form the basis of instructions to Her Majesty's Minister at Turin, a distinct statement of the proposals which

* These enclosures are not printed.—*See* Note, No. 7.

which shou d be made to the Italian Government, of the concessions which should be sought, and of those which this country is prepared in return to make.

Lord Russell will then forward that statement to Turin, with such further instructions as may be necessary; and he would wish that some well-qualified person from the Board of Trade should simultaneously be sent there to assist Sir J. Hudson in the detail of his negotiation.

I am, &c.
(signed) *E. Hammond.*

No. 26.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Sir, Foreign Office, 2 April 1863.

I AM directed by Earl Russell to request that you will inform the Lords of the Committee of Privy Council for Trade that his Lordship has received a letter dated the 24th instant from the Bradford Chamber of Commerce, containing their remarks upon the Commercial Treaty between France and Italy, a copy of which letter is stated to have been forwarded to the Board of Trade; and I am to state that Lord Russell would be glad to be favoured with the opinion of the Board on the whole question as soon as possible, as his Lordship fears that otherwise considerable delay may occur in the negotiations.

He would likewise wish to learn what officer of the Board of Trade will be instructed to go to Turin to assist Sir James Hudson.

I am, &c.
(signed) *E. Hammond.*

No. 27.

Sir *J. Emerson Tennent* to Mr. *Hammond.*

Office of Committee of
Privy Council for Trade, Whitehall,
Sir, 10 April 1863.

With reference to your letters of the 2nd April on the subject of the commercial negotiations between this country and Italy, I am directed by the Lords of the Committee of Privy Council for Trade to request that you will state that they entirely concur with his Lordship in the inexpediency of making isolated representations to the Italian Government on particular points of the new Tariff, and that they will be prepared, so soon as the replies from the different commercial bodies which have been consulted shall have been received, to supply his Lordship with a statement of the proposal which they think it may be desirable to make to that Government, and that they will at once place themselves in communication with the Lords of the Treasury with regard to the concessions which may in return be made by Her Majesty's Government.

I am to add that if it appears to Lord Russell, on receiving this statement, that it will be desirable that a gentleman from this department shall be sent to assist Sir J. Hudson in the detail of his negotiation, Mr. Mallet will be prepared to proceed to Turin for that purpose.

I have, &c.
(signed) *J. Emerson Tennent.*

No. 28.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Sir, Foreign Office, 14 April 1863.

I AM directed by Earl Russell to transmit to you herewith, for the information of the Lords of the Committee of Privy Council for Trade, copies of letters* from the Chambers of Commerce of Dundee and Batley, containing observations with regard to the negotiation of a commercial treaty with Italy.

I am, &c.
(signed) *E. Hammond.*

P.S.—It is requested that the printed and noted enclosure in the letter of the Dundee Chamber of Commerce may be returned to this office when done with.

No. 32.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Sir, Foreign Office, 4 May 1863.

With reference to my letter of the 14th ultimo, relative to the question of duties on jute manufactures in connection with the proposed commercial treaty between this country and Italy, I am directed by Earl Russell to transmit to you, to be laid before the Lords of the Committee of Privy Council for Trade, a further letter* from the Dundee Chamber of Commerce, enclosing a copy of a letter to the Chancellor of the Exchequer upon this subject.

I am to request that the original paper herewith enclosed may be returned when done with.

I am, &c.
(signed) *E. Hammond.*

No. 33.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Sir, Foreign Office, 15 May 1863.

I am directed by Earl Russell to request that you will acquaint the Lords of the Committee of Privy Council for Trade that a telegram has been received from Sir James Hudson, by which it appears that the Italian Government, who have recently concluded treaties of commerce with Holland and Belgium, are very anxious to be able to introduce into the King's speech, on the opening of the next Session of the Italian Parliament, which will take place on the 25th instant, a phrase respecting a treaty with England.

That they may be enabled to do so, they have authorised Sir James Hudson to say that they abandon the idea of obtaining reductions in the British tariff, hoping that Her Majesty's Government will sign the treaty of which Her Majesty's Government already possess a draft.

If the draft here alluded to is the one sent home by Mr. West in the beginning of this year, and which is commented upon in your letter of the 3d of February last, Lord Russell understands that the Board of Trade would not be prepared to assent to it as it now stands; but Lord Russell considers that it is very undesirable to let the question of a commercial treaty with the Kingdom of Italy, which is so much desired, be any longer postponed; and I am accordingly to request that the Board of Trade, having had full opportunity of communicating with the several Chambers of Commerce in the country on the subject, will frame such a draft of treaty as may be proposed to the Italian Government, with a reasonable expectation that it will be accepted, and, if accepted, be generally beneficial to the trade between the two countries.

Lord Russell directs me to add, that it is of the utmost importance that full instructions to Sir James Hudson on this matter should be forthwith sent to Turin, and his Lordship trusts, therefore, to receive the decision of the Board of Trade with the least possible delay.

I am, &c.
(signed) *E. Hammond.*

No. 34.

Mr. *Booth* to Mr. *Hammond.*

Office of Committee
of Privy Council for Trade, Whitehall,
Sir, 18 May 1863.

In reply to your letter of the 15th, I am directed to request that you will state to Earl Russell that the objection of this Board to the adoption of the draft treaty sent home by Mr. West at the beginning of this year, subject to the modifications indicated in their letter of the 3d February, rested principally on the ground that they had not then had an opportunity of examining the Tariff of Customs duties annexed to the recent treaty between Italy and France.

It now appears from the examination of that tariff which my Lords have been enabled to make, that, with the exception of certain reductions upon a limited number of articles in which the French trade is especially interested, and of the introduction of *ad valorem* duties upon woollen tissues, it is substantially the same as that which has recently been and still is generally in force in the Italian Kingdom. My Lords do

* These Enclosures are not printed. *See* Note, No. 7.

do not, therefore, anticipate any considerable change in the commercial relations of the two countries as a consequence of its extension to the United Kingdom.

Lord Russell having by his circular of the 17th March last invited the remarks of the principal Chambers of Commerce of the United Kingdom upon the provisions of this tariff, my Lords have received from many of them (though not yet from all) an expression of their views on its probable operation upon the British export trade.

Some of these replies are to the effect that the existing arrangements are satisfactory; others express the opinion that further modifications are required.

The principal points which seem to call for alteration are the following:—

The duties on iron and steel are too high in several instances, and the classification of the former too complicated and minute, but they are generally more moderate and simpler than in the French tariff.

On cutlery the Sheffield Chamber strongly urges an *ad valorem* duty instead of the present complicated classification.

The spinning interest generally considers that if duties on yarn are retained, the differential duties on bleached and dyed yarn should be at all events removed; the present differential duties are altogether disproportioned to the cost of these operations.

As respects woven fabrics of cotton, woollen, and silk, the tariff is satisfactory. In linens, it is to be desired that the rates on dyed and printed cloths should be the same as those on bleached.

It is especially important that the duty on all mixed fabrics should be charged *ad valorem* (as in the French tariff), and not upon the predominant material as is now the case.

A special representation from Dundee on the jute duties calls attention to the disproportionate duty charged on jute manufactures, and proposes that rates should be fixed in the same proportion to their value as in the case of manufactures of linen.

The Staffordshire potteries have called attention to the relative injury which they will sustain from the adoption of the Franco-Italian tariff, unless a reduction is made on earthenware corresponding to that effected on porcelain by that tariff. The particulars of this case were stated in my letter of the 19th March last.

It, however, does not appear from your letter of the 15th instant, whether, in withdrawing their claim to reductions in the British tariff, the Italian Government means it to be understood that all claims on the part of Her Majesty's Government for reductions in the Italian tariff are to be equally withdrawn.

If Lord Russell is of opinion that they are still prepared to receive representations with a view to further modifications in their tariff, my Lords will at once supply him with a statement of the principal proposal which in such an event it would be desirable to make.

But they rather infer, from the brief interval which has been left for such representation, that all that is intended by the Italian Government is the conclusion of a Treaty of Commerce and Navigation, containing the ordinary provisions, and providing for most favoured nation treatment, without any specific tariff concession on either side.

If this be so, it only remains for my Lords to state their opinion that, in the absence of information as to the existence of any objection on the part of the Italian Government to the draft Treaty prepared in this department, and transmitted in my letter of the 24th April 1862, they think that it is one which may be submitted to that Government with a reasonable expectation of being accepted, and that they would prefer it to that sent home by Mr. West in the early part of this year.

If, however, for reasons with which they are unacquainted, the draft prepared by Mr. West is more acceptable to the Italian Government, my Lords think that it should only be agreed to, subject to the remarks contained in my letter of the 3d February last.

In conclusion, I am to state that if Lord Russell is of opinion that no further tariff concessions can be obtained from the Italian Government at the present time, and that for political reasons it is important not to delay any longer the conclusion of a commercial treaty with Italy, my Lords think that in assenting to such a treaty, Her Majesty's Government should inform the Italian Government that their tariff is in several respects far from satisfactory to British interests, and obtain, if possible, some understanding that they will be ready to receive and consider future representations with a view to the modifications in its provisions, which it is desirable in the mutual interest of both countries to effect, and more particularly in those affecting manufactures of jute, earthenware, and mixed tissues of all kinds, to which I have already referred, and which ought, in the opinion of this Board, to be strongly urged on the Government of Italy.

I am, &c.
(signed) *James Booth.*

No. 35.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Sir, Foreign Office, 21 May 1863.

With reference to the question of a new Treaty of Commerce between Great Britain and Italy, I am directed by Earl Russell to transmit to you, for the information of the Lords of the Committee of Privy Council for Trade, copies of two memoranda, one by Mr. West, the Secretary to Her Majesty's Legation at Turin, the other by Mr. Allhusen, giving a report of conversations with some members of the Italian Government.

I am, &c.
(signed) *E. Hammond.*

Enclosure 1, in No. 35.

Memorandum by Mr. *West* on Conversations with Mr. *Nordlinger*, of Manchester, and Mr. *Allhusen*, of Newcastle, on the subject of Commercial Treaty.

(Private.)

In consequence of the letter from Mr. Layard of the 16th instant, which Sir James Hudson gave me to read, enclosing one from Mr. Forster,

App. No. 6.

M. P. for Bradford, requesting an introduction to Sir James Hudson for Mr. Nordlinger, a Manchester foreign merchant, I had occasion to speak to that gentleman on the subject of the proposed Commercial Treaty with Italy, about which he was anxious to make some suggestions on the part of the Manchester cotton interest. It was sought, he said, to obtain a revision of the existing rates, a reduction of which should be provided for in any treaty which might be concluded. I explained the difficulties which at the present moment we should encounter in obtaining from the Italian Government any further concessions on this head; and in order that Mr. Nordlinger should be convinced of this, I took him to M. Baer, the Secretary-General of the Ministry of Commerce, with whom I had been previously in communication on commercial matters, to discuss his suggestions privately. M. Baer at once said the moment was most inopportune to discuss this matter, and stated at length the difficulties the Government had encountered, and were actually encountering, in maintaining the reductions of 1860. I suggested that we should not discuss and argue on Free Trade *versus* Protection, a question upon which I felt convinced the Italian Government in reality agreed with us, but rather find means to satisfy the Manchester cotton interest, without adding to the difficulties the Italian Government were contending against. Mr. Nordlinger then proposed:

1. To put cotton goods on the same footing as woollen; or

2. An optional *ad valorem* duty, as provided for woollens by Franco-Italian Treaty.

Neither of these propositions, I feel assured, would be entertained, and this Mr. Nordlinger clearly saw from what M. Baer said. I afterwards saw the Minister of Commerce, M. Manna, and his language was equally decided on this point.

Mr. Nordlinger said that, if Sir James Hudson and myself thought that nothing could be obtained, it might be expedient to secure the application of the reductions accorded to France, which could not be claimed under Article XI. of our Treaty of 1851.* (I may here observe that such application would be obtained by Article VI. of the proposed draft.)

Mr. Nordlinger suggested a special clause providing for future negotiations for a reduction of the duties on cotton goods.

I told him I should report our conversation to Sir J. Hudson; and he left the same evening for Milan.

Since the above was written, Mr. Allhusen has presented to me Lord Russell's letter of the 27th of February. He expressed his desire to be put into communication with the Italian Government, for the purpose of pressing upon them the expediency of a revision of the existing tariff.

Should the Italian Government consent to entertain the question of such a revision, Mr. Allhusen said he was prepared to enter into details.

* The application entire of this tariff, as far as regards some articles, may not be beneficial to English interests.

Enclosure 2, in No. 35.

MEMORANDUM.

AFTER having discussed with M. Minghetti, the Minister of Finance, the effect which a general reduction of the Italian Tariff would have upon the prosperity of Italy, he stated that the Italian Government had every desire to develop the resources of the country. M. Manna, Minister of Agriculture and Commerce, entered the room at this period. M. Minghetti followed up his remarks by saying that there were two methods of meeting the representations I have made: the one was by a general revision of the Italian Tariff, which would involve an alteration of the treaty just concluded with France, and the other was by basing a treaty upon reductions to be made simultaneously upon the importation of Italian produce into England.

M. Manna expressed his satisfaction upon the duty now charged upon foreign wines, and considered that in the interest of Italy a considerable reduction should be made, as the rate of 1 *s.* per gallon, though a moderate duty on the produce of France and other countries, would amount to about 60 per cent. on the value of the cheap Italian wines. I replied that it would be altogether impracticable to conclude a commercial treaty upon any such basis, as any reduction in favour of Italian wines would have to be conceded to other countries; and for the present, at at any rate, further reductions were incompatible with the maintenance of the revenue of the country. Moreover, as England simply imposed nominal duties on the importation of Italian produce generally—dried fruits and wines formed the only exception—it could no longer negotiate treaties upon the principle proposed. Experience had proved that the removal of restrictions upon commerce had conferred benefits upon all classes of the community; and whilst it could not be doubted that a revision of the Italian tariff would benefit England, it could not be questioned that Italy would be the greatest gainer by the adoption of such a course.

After entering into some illustrations in support of this view, a practical issue of the discussion was arrived at by M. Minghetti, giving a distinct assurance that the Italian Government would be prepared to enter into a treaty by which Italy and England would secure to each other any advantages which have been or may be hereafter conferred in either country to any other nation. He further stated that, though the Italian Government was not prepared to name a time when a further revision of the tariff should be made, a revision should take place at as early a period as possible. He remarked that, as pressure of business brought upon the Government at present was very great, the subject would have to be deferred to a more favourable opportunity.

Under these circumstances, I would wish to suggest that a draft of a treaty on the basis proposed be prepared forthwith, so that the most favoured nation clause may be secured with respect to the Kingdom of Italy as now constituted, immediately after the French treaty shall be passed by the Chambers, unless, indeed, it can be passed simultaneously, and that the question of a further reduction of the tariff be from time to time brought under the notice of the Italian Government.

(signed) *C. Allhusen.*

Turin, 3 May 1863.

No. 36.

Sir *J. Emerson Tennent* to Mr. *Hammond.*

Office of Committee
of Privy Council for Trade,
Sir, Whitehall, 21 May 1863.

WITH regard to my letter of yesterday, I am directed by the Lords of the Committee of Privy Council for Trade to request that you will inform Earl Russell that they have this morning received from the Chamber of Commerce at Dundee a letter, of which I enclose a copy,* suggesting an amended classification of jute, yarn, and tissues in the Italian tariff, which my Lords would propose should be substituted for that inserted in the schedule annexed to the draft article enclosed in their letter of yesterday.

I am, &c.
(signed) *J. Emerson Tennent.*

No. 37.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Foreign Office,
Sir, 23 May 1863.

WITH reference to recent correspondence on the subject of the draft of a new treaty of commerce to be proposed to the Government of Italy, I am directed by Earl Russell to transmit to you, to be laid before the Lords of the Committee of Privy Council for Trade, two Despatches which he proposes to address to Her Majesty's Minister at Turin, transmitting the draft treaty prepared at the Board of Trade in May 1862. In that Despatch Lord Russell has incorporated as Article III. the draft article and tariff relative to manufactures of jute, earthenware, and mixed fabrics, which was enclosed in your letter of the 20th instant; the amended tariff as to jute fabrics, which was enclosed in your letter of the 21st instant, being, however, substituted for the corresponding part of the tariff which accompanied your letter of the 20th.

His Lordship, in conformity with the suggestion in a memorial from the Bradford Chamber of Commerce, enclosed in your letter of the 11th of February last, has added to the tariff a proviso that the duty on mixed fabrics may be paid by weight at the option of the importer. The Chamber suggest a rate of 1 franc 40 centimes per kilogramme; but Lord Russell has inserted 1 franc 60 centimes, believing that to be the lowest rate which there is any chance of obtaining. If, however, the Lords of the Committee think the lower rate should be proposed, they will have the goodness to make the requisite alteration in the draft article.

I am to add, that Lord Russell is of opinion that it would conduce to the success of the negotiation if Mr. Mallet were to proceed to Turin, in order to assist Sir James Hudson with his advice and knowledge of the requirements of British interests, and I am accordingly to request that you will move the Lords of the Committee to give him directions to that effect, if they concur in opinion with Lord Russell.

I am, &c.
(signed) *E. Hammond.*

* This Enclosure is not printed. *See* Note, No. 7.

Enclosure 1 in No. 37. App. No. 6.

DESPATCH to Sir *James Hudson.*

(No. 37.)

Sir, Foreign Office, 27 May 1863.

HER Majesty's Government have considered the draft Treaty of Commerce between Great Britain and Italy which was enclosed in Mr. West's Despatch of the 25th of January last. While they highly approve the diligence and care with which that draft was prepared, they are of opinion that its provisions are in many respects susceptible of improvement; and there are moreover some points not noticed in that draft on which it would be desirable to have treaty stipulations, while in regard to others Her Majesty's Government would not wish spontaneously to offer the engagements contained therein.

Under the first of these two classes I would mention duties of importation and exportation, trade marks, religious liberty, security against compulsory military service, forced loans and requisitions, legal rights and privileges, and the recovery of deserters.

Her Majesty's Government would also wish to propose some special tariff arrangements respecting manufactures of jute, earthenware, and mixed fabrics. On this subject I address to you a separate Despatch.

In the second class occur the following points:

In the article respecting transit trade there is inserted from the recent treaty with Belgium a prohibition affecting the transit of gunpowder, and a restriction as to the transit of arms and munitions of war. I am not aware whether the Italian Government would insist upon such provisions; but unless they did so, Her Majesty's Government would not insert them in the treaty of their own accord.

The same observation applies to the engagement not to prohibit the exportation of coal, which is contained in Article XII. of Mr. West's draft, and which is objectionable, and also to the engagement in Article XIV., that in the British Colonies no higher duties shall be imposed on Italian produce than on British produce.

The provision in Article XVII., which would permit Italian subjects to hold real property in the United Kingdom, is inconsistent with British law.

For these reasons Her Majesty's Government have caused a fresh draft of treaty to be prepared, and for the sake of convenience to be printed. I transmit to you some copies of it, and I have to instruct you to propose it to the Italian Minister. If it be accepted by him, you are authorised to sign it on the part of Her Majesty.

Should the Italian Government desire any alterations in the draft which you are instructed to offer to them, you will send their proposals home for the consideration of Her Majesty's Government.

I have only to add one or two further observations.

In Article VIII. of Mr. West's draft the word "communes" occurs. There is no reason why it should not be inserted in the corresponding Article of the printed draft, if its insertion will serve any useful purpose.

Article X. of Mr. West's draft, which relates to trade *en échelon*, is omitted in the new draft, on the presumption that it is unnecessary, the entire

App. No. 6.

coasting trade being opened by another Article. But if any special reason exists in Italian legislation to render it desirable, there can be no objection to its insertion.

No stipulation has been inserted in the new draft with regard to the Ionian Islands. Any engagement respecting those islands may be reserved for a separate negotiation hereafter.

I am, &c.

Enclosure 2, in No. 37.

Despatch to Sir *James Hudson*.

Sir, Foreign Office, 27 May 1863.

Her Majesty's Government are extremely desirous to obtain, in the new Treaty of Commerce which they hope to conclude with the Kingdom of Italy, some arrangements with regard to the three branches of British manufacture beyond what would be the result of the application to Great Britain, under a most favoured nation Article, of the tariff of duties annexed to the recent Treaty of Commerce between France and Italy. The three branches of manufacture to which I refer are—

1. Jute.
2. Earthenware.
3. Mixed woven fabrics.

I transmit to you a memorandum, explaining the grounds upon which Her Majesty's Government feel bound to press for some special arrangements with regard to these articles, to which the scale of duties settled by the Franco-Italian tariff are not justly applicable, and an Article, numbered III., has been inserted in the draft treaty, transmitted to you in my Despatch of this date, calculated to carry out the propositions of Her Majesty's Government in this respect.

Her Majesty's Government would have been happy if it had been in their power to offer to the Italian Government some specific advantage in return for what they are now asking. But the fact is, that the recent commercial legislation of Great Britain has been so liberal, that she has little or nothing to give to a foreign power beyond a treaty engagement for the continued enjoyment of the treatment of the most favoured nation, which is, in effect, national treatment. All the leading productions of the Kingdom of Italy, with the single exception of wine, are admitted into Great Britain absolutely free from duty. The duty on wine, an article which Great Britain does not herself produce, is levied solely for the purpose of revenue, and as any reduction upon Italian wines must, according to the commercial system of this country, be extended to wine the produce of all other countries, the result would be a serious loss of revenue, which Her Majesty's Government could not afford. But the arrangements which you are instructed to propose to the Italian Government with regard to jute manufactures, earthenware, and mixed fabrics would, on the contrary, benefit their revenue, while they would not have any injurious effects upon domestic manufactures.

You will urge these considerations in the strongest manner upon the Italian Government.

I am, &c.

No. 38.

Sir *J. Emerson Tennent* to Mr. *Hammond*.

Office of Committee of Privy Council for Trade,

Sir, Whitehall, 25 May 1863.

In reply to your letter of the 23d instant, I am directed by the Lords of the Committee of Privy Council for Trade to request that you will state to Earl Russell that they concur in the directions to Sir James Hudson contained in the two draft Despatches enclosed in your letter, and in the draft treaty which his Lordship proposes to submit for the acceptance of the Italian Government.

With reference to the proviso which his Lordship has inserted in the tariff on mixed fabrics, appended to Article III., giving the importer the option of paying by weight at the rate of 1·60 francs per kilogramme, I am to state, as the average value of worsted tissues may be taken at about 10 francs the kilogramme, my Lords would suggest that the rate proposed, videlicet, 1·60 francs, should be changed to 1·50 francs per kilogramme, with a corresponding reduction to one franc per kilogramme in October 1864; these rates being equivalent to the *ad valorem* duties of 15 per cent. and 10 per cent. respectively.

I am also to suggest, for Lord Russell's consideration, whether in the event of the Italian Government not being prepared to incorporate the desired tariff changes in the present Treaty, they might not be induced to adopt them at once by independent legislation, and whether Sir James Hudson might not be instructed to obtain from them a written assurance to this effect.

I am to add that if Lord Russell considers that Mr. Mallet's assistance will be useful to Sir James Hudson at this stage of the negotiations, my Lords will instruct him to go to Turin with the least possible delay.

I am, &c.
(signed) *J. Emerson Tennent.*

P. S.—I am desired to return the enclosed printed draft of the Treaty, with the alteration above alluded to, and proposed to be made in the Schedule of Customs Duties attached to Article III.

J. E. T.

No. 39.

Mr. *Hammond* to Sir *J. Emerson Tennent*.

Sir, Foreign Office, 23 May 1863.

I am directed by Earl Russell to transmit to you herewith, for the information of the Lords of the Committee of Privy Council for Trade, a copy of a report* which has been received from the Edinburgh Chamber of Commerce, upon the Commercial Convention between France and Italy.

I am, &c.
(signed) *E. Hammond.*

* This Enclosure is not printed. *See* Note, No. 7.

No. 40.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Sir, Foreign Office, 26 May 1863.

I HAVE laid before Earl Russell your letter of yesterday, respecting the negotiation of a new Treaty of Commerce between Great Britain and Italy, and I am directed by his Lordship to acquaint you, for the information of the Lords of the Committee of Privy Council for Trade, that he will to-morrow send to Sir James Hudson the instructions of which the drafts were submitted to their Lordships, with the modifications suggested in your letter.

Lord Russell would be glad that Mr. Mallet should take his departure for Turin as soon as possible.

I am, &c.
(signed) *E. Hammond.*

No. 41.

Mr. *Hammond* to Sir *J. Emerson Tennent.*

Sir, Foreign Office, 17 June 1863.

I AM directed by Earl Russell to transmit to you a copy of a Despatch from Her Majesty's Minister at Turin, stating that the Italian Government decline to accept Article III. of the draft Treaty which he was instructed to propose to them, and which article stipulated for reductions in the Italian tariff on manufactures of jute, on earthenware, and on mixed fabrics.

Lord Russell desires me to request that in laying this Despatch before the Lords of the Committee of Privy Council for Trade you will state that it seems that Her Majesty's Government may either have the most favoured nation clause, as proposed by the Italian Government, and defer all changes of tariff for subsequent negotiation, or may refuse any further negotiation until they can make a tariff treaty. His Lordship would be glad to know which course the Lords of the Committee would prefer.

His Lordship, however, desires me to add that in his opinion the first course would be the best, as the Chancellor of the Exchequer declines to agree to any reduction of the duties on wine and dried fruits. But if the Board of Trade prefer to leave things as they are, Lord Russell will so inform the Italian Government.

I am, &c.
(signed) *E Hammond.*

Enclosure 1, in No. 41.

Sir *J. Hudson* to Earl *Russell.*

(No. 68.)

My Lord, Turin, 13 June 1863.

WITH reference to your Lordship's Despatches of the 27th May, instructing me to negotiate a Treaty of Commerce with the Italian Government, I have the honour to report that the Italian negotiator, Signor Manna, Minister of Agriculture and Commerce, rejected the draft which your Lordship instructed me to propose to the Italian Government for the reasons which you will find detailed in the enclosed copy of a letter which he has addressed to me.

Mr. Mallet will, therefore, return forthwith to England.

(signed) *James Hudson.*

Enclosure 2, in No. 41.

Signor *Manna* to Sir *J. Hudson.*

Turin, Juin 1863.

M. le Ministre,

JE m'empresse à répondre à la lettre que votre Excellence a bien voulu m'adresser après notre conférence d'hier au sujet du Traité de Commerce.

Puisque je n'avais pas pu accepter l'Article III. du projet du Traité envoyé par le Gouvernement Anglais, votre Excellence a eu la bonté de me suggérer l'idée de donner par écrit une assurance que le Gouvernement Italien serait disposé à faire des réductions à son Tarif de Douane pour ce qui concerne la *jute*, la *faïence*, et les *tissus mélangés*. Après cela le traité serait signé sans l'Article III.

Votre Excellence voudra bien me permettre de lui rappeler que dès le commencement de cette négociation le Gouvernement du Roi, en échange des réductions accordées à la France sur son tarif, et dont l'Angleterre aurait profité à l'instant même de la ratification du nouveau traité, avait demandé des réductions de droit sur l'importation en Angleterre des vins, spiritueux, vinaigre, et fruits secs de l'Italie, et que par suite des déclarations de votre Excellence sur les difficultés que le Gouvernement Anglais rencontrerait à accéder à nos demandes, nous désistâmes de notre part d'y insister.

Par cette démarche nous avons donné au Gouvernement Anglais une preuve des meilleures dispositions du Gouvernement du Roi vers le Gouvernement de la Reine de la Grande Bretagne.

L'Angleterre aurait profité sans donner aucun équivalent de tous les avantages que nous avons accordés à la France en compensation de ceux qu'on nous avait accordé en dehors de ceux que la France avait garantis à l'Angleterre par ses Traités de 1860.

Par l'Article III. du contre-projet du Traité à intervenir, ce serait au contraire l'Italie qui devrait faire d'autres diminutions dans son Tarif à l'avantage des produits Anglais, et elles seraient à l'instant applicables aux produits similaires de la France, de la Belgique, et de la Suède, sans aucune compensation de la part de l'Angleterre pour les produits Italiens. Nous ne pourrions consentir à cette proposition.

Cependant le Gouvernement du Roi, animé du désir de donner au Gouvernement Anglais des preuves de ses sentimens de déférence, ne se refuse pas de promettre qu'il prendra en spéciale considération les demandes du Gouvernement Anglais dans la confiance qu'il rencontrera de la part de celui-ci les mêmes dispositions bienveillantes pour prendre en considération les demandes faites par nous.

Après la ratification du Traité avec la France, le Gouvernement Italien devra procéder à une

App. No. 6.

revision du Tarif des Douanes. Ce sera alors le cas de s'occuper des réductions demandées par le Gouvernement Anglais. Nous sommes sûrs de notre côté que celui-ci accédera en même temps à nos demandes.

Je saisis, &c.
(signé) *G. Manna.*

No. 42.

Sir *J. Emerson Tennent* to Mr. *Hammond.*

Office of Committee of Privy Council for Trade,
Whitehall, 30 June 1863.

Sir,

I AM directed by the Lords of the Committee of Privy Council for Trade to acknowledge the receipt of your letter of the 17th instant, enclosing a copy of a Despatch from Her Majesty's Minister at Turin, and of a note from M. Manna, the Italian Minister of Commerce, from which it appears that the Italian Government decline to accept Article III. of the draft treaty of commerce proposed by Her Majesty's Government, and also to give a note containing an assurance that the tariff arrangements contained in that article shall be proposed to the Italian Parliament, with a view to their being carried into effect by law.

M. Manna states, however, that after the ratification of their recent treaty with France, it is the intention of his Government to proceed to a revision of their Customs tariff, and that on that occasion they will be ready to take into special consideration the demands of Her Majesty's Government, on the conviction that the demands which have been made by the Italian Government for reductions in the British tariff will be at the same time acceded to.

Lord Russell states that, under these circumstances, two courses appear to be open to Her Majesty's Government:—

1. To conclude a treaty of commerce with Italy with a most-favoured-nation article, without any provision for tariff reductions.

2. To defer further negotiation until they may be enabled to make a tariff treaty.

In order to assist Lord Russell in deciding upon the policy to be adopted in this question, my Lords desire briefly to review the position of the two Governments with reference to their negotiations.

In the year 1860 England and France concluded a commercial treaty, by which important tariff reductions were mutually made by the two countries in each other's favour.

The whole of the reductions secured to France by England, under that instrument, several of which were of considerable value to the Italian trade, were extended immediately and unconditionally to the Kingdom of Italy, and at the present time the few remaining Customs duties in the British tariff which affect Italian produce are retained solely for the purposes of revenue.

Her Majesty's Government, therefore, naturally expected that the reductions which will be made in favour of France in the Italian tariff, under the pending treaty between France and Italy, would be applied at once, and as a matter of course, to this country, irrespective of all treaty stipulations, and were wholly unprepared to find that the Italian Government would avail themselves of any formal defect in the existing treaty between England and Sardinia to withhold those privileges, still less that they would represent them as constituting a ground for demanding as an equivalent further tariff reductions in the British tariff.

When, therefore, it was proposed by the Italian Government that a new commercial treaty should be concluded with this country, my Lords viewed the proposal as an indication that there existed on the part of that Government a desire to extend and consolidate the commercial relations of England and Italy, and that they would gladly avail themselves of such an occasion to diminish or remove those restrictions upon British trade which are retained, not on fiscal grounds, but in reference to principles of commercial policy which that Government has professedly discarded.

On the other hand, the Italian Government appear to have considered that the extension to this country of the tariff reductions accorded to France, and more recently to Belgium, by treaties with those countries, which are at present before the Italian Chambers, justified them in asking Her Majesty's Government to reduce the duties charged by the British tariff upon certain articles of Italian produce and manufacture specified in former correspondence, and when in the month of May last this claim was withdrawn, it was so withdrawn with a view to remove an obstacle to the immediate conclusion of a treaty with this country, which they desired for political reasons.

When, therefore, the recent proposals of Her Majesty's Government were submitted to the Italian Government by Sir J. Hudson, M. Manna, who conducted the negotiation, at once declined to entertain any question of tariff reductions in the treaty under consideration, but stated that his Government would be disposed to examine the propositions of Her Majesty's Government on the occasion of a general rectification of the Italian tariff, which it was intended to effect so soon as the treaty with France shall have received the sanction of the Chambers.

In considering the two alternative courses suggested by Earl Russell, my Lords might have been disposed, under ordinary circumstances, to have recommended that Her Majesty's Government should be satisfied with this assurance, and that they should proceed at once to the conclusion of a commercial treaty, irrespective of all tariff reductions on either side.

That, having regard to the attention which has been given by the commercial bodies in this country to the present negotiation, and to the opinions which they have been invited to express on the operation of the proposed Italian tariff, my Lords are somewhat unwilling to present to this country a new commercial treaty with Italy until some of the more obvious defects in that tariff have been remedied, and the good intentions of the Italian Government actually fulfilled; and they would, therefore, have preferred that the conclusion of a commercial treaty with Italy should follow rather than precede the promised revision of the Italian tariff.

My Lords are not aware of any practical inconvenience which could result from this delay, unless the Italian Government were to insist upon the conclusion of such a treaty as a condition of the extension to British trade of the advantages

advantages conceded to France—a course which they think can hardly be seriously intended.

But even in this event my Lords would recommend that the conclusion of a treaty with this country and Italy should be delayed to the latest possible moment. They are informed that the ratification of the treaty with France is not likely to take place before the month of August, and that it may even be deferred still later.

My Lords would therefore suggest that Her Majesty's Minister at Turin should be instructed to keep Her Majesty's Government informed as to the progress of the discussions in the Italian Chambers on the French treaty, and as to the date of its probable ratification, and in the meantime to inquire formally of the Italian Government whether it is their intention to impose differential duties upon British produce and manufactures, as against similar articles of French produce and manufacture, when that treaty shall have been brought into force.

I have, &c.

No. 43.

Mr. *Layard* to Sir *J. Emerson Tennent.*

Sir, Foreign Office, 7 July 1863.

HAVING laid before Earl Russell your letter of the 30th ultimo, relative to the negotiation of a new treaty of commerce with the kingdom of Italy, I am directed by his Lordship to acquaint you, for the information of the Lords of the Committee of Privy Council for Trade, that he has instructed Her Majesty's Minister at Turin to take no further step at present with regard to the proposed treaty, but to keep Her Majesty's Government informed as to any changes in the Italian tariff er any proposition in the Italian Parliament on the subject of tariff arrangements, or of the French treaty, and the probable time of its ratification.

In the meanwhile, Sir James Hudson will inquire whether, when the treaty with France shall have been put into force, differential duties will be levied upon British produce and manufactures.

I am, &c.
(signed) *A. H. Layard.*

No. 44.

Mr. *Layard* to Sir *J. Emerson Tennent.*

Sir, Foreign Office, 22 July 1863.

WITH reference to your letter of the 30th ultimo, and to my reply of the 7th instant, relative to the negotiation for a new treaty of commerce with the kingdom of Italy, I am directed by Earl Russell to transmit to you, to be laid before the Lords of the Committee of Privy Council for Trade, copy of a Despatch from Her Majesty's Minister at Turin, enclosing copy of a communication from M. Manna, the Italian negotiator; and I am to state that Lord Russell recommends strongly to their Lordships that the terms proposed by M. Manna should be accepted by Her Majesty's Government.

I am, &c.
(signed) *A. H. Layard.*

Enclosure 1, in No. 44.

App. No. 6.

Sir *J. Hudson* to Earl *Russell.*

My Lord, Turin, 16 July 1863.

WITH reference to your Lordship's Despatch of the 6th instant, on the subject of a proposed new treaty of commerce between Great Britain and Italy, and specially with regard to the concluding paragraph of that Despatch, whereby I am instructed to inquire of the Italian Government whether it is their intention, when their treaty with France shall be in operation, to impose differential duties upon British produce and manufacture, in comparison with similar articles of French produce and manufacture, I have the honour to inform your Lordship that, in obedience to your instructions, I put that question this morning to the President of the Council and Minister of Finance, Signor Marco Minghetti, who replied that, as a matter of principle, such duties ought not to be levied, because the Italian Government professes the principle of free trade; but as a matter of fact they would be levied during the interval between the ratification of the treaty with France in August next, and the revision of the tariff by the Parliament some time next Session, but at what period of that Session it is not easy to determine.

Upon this I inquired whether the provision in question would not be subject to all the chances and changes of Parliamentary opinion and contest; and if so, whether British produce and manufacture would not be exposed during that indefinite period to competition with a more favoured nation.

Signor Minghetti replied that undoubtedly this would be the case.

I therefore also inquired whether there was, with the exception of the IIIrd Article relating to earthenware, jute, and mixed fabrics, anything in the draft of the treaty (which by your Lordship's orders I had proposed for the acceptance of the Italian Government on the 11th ultimo) to which the Italian Government would object, because he would remember that my negotiations had broken down upon that IIIrd Article.

Signor Minghetti replied that, for his part, he had nothing to object to the other articles of that treaty.

It will be, therefore, for Her Majesty's Government to consider whether it would be advantageous for British interests in general to sacrifice to the manufacturers of jute and earthenware the general trade of Great Britain with Italy during the indefinite period alluded to; and it must be borne in mind, that no treaty of commerce is possible which will satisfy the expectations of British manufacturers on the one hand, and Italian agriculturists on the other.

Her Majesty's Government asked the Italian Government for reductions of import duty on some articles of British produce and manufacture. The Italian Government would have made a similar demand upon Her Majesty's Government had they not been informed that no such reductions could possibly take place.

The negotiations consequently soon came to an end, and may remain suspended till the readjustment of the Italian tariff.

At the present moment it is not easy to say what treaty Great Britain has with Italy. Her Majesty's consuls in the Southern Provinces claim the stipulations of the treaty with the Two Sicilies.

App. No. 6.

Sicilies. Her Majesty's Legation claims the application of the principles of constitutional law independently of that treaty, and the rights which derive from the treaties with Sardinia, and especially the treaty which throws open the coasting trade of Italy to British shipping, and *vice versâ*. The Neapolitan-Sicilian Customs resist this demand, and the question may be considered to a certain extent in abeyance.

And although no serious questions have arisen, nor so far has there been any need for reference to your Lordship, yet there is no reason why questions of a delicate and complicated nature should not arise under our present treaty arrangements between Italy and Great Britain.

Hence I have always been of opinion that the best method of meeting the altered political and commercial condition of Italy would be by a general treaty of amity and commerce, leaving special questions of trade to be dealt with specially and by instruction from your Lordship's office.

I have had a conversation with Signor Manna upon these points, and he has furnished me with a copy of the Italian tariff, accompanied by the conventional tariff with France under their new treaty, which will enable your Lordship to see at a glance the disparity which will exist between the duties of Customs to be levied in Italy on British and French goods respectively during the interval of time to which I have alluded.

I have the honour also to enclose the copy of a letter which Signor Manna addressed to me upon forwarding to me the enclosed tariff.

I beg to add, that I have read this Despatch to M. Minghetti, who confirmed the declaration made to me by his colleague, and expressed his his hope that a general treaty of amity and commerce would be concluded between Great Britain and Italy before the ratification of the treaty between France and Italy.

I have, &c.
(signed) *James Hudson.*

Enclosure 2, in No. 44.

Signor *Manna* to Sir *J. Hudson.*

Turin,
M. le Ministre, le 15 Juillet 1863.

J'AI l'honneur de vous transmettre ci-joint un travail de comparaison entre le Tarif Conventionnel annexé au traité entre le France et l'Italie et le Tarif Général Italien.

Dans ces deux tarifs j'ai fait marquer par une petite croix tous ces Articles sur lesquels nous avons consenti à une réduction.

Ainsi vous pourrez vous faire une idée claire et précise de la position qui est faite au commerce Français vis-à-vis de l'Italie d'après le traité, et par conséquent les réductions dont le commerce et l'industrie Anglaises profiteraient par la stipulation d'un traité de commerce avec nous.

Et remarquez que sans cette nouvelle stipulation les produits Anglais ne peuvent pas être admis au même traitement que les produits Français, parceque l'Article XI. du traité de 1851 entre l'Angleterre et la Sardaigne et un Article analogue entre l'Angleterre et l'ex-Royaume des Deux Siciles garantissent ce traitement de la nation plus favorisée qu'avec une compensation si les faveurs ou immunités ont été accordés à titre onéreux à une autre Puissance. Or tous les déprivements de douane que nous avons accordés à la France sont le correspondant non seulement de l'application aux produits Italiens des Tarifs Conventionnels Français avec l'Angleterre et la Belgique, mais aussi d'autres réductions consentis à nos produits dans notre traité spécial.

C'était pour cela que, voulant donner des gages de notre déférence pour le Gouvernement Anglais, nous avions proposé d'échanger des notes par lesquels chacun des deux Gouvernements se serait engagé à prendre en considération les demandes de l'autre relatives à des nouvelles réductions de tarif, et en attendant on aurait stipulé un simple traité de révision générale des traités précédents, et dans ce nouveau traité nous aurions insérée une clause par laquelle il serait établi entre les deux pays une réciprocité absolue et le traitement de la nation la plus favorisée sans conditions. C'est, vous le voyez, M. le Ministre, une grande marque de déférence pour le Gouvernement Anglais. En ajournant pour le moment la question des tarifs, l'Angleterre profiterait tout de suite du Tarif Conventionnel Français.

Voilà, M. le Ministre, tout ce que j'avais à vous dire en réponse à l'obligeante communication que vous avez eu la bonté de me faire.

Agréez, &c.
(signé) *Jean Manna.*

No. 45.

Mr. *Booth* to Mr. *Layard.*

Office of Committee
of Privy Council for Trade,
Sir, Whitehall, 25 July 1863.

I HAVE laid before the Lords of the Committee of Privy Council for Trade your letter of the 22d instant, enclosing, by direction of Earl Russell, copy of a Despatch from Her Majesty's Minister at Turin, with a copy of a communication from M. Manna, the Italian Minister of Commerce, on the subject of the pending negotiation for a new commercial treaty with the kingdom of Italy, and stating that Lord Russell strongly recommends that the terms proposed by M. Manna should be accepted by Her Majesty's Government.

Under the circumstances of the case, as reported by Sir J. Hudson, my Lords concur with Lord Russell in thinking that it will probably be the best course to accede to the wish expressed by the Italian Government, that a general treaty of amity and commerce should be concluded at once between Great Britain and Italy, before the ratification of the treaty between France and Italy.

With this view they presume, with reference to the statement made to Sir J. Hudson by Signor Minghetti, to the effect that he had nothing to object to the draft treaty proposed by Her Majesty's Government on the 11th of last June, with the exception of the IIIrd Article, that it will only be necessary to instruct Her Majesty's Minister at Turin to proceed at once to the signature of the treaty, with the omission of the Article in question.

They think, however, that in agreeing to the course proposed by the Italian Government, Her Majesty's Minister at Turin should be instructed to

to state that Her Majesty's Government have done so from a wish to meet the views of the Italian Government as to the particular form in which the commercial advantages granted by their recent treaty with France should be extended to this country; but that they think that whatever may be the technical construction which might be placed upon the XIth Article of our treaty with Sardinia of 1851, and upon the analogous Article referred to by M. Manna in our treaty with the Two Sicilies of 1845, those advantages could not, upon any equitable principle, be withheld from Great Britain, irrespective of all further concessions to Italian trade.

In conclusion I am to remark, that in the XXIInd Article of the draft treaty proposed to the Italian Government by Sir J. Hudson, on the 11th June last, the treaties between Great Britain and Tuscany of April 5, 1857, and of December 30, 1854, are omitted in the recital of the treaties for which the proposed treaty is to be substituted.

I am, &c.
(signed) *James Booth.*

No. 46.

Mr. *Layard* to Mr. *Booth.*

Sir, Foreign Office, 3 August 1863.

I AM directed by Earl Russell to request that you will state to the Lords of the Committee of the Privy Council for Trade that he has been informed, by telegraph, by Sir James Hudson that the Council of Ministers at Turin have considered the draft treaty of commerce proposed by Her Majesty's Government. They submit that the second paragraph of Article V. is unnecessary, as all transit dues have been abolished, and they proposed to substitute for Article XVI., respecting religion, an exchange of notes in the same sense, because the Constitution guarantees all that the Article contains, and because Great Britain has (as they allege) no such Article in a treaty with a civilized State. They accept the rest.

Lord Russell requests that you will move their Lordships to inform him as soon as possible whether, so far as the Board of Trade is concerned, it is necessary to insist upon these stipulations.

I am, &c.
(signed) *A. H. Layard.*

No. 47.

Mr. *Mallet* to Mr. *Layard.*

Office of Committee
of Privy Council for Trade,
Sir, Whitehall, 3 August 1863.

I AM directed by the Lords of the Committee of Privy Council for Trade to acknowledge the receipt of your letter of this day's date, informing this Board that the Council of Ministers at Turin have accepted the draft treaty proposed by Her Majesty's Government, with the exception of the second paragraph of Article V., which they consider unnecessary, and of Article XVI., which they object to on the ground that no such Article is contained in a treaty with a civilized State, and requesting to know whether, so far as the Board of Trade is concerned, it is necessary to insist on these stipulations.

In reply, I am to request that you will state to Earl Russell that my Lords have no objection to the omission of the second paragraph of Article V., provided that the provisions of the first paragraph be made to apply to the transit trade.

The Article might be altered in the following manner:—

"The subjects of the contracting parties shall enjoy in the dominions and possessions of the other equality of treatment with native subjects in all that relates to the transit trade, and also in regard to warehousing, bounties, facilities, and drawbacks."

The remaining three paragraphs might, in the opinion of this Board, be omitted altogether, although my Lords could not object to the retention of the third paragraph, if it is desired by the Italian Government; but in this case the word "Italian" should be omitted, so that the stipulation may apply equally to the administration of either country.

My Lords have no objection to the omission of Article XVI.

I am, &c.

[*N. B.*—In this Index the Figures following the Names of the Witnesses refer to the Questions in the Evidence; those following *App.*, to the Pages in the Appendix; and the Numerals following *Rep.*, to the Pages in the Report.]

A.

ADMIRALTY. Very similar character of the communication of the Foreign Office with the Admiralty and with the Board of Trade, *Hammond* 1753-1757. 1832-1836——Much larger communications or receipts from the Admiralty than from the Board of Trade, *ib.* 1754—— Conclusion, that there is no greater reason for amalgamating with the Foreign Office a portion of the Board of Trade than a portion of the Admiralty or of any other department, *ib.* 1756, 1757.

Akroyd, Edward. (Analysis of his Evidence.)—Is largely engaged in the worsted manufacture at Halifax; is President of the Halifax Chamber of Commerce, 883-885—— The Halifax Chamber, and the chambers of commerce generally, consider that there should be more immediate action on the part of Government in carrying out the representations of the commercial interests in matters of foreign trade, 886——Witness cites a passage from the annual report of the associated chambers as showing the impression of the commercial community as to the defects of the present system of the Foreign Office and the Board of Trade, 886, 887.

Statement as to deputations being referred from the Foreign Office to the Board of Trade, and from the Board of Trade to the Foreign Office under the present system of two departments and divided responsibility; instance of this, 887. 893-900——Courtesy and attention experienced at the hands of the officials, the system being alone to blame, 887—— Multiplicity of duties now devolving upon the Board of Trade, and advantage hereon if the functions of the department were confined entirely to inland trade and maritime affairs, 887. 891.

Proposition that a minister of commerce be attached to the Foreign Office, who should should conduct commercial negotiations with foreign countries, and should have the appointment and surveillance of consuls abroad, 887-892——All political matters should rest with the Foreign Office, independently of the office of the minister of commerce, both offices being in the same building, 888-892——Suggestion as to the course to be pursued by this country in connexion with the negotiation of treaties of commerce between France and foreign countries, 892.

Allhusen, Christian. (Analysis of his Evidence.)—Has for many years been exclusively engaged in commerce at Newcastle, 874-876——Represents the Newcastle Chamber of Commerce, and submits a memorial (*App.* 257-259) to the Committee on behalf of the chamber, 877-880——Submits also a summary of the evidence which he is prepared to lay before the Committee, 881, 882.

Alston, Mr. Statement by Mr. Alston, one of the senior clerks in the Foreign Office, in defence of the present action of the Foreign Office and Board of Trade upon commercial questions, *Hammond* 1825.

"*Annales du Commerce*" (*France*). Very valuable information given by the French Government upon commercial matters, by means of the "Annales du Commerce"; usefulness of this publication to English merchants, *Behrens* 501-506——Official character of the "Annales du Commerce;" it is prepared by the minister of commerce and agriculture, *ib.* 671-674.

Illustration of the important character of the information in the "Annales du Commerce," *Mallet* 2460-2462——Totally distinct character of the "Annales du Commerce," as compared with the "London Gazette," as a vehicle of publication, *ib.* 2804-2807—— Duty of the Board of Trade rather than of the Foreign Office to set on foot a publication like the "Annales du Commerce," *ib.* 2806, 2807. 2811, 2812.

Report, 1864—*continued.*

Ashworth, Henry. (Analysis of his Evidence.)—Is extensively engaged in the cotton trade; is President of the Manchester Chamber of Commerce, 901–904——Large extent of district, and enormous interests in cotton manufacture, represented by the Manchester Chamber, 905–908——Statement showing the immense extent of the cotton manufacture and export of Lancashire and Cheshire, 907——Reference to the magnitude of the diplomatic and consular service, and the large public expense incurred in respect thereof, as compared with the small result obtained as regards the demands of the cotton trade, 909–912.

Understanding as to the chambers of commerce being precluded from intercourse with the consuls, 910——Statement of the number and character of the communications received by the Manchester Chamber from the Foreign Office over a period of eight years; total of eighteen communications, only three of which related to foreign tariffs, 912–915——Doubt as to the chamber having been informed by the Foreign Office or Board of Trade of the mission of an Italian envoy to England with reference to treaty arrangements in 1863, 916–919——Total of only sixteen communications received from the Board of Trade in eight years, exclusive of printed documents; nature of these communications, 920–922.

Statement as to the Manchester Chamber having been referred from the Board of Trade to the Foreign Office and back again, with regard to some papers relating to the Philippine Islands, 923–925——Conclusion of the Manchester Chamber as to the Board of Trade being the proper and responsible department for the supervision and conducting of matters relating to foreign trade, 926–929. 938–941——Very efficient staff of the Board of Trade, 930——Approval of increased weight and responsibility being attached to the functions of this department, 930. 941, 942——Difficulty as to which department is to be blamed for the unsatisfactory results produced, 931.

Circumstances under which the Manchester Chamber waited upon Lord Palmerston early in 1864, with a memorial relative to the inadequate attention paid to the demands of commerce, 932–934——In former interviews with the two departments, the representatives of the Chamber had remarked upon the inefficiency of the arrangements between the two offices, 933. 935, 936——Exceptions taken to Lord Palmerston's defence of the present system, as well as to his statement that we could not look for a reduction of foreign tariffs, as we had now nothing to give in return, 936, 937. 1018–1021. 1096.

Further evidence on the subject of our large and expensive establishments abroad, and the small results derived as regards our export trade; conclusion as to the very imperfect action of the diplomatic and consular staff, 943–981. 1001–1017. 1025–1049——Very small value of our exports to Austria as compared with France; inference as to the inefficiency of our consuls, 944–947. 1077–1083——Amendments contemplated by witness in the appointment of consuls, as regards the qualifications to be required, 946–957——Suggestions as to the dissemination of information by the consuls and diplomatic agents, 958–961. 968–972. 1031–1037.

Advantage if the consuls or diplomatic agents were promoted or rewarded with reference to the services done by them to commerce, 961–963. 977. 1013–1017——Improvement if the consuls were in communication with the Board of Trade, 976, 977——Very little use of the commercial information afforded to Manchester by Government, either in direct communications or through the "London Gazette," 978. 1063–1076. 1098–1101——Delay on the part of Government when tariff negotiations have been going on between foreign powers, 979.

Uselessness to Manchester of the favoured nation clause in the case of Italy and the French treaty, 979. 982–986. 1087. 1116–1123——Very little use of the consular reports; statement hereon as to witness not reading these reports, and as to the Manchester Chamber not taking in the "London Gazette," which contains them, 980, 981. 1025–1027. 1059–1076. 1124–1126——Limited importance of statistics of silk as compared with cotton statistics, 987–1000.

Expediency of such a change of the present system, that one department may be entirely responsible, 1022–1024——Witness condemns the operations of our agents abroad by the barrenness of the results, but is not cognisant of the precise duties entrusted to the diplomatic service and consular service respectively, 1025–1049——Grounds for the statement, that in the competition for treaties of commerce France has latterly beaten us, 1050–1058——Examination as to witness's data for the conclusion that Government have generally been neglectful of the commercial interest in the matter of foreign tariffs, and have not made the required representations, 1077–1115——Nature of the representation which might have been made to Italy with a view to reductions in their tariff in the case of cotton goods, &c., 1102–1106. 1112–1114.

Attachés. The attachés have been converted into second and third secretaries of embassy and legation, *Morier* 3136, 3137.——*See* also *Diplomatic Service.*

Austria.

Austria. Very high and complicated character of the Austrian tariff; reference hereon to the questions now open between Austria and the Zollverein, *Behrens* 561. 662-667——Examination to the effect that, though the most favoured nation clause could not now be obtained from Austria, it might have been obtained if there had been proper action taken on former occasions, and efforts should now be made to obtain it prospectively, *ib.* 738–745. 754–790——Very small value of our exports to Austria as compared with France; inference as to the inefficiency of our consuls, *Ashworth* 944–947. 1077–1083.

Doubt as to there being any negotiations going on for a treaty of commerce with Austria; question hereon whether a new tariff, published in Austria last year, with reference to the Zollverein, should not have been more promptly communicated to the Board of Trade, *Mallet* 2762–2775——Witness cannot say whether the Austrian Government were prepared to enter into a treaty with this country, or whether the British Government have been in communication with Austria upon the subject, *ib.* 2793-2798——Belief that earlier application to Austria or Prussia would not have led to their giving us the most favoured nation clause at any earlier period, *ib.* 2873–2875.

Differential duties upon tobacco required by Austria in the event of concessions by that country, *Earl Russell* 3068——Close connection between commercial and political affairs in Austria, with reference to the Zollverein, *ib.* 3073.

Statement as to witness having been sent by the Foreign Office to Vienna and Madrid in December 1862, and as to his having reported fully upon the negotiations between France and the Zollverein, and between Austria and Prussia, *Morier* 3140–3143——Distinct refusal by Austria to enter into negotiations with this country until relations with the Zollverein were settled, *ib.* 3150, 3151.

Communications from Lord Bloomfield to Earl Russell in April 1864, explanatory of the relations between the Foreign Office and Ministry of Commerce on commercial affairs, *App.* 279, 280.

B.

Baden. Statement explanatory of the action respectively of the Ministry of Foreign Affairs and the Ministry of Commerce in the Grand Duchy of Baden, in regard to commercial matters, and negotiations with foreign countries, *App.* 289. 290.

Barron, Mr. Very able reports received from Mr. Barron, foreign agent at Brussels, *Mallet* 2818.

Batley Chamber of Commerce. Memorial from the Batley Chamber of Commerce, dated 8th April 1864, on the subject of the Italian tariff, *Hammond* 1702.

Bavaria. Communication from Mr. Bonar to Earl Russell, dated Munich, 1st May 1864, containing information as to the relations between the Foreign Department and the Department of Commerce of Bavaria, *App.* 290.

Behrens, Jacob. (Analysis of his Evidence.)—Has been extensively engaged in business at Bradford for many years, his trade extending to most parts of the Continent, 423-427——Is vice-president of the Bradford Chamber of Commerce, and has constantly supplied information to the Chamber with regard to the foreign duties upon Bradford goods, 428–430——In 1853 the Chamber made representations to Government on the subject of the differential duties in Holland, and in 1854 these duties were removed, 431–433.

Disadvantageous position of the Bradford trade as regards Belgium when witness first examined the Belgian tariff in 1854; undue preference given to French goods, 434–436——Steps taken by the Bradford Chamber in 1854 and 1856, with a view to this country being treated as the most favoured nation, with reference to the arrangements between Belgium and France, 437–445——Statement as to the Foreign Office having been of the same opinion as the Bradford Chamber as to the effect of the most favoured nation clause in the treaty of 1851, whilst the Board of Trade were of a different opinion, 441–447——Mr. Wickham and the secretary of the Bradford Chamber laid a paper before Mr. Hammond, who subsequently said he "could not pick a hole in it," 441.

Constant representations made by the Bradford Chamber to the Foreign Office on the subject of the undue preference given by Belgium to France; want of information displayed on the subject by the Foreign Office, 448–450——Memorial from the Chamber in November 1860 as to the probable increase of the then existing preference to French goods, 451, 452——Very prejudicial character of the preference in the interval between the Franco-Belgian treaty of 1861 and the Anglo-Belgian treaty of 1862; illustration of this, 453–456——Grounds for concluding that it would have been easier to procure satisfactory terms from Belgium if proper effort had been made before the Franco-Belgian treaty was concluded, 457–470.

Very high and vexatious character of the Spanish tariff as regards Bradford goods, 471–473——Frequent changes in the Spanish tariff during the last few years, 474–476——Reference to a certain Bill brought in by the Spanish Government in January 1863, of which the Bradford Chamber were not informed by the Board of Trade until the 17th March following, 477–483——Statement as to a Spanish decree, in February 1862,

Report, 1864—*continued.*

Behrens, Jacob. (Analysis of his Evidence)—*continued.*

which affected Bradford goods, not having been brought by Government to the notice of the Bradford Chamber; information first obtained on the subject through the "Moniteur," 484–493.

Circumstance of there not being any report from a secretary of legation relative to the general trade of Spain, 494–498——Nor is there any report from Russia by the secretary of the embassy, 497, 498——Usefulness of the commercial reports of secretaries of embassies; great delay at times before they are received by the chambers of commerce, 499, 500——Very valuable information given by the French Government upon commercial matters, by means of the "Annales du Commerce;" usefulness of this publication to English merchants, 501–506——Reference to the heavy differential duty in favour of Spanish shipping; an intention to increase this duty was not made known to the Bradford Chamber by Government, 507–509.

Statement as to the Bradford Chamber not having been able to obtain the required information from the Foreign Office on the subject of the Franco-Italian treaty, 510–512——Grounds for concluding that Mr. Mallet was sent to Italy at too late a period to be of any service, 513–519. 695–698——Advantage if the Bradford Chamber had been placed in communication with the Italian envoy when in England, 520–522.

Benefit derived by the Bradford trade under the French commercial treaty, from the circumstance of the trade having been represented by witness and others when the negotiations were being carried on at Paris, 523–525——Advantage in English manufacturers being placed in contact with the Government of any country when revising its tariff with another nation, 526–529——Great cause for complaint in the Manchester trade, but not in the Bradford trade, in regard to the existing Italian tariff, 530–535——Prohibitory effect of the Russian tariff upon the export of Bradford goods to Russia, 536–538——Changes made in the Russian tariff in 1863; understanding as to the French Ambassador having been consulted, 539–542. 723, 724.

Reference to and comment upon certain communications from the Foreign Office and the Board of Trade to the Bradford Chamber of Commerce, in September and December 1861, on the subject of the Zollverein treaty, 543–548——Conclusion that Mr. Mallet was sent at too late a period to Berlin with respect to the Zollverein treaty with France, 549–552——Virtual ratification of the Zollverein treaty as between France and Prussia, 553–556——Expediency of a clear understanding that England is to be placed by Prussia under the most favoured nation clause, 557–560.

Very high and complicated character of the Austrian tariff, 561——Statement as to the Bradford Chamber having memorialised the Foreign Office in November 1863, with reference to negotiations between France and Sweden; apprehension that no steps will be taken by Government until it is too late, 562–566——Several causes to which the delay, generally, on the part of Government is attributable, 567——Instance, in 1856, of the want of information in the Board of Trade on the subject of foreign commercial matters, 568–570.

Opinion as to the more valuable character of the French consular reports than of the information given by the English consuls, 571, 572——Very excellent reports by Mr. Ward, consul at Hamburg, 572——Inexpediency of the abolition of the English consulship at Paris, 573–576——Great disadvantage in having to deal with two departments of Government with regard to foreign commerce, 577–580——Satisfactory manner in which the negotiations in connection with the French treaty were carried on, 578. 600–604. 638.

Strong feeling on the Continent in favour of free trade; instance of this in Belgium, 581–583——Inexpediency, in the interests of commerce, of the chambers of commerce being obliged to make public representations to Government on the subject of foreign tariffs, 584–589. 613, 614. 631–634——Necessity of the department conducting negotiations being possessed of all the commercial information that is necessary, 590–592——The commercial question and political question are so involved that the same department should equally represent both, 593–597. 635–637——Reference to a report by the Swiss consul at Japan, as a model for consular reports, 598, 599.

Further statement as to the system of two departments having frequently resulted in omissions and delays, 605–612——Want of prompt and commercial information on the part of Government adverted to as owing chiefly to omission on the part of the diplomatic and consular agents abroad, 615–623——Expediency of the department conducting negotiations being informed and advised by officials in the same department, 624–630——The main grievance is that commercial questions do not receive that attention which they ought to do, 635–637.

Grounds for concluding that the Foreign Office should deal with the commercial question in reference to foreign tariffs, and that the agents abroad would attach much more importance to supplying commercial information if the investigation of commercial matters rested with the Foreign Office instead of the Board of Trade, 640–658——Probable advantage if Government had made some better effort in the case of Spain, 645——

Secondary

Report, 1864—*continued.*

Behrens, Jacob. (Analysis of his Evidence)—*continued.*

Secondary importance now attached by our foreign agents to commercial questions, 657.

Undue delay in the publication of the consular reports, so that their value is not much, 659-661——Very high tariff of Austria further adverted to; question at present between Austria and the Zollverein, 662-667——In witness's trade the Franco-Italian treaty has not made matters any worse, 668-670——Reference to the official character of the "Annales du Commerce Extérieur," 671-674.

Examination as to witness's grounds for concluding that, if we had applied in proper time to Belgium, concessions would have been granted much sooner, 675-687——Further reference to the grounds of complaint relative to the proceedings of Government in regard to changes in the Spanish tariff, 688-694——Consideration of witness's reasons for condemning the course pursued in reference to the Franco-Italian treaty; he knows nothing of the private negotiations between the English and Italian Governments on the subject, 695-711. 853-863——Statement that no demand was insisted upon in regard to the Bradford or Lancashire trade in the case of the Italian treaty, 705-709. 853-857.

Statement as to the French commercial treaty having been successfully carried through, notwithstanding the relations between the Foreign Office and Board of Trade, 712-722 ——Advantage of Mr. Mallet instead of Mr. Ward or in addition to him had been sent to Prussia in the first instance, 725-733——Binding character of the treaty between France and Prussia, though not ratified, 734-737——Examination to the effect that though the most favoured nation clause could not now be obtained from Austria and Prussia, it might have been obtained if there had been proper action taken on former occasions, and efforts should now be made to obtain it prospectively, 738-745. 755-790.

Witness approves of secret negotiations by Government in the matter of foreign tariffs, but concludes there have been no such negotiations with any amount of success, 746-754. 861-863——Right of Government to ask other nations for the most favoured nation clause, but not to ask for any reduction of the tariffs; illustration in the case of Prussia, 755-790. 829-831——Question as to the want of a consul at Paris further adverted to, 791-796——Consideration of objections to the proposition that that portion of the Board of Trade which relates to foreign commerce should be incorporated into the Foreign Office, 797-810. 850-852.

Expediency of Government collecting commercial information, and disseminating it to the chambers of commerce as promptly and efficiently as possible; defects of the system of publication in the "Gazette" adverted to hereon, 806-825——Circumstance of it having been found necessary in 1863 to issue a circular to the diplomatic and consular agents on the subject of the information in their reports, 826-828——Importance of the diplomatic and consular body constantly calling the attention of foreign governments to the principles of free trade, and the expediency of reducing their tariffs, 829-834.

Advantageous position of France in regard to commercial treaties, and as a means of bringing about reductions in the tariffs, 835-843. 847-849. 872——Several treaties already made by France with foreign countries for reductions of their tariffs, 839-843 ——Reference to the negotiations between the English and Italian governments as having resulted in much offence being given to the latter, 844-846.

Witness concludes finally, that the Foreign Office has been neglectful in its requisitions and its communications generally with foreign governments, 860-863. 865-873——The system of twofold offices is altogether wrong, but the men are not at all to blame, 864.

BELGIUM:

1. *Evidence on the part of Bradford, and the Bradford Chamber of Commerce, relative to the Action of the Foreign Office with regard to the Franco-Belgian and Anglo-Belgian Treaties.*
2. *Explanatory Statements on the part of the Foreign Office and Board of Trade.*
3. *Correspondence in detail relative to the Treaty between Great Britain and Belgium.*
4. *Papers explanatory of the System of the Departments in Belgium for dealing with Commercial Negotiations.*

1. *Evidence on the part of Bradford, and the Bradford Chamber of Commerce, relative to the Action of the Foreign Office with regard to the Franco-Belgian and Anglo-Belgian Treaties:*

Frequent presentation of memorials from the Bradford Chamber of Commerce previously to the Franco-Belgian treaty of 1861, upon the subject of trade with Belgium, and the preference given by Belgium to French goods over English goods, *Ripley* 8-29 ——Preference to French goods over English goods under the Belgian duties, previously to 1861; great increase of this preference by the treaty of that year, *ib.* 11-20——Instances of the great increase under the last Franco-Belgian treaty of the preference already

Report, 1864—*continued*.

BELGIUM—continued.

1. *Evidence on the part of Bradford, &c.*—continued.

already existing, *Ripley* 15–19——Duty of the British Government to have taken steps for removing the preference complained of by the Bradford Merchants, *ib.* 20, 21.

Communication from the Bradford Chamber of Commerce to Lord John Russell, as Foreign Secretary, dated 3 November 1860, relative to the expediency of the British trade with Belgium being placed upon a footing of equality with that of other nations, *Ripley*, 22, 23——Statement as to no answer having been received from the Foreign Office to the foregoing letter, nor to a subsequent letter on the 18th December, *ib.* 24–26——Further letter from the Chamber of Commerce, dated 4th January 1861, relative to the undue privileges in Belgium to French goods as compared with English goods, *ib.* 27–29——Acknowledgment by the Foreign Office on 3d January 1861, of the receipt of the letters of November and December 1860, *ib.* 30, 31——Circumstance of the letter of 3d November 1860, not having been forwarded by the Foreign Office to the Foreign Minister at Brussels until the 3d January 1861; loss of very valuable time thereby, *ib.* 32. 35–37.

Grounds for concluding that neither the Board of Trade nor the Foreign Office had really looked into the question up to the end of 1860, *Ripley* 33–35——Letter from the Foreign Office to the Bradford Chamber of Commerce, dated 11th January 1861, conveying an assurance that there was no intention on the part of the Belgian Government to make any distinction between the import duties upon French and British woollens; satisfaction felt with this letter, *ib.* 38–40——Reference to the passing of the Franco-Belgian treaty, and the representation consequently made by the Bradford Chamber to the Foreign Office; reply to this representation on 22d May 1861, *ib.* 40–49——Subsequent communication from the Chamber of Commerce to the Board of Trade, representing the expediency of steps being taken for the due protection of British merchants in the treaty or negotiation then pending with Belgium, *ib.* 50–53.

Conclusion as to its having been owing to the omission or neglect of the Foreign Office that Belgium did not concede the same privileges to this country as to France, *Ripley* 54–59——United action of various other chambers of commerce and of the Bradford Chamber in June and July 1861, when it was suggested that Mr. Cobden should be asked to go to Brussels on the subject of the new tariff, *ib.* 60–66——Active measures taken by the chambers of commerce in May 1862, relative to the Belgian treaty; shortly after this movement the treaty was signed, *ib.* 70–74.

Further statement as to the probability of equal concessions by Belgium to England as to France, if the Foreign Office had been more prompt in making representations on the subject, *Ripley* 139–144. 160 *et seq.*——Reference to a memorial from the Bradford Chamber of Commerce to the Foreign Office in January 1859, and to the reply of Lord Malmesbury, with regard to the Belgian treaty of 1851, *ib.* 145–149——Grounds for considering that if the Foreign Office had acted with energy and promptitude, Belgium would at the same time have made the same concessions to this country as to France, *ib.* 159–188——Injurious effect upon the Bradford trade in the interval between the conclusion of the Franco-Belgian treaty and the Anglo-Belgian treaty, *ib.* 184–186. 306–311.

Assurances given by the Foreign Office, in the time of Lord Malmesbury, to the Bradford Chamber of Commerce, previously to the reply, in April 1859, to the memorial from the chamber in the preceding January, *Ripley* 270–275——Explanation that the first communication from Bradford to the Board of Trade with reference to the Belgian treaty was in July 1861, *ib.* 276–280——Satisfaction felt at the time by the Bradford Chamber upon having applied to the Board of Trade, and having been promised the assistance of the Board in the matter of the Belgian treaty, *ib.* 281–285——Claim of this country to favourable consideration at the hands of Belgium, *ib.* 290, 291.

With regard to there not being in the Belgian treaty of 1861 any most favoured nation clause, witness still maintains that a prompt and early action on the part of the Foreign Office, when the Franco-Belgian treaty was in contemplation, might have removed the difficulties subsequently experienced, *Ripley* 299–305. 318–321——Probability of better results, in the case of Belgium, if the same course had been pursued as in the case of France, where the matter was arranged by Mr. Cobden and the Board of Trade, *ib.* 321–328. 336——Way in which the opposition in Belgium to the treaty with England might have been modified, if, when the Franco-Belgian treaty was being negotiated, the Foreign Office were also in the field, *ib.* 371–374——Improbability of the Belgian concessions to France having been prevented if England had been applying at the same time for similar concessions, *ib.* 384–388——The action of the Foreign Office in the matter of the Belgian treaty was not postponed advisedly, the delay having been owing to omission or neglect, *ib.* 389–391.

Steps taken by the Bradford Chamber in 1854 and 1856, with a view to this country being treated as the most favoured nation, with reference to the arrangements between Belgium and France, *Behrens* 437–445——Statement as to the Foreign Office having been of the same opinion as the Bradford Chamber, as to the effect of the most favoured nation

Report, 1864—*continued.*

BELGIUM—continued.

1. *Evidence on the part of Bradford, &c.*—continued.

nation clause in the treaty of 1851, whilst the Board of Trade were of a different opinion, *Behrens* 441-447——Statement as to Mr. Wickham, and the secretary of the Bradford Chamber, having stated that Mr. Hammond said he tried to pick a hole in the arguments put forth by the Bradford Chamber, but could not do so, *ib.* 441-444——A paper was submitted to Mr. Hammond one day, and the deputation from Bradford again saw him the next day, *ib.* 441.

Constant representations made by the Bradford Chamber to the Foreign Office, on the subject of the undue preference given by Belgium to France; want of information displayed on the subject by the Foreign Office, *Behrens* 448-450——Memorial from the chamber in November 1860, as to the probable increase of the then existing preference to French goods, *ib.* 451, 452——Very prejudicial character of the preference in the interval between the Franco-Belgian treaty of 1861, and the Anglo-Belgian treaty of 1862; illustration of this, *ib.* 453-456——Upon some goods there was a difference of 30 and 40 per cent. in favour of France, *ib.* 455.

Grounds for concluding that it would have been easier to procure satisfactory terms from Belgium, if proper effort had been made before the Franco-Belgian treaty was concluded, *Behrens* 457-470——Examination as to witness's grounds for concluding that if we had applied in proper time to Belgium, concessions would have been granted much sooner, *ib.* 675-687.

Witness was member for Bradford in 1856, and saw Mr. Hammond at the Foreign Office in September of that year, on the subject of a memorial previously submitted by the Bradford Chamber on the subject of the Belgian treaty, *Wickham* 1735, 1736——It was stated by Mr. Hammond, that he could find no fault with the arguments used by the Bradford Chamber, *ib.* 1737——When at Brussels, witness had interviews with Lord Howard de Walden and the Secretary of Legation, who showed every willingness to go into the question; he did not hear from them that there was any difference of opinion between the Foreign Office and the Board of Trade *ib.* 1738-1742.

2. *Explanatory Statements on the part of the Foreign Office and Board of Trade:*

Statement as to the inaccuracy of certain evidence of Mr. Behrens, in regard to a deputation from Bradford having seen witness in August 1856, upon the subject of the Belgian treaty, and having at the time presented a memorial to him, *Hammond* 1531-1535—— Great improbability of witness ever having said, that "he had tried to pick a hole in the arguments of the Bradford Chamber, but could not do so," *ib.* 1533—— Mistake on the part of the Bradford Chamber, in supposing that the Foreign Office expressed concurrence in the view that the favoured nation clause was given under the Belgian treaty of 1851; letter from witness on 20th September 1856 to Mr. Wickham, through the Bradford Chamber, adverted to hereon, *ib.* 1536-1538.

Probable reasons why certain communications from the Board of Trade to the Foreign Office in December 1860 and February 1861, relative to the Belgian tariff, were not forwarded to the Minister at Brussels, *Hammond* 1542-1548——Declaration on the part of Belgium adverted to, in explanation of the Foreign Office not having made any commercial representations to the Belgian Government between 5th January and 20th May 1861, *ib.* 1549-1561——Promise by Belgium, that on the termination of her negotiations with France, England should be put under the most favoured nation clause, *ib.* 1553-1561.

Considerations as to the intercommunication between M. Van de Weyer, Earl Russell, and the President of the Board of Trade, in 1861, upon the subject of the Belgian tariff, and as to the probability of M. Van de Weyer having also been in communication with Mr. Layard, *Hammond* 1562-1577——Witness explains, that Belgium is not in his division, and that he is not conversant with the details of the negotiations, *ib.* 1563-1570——Witness declines to offer any opinion in reference to a certain delay laid to the charge of Earl Russell in his communications with M. Van de Weyer, *ib.* 1574-1577.

Explanation that witness saw Mr. Wickham and another gentleman from Bradford, in September 1856, upon the subject of the Belgian treaty, but that he did not see them when the memorial from the Bradford Chamber was presented, and believes he never said that he could not pick a hole in the arguments of the memorial, *Hammond* 1708 *et seq.*——Particulars as to the communications which really did take place between Mr. Wickham and the Foreign Office, and between the Foreign Office and the Minister at Brussels, upon the subject of the Bradford memorial; witness reads the correspondence which passed in the matter, *ib.* 1711 *et seq.*

Personal communication between the heads of the two departments and M. Van de Weyer, in negotiating the Belgian treaty, *Sir J. E. Tennent* 2408, 2409——Communication between M. Van de Weyer and witness in 1851, with reference to the Belgian treaty, but not in 1861 or 1862, *Mallet* 2489-2496——Frequent communication between Mr. Milner Gibson and M. Van de Weyer, relative to the Belgian treaty; important details dealt with in this case, *ib.* 2892-2897.

Report, 1864—*continued.*

BELGIUM—continued.

2. *Explanatory Statements on the part of the Foreign Office, &c.*—continued.

Opinion that in the case of Belgium, better results could not have been produced, *Earl Russell* 3090——Constant personal communication between M. Van de Wever and Mr. Milner Gibson and witness, when the Belgian treaty was under negotiation, *ib.* 3106, 3107——Several causes for which the Belgian Government refused to enter upon negotiations, *ib.* 3109–3112.

3. *Correspondence in detail relative to the Treaty between Great Britain and Belgium:*

Copies of the correspondence between the Board of Trade and the Foreign Office in the years 1860–62, respecting the negotiation of a commercial treaty between Great Britain and Belgium, *App.* 295–333.

4. *Papers explanatory of the System of the Departments in Belgium for dealing with Commercial Negotiations:*

Communications from Lord Howard de Walden to Earl Russell, together with a memorandum prepared by Baron Lambermont, explanatory of the relative action of the Minister of Foreign Affairs and the Minister of Finance upon foreign commercial matters, *App.* 282–284.

Bergne, Mr. Views of Mr. Bergne, of the Foreign Office, in disproval of the proposition for a distinct commercial department in the Foreign Office, *Hammond* 1825.

Board of Control (India). Advantage of the power of the former Board of Control for India of enforcing its policy upon the Court of Directors, it having been the practice of the former body to consult the Board of Trade, *Sir J. E. Tennent* 2402–2404——Very limited consultation of the Board of Trade by the former Board of Control, *Mallet* 2580.

BOARD OF TRADE:

1. *Present Functions of the Department, and Practice in the Transaction of Business.*
2. *Efficiency of the Staff.*
3. *Office of President.*
4. *Office of Vice President.*
5. *Nominal Character of the Board or Committee.*
6. *Expediency of increased Importance being given to the Department.*
7. *Commissions of 1853 and 1863.*
8. *Question considered as to the Expediency of direct Communication with the Consular and Diplomatic Servants.*
9. *Question of Communication with the Foreign Ministers in London and Abroad.*
10. *Question of rendering the Board more efficient and responsible with reference to Foreign Trade and Treaties, or of depriving it of its Consultative Functions.*
11. *Correspondence on the subject of the Belgian Treaty.*
12. *Correspondence relative to Treaty Negotiations with Italy.*
13. *Conclusions and Recommendations of the Committee.*

1. *Present Functions of the Department, and Practice in the Transaction of Business:*

Details relative to the several duties and administrative functions of the Board, and the practice of transaction or division of business between the President and Vice President, *Booth* 1962–1975——Division of duties between witness and the other secretary; the relation between the Foreign Office and the Board does not come under witness, except in the absence of the other secretary, *ib.* 1972–1980. 1999——Material diminution in much of the business which formerly devolved upon the Board of Trade, additional functions, however, having been entrusted to the Board in recent years, *ib.* 2036–2042——Reference to the practice formerly of meetings of the chief officials of the Board for the passing of papers, *ib.* 2052–2056.

All consultative communications from the Foreign Office come under witness's branch, *Sir J. E. Tennent* 2244——Practice of the Board in communicating with the Foreign Office upon receiving individual complaints of grievances, *ib.* 2272–2275.

The Foreign Office business in witness's division passes through witness and through Sir Emerson Tennent; particulars as to the practice in dealing with this business, *Mallet* 2444–2448——Larger share taken formerly by the Board of Trade in commercial negotiations than has been the practice in recent years, *ib.* 2449–2451——Increase of the executive business of the Board whilst the consultative action has been diminished, *ib.* 2452, 2453——Entire departure from the original idea of the Board of Trade as a consultative office, *ib.* 2909.

Explanation

Report, 1864—*continued.*

Board of Trade—continued.

1. *Present Functions of the Department, &c.*—continued.

Explanation of the relations between the President and Vice President and the arrangements between them for the division of business, *Right Hon. T. M. Gibson* 3434–3438——Transition state of the Board of Trade at the present time, it being settled that the department, when re-constituted, is to comprise two secretaries and four assistants, *ib.* 3444–3447——Modes of conveying information from the Board of Trade to the Foreign Office; verbal communication frequently between witness and the Secretary of State, *ib.* 3451.

2. *Efficiency of the Staff:*

Great willingness always evinced by the Board of Trade to discuss commercial matters with the commercial community, *Ripley* 110——Commercial knowledge and zeal at the Board of Trade, whilst there is a deficiency of those qualities at the Foreign Office, *ib.* 360, 361——The system of two offices is altogether wrong, but the men are not at all to blame, *Behrens* 864.

Courtesy and attention experienced at the hands of the officials, the system being alone to blame, *Akroyd* 887; *Sturrock* 1240. 1248–1251——Very efficient staff of the Board of Trade, *Ashworth* 930——Very competent officials at the Board in matters of commerce, *Earl of Clarendon* 3030, 3031.

3. *Office of President:*

Statement of the relations between the President and Vice President, *Booth* 1953–1961; *Right Hon. T. M. Gibson* 3434–3438——Disadvantage in the President of the Board not being always a Cabinet Minister, *Earl of Clarendon* 2994, 2995; *Earl Russell* 3077–3080——Very able men who have filled the Office of President, *Earl Russell* 3087——Advantage in the President being always a member of the Cabinet, *Earl of Malmesbury* 3214; *Right Hon. T. M. Gibson* 3439. 3461.

The nomenclature of the President should be altered, and his responsibility restricted, if there were a commercial department in the Foreign Office, *Right Hon. T. M. Gibson* 3455——Greater or less importance of the department accordingly as the President is more or less active, *ib.* 3460, 3461——Adequate facilities of the President of the Board, if a Cabinet Minister, for representing the interests of the commercial classes, *ib.* 3515–3518.

4. *Office of Vice President:*

Arrangement between the Vice President and President of the Board, by which the former assists the latter, without however any special or distinct duties as Vice President, *Booth* 1958–1961; *Right Hon. T. M. Gibson* 3434–3438——Approval of an abolition of the office of Vice President, especially now that it is mainly an executive department, *Booth* 2228–2232——Objection to the Vice President of the Board of Trade being an Under Secretary in the Foreign Office for commercial purposes; this arrangement, however, would have some advantages, *Sir J. E. Tennent* 2357, 2358——The Vice President may be said to have a co-ordinate authority with the President, *Right Hon. T. M. Gibson* 3437.

5. *Nominal Character of the Board or Committee:*

Constitution of the committee or Board; in practice the committee is entirely a fiction, *Booth* 1958, 1959——Absence of advantage in the department of the Board of Trade being nominally a Board, instead of a department presided over by a Secretary of State, *ib.* 2238, 2239——Reference to the President and Vice President as resembling the chairman and deputy chairman of a Board, though there is practically no Board of Trade in operation, *Earl of Clarendon* 2996, 2997.

Explanation as to the nominal character of the committee under which the business of the Board of Trade is conducted; there is no reason why this fiction should not be abolished, and the business carried on in the name of the President, or of a secretary of commerce, *Right Hon. T. M. Gibson* 3465–3474.

6. *Expediency of increased Importance being given to the Department:*

Approval of increased weight and responsibility being attached to the functions of this department, *Ashworth* 930. 941, 942——Advantage if the Board of Trade were placed on an equality with the Foreign Office, &c., so that it should be able to give greater force to its recommendations, *Sir J. E. Tennent* 2354–2356. 2366. 2376–2378; *Mallet* 2608–2611. 2616–2628.

Conclusion, that under the present system, the usefulness of the Board as a consultative department is very much affected by its comparatively subordinate position, *Mallet* 2609. 2616–2635——Great improvement if the Board of Trade were placed in the same position to the Foreign Office that the Customs' Department holds to the Treasury, *ib.* 2621–2625——Expediency of increased weight being given to the Board, if retained as a consultative department, this being the weak point in the present Board, *ib.* 2754, 2755.

BOARD OF TRADE—continued.

6. *Expediency of increased Importance being given to the Department*—continued.

Difficulty in rendering the Board a more important department; advantage if this could be done, *Earl of Clarendon* 2992, 2993——Opinion that it is not essential that the department be made a Secretaryship of State, *Earl Russell* 3077. 3080——Approval of more importance being attached to the Board of Trade as a public department; advantage of the President being always a Member of the Cabinet, *Earl of Malmesbury* 3213–3215.

It is quite immaterial as to the discharge of duties, whether the Board be still under a President, or a Secretary of State be appointed for the department, *Right Hon. E. Cardwell* 3429——Expediency of the President being a Cabinet Minister, and of his being provided with proper facilities for obtaining commercial information wherewith to advise his colleagues; a minister of commerce is not essential, *Right Hon. T. M. Gibson* 3439. 3461. 3493. 3515–3518.

7. *Commissions of 1853 and 1863:*

Reference to the report of the Commission of 1853, as contemplating the progressive diminution of the importance of the Board, *Mallet* 2582——General result arrived at by the Commission of 1863, as regards the executive and consultative functions of the department, *ib.* 2583–2587.

8. *Question considered as to the Expediency of direct Communication with the Consular and Diplomatic Servants:*

Evidence in approval of direct communication on commercial affairs between the Board of Trade and the British agents abroad; increased despatch and efficiency thereby, *Ashworth* 976, 977; *Booth* 1981–1989. 2132–2158; *Sir J. E. Tennent* 2301, 2302; *Mallet* 2454–2472. 2608–2628. 2657 *et seq.* 2746–2748.

Opinion as to the inexpediency of the direct communication of the consuls with the Board of Trade on marine affairs, *Hammond* 1523, 1524——Examination as to witness's grounds for objecting to the Board communicating directly abroad upon matters of detail connected with trade, *ib.* 1860 *et seq.*

Explanation relative to the communication between the Board of Trade and the consuls, under the Merchant Shipping Act; absence generally of any collision with the Foreign Office, *Booth* 1981–1989——How far there is anything exceptional in the consuls being placed in communication with the Board, under the Merchant Shipping Act, *ib.* 2132–2139. 2145, 2146.

Probability of more early and complete information in the possession of the Board, if it were in direct communication with the officers abroad, *Sir J. E. Tennent* 2301, 2302——Considerable advantage anticipated if the Board were placed in communication with the consuls, under flying seal, through the Foreign Office, *ib.* 2366–2378. 2399.

Statement that direct communication between the Board of Trade and consuls on commercial matters, would not be productive of any advantage, but would rather create complication and delay, *Earl of Clarendon* 2980. 2987–2989. 3011–3021. 3028. 3049——Conclusion that there need be no delay under the system of the Board communicating with the consuls or ministers abroad, through the Foreign Office, *ib.* 3987. 3309——Witness also objects to the Board communicating abroad under flying seal through the Foreign Office, *ib.* 2991. 3020, 3021——Approval of the Board communicating directly abroad on mere matters of detail, as in the case of the French Treaty; this however was an exceptional case, *ib.* 3010–3012. 3053–3055——Difficulty in drawing a line where detail ends or begins in connexion with commercial negotiations; obstacle therefore to any rule leaving details to be settled by the Board of Trade in direct communication, *ib.* 3011–3013. 3017–3019. 3028. 3049.

Doubt as to any advantage, in the Board of Trade communicating upon matters of detail with the foreign agents under flying seal through the Foreign Office, *Earl Russell* 3074–3076. 3085.

Inference from witness's experience, as to the advantage of communication between the foreign agents and the Board of Trade, *Morier* 3163–3172——Witness sugests that much delay may be avoided in the transmission of despatches to the Board, if the foreign agents docketed their despatches as "political" or "commercial," and if the latter were in the first instance sent on at once from the Foreign Office, *Earl of Malmesbury* 3209–3211.

Non-objection to the Board of Trade communicating with the consuls and ministers under flying seal, through the Foreign Office upon purely commercial matters, *Earl of Malmesbury* 3210, 3211. 3218–3225. 3239, 3240; *Right Hon. T. M. Gibson* 3463——Dissapproval of the Board of Trade and Foreign Office having separate and independent communications with the consuls and ministers abroad, *Earl of Malmesbury* 3218.

Difficulty apprehended with respect to any direct communication between the Board of Trade and foreign agents, or if carried on under flying seal through the Foreign Office, *Lindsay* 3250–3254.

Conclusion

BOARD OF TRADE—continued.

8. *Question considered as to the Expediency of direct Communication, &c.*—cont[d].

Conclusion that the same purpose is served under the present system of communication with the agents abroad, as though the Board were to communicate directly with them, *Hammond* 3311, 3312. 3361——Witness also contends that any slight saving of time by the consuls communicating on commercial subjects directly with the Board, is not commensurate with the inconvenience that would result from the consuls corresponding with two departments, *ib.* 3313–3327. 3370–3376. 3382, 3383——Business would be retarded rather than expedited, by the consuls communicating abroad under flying seal through the Foreign Office, *ib.* 3319. 3366——Objection to consuls' despatches docketed "commercial," being sent to the Board of Trade, without their being seen by the Secretary of State, *ib.* 3324, 3325. 3370–3376. 3380–3383.

Grounds for objecting to the proposal that the Board of Trade should have any communication with the ministers and consuls abroad which should at all diminish the responsibility of the Secretary of State, for the conduct of foreign negotiations, *Right Hon. E. Cardwell* 3392–3398. 3408, 3409——Aproval of Lord Malmesbury's suggestion that the commercial despatches from abroad, should be docketed, and forwarded at once to the Board, *Right Hon. T. M. Gibson* 3462.

9. *Question of Communication with the Foreign Ministers in London and Abroad:*

Inconvenience apprehended if the Board of Trade were put in communication with the ministers of other countries abroad, *Booth* 2004, 2005. 2032.

Advantages if the Board of Trade had more free and systematic communication with the foreign ministers in London, *Mallet* 2484–2496——Circumstance of the Board of Trade having formerly been more frequently placed in personal communication with foreign ministers when negotiating treaties in London, *ib.* 2799——Examination upon the suggestion that there should be greater facilities of communication between witness's department and the foreign ministers in London, *ib.* 2882–2897.

Impracticability of the Board of Trade communicating directly with the foreign ministers in this country, *Earl of Clarendon* 3051, 3052——Apprehended difficulty to the Foreign Office if the foreign ministers were to communicate directly with the Board of Trade, *Right Hon. T. M. Gibson* 3462. 3483.

10. *Question of rendering the Board more efficient and responsible with reference to Foreign Trade and Treaties, or of depriving it of its consultative Functions:*

Necessity of a new and special department in the Board of Trade, if the Board were entrusted with matters of foreign trade and treaties, *Ripley* 111. 128, 129——Powerlessness at present of the Board in reference to negotiations abroad, *ib.* 112——Instance in 1856, of the want of information by the Board on the subject of foreign commercial matters, *Behrens* 568–570——Multiplicity of duties now devolving upon the Board, and advantage hereon if the functions of the department were confined entirely to inland trade and maritime affairs, *Akroyd* 887. 891——Conclusion of the Manchester Chamber as to the Board of Trade being the proper and responsible department for the supervision and conducting of matters relating to foreign trade, *Ashworth* 926–929. 938–941.

Opinion that the functions of the department should be limited to its administrative duties, and that its intercourse with other departments should be restricted with direct reference to the information obtained in the fulfilment of such duties, *Booth* 2240——Much more complete and valuable character of the information obtained by the Board of Trade in its collective capacity, than of information obtained by sectional departments acting separately, *Sir J. E. Tennent* 2340——Effect of the Board in harmonising the commercial policy of the other departments, *ib.*

Good ground for the complaint that the permanent officers of the Board are frequently unable to supply merchants with sufficient information as to what is passing in foreign countries, *Mallet* 2479 *et seq.*——Increasing impression of late years as to the Board becoming less and less a consultative body; expression of this view by Mr. Cardwell, *ib.* 2581, 2582——Condemnation of the present relations between the Foreign Office and Board of Trade, not only because of the irregular and tardy manner in which information is received by the Board, but because of the want of some clear responsibility in the President, *ib.* 2588–2590——Inexpediency of maintaining the Board of Trade as a consultative department with reference to the use made of it by the Treasury and Colonial Office, *ib.* 2609. 2628–2634——Expediency of the Board being furnished with the fullest information, if retained as a consultative department, *ib.* 2638–2641.

Ample duties of a minister of commerce to perform, irrespectively of consultative duties, *Mallet* 2783, 2784——If the addditional functions proposed to be thrown upon the Foreign Office are more than it can efficiently discharge, the best alternative is to render the Board of Trade really efficient as a consultative department, and to give greater weight and responsibility to the head of the department, *ib.* 2908–2911. 2932, 2933——Disadvantage in continuing the present ill-defined and limited consultative functions of the Board of Trade, *ib.* 2909.

BOARD OF TRADE—continued.

10. *Question of rendering the Board more efficient, &c.*—continued.

Expediency of the Board of Trade being the repository of all commercial information, and the consultative body for the other departments, *Earl of Clarendon* 2983. 2992——Witness looks upon the Board of Trade as essentially a consultative department, *ib.* 2992, 2993.

Advantage in the Board of Trade taking the initiative upon the "commercial" despatches, and in these being submitted subsequently to the Foreign Secretary, together with the views of the former department upon them, *Earl of Malmesbury* 3209–3211. 3228——Witness contemplates that the Foreign Office should still be responsible for the carrying out of treaties; but that all the technical part, so far as trade is concerned, should be managed by the Board of Trade, *ib.* 3218–3223. 3239.

Witness explains the views held by him when at the Board of Trade in regard to its not being necessary in the Foreign Office generally to consult the Board with respect to the foreign commercial relations of the country, *Right hon. E. Cardwell* 3386-3388——Witness considered in fact, and still considers, that the principal function of the consultative department of the Board terminated with the permanent adoption of the principle of free trade, *ib.* 3387, 3388——Inconvenience in there being both an executive and a consultative department in the Board of Trade, *ib.* 3399, 3400——Opinion in favour of a termination of the consultative department and of an enlargement from time to time of the executive duties of the Board, *ib.* 3417. 3427–3429.

Doubt whether the consultative business of the department could ever occupy much less of the staff than it now does, *Right Hon. T. M. Gibson* 3447——Effect of a commercial department in the Foreign Office to lead to a virtual abolition of the Board of Trade as regards its promotion of the commercial interests in connection with foreign trade, *ib.* 3454, 3455——Absence of necessity for maintaining the commercial and general department of the Board of Trade if there were a commercial department in the Foreign Office, *ib.* 3455——Expediency of the Board being limited entirely to executive duties if the proposed department were established in the Foreign Office, *ib.* 3458——Limited information received by the Board from abroad save through the Foreign Office, *ib.* 3475–3477. 3503–3508.

Obstacles to a concentrated and comprehensive power in the Board of Trade, so that the department might take greater action in the foreign and Indian and Colonial relations of the empire as regards commerce, *Right Hon. T. M. Gibson* 3483-3501——Dissent from the view of Mr. Cardwell, that the consultative department of the Board should be abolished altogether, *ib.* 3502——Expediency of a proper depository of information available to witness in order that his office may operate usefully in consultation with other departments, *ib.* 3503–3514.

11. *Correspondence on the subject of the Belgian Treaty:*

Copies of the correspondence between the Board of Trade and the Foreign Office in 1860–62, respecting the negotiation of a commercial treaty between Great Britain and Belgium, *App.* 295–333.

12. *Correspondence relative to Treaty Negotiations with Italy:*

Copies of the correspondence of the Board with the Foreign Office on the subject of the treaty between France and Italy, and the negotiation of a treaty between Great Britain and Italy, *App.* 334–355.

13. *Conclusions and Recommendations of the Committee:*

Review by the Committee of the arrangement between the two departments as regards the Board of Trade being furnished with information or being consulted by the Foreign Office, *Rep.* iii, iv——Respects in which the present relations of the department with the Foreign Office are deemed unsatisfactory by the commercial classes, *ib.* iv——Circumstance of its being admitted by the Board of Trade that some of the complaints by the commercial community are not without foundation, and that the machinery needs improvement, *ib.*

Functions and constitution of the Board of Trade adverted to with reference to the question as to the future relations with the Foreign Office in matters of free trade, *Rep.* v, vi——Grounds for the recommendation that the Board be put in direct communication with the members of the diplomatic and consular services, and that such communication be carried on through the Foreign Office, with such provision as shall prevent collision, *ib.* vi.

Recommendation also that the Board be placed more nearly upon an equality with the Foreign Office than it is at present, in order that its opinion when asked may have weight; and that its chief be always a member of the Cabinet, *Rep.* vi.

Report, 1864—*continued.*

Booth, James, (Analysis of his Evidence.)—Senior secretary to the Board of Trade; first went to the department in 1850 as junior secretary, 1952-1957——Arrangement between the Vice-President and President of the Board by which the former assists the latter, without, however, any special or distinct duties as Vice-President, 1958-1961——Constitution of the committee or Board; in practice the committee is entirely a fiction, 1958, 1959——Details relative to the several duties and administrative functions of the Board, 1962-1975——Limited extent to which Colonial Acts are now referred to the Board of Trade, 1967-1970——Division of duties between witness and the other secretary; the relation between the Foreign Office and the Board does not come before witness except in the absence of the other secretary, 1972-1980. 1999.

Explanation relative to the communication between the Board of Trade and the consuls, under the Merchant Shipping Act; absence generally of any collision with the Foreign Office, 1981-1989——Instance of an appeal by a consul from the Board of Trade to the Foreign Office, 1984. 2009-2012——Witness sees no difficulty in the Foreign Office authorising the consuls to communicate with the Board of Trade upon matters relating to trade, 1987——Evidence to the effect that there would be no disadvantage or difficulty in transferring to the Foreign Office those officers of the Board of Trade who now supply information to the former department with reference to foreign trade; necessity, however, in many cases, of the Board of Trade and the Statistical department being still consulted, 1990-2003. 2013-2025.

Inconvenience apprehended if the Board of Trade were put in communication with the ministers of other countries abroad, 2004, 2005. 2032—— Convenience in one department undertaking a general supervision of trade, 2006-2008——A commercial department in the Foreign Office would, after consulting the Statistical Department, communicate directly to the Foreign Secretary; whereas at present the required information from the Statistical Department is communicated through the Board of Trade, 2016-2025—— If simply with a view to the collection of information witness sees no objection to the Board of Trade corresponding not only with our consuls, but our ministers abroad, 2026-2032.

Doubt as to the expediency of publishing annually a full report of our foreign commercial relations, and of all negotiations for new treaties; considerable expense of such publication, 2033-2035——Material diminution in much of the business which formerly devolved upon the Board of Trade, additional functions having, however, been entrusted to the Board in recent years, 2036-2042——Former detailed examination by the Board of Trade of all colonial Acts before confirmation, many of these Acts having since been withdrawn from the cognizance and supervision of the Board as being unnecessary, 2043-2051.

Reference to the practice formerly of meetings of the chief officials of the Board for the passing of papers, 2052-2056——Way in which any information required in the negotiation of treaties from the Mercantile Marine Department of the Board of Trade is now obtained; increased facility if there were a commercial department in the Foreign Office, 2057-2069——Form of application by the Foreign Office for the required information; officials to whom the communications are generally addressed, 2070-2079—— Approval of the functions of the Statistical Department being extended, and of the department being rendered quite independent, 2080-2084——Facility of direct communication between a commercial department in the Foreign Office and the Statistical Department, 2085-2089.

Witness contemplates that there should be at the Foreign Office a chief clerk or Under Secretary, with one or two assistants to supply the information required in conducting the ordinary correspondence relating to foreign trade; such an officer as Mr. Mallet could efficiently fill this position, 2091 *et seq.*——Contemplated communication of the proposed officer with the Secretary of State, it being still open to the latter to obtain information also from the Board of Trade, 2094-2124——Responsibility of the Secretary of State considered in connexion with the functions to be exercised by the proposed official, 2094-2109. 2163 *et seq.*——The proposed officer might communicate freely with the Statistical Department, 2125-2127——Effect of the proposed staff in the Foreign Office in obviating any delay that may arise under the present system, 2128-2131.

Further evidence in approval of the consuls communicating directly with the Board of Trade; sundry objections thereto considered, 2132-2158——How far there is anything exceptional in the consuls being placed in communication with the Board of Trade under the Merchant Shipping Act, 2131-2139. 2145, 2146——Check to be exercised by the Board of Trade before publishing the reports of the consuls, 2154-2158——Doubt as to the Secretary of State for India being in the habit of consulting the Board of Trade, 2159-2161.

Exceptional, but satisfactory manner in which the negotiation of the details of the French Treaty was conducted, 2162. 2169, 2170——Further reference to the responsibility of the Secretary of State in acting upon information obtained from a commercial department in the Foreign Office and from the Board of Trade, 2163-2168. 2179-2186.

Report, 1864—*continued.*

Booth, James. (Analysis of his Evidence)—*continued.*

2195-2200——Convenience of communication between the subordinates of different departments, 2171-2174——Witness does not propose that the Foreign Secretary should send for Sir Emerson Tennant or witness to consult them, but can conceive that much convenience would arise from this practice in some cases, 2172-2186. 2201-2203.

Explanation that witness does not appear before the Committee as an opponent of the present system generally, though he conceives that some advantage would arise from a commercial department in the Foreign Office, 2187-2200——Absence of inconvenience if applications from other departments to the Statistical Department went directly, instead of through the Board of Trade, 2204-2206——Information as to the consultation of the Board of Trade by the Colonial Office, and as to such consulation not being necessary in the greater number of cases, 2207-2216.

Contemplated reference by the Colonial Office to the Board of Trade rather than to a commercial branch in the Foreign Office, 2217-2220——Tendency to a waste of time in the consideration of details by the Board of Trade in connexion with questions of policy resting with the Colonial Office or Foreign Office, 2221-2224——Degree of responsibility in Parliament or in correspondence abroad, which might attach to a commercial Under Secretary at the Foreign Office, 2225, 2226. 2233-2237.

With regard to the expense of the contemplated department, there might, on the other hand, be a saving in the staff at the Board of Trade, 2227——Approval of an abolition of the office of Vice-President of the Board of Trade, especially now that it is mainly an executive department, 2228-2232——Absence of advantage in the department of the Board of Trade being nominally a Board, instead of a department, presided over by a Secretary of State, 2238, 2239——Opinion that the functions of the department should be limited to its administrative duties, and that its intercourse with other departments should be restricted with direct reference to the information obtained in the fulfilment of such duties, 2240.

Bradford Chamber of Commerce:

1. *Communications from the Chamber on the subject of the Belgian Tariff and the Franco-Belgian Treaty.*
2. *Representations on the subject of the Italian Tariff.*
3. *French Commercial Treaty.*
4. *Question of a French Consulship at Bradford.*
5. *Practice of the Chamber as to communicating in Duplicate with the Foreign Office and Board of Trade.*
6. *Origination by the Bradford Chamber of the present Inquiry.*

1. *Communications from the Chamber on the subject of the Belgian Tariff and the Franco-Belgian Treaty:*

Witness has been President of the Bradford Chamber of Commerce since 1858, and has taken an active part in communications with the Foreign Office on the subject of trade and treaties with foreign countries, *Ripley* 4 *et seq.*——Details explanatory of the course taken by the Bradford Chamber of Commerce with reference to the preference given by Belgium to France over England previously, as well as subsequently, to the Franco-Belgian Treaty of 1861; frequent memorials to and correspondence with the Foreign Office on the subject, *Ripley* 8 *et seq.*; *Behrens* 437 *et seq.*——Communication from the Bradford Chamber of Commerce to Lord John Russell, as Foreign Secretary, dated 3 November 1860, relative to the expediency of the British trade with Belgium being placed upon a footing of equality with that of other nations, *Ripley* 22, 23——Statement as to no answer having been received from the Foreign Office to the foregoing letter, nor to a subsequent letter on the 18th December, *ib.* 24-26.

Further letter from the Chamber of Commerce, dated 4 January 1861, relative to the undue privileges in Belgium to French goods as compared to English goods, *Ripley* 27-29——Acknowledgment by the Foreign Office on 3 January 1861 of the receipt of the letters of November and December 1860, *ib.* 30, 31——Reference to the passing of the Franco-Belgian treaty and the representation consequently made by the Bradford Chamber to the Foreign Office; reply to this representation on 22 May 1861, *ib.* 40-49——Subsequent communication from the Chamber of Commerce to the Board of Trade representing the expediency of steps being taken for the due protection of British merchants in the treaty or negotiation then pending with Belgium, *ib.* 50-53.

Reference to a memorial from the Bradford Chamber of Commerce to the Foreign Office in January 1859, and to the reply of Lord Malmesbury, with regard to the Belgian treaty of 1851, *Ripley* 145-149——Amount of injury to the Bradford Trade in consequence of the Franco-Belgian treaty, and previously to the Anglo-Belgian trade, *ib.* 184-186. 306-311——Assurance given by the Foreign Office in the time of Lord Malmesbury to the Bradford Chamber of Commerce, previously to the reply in April 1859, to the memorial from the Chamber in the preceding January, *ib.* 270-275——Explanation that

Report, 1864—*continued.*

Bradford Chamber of Commerce—continued.

1. *Communications from the Chamber, &c.*—continued.

that the first communication from Bradford to the Board of Trade with reference to the Belgian treaty was in July 1861; *Ripley* 276–280——Satisfaction felt at the time by the Bradford Chamber upon having applied to the Board of Trade, and having been promised the assistance of the Board in the matter of the Belgian treaty, *ib.* 281–285.

Disadvantageous position of the Bradford trade as regards Belgium when witness first examined the Belgian tariff in 1854; undue preference given to French goods, *Behrens* 434–436——Steps taken by the Bradford Chamber in 1854 and 1856 with a view to this country being treated as the most favoured nation with reference to the arrangements between Belgium and France, *ib.* 437–445——Constant representation by the Bradford Chamber of Commerce to the Foreign Office on the subject of the undue preference given by Belgium to France; want of information displayed on the subject by the Foreign Office, *ib.* 448–450——Memorial from the Chamber in November 1860, as to the probable increase of the then existing preference to French goods, *ib.* 451, 452.

With regard to some delay on the part of the Foreign Office in acknowledging a letter from the Bradford Chamber, dated 3 November 1860, there was doubtless an omission which should not have occurred, *Hammond* 1539–1541.

2. *Representations on the subject of the Italian Tariff:*

Statement as to the Bradford Chamber of Commerce having, in July 1862, requested, through the Foreign Office, to be put in communication with Signor Marliani on the question of the Italian treaty, which he had been deputed to negotiate; departure of Signor Marliani without any such intercommunication having taken place, *Ripley* 92–96. 210–219——Inability of the Bradford Chamber to obtain information required from the Foreign Office on the subject of the Franco-Italian treaty, *Behrens* 510–512——Disadvantage through the Bradford Chamber not having been placed in communication with the Italian envoy when in this country in 1862, *ib.* 520–522.

3. *French Commercial Treaty:*

Advantage in the trade of Bradford having been represented at Paris at the time of the negotiations for the French commercial treaty, *Behrens* 523–525.

4. *Question of a French Consulship at Bradford:*

Correspondence between the Bradford Chamber of Commerce and the Board of Trade upon the subject of the appointment of a French consul or vice-consul at Bradford; better chance of such appointment if the Board of Trade had acted promptly in the matter, *Ripley* 97–101——Grounds for concluding that the Foreign Office did not enter into any communication on the subject of the appointment of a French consul or vice-consul at Bradford, *ib.* 220–228——Effect of the delay on the part of the Foreign Office in regard to the non-appointment of the consul, *ib.* 229, 230.

5. *Practice of the Chamber as to communicating in duplicate with the Foreign Office and Board of Trade:*

Statement as to it being the practice of the Bradford Chamber of Commerce to send duplicate memorials to the Board of Trade, on account of the unsatisfactory results of these communications with the Foreign Office, *Ripley* 102–107——Explanation as to duplicate copies of the correspondence in 1860 with the Foreign Office not having been sent by the Bradford Chamber to the Board of Trade, *ib.* 131, 132.

6. *Origination by the Bradford Chamber of the present Inquiry:*

Circular letter from Mr. Darlington, as secretary to the Bradford Chamber of Commerce, dated 9 April 1864, to the several Members of the House of Commons, requesting their support to the motion of Mr. Forster for an inquiry into the arrangements between the Foreign Office and Board of Trade; statement prepared by the Bradford Chamber, and circulated with this letter, *App.* 270–272.

See also *Belgium.* *Italy.* *Russia.* *Spain.* *Sweden.*

Brunnow, Baron. Warm testimony recently borne by Baron Brunnow to the good organization of the Foreign Office, *Hammond,* 1490. 3342.

C.

Canada and United States. See *Reciprocity Treaty.*

Cardwell, The Right Hon. Edward. (Analysis of his Evidence.)—Was President of the Board of Trade in 1853 and 1854; 3384, 3385——Explains the views held by him when at the Board of Trade in regard to its not being necessary in the Foreign Office generally to consult the Board with respect to the foreign commercial relations of the country, 3386–3388——Witness considered in fact, and still considers, that the principal func-

Report, 1864—*continued.*

Cardwell, The Right Hon. Edward. (Analysis of his Evidence)—*continued.*

tion of the consultative department of the Board of Trade terminated with the permanent adoption of the principle of free trade, 3387, 3388.

Opinion that the Foreign Office need no consultation with any other department with reference to the principle of reductions in the Italian tariff, or any other foreign tariff, 3389. 3403——Dissent from the view of Mr. Hammond as to the necessity of the Foreign Office still consulting the Board of Trade, even if there were a commercial department in the former office, 3390——Less rapid and effective transaction of business when it has to pass through two departments, instead of one, 3391——Grounds for objecting to the proposal that the Board of Trade should have any communication with the ministers and consuls abroad, which should at all diminish the responsibility of the Secretary o State for the conduct of foreign negociations, 3392–3398. 3408, 3409.

Inconvenience in there being both an executive and a consultative department in the Board of Trade, 3399, 3400——Several sources of detailed information equally open to the Foreign Office directly as indirectly through the Board of Trade, 3403——Approval of the Foreign Office obtaining detailed information directly from the commercial bodies interested in tariff alterations, 3403. 3406, 3407——Means of the Foreign Office for obtaining details from the statistical department without direct consultation with it, 3403–3405. 3423-3426.

Expediency of the Colonial Office being able to come to its own conclusions on commercial subjects without consultation with the Board of Trade, 3410, 3411——Witness contemplates that the Foreign Office or Colonial Office should still apply for information to the Board of Trade upon certain matters of detail, but should not apply to it as a consultative department, 3412–3429——An officer like Mr. Mallet could, if in the Foreign Office, efficiently and advantageously give information or advice for which reference is now made to a separate department, 3415–3417.

Opinion in favour of a termination of the consultative department of the Board of Trade, and of an enlargement from time to time of the executive duties of the Board, 3417. 3427–3429——Particulars in connection with the consultation of witness, when at the Board of Trade, by the Colonial Office with regard to the sugar duties, 3420–3422——Separate character of the Statistical Department, though nominally a branch of the Board of Trade, 3424–3426——It is quite immaterial as to the discharge of duties, whether the Board be still under a President, or a Secretary of State be appointed for the department, 3429.

Chambers of Commerce. Inexpediency, in the interests of trade, of the chambers of commerce being obliged to make public representations to Government on the subject of foreign tariffs, *Behrens* 584–589. 613, 614. 631–634——Witness cites a passage from the annual report of the associated chambers as showing the impression of the commercial community as to the defect of the present system of the Foreign Office and Board of Trade, *Ackroyd* 886, 887——Objection by the association of chambers of commerce to the double machinery and the divided responsibility under the present system, *ib.* 886——The chambers of commerce generally consider that there should be more immediate action on the part of Government in carrying out the representations of the commercial interests in matter of foreign trade, *ib.*

Understanding as to the chambers of commerce being precluded from intercourse with the consuls, *Ashworth* 910——Duties of chambers of commerce to place information before Government, although in the case of Dundee and the Jute trade with Italy no result has been produced, *Sturrock* 1236–1239.

Witness regrets that a deputation from the chambers of commerce did not see Mr. Layard and himself upon the matters referred to the present Committee, *Hammond* 1505——Satisfaction given to several chambers of commerce by the grant of the most favoured nation clause by Italy; memorials and letters from various chambers adverted to hereon, *ib.* 1692–1694. 1701–1077.

Frequent communication between the Board of Trade and the chambers of commerce and individual merchants, *Sir J. E. Tennent* 2279, 2280.

Ready part taken by the Foreign Office in communicating with chambers of commerce, and in forwarding the views of the cotton association, when witness was Foreign Secretary, *Earl of Clarendon* 3001——Want of foundation for the complaint of chambers of commerce, that their representations are not properly or promptly attended to under the system of two departments, *ib.* 3014–3017. 3029.

Remarks upon a statement by the chambers of commerce, that the defects of the present system render necessary public representations by the commercial community, which operate injuriously, *Hammond* 3343–3345.

Correspondence between the association of chambers of commerce and the Foreign Office in February and March 1864, upon the subject of the commercial classes being put in immediate and direct communication with those who are responsible for the action of Government in commercial negotiations with foreign countries, *App.* 275, 276.

List

Report, 1864—*continued.*

Chambers of Commerce—continued.

List of chambers of commerce to which a Foreign Office circular of 17 March 1863, on the subject of commercial negotiations between Great Britain and Italy, was addressed, *App.* 346.

See also *Belgium. Bradford Chamber of Commerce. Commercial Classes. Deputations. Dundee. Foreign Office. Italy. Manchester.*

Clarendon, The Right Hon. The Earl of, K.G. (Analysis of his Evidence.)—Was Secretary of State for Foreign Affairs from February 1853 till February 1858; has also been President of the Board of Trade, 2975–2978——When at the Foreign Office witness anxiously considered the relations with the Board of Trade, but was not able to suggest any more efficient arrangements than those now in force, 2980——He does not concur in the proposal that more direct communication should be established between the Board of Trade and the British agents abroad, *ib.*—— He also objects to a commercial department in the Foreign Office, whether under a permanent Under Secretary or a Parliamentary Under Secretary, 2981–2983.

Grounds for concluding that the Secretary of State would equally deem it necessary to consult the Board of Trade, even if there were a commercial branch in the Foreign Office, so that there would be no saving of time or labour, 2982–2985. 3007——Expediency of the Board of Trade being the repository of all commercial information, and the consultative body for the other departments, 2983. 2992——Importance of communications between the two departments being in writing, as a means of record, 2984—— Approval of personal communication occasionally between the Foreign Secretary and the officials at the Board of Trade; witness often had such communication, 2984. 2986.

Apprehended confusion and increase of delay if the Board of Trade and the consuls were in direct communication with each other, 2987–2989——Conclusion that there need be no delay under the system of the Board of Trade communicating with the consuls or ministers abroad, through the Foreign Office, 2987. 3009——Disapproval also of the Board of Trade as well as the Foreign Office, communicating directly with the British ministers abroad, as productive only of confusion, 2990——Witness also objects to the Board of Trade communicating abroad under flying seal through the Foreign Office, 2991. 3020, 3021.

Witness looks upon the Board of Trade as essentially a consultative department, 2992, 2993——Difficulty in rendering the Board a more important department; advantage if this could be done, *ib.*——Prompt communication of information to the Board of Trade when witness was Foreign Secretary, 2993——Disadvantage in the President of the Board not being always a Cabinet Minister, 2994, 2995——Reference to the President and Vice President as resembling the chairman and deputy chairman of a Board, though there is practically no Board of Trade in operation, 2996, 2997.

Doubt as to any improvement or dispatch if there were a special clerk in the Foreign Office for superintending the correspondence with the Board of Trade, 2998——Conclusion as to there not being any advantage in the separate character of the slave trade department, 2999, 3000——Ready part taken by the Foreign Office in communicating with chambers of commerce, and in forwarding the views of the Cotton Association, when witness was Foreign Secretary, 3001——Considerable experience of witness in connexion with questions of commerce, 3002–3006——Any supposed ignorance in a Foreign Secretary upon commercial matters would not be removed by a commercial branch in the office any more than by the Board of Trade, 3007.

With regard to France, there is a commercial department in the Foreign Office, but there is also a ministry of commerce, 3008——If any improvement could be derived from direct communication between the Board of Trade and the agents abroad, witness would gladly favour such communication, but he considers that confusion and want of harmony would be the result, 3009. 3014–3021. 3028——The correspondence between the Board of Trade and the Treaty Commissioners in Paris operated very satisfactorily, but this case was one of quite an exceptional character, 3010–3012. 3019. 3028.

Non-objection to the Board of Trade still communicating directly with Paris on questions arising out of the French Treaty, 3011. 3019. 3053–3055——Grounds for concluding that there would not generally be a saving of time if the Board of Trade communicated directly abroad, whilst confusion and increased delay would probably result, 3011–3021 ——Difficulty in drawing a line where detail ends or begins in connexion with commercial negotiations; obstacle, therefore, to any rule leaving details to be settled by the Board of Trade in direct communication, 3011–3013, 3017–3019. 3028.

Want of foundation for the complaint by chambers of commerce that their representations are not properly or promptly attended to under the the system of two departments, 3014–3017. 3029——Denial that the Foreign Office avows its ignorance, or is ignorant upon commercial questions, although there is necessity for its consultation of the Board of Trade, 3022–3027. 3047——Very competent officials at the Board in matters of commerce, 3030, 3031——Advantage in the Foreign Office applying to the Board for the aid

Report, 1864—*continued.*

Clarendon, The Right Hon. The Earl of, K.G. (Analysis of his Evidence)—*continued.*

of an efficient officer in conducting such treaties, as the French Commercial Treaty, 3032, 3032*——Expediency in all cases of the Foreign Office superintending the wording and the final settlement of treaties, 3033–3035.

Grounds for concluding that the want of concessions on the part of Spain is in no way owing to any want of proper representations by the British Government, 3037, 3038——Approval of secretaries of embassies being in attendance at commercial conferences abroad 3039, 3041——Witness repeats his opinion that a commercial department in the Foreign Office would not work well, 3042——He would gladly suggest any change that promised improvement, but he sees no room for any radical change in the present system, 3043—— Probability of some delays complained of by the commercial community having arisen through political causes, 3044.

Grave censure to be attached to any neglect of commercial interests by the diplomatic servants, 3045——Great attention paid by the diplomatic body to matters of commerce, *ib.*——Advantage in the foreign agents communicating with the Foreign Office rather than with the Board of Trade, as regards the inducement to them to be zealous in commercial matters, 3046——Insufficient information upon which the commercial classes blame the Foreign Office for not having obtained concessions from other nations, 3048——Difficulty in obtaining concessions on account of our having nothing to concede in return, through having adopted the principles of free trade, *ib.*

Further statement that direct communication between the Board of trade and consuls on commercial matters would not be productive of any advantage, 3049——Impracticability, moreover, of drawing a line as to the points upon which the Board of Trade and Foreign Office should respectively communicate with the consuls, *ib.*——Opinion that any improvements feasible in the present system of the departments can best be left for adoption to the departments themselves, 3050——Impracticability of the Board of Trade communicating directly with the foreign ministers in this country, 3051, 3052——Further approval of the Board communicating directly abroad on mere matters of detail, as in the case of the French Treaty, 3053–3055.

Cobden, Mr. Reference to a letter from Mr. Cobden in July 1863, disapproving of the Foreign Office being set in motion by commercial bodies, to urge reductions of tariffs upon foreign governments, *Hammond* 3299.—— *See* also *France*, 1. 3.

Colonial Office. Larger receipts or communications from the Colonial Office, than from the Board of Trade, to the Foreign Office, *Hammond* 1754.

Limited extent to which Colonial Acts are now referred to the Board of Trade by the Colonial Office, *Booth* 1967–1970——Former detailed examination by the Board of Trade of all Colonial Acts, before confirmation, many of these Acts having since been withdrawn from the cognizance and supervision of the Board as being unnecessary, *ib.* 2043–2051——Information as to the present consultation of the Board of Trade by the Colonial Office, and as to such consultation not being necessary in the greater number of cases, *ib.* 2207–2216—— Contemplated reference by the Colonial Office to the Board of Trade, rather than to a commercial branch in the Foreign Office, *ib.* 2217–2220.

Useful consultation of the Board of Trade with reference to colonial duties, *Sir J. E. Tennent* 2344–2346——The opinions of the Board of Trade are not always acted upon by the Colonial Office, *ib.* 2345, 2346——Rare instances of any result following the opinions of the Board of Trade in regard to the Colonial Acts submitted for the consideration of the Board, *Mallet* 2577——Statement as to the opinion of the Board of Trade having been overruled by the Colonial Office in 1859, upon the question of a commercial union between all the provinces of British North America, *ib.* 2710–2712. 2790–2792——Probable advantage in the India Office and Colonial Office consulting the Board, if efficiently constituted, *ib.* 2912–2916——Circumstance of the Foreign Office finding it necessary largely to consult the Colonial Office, *ib.* 2953–2956.

Expediency of the Colonial Office being able to come to its own conclusions on commercial subjects, without consultation with the Board of Trade, *Right Hon. E. Cardwell* 3410, 3411.

Functions exercised by the Board of Trade, with reference to British and colonial trade, *Right Hon. T. M. Gibson* 3478, 3479——Importance of facilities for commercial information relative to the colonies being promptly communicated with and readily available, *ib.* 3480–3483——Impediments to any interference by the Board in regard to colonial import or export duties, or colonial legislation generally, *ib.* 3494–3497. 3523–3525.

Commercial Classes. Strong disapproval of the practice whereby the commercial community are constrained to communicate with two departments, and are kept in uncertainty as to whether representations will be attended to, *Ripley* 106–108. 112–114——The main grievance is, that commercial questions do not receive that attention which they ought to do, *Behrens* 635–637.

Commercial Classes—continued.

Practice of the Board of Trade in regard to communicating to the Foreign Office representations from commercial bodies; discretion exercised by the former department as to the necessity of such communications, *Hammond* 1438–1440. 1444, 1445 ——Any direct representations by commercial bodies to the Foreign Office are, as a rule, referred to the Board of Trade, *ib.* 1441–1443 ——Witness sees no disadvantage in commercial representations being made to two offices, *ib.* 1608–1610.

Varying practice in regard to communications from commercial bodies coming to the Board of Trade or to the Foreign Office, *Sir J. E. Tennent* 2261 ——Frequent communications between the Board and chambers of commerce, and individual merchants, *ib.* 2279, 2280 ——With reference to the frequent complaint by the commercial classes as to the disadvantage and delay in having to deal with two offices, witness questions whether there is real ground for the complaint, *ib.* 2282, 2283.

Commercial representations about foreign trade should be made to the Foreign Office as being the responsible department, such representations being submitted to the Board of Trade for information, *Sir J. E. Tennent* 2283. 2338–2340. 2379–2393 ——Inexpediency of the commercial community being debarred from complaining to a department like the Board of Trade, *ib.* 2369 ——Better understanding of late on the part of the commercial community as to the distinction between the functions of the Board of Trade and of the Foreign Office, *ib.* 2411–2413.

With regard to its being felt as a grievance that the commercial community are referred from one office to another, the necessity of applications to both departments would still exist if there were a commercial branch in the Foreign Office, *Sir J. E. Tennent* 2414–2427.

Very valuable information received by the Board of Trade from private merchants and commercial bodies at home, *Mallet* 2477 ——Ample facilities of the Board for being informed as to the interests and wants of the commercial classes, *ib.* 2478 ——Advantage in commercial complaints as to the operation of any duty or tax being laid directly before the Treasury, rather than the Board of Trade, *ib.* 2636, 2637.

It does not follow that shrewd men of business are the best judges of what would be the most effectual way of promoting their own interests with foreign governments, *Earl of Clarendon* 3029 ——Insufficient information upon which the commercial classes blame the Foreign Office for not having obtained concessions from other nations, *ib.* 3048.

Approval of the Foreign Office obtaining detailed imformation directly from the commercial bodies interested in tariff alterations, *Right Hon. E. Cardwell* 3403. 3406, 3407 ——Doubt whether the commercial classes would consider their interest so well represented if in lieu of the present system they were to communicate upon important questions with a department in the Foreign Office, *Right Hon. T. M. Gibson*, 3456, 3457. 3514.

Absence of rule or practice as to the department to which representations by the commercial community to Government should be made, *Rep.* iv. ——Several grounds upon which the commercial community are dissatisfied with the present arrangement generally between the Foreign Office and Board of Trade, *ib.*

See also *Belgium*, 1. *Bradford Chamber of Commerce. Chambers of Commerce. Deputations. Foreign Office. Italy. Publication of Commercial Information.*

Commercial Department. Evidence to the effect that one special department, whether in the Foreign Office or the Board of Trade, should exclusively deal with questions of foreign trade and treaties, *Ripley* 108–123. 231–237 ——Respects in which it is more desirable that the commercial department contemplated by witness should be in the Foreign Office than in the Board of Trade, *ib.* 109–129.

Examination to the effect that it is for the executive to determine whether the proposed new department should be in the Foreign Office or the Board of Trade; witness declines to give any opinion upon this point, *Ripley* 231–237. 360–362. 392–422.

Necessity of the department conducting negociations, being possessed of all the commercial information that is necessary, *Behrens* 590–592 ——Expediency of the department conducting negociations, being informed and advised by officials in the same department, *ib.* 624–630.

Much more complete and valuable character of the information obtained by the Board of Trade in its collective capacity, than of information obtained by sectional departments acting separately, *Sir J. E. Tennent* 2340 ——Apprehended antagonism between the departments if each acted upon the advice of a commercial branch of its own, *ib.*

Either there should be one commercial and consultative office for the Government departments, or each department should be a self-contained office, consulting officers of its own, *Mallet* 2736 ——Opinion that each executive department should be self-contained and should consult another executive office only upon questions falling within the executive work of such office, *ib.* 2782. 2908–2931.

See also *Board of Trade. Foreign Office.*

Report, 1864—*continued.*

Commission of 1853 (Board of Trade). Reference to the Report of the Commission of 1853, as contemplating the progressive diminution of the importance of the Board, *Mallet* 2582.

Commission of 1863 (Board of Trade). General results arrived at by the Commission of 1863, as regards the executive and consultative functions of the department, *Mallet* 2583–2587.

Consuls and Consular Reports:

1. *Statements in favour of the Consuls communicating more directly with the Board of Trade.*
2. *Evidence opposed to the foregoing proposition.*
3. *Suggested communication between a Commercial Department in the Foreign Office, and the Agents Abroad.*
4. *Question of Despatches docketed as "Commercial" being sent on at once from the Foreign Office to the Board of Trade.*
5. *Considerations as to the efficiency or inefficiency of the Consular Service.*
6. *Omission on the part of many Consuls to report to the Foreign Office.*
7. *Suggested transmission of the Consuls' Reports to the Chambers of Commerce.*
8. *Practice considered in regard to the Publication of the Reports.*
9. *Transmission of the Reports from the Foreign Office to the Board of Trade.*

1. *Statements in favour of the Consuls communicating more directly with the Board of Trade.*

Improvement, if the consuls were in communication with the Board of Trade, *Ashworth* 976, 977——Explanation relative to the communication between the Board of Trade, and the consuls under the Merchant Shipping Act; absence generally of any collision with the Foreign Office, *Booth* 1981–1989——Instance of an appeal by a consul, from the Board of Trade to the Foreign Office, *ib.* 1984. 2009–2012——Witness sees no difficulty in the Foreign Office authorizing the consuls to communicate with the Board of Trade, upon matters relating to trade, *ib.* 1987.

Further evidence in approval of the consuls communicating directly with the Board of Trade; sundry objections thereto considered, *Booth* 2132–2158——How far there is anything exceptional in the consuls being placed in communication with the Board of Trade, under the Merchant Shipping Act, *ib.* 2132–2139. 2145, 2146.

Probability of more early and complete information in the possession of the Board of Trade, if it were in direct communication with the officers abroad, *Sir J. E. Tennent* 2301, 2302——Considerable advantage anticipated if the Board of Trade were placed in communication with the consuls under flying seal through the Foreign Office, *ib.* 2366–2378. 2399.

More prompt and complete information if the ministers and consuls abroad were in direct communication with the Board of Trade, *Mallet*, 2471, 2472——Further statement as to the importance of the Board of Trade communicating directly with our foreign representatives; witness sees no practical inconvenience in their doing so, *ib.* 2644, 2657 *et seq.* 2746—— Probability of greater zeal in the discharge of commercial duties if the foreign agents communicated directly with the Board of Trade in commercial matters, *ib.* 2747. 2748. 2816——Competency of our foreign agents to deal with commercial questions further adverted to with reference to the expediency of their reporting to the Board of Trade, *ib.* 2816–2819.

Non-objection to the Board of Trade communicating with the consuls and ministers under flying seal through the Foreign Office upon purely commercial matters, *Earl of Malmesbury* 3210, 3211. 3218–3225. 3239, 3240——Disapproval, however, of the Board of Trade and Foreign Office having separate and independent communications with the consuls and ministers abroad, *ib.* 3218.

Absence as a rule of direct communication between the Board of Trade and the members of the diplomatic or consular service, *Rep.* iii.——Conclusion of the Committee in favour of the Board of Trade being put in direct communication with the members of the consular and diplomatic services upon commercial matters, and of such communication being carried on through the Foreign Office, *ib.* vi.

2. *Evidence opposed to the foregoing Proposition:*

Importance attached to the practice of the consuls reporting to the Foreign Office instead of to the Board of Trade; extensive range of duties now entrusted to them irrespectively of trade, *Hammond* 1523–1530——Opinion as to the inexpediency of the direct communication of the consuls with the Board of Trade on marine affairs, *ib.* 1523, 1524 ——Grounds for objecting to the Board of Trade communicating with the consuls abroad; inconvenience apprehended, whilst there would be no material saving of time, *ib.* 1860 *et seq.*

Witness

CONSULS AND CONSULAR REPORTS—continued.

2. *Evidence opposed to the foregoing Proposition*—continued.

Witness does not concur in the proposal that more direct communication should be established between the Board of Trade and the British agents abroad, *Earl of Clarendon* 2980 —— Apprehended confusion and increase of delay if the Board of Trade and the consuls were in direct communication with each other, *ib.* 2987-2989——Conclusion that there need be no delay under the system of the Board of Trade communicating with the consuls or ministers abroad through the Foreign Office, *ib.* 2987. 3009——Witness also objects to the Board of Trade communicating abroad under flying seal through the Foreign Office, *ib.* 2991. 3020. 3021.

If any improvement could be derived from direct communication between the Board of Trade and the agents abroad witness would gladly favour such communication, but he considers that confusion and want of harmony would be the result, *Earl of Clarendon* 3009. 3014-3021. 3028 —— Grounds for concluding that there would not generally be a saving of time if the Board of Trade communicated directly abroad, whilst confusion and increased delay would probably result, *ib.* 3011-3021 —— Impracticability moreover of drawing a line as to the points upon which the Board of Trade and Foreign Office should respectively communicate with the consuls, *ib.* 3049.

Doubt as to any advantage in the Board of Trade communicating upon matters of detail with the foreign agents under flying seal through the Foreign Office, *Earl Russell* 3074-3076. 3085——Difficulty apprehended with respect to any direct communication between the Board of Trade and foreign agents, or if carried on under flying seal through the Foreign Office, *Lindsay* 3250-3254.

Conclusion that the same purpose is served under the present system of communication with the agents abroad as though the Board of Trade were to communicate directly with them, *Hammond* 3311, 3312. 3361——Witness also contends that any slight saving of time by the consuls communicating on commercial subjects directly with the Board of Trade is not commensurate with the inconvenience that would result from the consuls corresponding with two departments, *ib.* 3313-3327. 3370-3376. 3382, 3283 ——Business would be retarded rather than expedited by the consuls communicating abroad under flying seal through the Foreign Office, *ib.* 3319. 3366.

Grounds for objecting to the proposal that the Board of Trade should have any communication with the ministers and consuls abroad which should at all diminish the responsibility of the Secretary of State for the conduct of foreign negotiations, *Right Hon. E. Cardwell* 3392-3398. 3408, 3409.

3. *Suggested Communication between a Commercial Department in the Foreign Office and the Agents Abroad:*

Importance of direct communication between the proposed commercial department and the consuls abroad, *Ripley* 108, 109. 112-116. 231-237. 362. 419. 421 —— Grounds for concluding that the Foreign Office should deal with the commercial question in reference to foreign tariffs, and that the agents abroad would attach much more importance to supplying commercial information if the investigations of commercial matters vested with the Foreign Office instead of the Board of Trade, *Behrens* 640-658—— Proposition that a minister of commerce be attached to the Foreign Office who should conduct commercial negotiations with foreign countries, and should have the appointment and surveillance of consuls abroad, *Akroyd* 887-892.

4. *Question of Despatches docketed as "Commercial" being sent on at once from the Foreign Office to the Board of Trade:*

Suggestion that much delay may be avoided in the transmission of despatches to the Board of Trade if the foreign agents docketed their despatches as "political" or "commercial," and if the latter were in the first instance sent on at once from the Foreign Office, *Earl of Malmesbury,* 3209-3211.

Circumstance of some of the consuls now dividing their despatches under the heads of "political" and "commercial"; objections to this system being extended to all the consuls, *Hammond* 3320-3323 —— Objection to consuls' despatches, docketed "commercial," being sent to the Board of Trade without their being seen by the Secretary of State, *ib.* 3324. 3325. 3370-3376. 3380-3383.

Approval of Lord Malmesbury's suggestion that the commercial despatches from abroad should be docketed and forwarded at once to the Board of Trade, *Right Hon. T. M. Gibson,* 3462.

5. *Considerations as to the efficiency or inefficiency of the Consular Service:*

Witness complains, not of the high tariffs in foreign countries, but that men properly conversant with commercial matters are not appointed as consuls and diplomatic agents to make representations on the subject, *Ripley* 328. 343-366 —— Ignorance upon commercial matters of the great majority of our foreign consuls; grounds for this conclusion, *ib.* 355-366.

Report, 1864—*continued.*

Consuls and Consular Reports—continued.

5. *Considerations as to the efficiency or inefficiency of the Consular Service*—cont[d].

Opinion as to the more valuable character of the French consular reports than of the information given by the English consuls, *Behrens* 571, 572 ——Reference to a report by the Swiss consul at Japan as a model for consular reports, *ib.* 598, 599——Want of prompt and proper commercial information on the part of Government, adverted to as owing chiefly to omission on the part of the diplomatic and consular agents abroad, *ib.* 615–623——Secondary importance now attached by our foreign agents to commercial questions, *ib.* 657.

Circumstance of it having been found necessary in 1863 to issue a circular to the diplomatic and consular agents on the subject of the information in their reports, *Behrens* 826–828——Importance of the diplomatic and consular body constantly calling the attention of foreign governments to the principles of free trade, and the expediency of reducing their tariffs, *ib.* 829–834.

Reference to the magnitude of the diplomatic and consular service, and the large public expense in respect thereof, as compared with the small result obtained as regards the demands of the cotton trade, *Ashworth* 909–912——Further evidence on the subject of our large and expensive establishments abroad, and the small results derived as regards our export trade; conclusion as to the very imperfect action of the diplomatic and consular staff, *ib.* 943–981. 1001–1017. 1025–1049——Amendments contemplated by witness in the appointment of consuls as regards the qualifications to be required, *ib.* 946–957——Suggestions, as to the dissemination of information by the consuls and diplomatic agents, *ib.* 958–961. 968–972. 1031–1037.

Advantage if the consuls or diplomatic agents were promoted or rewarded with reference to the services done by them to commerce, *Ashworth* 961–963. 977. 1013–1017——Very little use of the consular reports; statement hereon as to witness not reading these reports, and as to the Manchester Chamber not taking in the "London Gazette" which contains them, *ib.* 980, 981. 1025–1027. 1059–1076. 1124–1126.

Nature of the check exercised in the Foreign Office over the consular reports in the event of any neglect in the matter, *Hammond* 1414–1417——Equal desire of the consuls to give every information about trade, as though their promotion rested with the Board of Trade, *ib.* 1521, 1522——Strong testimony borne by the Select Committee on the Consular Service in 1858, to the efficiency of the consuls, *ib.* 1522——Desire evinced by our diplomatic and consular agents to attend to matters of trade, *ib.* 1798, 1799——Very valuable commercial information is obtained from our agents abroad, *ib.* 1800.

Earlier information obtained by merchants upon matters of trade and changes of tariffs in foreign countries than is obtained by the Board of Trade through the reports forwarded by the Foreign Office, *Sir F. E. Tennent* 2284–2292——Many of the reports by the foreign agents are of a very valuable character, *Mallet* 2734——Importance of our agents abroad having a proper knowledge of the bearing of legislation upon trade, *ib.* 2826.

6. *Omission on the part of many Consuls to report to the Foreign Office:*

Small number of consular reports received in proportion to the number of persons in the consular service, *Mallet* 2730–2732——Reference to the apparent omission on the part of several consuls to make reports; doubt whether there has been any omission on their part in regard to special reports upon cotton, *Earl Russell* 3126–3130——Explanation upon the subject of the commission on the part of a large number of the consuls to make reports, *Hammond* 3334——Full reports received from the consuls in cotton-growing countries, *ib.* 3335, 3336.

7. *Suggested Transmission of the Consuls' Reports to the Chambers of Commerce:*

Expediency of the consuls' reports to the department at home, being forwarded to the chambers of commerce, *Ripley* 328. 344, 345——Statement as to the consular reports not being now furnished to the chambers of commerce, or put into a tangible shape for their use, *ib.* 329–335. 345. 367–370——Importance of the information received from abroad being disseminated to the chambers of commerce as promptly and efficiently as possible, *Behrens* 806–825.

8. *Practice considered in regard to the Publication of the Reports:*

Undue delay in the publication of the consular reports, so that their value is not much, *Behrens* 659–661——Expediency of Government collecting commercial information, and disseminating it to the chambers of commerce as promptly and efficiently as possible; defects of the system of publication in the "Gazette," adverted to hereon, *ib.* 806–825.

Absence of delay on the part of the Foreign Office in publishing the consuls' reports, *Hammond* 1816, 1817.

Check to be exercised by the Board of Trade before publishing the reports of the consuls, if the latter communicated directly with them, *Booth* 2154–2158——Delay in the publication of important information from abroad, on account of such information being

Report, 1864—*continued.*

Consuls and Consular Reports—continued.

8. *Practice considered in regard to the Publication of the Reports*—continued.

being supplied to the Board of Trade through the Foreign Office, *Mallet* 2454-2472——Practice as to the publication in the "London Gazette;" defects of this mode of publicity, *ib.* 2467-2470. 2803-2810.

Preparation and publication by the Foreign Office of the consuls' reports; formerly they were prepared for publication by the Board of Trade, *Mallet* 2733, 2734——Witness is not aware of the reason of the transfer from the Board of Trade, of the publication of the consuls' reports, *ib.* 2948-2950.

Rule followed by the Foreign Office as to the time of publishing the consular and diplomatic reports, *Hammond* 3341.

Disaffection on the part of the commercial community with respect to the system of publication as involving delay, *Rep.* iv.

9. *Transmission of the Reports from the Foreign Office to the Board of Trade:*

Practice in regard to the reports of consuls and secretaries of legations being forwarded to the Board of Trade, *Hammond* 1398-1404. 1413——The Foreign Office not only consult upon all questions connected with foreign treaties and tariffs, but communicate to the Board of Trade consular reports and other information connected with trade, *Sir J. E. Tennent* 2244-2249. 2284. 2293-2310.

Reference to the practice of the Foreign Office in regard to forwarding to the Board of Trade information received from consuls upon commercial matters, *Rep.* iii.

Consultative Department (*Commerce*). See *Board of Trade*, 10. *Commercial Department. Foreign Office*, 7, 8.

Cotton Trade. Large extent of district and enormous interests in cotton manufacture represented by the Manchester Chamber of Commerce, *Ashworth* 905-908——Statement showing the immense extent of the cotton manufacture and export of Lancashire and Cheshire, *ib.* 907——Small result obtained as regards the demands of the cotton trade, notwithstanding the magnitude of the diplomatic and consular service, and the large public expense incurred in respect thereof, *ib.* 909-912.

Statement showing the forward part taken by the Foreign Office in communication with the Manchester Chamber of Commerce and the Cotton Supply Association, with a view to increased supplies of cotton from sources other than the United States, *Hammond* 1801-1808——Means suggested by the Foreign Office in January 1861, for obtaining increased supplies through the agency of the consuls, or through agents specially appointed; advantage if this proposal had been adopted, *ib.* 1802. 1804——Ready part taken by the Foreign Office in communicating with chambers of commerce, and in forwarding the views of the Cotton Association, when witness was Foreign Secretary, *Earl of Clarendon* 3001——Full reports received from the consuls in cotton growing countries, *Hammond* 3335, 3336.

Considerations as to the part taken by the Board of Trade or by the Indian Office in reference to supplies of cotton from India, and other questions connected with Indian produce, *Right Hon. T. M. Gibson* 3484-3492.

Cowley, Lord. Lord Cowley offered witness every facility in his communications with the French Government, *Lindsay* 3273.——*See* also *France*, 1, 2.

D.

Delay:

1. *Representations as to the Occurrence and Causes of Delay under the preeent System.*
2. *Explanations on the part of the Foreign Office; Denial that any material Delay occurs.*

1. *Representations as to the Occurrence and Causes of Delay under the present System:*

Several causes to which the delay generally on the part of the Government is attributable, under the system of two departments for dealing with matters of foreign trade, *Behrens* 567——Further statement as to the system of two departments having frequently resulted in omissions and delays, *ib.* 605-612——Delay on the part of Government when tariff negotiations have been going on between foreign powers, *Ashworth* 979.

Tendency to a waste of time in the consideration of details by the Board of Trade in connection with questions of policy resting with the Colonial Office or Foreign Office, *Booth* 2221-2224.

Earlier information obtained by merchants upon matters of trade and changes of tariffs in foreign countries, than is obtained by the Board of Trade through the reports forwarded from the Foreign Office, *Sir J. E. Tennent* 2284-2292——Effect of political

Report, 1864—*continued.*

DELAY—continued.

1. *Representations as to the Occurrence and Causes of Delay, &c.*—continued.

considerations in retarding progress in the negotiation of treaties of commerce, *Sir J. E. Tennent* 2323; *Mallet* 2749-2752——Witness does not impute delay to the Foreign Office in connection with the reports by foreign agents, *Mallet* 2800–2802.

Particular instances of important decrees which appeared in the "Moniteur" having been gazetted by the Board of Trade from that journal, before receiving them from the Foreign Office, *Mallet* 2813. 2820, 2821——Occasional representation by the Board of Trade to the Foreign Office on the subject of the omission or delay in sending important foreign decrees to the Board, such omission resting most probably with our foreign agents, *ib.* 2814–2819.

Delay through the Board of Trade having to communicate with the Foreign Office, in connection with any negotiations for the removal of differential dues on shipping, through the Foreign Office not possessing the required knowledge in such matters, *Lindsay* 3247-3249.

Less rapid and effective transaction of business when it has to pass through two departments instead of one, *Right Hon. E. Cardwell* 3391.

Grounds upon which the commercial community are dissatisfied with the double action between the two departments as involving delay, *Rep.* iv.

2. *Explanations on the part of the Foreign Office; Denial that any material Delay occurs:*

With regard to some delay on the part of the Foreign Office in acknowledging a letter from the Bradford Chamber, dated 3 November 1860, there was doubtless an omission which should not have occurred, *Hammond* 1539–1541——Witness declines to offer any opinion in reference to a certain delay laid to the charge of Earl Russell in his communications with M. Van de Weyer, *ib.* 1574–1577——Statement to the effect that delay was not created under the system of two departments, in obtaining information from Turin relative to the negotiations with France, *ib.* 1625–1627——Absence of delay on the part of the Foreign Office in publishing the consuls' reports, *ib.* 1816, 1817.

Explanation as to the necessity of a certain delay in answering a communication from the Bradford Chamber of Commerce to the Foreign Office in 1859; previous delay on the part of the Bradford Chamber, *Hammond* 1818–1820——With regard to the complaints of delay under the present system of communication with the consuls, &c. there is practically no delay of any moment, *ib.* 1884–1886. 1943–1945. 1951.

There need be no delay under the present system of communication abroad, *Earl of Clarendon* 2987. 3009——Prompt communication of information to the Board of Trade when witness was Foreign Secretary, *ib.* 2993——Probability of some delays complained of by the commercial community having arisen through political causes, *ib.* 3044.

Expediency of its resting with the Secretary of State as to the most judicious time to open negotiations; impolicy of pressing matters unless there is fair prospect of success, *Earl Russell* 3117-3120. 3123.

With regard to the mode of dealing with foreign despatches when witness was Foreign Secretary, and the delay which ensued, it is explained to him (by Mr. Layard) that the system now in force is very prompt and rapid, *Earl of Malmesbury* 3226-3229.

Reference to the official steps taken in connection with a memorial from Huddersfield, as showing how delay sometimes rests with foreign Governments, *Hammond* 3300, 3301——There is not any practical inconvenience from the delay which occurs, *ib.* 3316——Probability of there being occasionally a delay of a few days before the Foreign Office forward communications to the Board of Trade; that is, in cases not urgent, *ib.* 3366–3369——As a general rule there is no delay in forwarding papers to the departments which they concern, *ib.* 3369.

See also *Belgium.* *Foreign Office.* *Italy.* *Zollverein.*

Denmark. Statement explanatory of the system in Denmark of treating commercial negotiations with foreign nations, *App.* 291.

Deputations. Statement as to deputations being referred from the Foreign Office to the Board of Trade, and from the Board of Trade to the Foreign Office, under the present system of two departments and divided responsibility; instance of this, *Akroyd* 887. 893-900.

Entire readiness of the Foreign Office to receive commercial deputations; letter from witness hereon to the association of Chambers of Commerce, *Hammond* 1501-1507.

Consultation generally with the Board of Trade before the Foreign Office give replies to commercial deputations; exceptions to this rule, *Sir J. E. Tennent* 2262, 2264–2271——Presence of witness or his colleague at the reception of deputations by the president of

Deputations—continued.

of the Board, *Sir J. E. Tennent* 2263——Suggestion that the deputations should go direct to the Foreign Office in applications of the ordinary kind, *ib.* 2283.

Ses also *Chambers of Commerce.* *Commercial Classes.*

Dewsbury Chamber of Commerce. Extract from a memorial of the Dewsbury Chamber of Commerce on the subject of the Franco-Italian Treaty of Commerce, *Hammond* 1702.

Diplomatic Service:

1. *Qualifications of the Foreign Agents considered with reference to their Action in Commercial Matters.*
2. *Question of Communication between the Board of Trade and the British Ministers and Agents Abroad.*

1. *Qualifications of the Foreign Agents considered with reference to their Action in Commercial Matters:*

Grounds upon which it is contended that the foreign agents are not zealous in commercial matters, or efficient in the discharge of their commercial duties, *Ripley* 328. 343–366; *Behrens* 615-623. 657. 826-828; *Ashworth* 909-912. 943-981. 1001-1017. 1025-1049——Usefulness of the commercial reports of secretaries of embassies; great delay at times before they are received by the Chambers of Commerce, *Behrens* 499, 500.

Evidence on the subject of our large and expensive establishments abroad, and the small results derived as regards our export trade; conclusion as to the very imperfect action of the diplomatic and consular staff, *Ashworth* 909-912. 943-981. 1001-1017. 1025-1049——Witness condemns the operations of our agents abroad by the barrenness of the results, but is not cognisant of the precise duties entrusted to the diplomatic service and consular service respectively, *ib.* 1025-1049.

Explanation as to the secretaries of Legations having no direct correspondence with the Foreign Office, *Hammond* 1404. 1411, 1412——Matters of general interest, as well as matters of trade, upon which the secretaries of Legation may report to the ministers abroad; delay at times in these reports being made, *ib.* 1412. 1417–1427——Explanation as to the secretary of Legation at St. Petersburgh not having reported since 1862; valuable report in that year, *ib.* 1420, 1421——Explanation also as to there not having been a report from the Secretary of Legation in Spain, *ib.* 1422–1425.

Valuable character of the information contained in the reports received from the foreign agents, *Hammond* 1800; *Mallet* 2734——Several circulars issued to heads of missions with reference to periodical reports by secretaries of embassy and legation, *Hammond* 1813, 1814——Necessity of attachés in the diplomatic service undergoing an examination in political economy, *ib.* 1815.

Great zeal displayed by our representatives at Paris, Turin and Berlin in co-operating with witness; importance attached by them to commercial matters, *Mallet* 2743, 2744——Omission in attachés not undergoing an examination in political economy, *ib.* 2826.

Approval of secretaries of embassies being in attendance at commercial conferences abroad, *Earl of Clarendon* 3039–3041——Grave censure to be attached to any neglect of commercial interests by the diplomatic servants, *ib.* 3045——Great attention paid by the diplomatic body to matters of commerce, *ib.*

The Foreign Office has shown every desire to obtain information from witness upon matters of trade, *Morier* 3138–3142——Desire on the part of the diplomatic servants to devote attention to matters of trade, *ib.* 3154——Entire inaccuracy of any impression that the Foreign Office discourages the study of commercial subjects by the diplomatic body, *ib.* 3155, 3156.

Statement as to the expediency of our ambassadors and diplomatists abroad having had a training in matters of commerce and navigation so that they might be more competent to deal with foreign governments on such questions, *Lindsey* 3259-3264. 3267-3269. 3273. 3282-3293.

Sundry circulars issued by the Foreign Office upon the subject of the functions to be discharged by the secretaries of embassy and legation, and the investigations and reports to be made by them with reference to commercial matters, *App.* 268–270.

Circular to ministers abroad, dated Foreign Office, 25 April 1863, with a view to their promptly forwarding the fullest and earliest information upon commercial matters abroad, *App.* 270.

Paper explanatory of the regulations for the examination of attachés in Her Majesty's Diplomatic Service, *App.* 271.

2. *Question of Communication between the Board of Trade and the British Ministers and Agents abroad.*

Witness contends that it is very undesirable that the Board of Trade, or the president of the Board should, as well as the foreign secretary, communicate directly with the

Report, 1864—*continued.*

Diplomatic Service—continued.

2. *Question of Communication, &c.*—continued.

foreign ministers; inexpediency thereof, as the latter would thereby be under two masters, *Hammond* 1860 *et seq.*

If simply with a view to the collection of information witness sees no objection to the Board of Trade corresponding not only with our consuls, but our misisters abroad, *Booth* 2026–2032——Evidence in favour of the Board of Trade being placed in more direct communication with the foreign agents, *Sir J. E. Tennent* 2301, 2302; *Mallet* 2471, 2472. 2644–2657 *et seq.* 2816–2819; *Earl of Malmesbury* 3210, 3211. 3218–3225—— Objection to commercial questions, which are apparently trifling, being dealt with by the Foreign Office in communication with the ministers abroad without reference to the Board of Trade, *Mallet* 2757–2760.

Objections to the proposition for more direct communication between the Board of Trade and the British agents abroad, *Earl of Clarendon* 2980. 2987–2991. 3011–3021; *Earl Russell* 3074–3076. 3085; *Lindsey* 3250–3254; *Hammond* 3311 *et seq*——Disapproval of the Board of Trade as well as the Foreign Office communicating directly with the British ministers abroad, as productive only of confusion, *Earl of Clarendon* 2990—— Advantage in the foreign agents communicating with the Foreign Office rather than with the Board of Trade as regards the inducement to them to be zealous, in commercial matters, *ib.* 3046.

Improvement if our foreign ministers could be put in possession of more complete information when negotiations are pending between foreign nations, *Earl Russell* 3070 —— Obstacle to the Board of Trade communicating directly with the diplomatic agents, commercial and political matters being closely intermixed in foreign countries, *ib.* 3073–3085.

Advantage, in the abstract, of the principle of direct communication, *Morier* 3163—— Benefit experienced by witness in communicating privately with Mr. Mallet on commercial matters, as well as with Mr. Layard; inference as to the advantage of more direct communication between the Board of Trade and the foreign agents generally, 3163–3172.

Probable removal of difficulty with the Foreign Office if the Board of Trade could communicate with the diplomatic body through the Foreign Office and under flying seal, *Right Hon. T. M. Gibson* 3463.

Direct Communication. See *Consuls and Consular Reports. Delay. Foreign Office. France* 1. *Italy. Responsibility.*

Draft Treaties. In almost the majority of instances the draft treaty is prepared by the Board of Trade rather than by the Foreign Office, *Sir J. E. Tennent* 2322.

Dundee. The Dundee Chamber of Commerce represents the Scotch linen trade, *Sturrock* 1129——The trade lies chiefly with America, but there is a large continental trade, *ib.* 1131, 1132——Immense increase since 1838 in the import of Indian jute to Dundee, and in the jute manufacture, *ib.* 1135–1140——High price of jute goods in Dundee through the cotton scarcity, so that articles of French manufacture are largely imported, *ib.* 1142, 1143.

Details relative to communications between the Board of Trade and the Dundee Chamber, before and after the Franco-Italian treaty, *Sturrock* 1168–1191——Representation made by the Dundee Chamber of Commerce to Government on the subject of the jute trade with the Zolliverein; subsequent communication from the Foreign Office, *ib.* 1212–1215——Explanation as to witness deeming it expedient at times to communicate with both departments on the same subject, although he would much prefer having but office to do with, *ib.* 1233–1235. 1272–1293——Further statement as to the French treaty having resulted in Dundee importing jute goods from France instead of exporting them to France; explanation on this point, *ib.* 1245–1247. 1262, 1263. 1322.

Doubt whether the memorial of the Dundee Chamber of Commerce in July 1862 was forwarded to Turin, *Hammond* 1677–1679.

Memorial of the directors of the Dundee Chamber of Commerce, dated 12 May 1862, with refereuce to the treaty between France and the Zollverein, and the expediency of steps being taken in the interests of the jute trade of Dundee, &c., *App.* 262–264.

Letter from the Dundee Chamber to the Board of Trade, dated 28 January 1863, upon the subject of the absence of any provision in the Italian tariff for manufactures of jute, *App.* 342.

E.

Edinburgh Chamber of Commerce. Memorial of the Edinburgh Chamber of Commerce, dated 20 May 1864 on the subject of the Franco-Italian Treaty of Commerce, *Hammond* 1702.

Evans,

Report, 1864—*continued.*

Evans, John. (Analysis of his Evidence).—Member of the firm of John Dickinson & Co., one of the largest in the paper trade, 1323——Is chairman of an association recently formed in the interests of the trade, 1324, 1325——Very unfair competition to which the paper trade is subjected on account of the heavy export duties on foreign rags, and the free admission of French paper into this country, 1326–1329. 1336, 1337. 1365–1367——Absence of official communication with the paper trade pending the negotiations for the French treaty, 1328——Frequent representations made in different quarters relative to the export duties upon foreign rags, but without effect, 1330–1332. 1346–1349.

Reference to a statement by Mr. Gladstone that France would make some concession as to the duty on rags, and that in Italy the duty would be abolished; question as to the information on which this statement, 1333, 1334. 1338. 1350, 1351. 1369–1372——Want of information displayed by Earl Russell on the subject of the paper trade and the rag duty, 1335. 1360–1364. 1373——Very close supervision required of foreign tariffs in the interests of the paper trade, 1336.

Increase in the export duty on rags in part of Italy, 1338–1341——Absence of official intimation to the paper trade when the Italian Tariff was being revised, and when an Envoy was sent to this country, 1342–1345. 1352–1354——Representations made on several occasions to the Foreign Office as well as to the Board of Trade, 1346–1349——Belief that France would have given us free trade in rags if insisted upon as a condition of our giving them free trade in paper, 1355–1359. 1368.

Foreign Agents. See *Consuls and Consular Reports. Diplomatic Service.*

Foreign Countries. Particulars as to the practice in France, Prussia, and Italy, in regard to a foreign commercial department both in the Foreign Office and Ministry of Commerce, *Mallet* 2593–2597.

Paper submitted to the Committee showing the relations between the Foreign Office and Ministry of Commerce in foreign countries, *Hammond* 3350–3352; and *App.* 276 *et seq.*

Foreign Ministers. See *Board of Trade*, 9. *Diplomatic Service.*

FOREIGN OFFICE:

1. *Explanations as to the present practice of the Office in the transaction of business.*
2. *Exceptions taken to the present System as regards Commercial Matters.*
3. *Exemption of the Officials from fault.*
4. *Evidence in defence and approval of the present System of the Office, and of its relations with the Board of Trade.*
5. *Harmonious action between the two Departments.*
6. *Question as to the present System having produced but barren results.*
7. *Evidence in support of a Commercial Department in the Foreign Office as a means of obviating the double action under the present System.*
8. *Evidence opposed to the foregoing Proposition.*
9. *Statements in favor of a Special Clerk for attending to Communications with the Board of Trade.*
10. *Objections to the foregoing Proposal.*
11. *Question of Communication with Subordinates in the Board of Trade.*
12. *Question of relegating to the Board of Trade the primary Consideration of Commercial Despatches and Details.*
13. *Suggestion that the question of improved regulations had better have been left to the Departments themselves.*
14. *Details as to the part taken by the Office in regard to the Belgian and Italian Treaties.*
15. *Relations between the Foreign Office in other Countries and the Ministry of Commerce.*
16. *Conclusions and Recommendations of the Committee.*

1. *Explanations as to the present practice of the Office in the transaction of business:*

The permanent and Parliamentary under secretaries are on the same footing, and take the business between them according to a geographical division of the world, *Hammond* 1376–1379. 1385——Witness refers to a certain paper submitted in his evidence before the diplomatic committee, as best explaining the working of the office and the allotment of duties to the several clerks, *ib.* 1378. 1380. 1384——In the absence of one under secretary the other takes charge of the whole political department, *ib.* 1379——There is constant intercommunication between the two under secretaries; particulars on this point, *ib.* 1382–1384.

Report, 1864—*continued.*

FOREIGN OFFICE—continued.

1. *Explanations as to the present practice of the Office, &c.*—continued.

Detailed description of the system of the office, and of the mode of dealing with despatches, as contained in a paper drawn up by witness, and before referred to, *Hammond* 1384——Information as to the various subjects connected with foreign trade, upon which the Foreign Office communicate with the Board of Trade, *ib.* 1386-1406——Unreserved communication between the Foreign Office and Board of Trade with reference to all commercial negotiations with foreign countries, *ib.* 1405, 1406——Rule of the Foreign Office to act upon the suggestions of the Board of Trade on all mere commercial questions, *ib.* 1407-1410.

Any direct representations by commercial bodies to the Foreign Office are, as a rule, referred to the Board of Trade, *Hammond* 1441–1443——Communication, in writing, between witness and the secretary of the Board of Trade whenever the opinion of the Board is required, *ib.* 1446–1451. 1457-1464——Replies from the Board go, eventually, before the Foreign Secretary of State, *ib.* 1452——Consultation of the President of the Board of Trade by the Foreign Secretary whenever he deems it necessary, *ib.* 1453–1455. 1461.

Witness further explains the general practice of the Foreign Office in communicating information to the Board of Trade, or in referring to the Board for information, *Hammond* 1750–1752——Explanation that, in all cases of reduction or revision of tariffs, the Foreign Office would refer to the Board of Trade for information and assistance, *ib.* 1792–1795——Exceptional circumstances under which the Foreign Office some times act upon commercial questions without consulting the Board of Trade, *ib.* 1830, 1831.

Form of application by the Foreign Office to the Board of Trade for the required information; officials to whom the communications are generally addressed, *Booth* 2070–2079——Practice of the Foreign Office to send to the Board of Trade all the information which they consider concerns the department, *Sir J. E. Tennent* 2244-2249. 2284. 2293–2310——Origination, in the Foreign Office, of the communication between the two departments, *ib.* 2250–2252——The communications come in the name of the Secretary of State, and are addressed to the Secretary of the Board of Trade, *ib.* 2253–2255——With some few exceptions the communications take place in writing, *ib.* 2256–2260.

Consultations, generally, with the Board of Trade, before the Foreign Office gives replies to commercial deputations; exceptions to this rule, *Sir J. E. Tennent* 2262. 2264–2271——Discretion exercised by the Foreign Office, in regard to consulting the Board of Trade, when individuals complain first to the former department, *ib.* 2276–2278——Occasional difficulty through the Foreign Office omitting to supply information which is afterwards required; this is always remedied on application by the Board, *ib.* 2293–2299.

Opinion as to complete information, for the purposes of the Board being generally supplied by the Foreign Office, *Sir J. E. Tennent* 2300–2310——Statement as to political considerations not being always communicated to the Board; doubt as to any disadvantage on this score, *ib.* 2304–2310. 2323——Practice of the Foreign Office not always to consult the Board of Trade before treaties affecting commerce are concluded with foreign nations, *ib.* 2311–2329——Concurrence of the Foreign Office in all substantive recommendations by the Board of Trade relative to foreign tariffs; any delay has been from political considerations, *ib.* 2323——Reliable character of the information generally received by the Board of Trade from the Foreign Office, *Mallet* 2466.

Practice of the Foreign Office in forwarding to the minister abroad copies of the letters received from the Board of Trade, or, in sending instead despatches from the Secretary of State embodying such letters, *Hammond* 3362–3365.

2. *Exceptions taken to the present System as regards Commercial Matters:*

Witness has always felt that there was an immense amount of ignorance in the office as to commercial questions generally, *Ripley* 104, 105. 107——Witness dates chiefly from 1860 the grievances complained of in dealing with the Foreign Office, *ib.* 117–121. 130——The complaint against the Foreign Office refers not only to the Belgian Treaty, but to the Zollverein case and the Italian case, *ib.* 292, 293——Grounds for the conclusion that in the Foreign Office there is great ignorance upon commercial questions, and that the commercial community should have a properly informed department to go to on such matters, *ib.* 294–298.

Great disadvantage in having to deal with two departments of Government with regard to Foreign commerce, *Behrens* 577–580——Witness concludes that the Foreign Office has been neglectful in its requisitions and its communications generally with Foreign Governments, *ib.* 860–863. 865–873.

Statement as to deputations being referred from the Foreign Office to the Board of Trade, and from the Board of Trade to the Foreign Office, under the present system of two departments and divided responsibility; instance of this, *Akroyd* 887. 893–900.

Examination as to witness's data for the conclusion that Government have generally been

Report, 1864—*continued.*

FOREIGN OFFICE—continued.

2. *Exceptions taken to the present System, &c.*—continued.

been neglectful of the commercial interest in the matter of foreign tariffs, and have not made the required representations, *Ashworth* 1077-1115——Want of organization between the Foreign Office and Board of Trade, *Sturrock* 1242.

Frequency of the Board of Trade not being provided with sufficient information to enable them to advise the Foreign Office in commercial matters, *Mallet* 2473-2476—— Other cases in addition to that of the Italian Treaty, in which the Board of Trade were not supplied with sufficient information to advise the Foreign Office, *ib.* 2540, 2541—— Condemnation of the present relations with the Board of Trade as causing delay and irregularity, *ib.* 2588-2590——Impracticability of efficiency under the present indirect system, *ib.* 2609-2611——Witness has always found the greatest possible willingness in the Foreign Office and its agents to act on behalf of the commercial interests of the country; he finds fault with the system, not with the men, *ib.* 2945, 2946. 2973, 2974.

Inconvenience in the Foreign Office having to consult the Board of Trade upon all tariff questions, *Mallet* 2951, 2952——Obstacle to the Board of Trade making representations to the Foreign Office in disapproval of their mutual relations, *ib.* 2966-2968 ——Though there may be some remissness on the part of the Foreign Office in the interests of British trade abroad, there certainly is not any intentional remissness, *ib.* 2973, 2974.

Less rapid and effective transaction of business when it has to pass through two departments, instead of one, *Right Hon. E. Cardwell* 3391.

3. *Exemption of the Officials from Fault:*

Courtesy and attention experienced at the hands of the officials, the system being alone to blame, *Ripley* 104, 105; *Ackroyd* 887; *Sturrock* 1240. 1248-1251——The system of twofold offices is altogether wrong, but the men are not at all to blame, *Behrens* 864; *Mallet* 2945, 2946. 2973, 2974.

4. *Evidence in Defence and Approval of the present System of the Office, and of its Relations with the Board of Trade:*

Examination to the effect that there is no disadvantage as regards commerciel questions in the Secretary of State not, as a rule, directly consulting the permanent officials of the Board of Trade; whenever he requires more ample information, he can consult whom he pleases, *Hammond* 1455-1481——Under the present system it may be said that the detailed opinion of the Board of Trade is really before the Foreign Office, *ib.* 1479, 1480——Absence of inconvenience or disadvantage in having to refer to another department for the required information on commercial questions, *ib.* 1482. 1508-1510.

Opinion of one of the foreign ministers (Baron Brunnow) as to the great efficiency of our Foreign Office under the present system, *Hammond* 1490. 3342——Advantage of the arrangement whereby commercial questions with the Board of Trade are dealt with by the clerks in the office according to the countries allotted to the several clerks, *ib.* 1491——Entire readiness of the Foreign Office to receive commercial deputations; letter from witness hereon to the Association of Chambers of Commerce, *ib.* 1501-1507—— Witness sees no disadvantage in commercial representations being made to two offices, *ib.* 1508-1510——Speculative character of the evidence generally upon which the conduct of witness's department has been impugned, *ib.* 1700.

When at the Foreign Office witness anxiously considered the relations with the Board of Trade, but was not able to suggest any more efficient arrangements than those now in force, *Earl of Clarendon* 2980——Prompt communication of information to the Board of Trade when witness was Foreign Secretary, *ib.* 2993——Want of foundation for the complaint of chambers of commerce that their representations are not properly or promptly attended to under the system of two departments, *ib.* 3014-3017. 3029—— Denial that the Foreign Office avows its ignorance, or is ignorant, upon commercial questions, although there is necessity for its consultation of the Board of Trade, *ib.* 3022-3027. 3047——Witness would gladly suggest any change that promised improvement, but he sees no room for any radical change in the present system, *ib.* 3043.

When witness requires commercial information of any importance, he consults Mr. Milner Gibson, and has every facility of obtaining information or advice, *Earl Russell* 3063-3065——With regard to the mode of dealing with foreign despatches when witness was Foreign Secretary, and the delay which ensued; it is explained to him (by Mr. Layard) that the system now in force is very prompt and rapid, *Earl of Malmesbury* 3226-3229.

Great facility with which witness has obtained information from the Foreign Office, *Lindsay* 3262. 3271——Peculiarly excellent character of the business arrangements of the office; opinion that it is the best arranged of all the public departments, *ib.* 3262. 3270-3272.

FOREIGN OFFICE—continued.

4. *Evidence in Defence and Approval of the present System, &c.*—continued.

Witness maintains that his department is well competent to deal with questions of commercial policy, and that it exercises an efficient supervision in this respect, though it leaves the details of tariffs to the Board of Trade, as the more competent body in such matters, *Hammond* 3308–3310. 3356–3360——Further statement as to the prompt action of the Foreign Office with reference to all important communications from or with the Board of Trade, *ib.* 3316——Steps now taken by the Under Secretaries in order that no time may be lost in forwarding commercial information to the Board of Trade, *ib.* 3325–3327. 3371——Several important matters relative to tariffs, independently of the actual details, over which matters the Foreign Office are careful to exercise supervision, *ib.* 3356–3360.

5. *Harmonious Action between the two Departments:*

Perfectly harmonious action between the Foreign Office and Board of Trade, *Sir J. E. Tennent* 2405, 2406——Thoroughly cordial feeling between both offices with a view to the advancement of the public service, *Morier* 3172——Facilities of witness for knowing what action is being taken at the Foreign Office upon information communicated by the Board of Trade, *Right Hon. T. M. Gibson* 3452, 3453——Witness has never found the slightest difficulty at the Foreign Office in obtaining the fullest information upon any subject that he was desirous of inquiring into, *ib.* 3453.

6. *Question as to the present System having produced but barren Results:*

Condemnation of the present relations between the Foreign Office and the Board of Trade on account of the barrenness of the results; witness does not know what the precise relations are, *Ripley* 259–269. 286, 287.

Inaccuracy of a statement by Mr. Ripley as to the operations of the Foreign Office and Board of Trade under the present system being attended with a barrenness of results, *Mallet* 2858–2864.

7. *Evidence in support of a Commercial Department in the Foreign Office as a means of obviating the Double Action under the present System:*

Grounds for the conclusion that there should be one department solely responsible in the matter of foreign trade and commercial negociations, and that the double action and divided responsibility under the present system should at once be abolished, *Ripley* 108 *et seq.* 392–422——Consideration of the question whether the Foreign Office or Board of Trade should supply the proposed department; respects in which the Foreign Office is the more fitting place for it, *ib.* 109–129——Understanding as to the Foreign Office being the proper department to which to apply for information upon foreign commercial questions, *ib.* 254–258.

Grounds for concluding that the Foreign Office should deal with the commercial question in reference to foreign tariffs, and that the agents abroad would attach much more importance to supplying commercial information if the investigation of commercial matters was vested with the Foreign Office instead of the Board of Trade, *Behrens* 640–658——Consideration of objections to the proposition that that portion of the Board of Trade which relates to foreign commerce should be incorporated into the Foreign Office, *ib.* 797–810. 850–852.

Opinion as to the advantage that would result if the Foreign Office attended entirely to matters of foreign trade, and had an efficient staff for the purpose, *Sturrock* 1288–1298.

Evidence to the effect that there would be no disadvantage or difficulty in transferring to the Foreign Office those officers of the Board of Trade who now supply information to the former department with reference to foreign trade; necessity, however, in many cases of the Board of Trade and the Statistical Department being still consulted, *Booth* 1990–2003. 2013–2025——A Commercial Department in the Foreign Office would, after consulting the Statistical Department, communicate directly to the Foreign Secretary, whereas at present the required information from the Statistical Department is communicated through the Board of Trade, *ib.* 2016–2025——Facility of direct communication between a Commercial Department in the Foreign Office and the Statistical Department, *ib.* 2085–2089.

Witness contemplates that there should be at the Foreign Office a chief clerk or Under Secretary, with one or two assistants, to supply the information required in conducting the ordinary correspondence relating to foreign trade; such an officer as Mr. Mallet could efficiently fill this position, *Booth* 2091 *et seq.*——Contemplated communication of the proposed officer with the Secretary of State, it being still open to the latter to obtain information also from the Board of Trade, *ib.* 2094–2124——Responsibility of the Secretary of State considered in connection with the functions to be exercised with the proposed official, *ib.* 2094–2109. 2163 *et seq.*——The proposed officer might communicate freely with the statistical department, *ib.* 2125–2127——Effect of the proposed staff in the Foreign Office in obviating any delay that may arise under the present system, *ib.* 2128–2131.

FOREIGN OFFICE—continued.

7. *Evidence in support of a Commercial Department, &c.*—continued.

Further reference to the responsibility of the Secretary of State in acting upon information obtained from a commercial department in the Foreign Office and from the Board of Trade, *Booth* 2163-2168. 2179-2186. 2195-2200 —— Explanation that witness does not appear before the Committee as an opponent to the present system generally, though he conceives that some advantage would result from a Commercial Department in the Foreign Office, *ib.* 2187-2200——Degree of responsibility in Parliament, or in respect of correspondence abroad, which might attach to a commercial Under Secretary at the Foreign Office, *ib.* 2225, 2226. 2233-2237——With regard to the expense of the contemplated department, there might, on the other hand, be a saving in the staff at the Board of Trade, *ib.* 2227.

Importance attached to the proposition for a Commercial Department in the Foreign Office, *Mallet* 2591, 2592——Expediency of a Commercial Department in the Foreign Office being so constituted that it should have equal weight and authority to that now possessed by the Board of Trade; question hereon as to the appointment of a political Under Secretary of such department, *ib.* 2599-2601. 2627——Witness is aware of Mr. Hammond's objections to a Commercial Department in the Foreign Office, *ib.* 2642, 2643.

Opinion that the most perfect system would be to make the Foreign Office a self-contained office, like the India Office; objections to this view considered, *Mallet* 2736. 2782. 2908-2931——Necessity on many occasions of a Commercial Department in the Foreign Office consulting other departments, *ib.* 2782——Contemplated consultation of the Board of Trade upon questions belonging to the executive functions still attached to that department, *ib.* 2908. 2921-2923—— Certain additions to the staff would doubtless be required, *ib.* 2917.

Consideration of the question as to the responsibility respectively of the Secretary of State and of an Under Secretary in charge of the proposed commercial branch; doubt as to any serious difficulty on this score, *Mallet* 2924-2931. 2957-2966——Advantage of a Parliamentary Under Secretary at the head of the department, *ib.* 2925. 2959-2964.

Approval of the promotion of a commercial department in the Foreign Office by the transfer of permanent officials from the Board of Trade, or by an extension of the existing consular department, *Lindsay* 3254. 3255. 3294.

Opinion that the Foreign Office need no consultation with any other department with reference to the principle of reductions in the Italian tariff, or any other foreign tariff, *Right Hon. E. Cardwell* 3389. 3403——Dissent from the view of Mr. Hammond as to the necessity of the Foreign Office still consulting the Board of Trade, even if there were a commercial department in the former office, *ib.* 3390——Several sources of detailed information equally open to the Foreign Office directly as indirectly through the Board of Trade, *ib.* 3403.

Witness contemplates that the Foreign Office or Colonial Office should still apply for information to the Board or Trade upon certain matters of detail, but should not apply to it as a consultative department, *Right Hon. E. Cardwell* 3412-3429——An officer like Mr. Mallet could, if in the Foreign Office, efficiently and advantageously give information or advice, for which reference is now made to a separate department, *ib.* 3415-3417.

Larger consultation of the Board of Trade by the Foreign Office than by the Treasury or Colonial Office, *Right Hon. T. M. Gibson* 3440-3442——Effect of a Commercial Department in the Foreign Office to lead to a virtual abolition of the Board of Trade as regards its promotion of the commercial interests in connection with foreign trade, *ib.* 3454, 3455——Anticipated sufficiency of the proposed department as a means of carrying out all ordinary correspondence with foreign countries without reference to the Board of Trade, *ib.* 3456. 3514.

8. *Evidence opposed to the foregoing Proposition:*

Strong objection to a department of commerce in the ForeignOffice for dealing with all matters relating to foreign trade; the office is already burdened with work, and the proposed increase of functions would swamp it altogether, *Hammond* 1478. 1483 *et seq.*—— Impracticability of the Secretary of State attending to the details of commerce, *ib.* 1478.

Evidence in further support of witness's objections to a commercial department in the Foreign Office which should supersede all reference to the Board of Trade in matters of foreign commerce, *Hammond* 1756 *et seq.*——Great prejudice to the organization of the Foreign Office if there were a commercial department imported into it; difficulty in regard to the division of clerical labour, office hours, promotion, &c., *ib.* 1759, 1760—— Necessity in any case of consultation with the Board of Trade even if there were a commercial department, *ib.* 1769, 1770. 1776-1778——Obstacle to a commercial department of the Foreign Office being represented in Parliament, or being properly superintended by either of the present Under Secretaries, *ib.* 1776-1778.

Reference to, and quotation of, the opinions of senior clerks in the Foreign Office upon a paper circulated by the Bradford Chamber of Commerce in favour of a commercial department in the Foreign Office; adverse conclusions arrived at by these gentlemen

Report, 1864—*continued.*

FOREIGN OFFICE—continued.

8. *Evidence opposed to the foregoing Proposition*—continued.

relative to this proposition, whilst they defend the present system, *Hammond* 1821-1825——Further conclusion as to the necessity of consultation with the Board of Trade even if there were a commercial department in the Foreign Office, *ib.* 1841. 1845-1848.

Conclusion that the remedy of any supposed grievance of the commercial community would be dearly purchased by injuring the efficient working of the Foreign Office, *Hammond* 1848-1852——Witness is not wedded to routine, and would readily promote any changes in the office that tended to the public advantage or convenience, *ib.* 1852-1854——Doubt as to any appreciable increase of labour through the Foreign Office having to communicate by writing with a department not under the same roof; disapproval of verbal communications, *ib.* 1854-1859.

Expediency of commercial representations being still made to the Foreign Office, and of that department resorting to the Board of Trade for information, the responsibility of action resting with the Foreign Secretary, *Sir J. E. Tennent* 2283. 2338-2340. 2379-2393——Necessity, in many cases, of application being made to both departments, notwithstanding any arrangements that might be made at the Foreign Office, *ib.* 2283——With regard to the formation of a commercial department in the Foreign Office, witness is satisfied it would never work well, *ib.* 2330-2332——Belief that if the proposed department were established, the present establishment of the Board of Trade would be equally required, and two offices, instead of one, must be consulted, *ib.* 2332-2334——Objection on account of the additional labour to be imposed upon the Secretary of State, *ib.* 2334-2337. 2379-2391——Disapproval of the proposed department being under a Parliamentary Under Secretary, *ib.* 2335.

Apprehended antagonism between the departments if each acted upon the advice of a commercial branch of its own, *Sir J. E. Tennent* 2340——With regard to its being felt as a grievance that the commercial community are referred from one office to another, the necessity of application to both departments would still exist if there were a commercial branch in the Foreign Office, *ib.* 2414-2427.

Objection to a commercial department in the Foreign Office, whether under a permanent Under Secretary, or a Parliamentary Under Secretary, *Earl of Clarendon* 2981-2983——Grounds for concluding that the Secretary of State would equally deem it necessary to consult the Board of Trade even if there were a commercial branch in the Foreign Office, so that there would be no saving of time or labour, *ib.* 2982-2985. 3007——Any supposed ignorance in a Foreign Secretary upon commercial matters would not be removed by a commercial branch in the office any more than by the Board of Trade, *ib.* 3007——Witness repeats his opinion that a commercial department in the Foreign Office would not work well, *ib.* 3042.

Disadvantage rather than advantage would result from a commercial department in the Foreign Office, whether under a Parliamentary or a permanent Under Secretary, *Earl Russell* 3059-3062——The Foreign Secretary has ample work to do without entering into the details of trade, *ib.* 3060——Information would most probably still be required from the Board of Trade, so that matters would be more complicated than at present, *ib.* 3062——Witness, though at present opposed to a commercial department in the Foreign Office, will carefully consider the suggestions, as well as others that have been submitted to the Committee, *ib.* 3089.

Witness considers that the delay complained of, under the present relations between the Foreign Office and Board of Trade would not be obviated by the establishment of a commercial department in the former office, *Earl of Malmesbury* 3207-3209. 3212. 3239——The proposed department would not remove the necessity of consulting the Board of Trade, *ib.* 3212.

9. *Statements in favour of a Special Clerk for attending to Communications with the Board of Trade;*

Improvement if there were a special clerk in the Foreign Office in charge of the communications with the Board of Trade, *Sir J. E. Tennent* 2359-2364. 2366. 2373. 2392-2401——Further statement as to the advantage of a special clerk or a registrar in the Foreign Office in order to see that communication with the Board of Trade was promptly and efficiently carried out, *ib.* 2428-2435.

Advantage of an officer in the Foreign Office specially charged with the duty of attending to the Board of Trade correspondence, and who should also communicate freely with the officials of the Board, *Mallet* 2612-2615——It would, however, be but a subordinate advantage to have some one in the Foreign Office whose special duty it should be to see that the correspondence with the Board of Trade was conducted with promptitude and despatch, *ib.* 2753.

Probable advantage of a special officer in the Foreign Office for attending to the correspondence with the Board of Trade, and for receiving information from that department, *Earl Russell* 3066. 3085——The despatches in reference to politics and commerce are very much mixed up under the geographical arrangement, *Earl of Malmesbury* 3216——

Probable

FOREIGN OFFICE—continued.

9. *Statement in favour of a Special Clerk, &c.*—continued.

Probable improvement if there were a special clerk in the Foreign Office for superintending the communications with the Board of Trade, *Earl of Malmesbury* 3216. 3237, 3238——Approval of an officer at the Foreign Office whose especial duty it should be to put forward all commercial business, *Right Hon. T. M. Gibson* 3464.

10. *Objections to the foregoing Proposal:*

Respects in which much disadvantage would ensue if there were special clerks for communicating with the Board of Trade; special character of the slave trade department adverted to hereon, *Hammond* 1492–1496——Doubt as to any improvement or despatch if there were a special clerk in the Foreign Office for superintending the correspondence with the Board of Trade, *Earl of Clarendon* 2998——Tendency to a prevention of dispatch if there were one department in the office which should exclusively deal with questions of commerce, and attend to the forwarding of papers to the Board of Trade; this is now the duty of the senior clerk in each division, *Hammond* 3376–3379.

11. *Question of Communication with Subordinates in the Board of Trade:*

Convenience of communication between the subordinates of different departments, *Booth* 2171–2174——Witness does not propose that the Foreign Secretary should send for Sir Emerson Tennent or witness to consult them, but can conceive that much convenience would arise from this practice in some cases, *ib.* 2172–2186. 2201–2203.

12. *Question of relegating to the Board of Trade the primary consideration of Commercial Despatches and Details:*

Suggestions that the despatches from abroad be docketed "commercial" and "political," and that the former be transmitted at once from the Foreign Office to the Board of Trade, and be dealt with in the first instance by the latter department, *Earl of Malmesbury* 3209–3211——Approval of the foregoing proposition, *Right Hon. T. M. Gibson* 3462.

Witness contemplates that the Foreign Office should still be responsible for the carrying out of treaties, but that all the technical part, so far as trade is concerned, should be managed by the Board of Trade, *Earl of Malmesbury* 3218-3223. 3239.

Inexpediency of any arrangement whereby the Secretary of State, or the Office generally, should not have cognisance of commercial matters as reported by the foreign agents, *Hammond* 3324, 3325. 3370–3383.

13. *Suggestion that the Question of improved Regulations had better have been left to the Departments themselves:*

Witness regrets that a deputation from the chambers of commerce did not see Mr. Layard and himself upon the matters referred to the present Committee, *Hammond* 1505.

Opinion that any improvements feasible in the present system of the departments can best be left for adoption to the departments themselves, *Earl of Clarendon* 3050.

14. *Details as to the Part taken by the Office in regard to the Belgian and Italian Treaties:*

Correspondence on the part of the Foreign Office in the years 1860–62 with reference to the treaty with Belgium, *App.* 295–333.

Correspondence on the part of the Foreign Office in 1862–63 on the subject of the Franco-Italian treaty, and the negotiation of a treaty between this country and Italy, *App.* 344–355.

15. *Relations between the Foreign Office in other Countries and the Ministry of Commerce:*

Reports from Her Majesty's Ministers, at the principal European courts, as to the relations between the Foreign Office and the Ministry of Commerce in the countries in which they reside, *App.* 276–294.

16. *Conclusions and Recommendations of the Committee:*

Absence, as a rule, of personal intercourse between the permanent officials of each department, *Rep.* iii——Circumstance of its being at the option of the Foreign Secretary, with regard to the official correspondence, whether he asks for the advice of the Board of Trade, or follows it, or gives reasons for not doing so, *ib.*——Summary of the existing arrangements and practice in regard to the Foreign Office referring matters to the Board of Trade, and consulting the Board by means of correspondence, *ib.* iii, iv.

Several grounds upon which the public are dissatisfied with the present relations of the department towards the Board of Trade, *Rep.* iv——Consideration of the proposition that the Foreign Office should be self-sufficing for commercial as well as for other matters, and should no longer refer them to the Board of Trade; objection on the whole to this proposal, *ib.* v——Grounds upon which the Committee recommend that an

Report, 1864—*continued.*

FOREIGN OFFICE—continued.

16. *Conclusions and Recommendations of the Committee*—continued.

officer or officers be appointed in the Foreign Office to conduct its correspondence with the Board of Trade, *Rep.* vi.

FRANCE:

1. *Treaty of Commerce between France and Great Britain.*
2. *System in France of dealing with Commercial Questions and Negotiations.*
3. *Offer on the part of France to admit a British Representative to her Negotiations with other Countries.*

1. *Treaty of Commerce between France and Great Britain:*

Satisfactory manner in which the Board of Trade exercised extended functions with reference to the French commercial treaty, *Ripley* 108. 118. 133–138——Grounds for concluding that although Lord Cowley was joint negotiator with Mr. Cobden in the matter of the French treaty, he had little or nothing to do with the tariff arrangements, which were settled by Mr. Cobden and Mr. Mallet in communication with the Board of Trade, *ib.* 238–253. 288, 289. 312–317.

Benefit derived by the Bradford trade under the French commercial treaty, from the circumstance of the trade having been represented by witness and others when the negotiations were being carried on at Paris, *Behrens* 523–525——Satisfactory manner in which the details of the French commercial treaty were carried out under the Board of Trade and Mr. Cobden, *Behrens* 578. 600–604. 638; *Sturrock* 1242–1244——Statement as to the treaty having been successfully carried through, notwithstanding the relations between the Foreign Office and Board of Trade, *Behrens* 712–722.

Details explanatory of the course pursued respectively by the Foreign Office and by the Board of Trade in the diplomatic negotiations and in the tariff revision in the matter of the French commercial treaty; harmonious action between the two departments, *Hammond* 1779–1789——Reasons for handing over to the Board of Trade the details in connection with the treaty further adverted to; exceptional circumstances which caused this departure from the usual course, *ib.* 1861–1863. 1898–1912. 1936–1940——Reasons for objecting to any direct communication between Mr. Mallet on the part of the Board of Trade and the French Government upon any questions of detail still arising out of the treaty, *ib.* 1864–1873.

Exceptional, but satisfactory manner in which the negotiations of the details of the French treaty was conducted, *Booth* 2162. 2169, 2170——The Board was not consulted until after the completion of the French treaty, *Sir J. E. Tennent* 2321. 2351; *Mallet* 2550——Probability of advantageous representations on the part of the Board if it had been referred to at an earlier stage of the French treaty, *Sir J. E. Tennent* 2351–2353.

Advantage in the case of the French treaty of the details having been left to the Board of Trade, *Mallet* 2644-2647——Particulars as to the circuitous course pursued in dealing with individual representations to the Board of Trade upon matters arising out of the treaty; more prompt settlement of such questions if the Board could communicate directly with Lord Cowley, *ib.* 2679–2707——Investigation of the question as to the actual delay attributable to the system of communication with Lord Cowley through the Foreign Office; witness makes no charge against the Foreign Office in the matter, *ib.* 2691–2709.

The correspondence between the Board of Trade and the Treaty Commissioners in Paris operated very satisfactorily, but this case was one of quite an exceptional character, *Earl of Clarendon* 3010–3012. 3019–3028——Non-objection to the Board of Trade still communicating directly with Paris on questions arising out of the French treaty, *ib.* 3011. 3019. 3053–3055.

Statement of the circumstances under which the treaty of commerce with France was first brought forward, *Earl Russell* 3081.

Witness has prepared and submitted a memorandum showing in detail the relative action of the Foreign Office and Board of Trade, and the steps taken by Lord Cowley and Mr. Cobden, in the negotiation of the French treaty of commerce, *Hammond* 3298.

2. *System in France of dealing with Commercial Questions and Negotiations:*

Advantage if there were a department in England similar to that of the Ministry of Commerce

Report, 1864—*continued.*

FRANCE—continued.

2. *System of France in dealing with Commercial Questions, &c.*—continued.

Commerce in Paris, the minister not being bound to communicate through the Foreign Office, *Ripley* 337-342——Advantageous position of France in regard to commercial treaties, and as a means of bringing about reductions in the tariffs, *Behrens* 835-843. 847-849. 872——Several treaties made by France with foreign countries for reduction of their tariffs, *ib.* 839-843——Suggestion as to the course to be pursued by this country in connection with the negotiation of treaties of commerce between France and foreign countries, *Ackroyd* 892——Grounds for the statement that in the competition for treaties of commerce France has latterly beaten us, *Ashworth* 1050-1058.

System of a Foreign Office Commercial Department, in France and some other foreign countries adverted to as not desirable for adoption in this country, *Hammond* 1489, 1490.

Mode of operation of the Commercial Department in the French Foreign Office, *Mallet* 2756——Instance of the French Minister of Commerce communicating with a French agent abroad, *ib.* 2785, 2786. 2969——Doubt as to France having concluded any more treaties than Great Britain in recent years, *ib.* 2862-2864——Circumstance of Lord Cowley being in constant and direct intercourse with the Minister of Commerce at Paris, *ib.* 2885. 2969.

With regard to France, there is a Commercial Department in the Foreign Office, but there is also a Ministry of Commerce, *Earl of Clarendon* 3008——Statement showing that in Paris Lord Cowley does not communicate directly with the Minister of Commerce, but only with the French Foreign Office, *Hammond* 3304, 3305. 3347——Resemblance between the Commercial Department in the French Foreign Office and the Consular and Treaty Departments in the English Foreign Office; more extensive functions of the former department, *ib.* 3306. 3353-3355.

Constant communication between the Commercial Department and the Ministry of Commerce, *Hammond*, 3346——Further statement that in France the Ministry of Commerce does not correspond with the diplomatic or consular agents, *ib.* 3348-3355——Particulars as to the constitution and bearings of the Commercial Department in the French Foreign Office, *ib.* 3350. 3353-3355.

Report by Mr. Grey, dated Paris, 24 April 1864, as to the relative action of the Ministry for Foreign Affairs and of the Ministry of Commerce, *App.* 277.

3. *Offer on the part of France to admit a British Representative to her Negotiations with other Countries:*

Probability of great advantage having been derived if the Board of Trade had it in its power to appoint an agent to act, or if witness when in Paris had authority to act, with the representatives of France at the time of the French negotiations with Italy, Belgium, &c., *Mallet* 2648-2656.

Further reference to the circumstance of its having been stated to witness when in Paris that the French Government would have associated a British agent with their own representatives in their negotiations with Belgium, &c. *Mallet* 2942-2944.

With regard to an intimation by the French Government to Mr. Cobden that they would gladly admit a British representative to co-operate in their negotiations with other countries, witness does not recollect that Mr. Cobden ever transmitted this intimation to the Foreign Office, *Earl Russell* 3121, 3122.

See also "*Annales du Commerce.*" *Belgium.* *Italy.* *Rags.*

Free Trade. Strong feeling on the continent in favour of free trade; instance of this in Belgium, *Behrens* 581-583——Importance of the diplomatic and consular body constantly calling the attention of foreign governments to the principles of free trade, and the expediency of reducing their tariffs, *ib.* 829-834.

Reference to two circulars and statistical papers sent in different years to our diplomatic agents abroad to be laid before foreign governments, as showing the advantage of a free trade policy, *Hammond* 1809-1811——The Foreign Office have recently applied to the Board of Trade for another statement for foreign circulation as to the expediency of free trade, *ib.* 1812.

Great importance of the Board of Trade having direct communication abroad on the score of the propagation of the principles of free trade; disadvantage in this respect in having to communicate through the Foreign Office, *Mallet* 2662-2678.

Difficulty in obtaining concessions on account of our having nothing to concede in return, through having adopted the principles of free trade, *Earl of Clarendon* 3048.

Expediency of our foreign agents being more largely employed in impressing the principles of free trade upon foreign nations, *Lindsay* 3288-3293.

Paper relative to the effects of the free trade policy recently inaugurated in England, as indicated by its practical results, *App.* 266, 267.

French Commercial Treaty. See *France.*

Report, 1864—*continued.*

G.

Gibson, The Right Hon. Thomas Milner (Member of the Committee). (Analysis of his Evidence.)—Has been President of the Board of Trade since 1859; was formerly Vice-President, 3430–3433——Explains the relations between President and Vice-President, and the arrangements between them for the division of business, 3434-3438——The Vice-President may be said to have a co-ordinate authority with the President, 3437.

Expediency of the president being a Cabinet Minister, and of his being provided with proper facilities for obtaining commercial information wherewith to advise his colleagues, 3439. 3461——Larger consultation of the Board of Trade by the Foreign Office than by the Treasury or Colonial Office, 3440–3442——Non-consultation of the Board by the India Office, though the latter sometimes applies for information, 3443.

Transition state of the Board of Trade at the present time, it being settled that the department, when reconstituted, is to comprise two secretaries and four assistants, 3444 3447——Doubt whether the consultative business of the department could ever occupy much less of the staff than it now does, 3447—— Propriety of the Foreign Secretary, rather than the President of the Board of Trade, replying to questions in Parliament upon matters of foreign trade, 3448——Advantage in commercial deputations coming to the Board of Trade, 3449.

Responsibility of the Foreign Office rather than of the Board of Trade in regard to action with foreign countries in matters of trade; opinion that both departments should be, and are, jointly and severally responsible, 3450——Modes of conveying information from the Board of Trade to the Foreign Office; verbal communication frequently between witness and the Secretary of State, 3451——Facilities of witness for knowing what action is being taken at the Foreign Office upon information communicated by the Board of Trade, 3452, 3453.

Effect of a commercial department in the Foreign Office to lead to a virtual abolition of the Board of Trade, as regards its promotion of the commercial interests in connection with foreign trade, 3454, 3455——Absence of necessity for maintaining the commercial and general department of the Board of Trade, if there were a commercial department in the Foreign Office, 3455——Anticipated sufficiency of the proposed department as a means of carrying on all ordinary correspondence with foreign countries, without reference to the Board of Trade, 3456. 3514.

Doubt whether the commercial classes would consider their interests so well represented if, in lieu of the present system, they were to communicate upon important questions with a department in the Foreign Office, 3456, 3457. 3514——Expediency of the Board of Trade being limited entirely to executive duties, if the proposed department were established, 3458——Considerable extent to which the Board of Trade is now made use of by the Treasury in matters relating to the revenue, 3459——Greater or less importance of the department accordingly as the president is more or less active, 3460, 3461.

Apprehended difficulties to the Foreign Office if the Foreign Ministers were to communicate directly with the Board of Trade, 3462. 3483——Approval of Lord Malmesbury's suggestion that the commercial despatches from abroad should be docketed and forwarded at once to the Board of Trade, 3462——Probable removal of difficulty with the Foreign Office if the Board of Trade could communicate with the diplomatic body through the Foreign Office, and under flying seal, 3463——Advantage if there were an officer at the Foreign Office whose especial duty it should be to put forward all commercial business, 3464.

Explanation as to the nominal character of the committee under which the business of the Board of Trade is conducted; there is no reason why this fiction should not be abolished, and the business carried on in the name of the president, or of a secretary of commerce, 3465–3474.

Limited information received from abroad by the Board of Trade, save through the Foreign Office, 3475-3477. 3503–3508 —— Functions exercised by the Board with reference to British and Colonial trade, 3478, 3479——Importance of facilities for commercial information relative to the colonies being promptly communicated with and readily available, 3480–3483——Necessity of keeping up the statistical department in connection with the interests of trade, 3482. 3509-3514——Obstacles to a concentrated and comprehensive power in the Board of Trade, so that the department might take greater action in the foreign and Indian and colonial relations of the empire as regards commerce, 3483–3501.

Considerations as to the part taken by the Board, or by the India Office, in reference to supplies of cotton from India, and other questions connected with Indian produce, 3484–3492——Sufficient authority of witness's department so long as the president is a member of the Cabinet, a ministry of commerce not being essential, 3493. 3515–3518 ——Impediments to any interference by the Board in regard to colonial import or export duties, 3494–3497.

Dissent

Report, 1864—*continued.*

Gibson, The Right Hon. Thomas Milner (Member of the Committee)—continued.

Dissent from the view of Mr. Cardwell that the consultative department of the Board of Trade should be abolished altogether, 3502——Expediency of a proper depository of information available to witness, in order that his office may operate usefully in consultation with other departments, 3503–3514——Adequate facilities of the President of the Board of Trade if a Cabinet Minister, for representing the interests of the commercial classes, 3515–3518——Necessity of representations being made to the India Office, rather than to the Board of Trade, upon questions relating to the Indian tariff, 3519–3522——Difficulty of interference in matters of colonial legislation, further adverted to, 3523–3525.

Grey, Mr. Very able reports received from Mr. Grey, member of the Mission at Paris, *Mallett* 2818.

H.

Halifax Chamber of Commerce. The Halifax Chamber of Commerce considers that there should be more immediate action on the part of Government in carrying out the representations of the commercial interests, in matters of foreign trade, *Akroyd* 886.

Hammond, Edmund. (Analysis of his Evidence.)—Has been permanent Under Secretary for Foreign Affairs for about ten years; was previously a clerk in the office for thirty years, 1374, 1375——The permanent and Parliamentary Under Secretaries are on the same footing, and take the business between them according to a geographical division of the world, 1376–1379. 1385——Witness refers to a certain paper submitted in his evidence before the Diplomatic Committee, as best explaining the working of the Office and the alllotment of duties to the several clerks, 1378. 1380, 1381——In the absence of one Under Secretary, the other takes charge of the whole political department, 1379——There is constant intercommunication between the two Under Secretaries; particulars on this point, 1382–1384.

Detailed description of the system of the Office, and of the mode of dealing with despatches, as contained in a paper drawn up by witness, and before referred to, 1384——Information as to the various subjects connected with foreign trade, upon which the Foreign Office communicate with the Board of Trade, 1386–1406——Practice in regard to the reports of consuls and secretaries of legations being forwarded to the Board of Trade, 1398–1404. 1413——Explanation as to the secretaries of legations having no direct correspondence with the Foreign Office, 1404. 1411, 1412.

Unreserved communication between the Foreign Office and Board of Trade, with reference to all commercial negotiations with foreign countries, 1405, 1406——Rule of the Foreign Office to act upon the suggestions of the Board of Trade on all mere commercial questions, 1407–1410——Matters of general interest, as well as matters of trade, upon which the secretaries of legations may report to the Ministers abroad; delay at times in these reports being made, 1412. 1417–1427.

Nature of the check exercised in the Foreign Office over the consular reports, in the event of any neglect in the matter, 1414–1417——Explanation as to the secretary of legation at St. Petersburgh not having reported since 1862; valuable report in that year, 1420, 1421——Explanation also as to there not having been a report from the secretary of legation in Spain, 1422–1425——Doubt as to the expediency of publishing a report as to the operation of the Spanish tariff, unless drawn up in a very careful manner; otherwise more harm than good would result, 1429–1436——The British Government have done their utmost to induce the Spanish Government to carry more liberal views into action, 1437.

Practice of the Board of Trade in regard to communicating to the Foreign Office representations from commercial bodies; discretion exercised by the former department as to the necessity of such communication, 1438–1440. 1444, 1445——Any direct representations by commercial bodies to the Foreign Office are, as a rule, referred to the Board of Trade, 1441–1443——Communication in writing between witness and the secretary of the Board of Trade, whenever the opinion of the Board is required, 1446–1451. 1457–1464——Replies from the Board go eventually before the Foreign Secretary of State, 1452.

Consultation of the President of the Board of Trade by the Foreign Secretary, whenever he deems it necessary, 1453–1455. 1461——Examination to the effect that there is no disadvantage as regards commercial questions in the Secretary of State, not as a rule, directly consulting the permanent officials of the Board of Trade; whenever he requires more ample information, he can consult whom he pleases, 1455–1481——Impracticability of the Secretary of State attending to the details of commerce, 1478——Under the present system it may be said that the detailed opinion of the Board of Trade is really before the Foreign Office, 1479, 1480.

Absence of inconvenience or disadvantage in having to refer to another department

Report, 1864—*continued.*

Hammond, Edmund. (Analysis of his Evidence)—*continued.*

for the required information on commercial questions, 1482. 1508-1510——Strong objection to a department of commerce in the Foreign Office, for dealing with all matters relating to foreign trade; the Office is already burdened with work, and the proposed increase of functions would swamp it altogether, 1483 *et seq.*——System in France and some other foreign countries adverted to, as not desirable for adoption, 1489, 1490——Opinion of one of the Foreign Ministers as to the great efficiency of our Foreign Office under the present system, 1490.

Advantage of the arrangement whereby commercial questions with the Board of Trade are dealt with by the clerks in the Office according to the countries allotted to the several clerks, 1491——Respects in which much disadvantage would ensue if there were special clerks for communicating with the Board of Trade; special character of the slave trade department adverted to hereon, 1492-1496——Reference to the Treasury as finding it necessary at times to communicate with and consult the Board of Trade, 1497-1500.

Entire readiness of the Foreign Office to receive commercial deputations; letter from witness hereon to the Association of Chambers of Commerce, 1501-1507——Witness regrets that a deputation from the Chambers of Commerce did not see Mr. Layard and himself upon the matters referred to the present Committee, 1505——He sees no disadvantage in commercial representations being made to two offices, 1508-1510——Practice of the Secretary of State in communicating any private information to the permanent officials upon political and commercial matters respectively, 1511-1520.

Equal desire of the consuls to give every information about trade, as though their promotion rested with the Board of Trade, 1521, 1522——Strong testimony borne by the Select Committee on the Consular Service in 1858, to the efficiency of the consuls, 1522——Importance attached to the practice of the consuls reporting to the Foreign Office instead of to the Board of Trade; extensive range of duties now entrusted to them, irrespectively of trade, 1523-1530——Opinion as to the inexpediency of the direct communication of the consuls with the Board of Trade on marine affairs, 1523, 1524.

Statement as to the inaccuracy of certain evidence of Mr. Behrens in regard to a deputation from Bradford having seen witness in August 1856 upon the subject of the Belgian Treaty, and having at the time presented a memorial to him, 1531-1535——Great improbability of witness having ever said that "he had tried to pick a hole in the arguments of the Bradford Chamber, but could not do so," 1533——Mistake on the part of the Bradford Chamber in supposing that the Foreign Office expressed concurrence in the view that the favoured nation clause was given under the Belgian Treaty of 1851; letter from witness on 20th September 1856 to Mr. Wickham through the Bradford Chamber, adverted to hereon, 1536-1538.

With regard to some delay on the part of the Foreign Office in acknowledging a letter from the Bradford Chamber dated 3 November 1860, there was doubtless an omission which should not have occurred, 1539-1541——Probable reasons why certain communications from the Board of Trade to the Foreign Office in December 1860 and February 1861, relative to the Belgian tariff, were not forwarded to the Minister at Brussels, 1542-1548——Declarations on the part of Belgium adverted to in explanation of the Foreign Office not having made any commercial representations to the Belgian Government between 5th January and 20th May 1861; 1549-1561——Promise by Belgium that on the termination of her negotiations with France, England should be put under the most favoured nation clause, 1553-1561.

Considerations as to the inter-communication between M. Van de Weyer, Earl Russell, and the President of the Board of Trade in 1861, upon the subject of the Belgian tariff, and as to the probability of M. Van de Weyer having also been in communication with Mr. Layard, 1562-1577——Witness explains that Belgium is not in his division, and that he is not conversant with the details of the negotiations, 1563-1570——He declines to offer any opinion in reference to any delay laid to the charge of Earl Russell in his communications with M. Van de Weyer, 1574-1577.

Examination as to the part taken by the Foreign Office in 1862, with reference to the negotiations between France and Italy for a revision of the Italian tariff; defence of the Foreign Office from the charge that they were remiss in their communications with the Italian Government, 1578 *et seq.*——The Foreign Office eventually obtained from the Italian Government the most favoured nation clause, 1588, 1589——Opinion as to the uselessness and inexpediency of any active interference by the Foreign Office in connexion with the negotiations between France and Italy, 1589-1620.

Grounds of the Foreign Office for concluding that Italy would do nothing until they had settled the French Treaty, 1611-1623——Statement to the effect that delay was not created under the system of two departments in obtaining information from Turin, relative to the negotiations with France, 1625-1627——Reference to the date of arrival and stay in this country of Signor Marliani in 1862; understanding as to his having been in communication with the Board of Trade, 1628-1632. 1644-1651.

Explanation as to the Foreign Office having consulted the Board of Trade rather than the Treasury upon a proposition for the reduction of certain duties upon Italian produce; doubt whether the required information would have been more quickly received directly from

Hammond, Edmund. (Analysis of his Evidence)—*continued.*

from the Treasury, 1633–1643——Witness cannot say why Signor Marliani was not put in communication with the Chambers of Commerce, 1652——Examination as to a draft treaty with Italy, suggested by the Board of Trade, not having been forwarded to Mr. West or Sir James Hudson at Turin; this draft was not forgotten, but there was some reason for not sending it on, 1653–1676. 1690.

Explanatory statement as to the action of the Foreign Office in reference to representations in 1862 on the part of the jute trade relative to the Italian tariff, 1677–1686——Doubt whether the memorial of the Dundee Chamber of Commerce in July 1862 was forwarded to Turin, 1677–1679——Conclusion as to the slight result which would have attended any strong representations about jute goods, 1680–1686.

Obstacles to the Foreign Office obtaining information as to the detailed negotiations between France and Italy, 1686–1689——Instructions from the Board of Trade under which Mr. Mallet went to Italy, 1691, 1692——Satisfaction given to several Chambers of Commerce by the grant of the most favoured nation clause by Italy; memorials and letters from numerous chambers adverted to hereon, 1692–1694. 1701–1707——Belief that on the whole the country is well satisfied with the treaty, 1692, 1693. 1707.

With regard to a certain Bill and decree on the part of the Spanish Government, they were doubtless communicated by the Foreign Office to the Board of Trade, 1695–1697——Any memorial from the Bradford Chamber of Commerce to the Foreign Office relative to the Swedish tariff would have been forwarded to the Board of Trade, 1698, 1699——Inaccuracy of the inference sought to be drawn by Mr. Allhusen of Newcastle to the prejudice of the Foreign Office in reference to the negotiations with Berlin in November 1861; 1700——Speculative character of the evidence generally upon which the conduct of witness's department has been impugned, *ib.*

[Second Examination.] Explanation that witness saw Mr. Wickham and another gentleman from Bradford in September 1856 upon the subject of the Belgian Treaty, but that he did not see them when the memorial from the Bradford Chamber was presented, and believes he never said that he could not pick a hole in the arguments of the memorial, 1708 *et seq.*——Particulars as to the communications which really did take place between Mr. Wickham and the Foreign Office, and between the Foreign Office and the Minister at Brussels, upon the subject of the Bradford memorial; witness reads the correspondence which passed on the matter, 1711 *et seq.*

[Third Examination.] Date at which the Bradford memorial, relative to the Swedish Treaty, was received by the Foreign Office, and was forwarded to the Board of Trade, 1743——Information relative to various measures, brought before the Spanish Cortes, having been communicated by the Minister at Madrid to the Foreign Office, and by the latter to the Board of Trade; absence of delay on the part of the Foreign Office, 1744–1746——Further explanations on the subject of the Italian tariff, and the several steps taken in reference thereto in Italy since 1859; 1747–1749.

Witness further explains the general practice of the Foreign Office in communicating information to the Board of Trade, or in referring to the Board for information, 1750–1752——Similar communication with the Admiralty, the law officers, &c., as with the Board of Trade, 1753–1757——Evidence in further support of witness's objections to a commercial department in the Foreign Office which should supersede all reference to the Board of Trade in matters of foreign commerce, 1756 *et seq.*

There is no greater reason for amalgamating with the Foreign Office a portion of the Board of Trade, than a portion of the Admiralty or of any other department, 1756, 1757——Great prejudice to the organization of the Foreign Office if there were a commercial department imported into it; difficulty in regard to the division of clerical labour, official hours, promotion, &c., 1759, 1760.

Extent and operation of the slave trade department; opinion that it would be better if it did not exist as a separate department in the office, 1765–1767——Reference to the treaty department as not being of an entirely distinct character, the business being connected with that of the office generally, 1767, 1768——Necessity in any case of consultation with the Board of Trade, even if there were a commercial department, 1769, 1770. 1776–1778——Obstacle to a commercial department of the Foreign Office being represented in Parliament, or being properly superintended by either of the present Under Secretaries, 1769–1775——Increased correspondence and delay if there were such a department in the Foreign Office, 1776–1778.

Details explanatory of the course pursued respectively by the Foreign Office and by the Board of Trade in the diplomatic negotiations, and in the tariff revision in the matter of the French Commercial Treaty; harmonious action between the two departments, 1779–1789——Course adopted for discussing and settling the tariff in connection with the treaty with Turkey, 1790, 1791——Explanation that in all cases of reductions or revision of tariffs the Foreign Office would refer to the Board of Trade for information and assistance, 1792–1795.

With regard to a statement by Mr. Forster, that England was behind-hand as compared

Report, 1864—*continued.*

Hammond, Edmund. (Analysis of his Evidence)—*continued.*

pared with France in communicating with the Russian Government, and in obtaining reductions in the Russian tariff, witness cites a despatch from Lord Napier denying the accuracy of this statement, 1796, 1797——Desire evinced by our diplomatic and consular agents to attend to matters of trade, 1798, 1799——Very valuable commercial information is obtained from our agents abroad, 1800.

Statement showing the forward part taken by the Foreign Office, in communication with the Manchester Chamber of Commerce and the Cotton Supply Association, with a view to increased supplies of cotton from sources other than the United States, 1801–1808——Means suggested by the Foreign Office in January 1861 for obtaining increased supplies through the agency of the consuls, or through agents specially appointed; advantage if this proposal had been adopted, 1802. 1804.

Reference to two circulars and statistical papers sent in different years to our diplomatic agents abroad, to be laid before foreign governments, as showing the advantage of a free trade policy, 1809-1811——The Foreign Office have recently applied to the Board of Trade for another statement for foreign circulation as to the expediency of free trade, 1812——Several circulars issued to heads of missions with reference to periodical reports by secretaries of embassy and legation, 1813, 1814.

Necessity of attachés in the diplomatic service undergoing an examination in political economy, 1815——Absence of delay on the part of the Foreign Office in publishing the consuls' reports, 1816, 1817——Explanation as to the necessity of a certain delay in answering a communication from the Bradford Chamber of Commerce to the Foreign Office in 1859; previous delay on the part of the Bradford Chamber, 1818–1820.

Reference to and quotation of the opinions of senior clerks in the Foreign Office upon a paper circulated by the Bradford Chamber of Commerce in favour of a commercial department in the Foreign Office; adverse conclusions arrived at by these gentlemen relative to this proposition, whilst they defend the present system, 1821–1825.

Statement explanatory of the steps taken by the Foreign Office in communicating with foreign governments upon the subject of a reduction of duties upon rags; every effort has, in fact, been made, 1826–1829——Inaccuracy of the statements in a memorial from the Manchester Chamber of Commerce on the subject of the duties on foreign rags, 1828, 1829.

Exceptional circumstances under which the Foreign Office sometimes act upon commercial questions without consulting the Board of Trade, 1830, 1831——Further reference to the communication of the Foreign Office with the Admiralty and law officers as well as with the Board of Trade, 1832–1839——Further conclusion as to the necessity of consultation with the Board of Trade, even if there were a commercial department in the Foreign Office, 1841. 1845–1848——Working of the Slave Trade Department further adverted to in connection with the question of a commercial department, 1842–1845.

Conclusion that the remedy of any supposed grievance of the commercial community would be dearly purchased by injuring the efficient working of the Foreign Office 1848–1852——Witness is not wedded to routine, and would readily promote any changes in Office that tended to the public advantage and convenience, 1852–1854——Doubt as to any appreciable increase of labour through the Foreign Office having to communicate by writing with a department not under the same roof; disapproval of verbal communications, 1854–1859.

Examination as to witness's grounds for objecting to the Board of Trade communicating directly abroad upon matters of detail connected with trade, 1860 *et seq.*——Reasons for handing over to the Board of Trade the details in connection with the French Treaty, further adverted to; exceptional circumstances which caused this departure from the usual course, 1861–1863. 1898-1912. 1936–1940——Reasons for objecting to any direct communication between Mr. Mallet, on the part of the Board of Trade, and the French Government upon any questions of detail still arising out of the treaty, 1864–1873.

Witness further contends that it is very undesirable that the Board of Trade, or the President of the Board, should, as well as the Foreign Secretary, communicate directly with the foreign ministers; inexpediency thereof, as the latter would thereby be under two masters, 1870 *et sec.*——With regard to the complaints of delay under the present system, there is practically no delay of any moment, 1884-1886. 1943-1945. 1951——Grounds for objecting to the Board of Trade communicating with the consuls abroad; inconvenience apprehended, whilst there would be no material saving of time, 1917 *et seq.*

[Third Examination.] Witness has drawn up, and reads to the Committee a memorandum explanatory of the action respectively of the Foreign Office and Board of Trade with regard to the negotiation of the reciprocity treaty with the United States in 1852–54; 3297——Witness has also prepared and submits a memorandum, showing in detail the relative action of the Foreign Office and Board of Trade, and the steps taken by Lord Cowley and Mr. Cobden, in the negotiation of the French Treaty of Commerce, 3298.

Letter

Report, 1864—*continued.*

Hammond, Edmund. (Analysis of his Evidence)—*continued.*

Letter from Mr. Cobden, in July 1863, disapproving of the Foreign Office being set in motion by commercial bodies to urge reductions of tariffs upon foreign governments, 3299——Reference to the official steps taken in connection with a memorial from Huddersfield, as showing how delay sometimes rests with foreign governments, 3300, 3301——Steps taken by the Foreign Office with reference to some sewing machines adverted to, as illustrative of the prompt action of the department, 3302——Strong objection to a suggestion by Mr. Mallet, that some questions with foreign governments might be disposed of by private correspondence, 3303.

Statement showing that in Paris Lord Cowley does not, and cannot, communicate directly with the Minister of Commerce, but only with the French Foreign Office, 3304, 3305. 3347——Resemblance between the Commercial Department in the French Foreign Office and the Consular and Treaty Departments in the English Foreign Office; more extensive functions of the former department, 3306. 3353-3355——Constant communication between the French Foreign Office or its Commercial Department and the Ministry of Commerce, 3307. 3346.

Witness maintains that his department is well competent to deal with questions of commercial policy, and that it exercises an efficient supervision in this respect, though it leaves the details of tariffs to the Board of Trade, as the more competent body in such matters, 3308-3310. 3356-3360——Conclusion that the same purpose is served under the present system of communication with the agents abroad, as though the Board of Trade were to communicate directly with them, 3311, 3312. 3361——Witness also contends that any slight saving of time by the consuls communicating on commercial subjects directly with the Board of Trade is not commensurate with the inconvenience that would result from the consuls corresponding with two departments, 3313-3327. 3370-3376. 3382, 3383.

Further statement as to the prompt action of the Foreign Office with reference to all important communications from or with the Board of Trade, 3316——Business would be retarded rather than expedited by the consuls communicating abroad under flying seal, through the Foreign Office, 3319. 3361——Circumstance of some of the consuls now dividing their despatches under the heads of "political" and "commercial"; objection to this system being extended to all the consuls, 3320-3323——Objections to consuls' despatches, docketed "commercial," being sent on to the Board of Trade without their being seen by the Secretary of State, 3324, 3325. 3370-3376. 3380-3383.

Steps now taken by the Under Secretaries in order that no time may be lost in forwarding commercial information to the Board of Trade, 3325-3327. 3371——Explanation as to the objection raised by the Foreign Office, in correspondence with the Board of Trade, to the publication by that department of information received from the foreign agents, unless it came through the Foreign Office, 3328——Statement in explanation of a delay imputed to the Foreign Office in regard to the publication of a report from Zanzibar, 3329-3333.

Explanation upon the subject of the omission on the part of a large number of the consuls to make reports, 3334——Full reports received from the consuls in cotton-growing countries, 3335, 3336——Inaccuracy of a statement, that the consul at Paris had been done away with; reason for a consul being maintained there, though the office is not considered necessary, 3337-3340——Rule followed by the Foreign Office as to the time of publishing the consular and diplomatic reports, 3341——Warm testimony recently borne by Baron Brunnow to the good organization of the Foreign Office, 3342.

Remarks upon a statement by the Chambers of Commerce that the defects of the present system render necessary public representations by the commercial community which operate injuriously, 3343-3345——Further statement that in France the Ministry of Commerce does not correspond with the diplomatic or consular agents, 3348-3355——Particulars as to the constitution and business of the Commercial Department in the French Foreign Office, 3350. 3353-3355——Paper submitted to the Committee, showing the relations between the Foreign Office and Ministry of Commerce in France and other foreign countries, 3350-3352.

Several important matters relative to tariffs, independently of the actual details, over which matters the Foreign Office is careful to exercise supervision, 3356-3360——Practice of the Foreign Office in forwarding to the ministers abroad copies of the letters received from the Board of Trade, or in sending instead despatches from the Secretary of State embodying such letters, 3362-3365——Probability of there being occasionally a delay of a few days before the Foreign Office forward communications to the Board of Trade; that is, in cases not urgent, 3366-3369——As a general rule, there is no delay in forwarding papers to the departments which they concern, 3369.

Inexpediency of any arrangement whereby the Secretary of State, or the Office generally, should not have cognizance of commercial matters, as reported by the foreign agents, 3370-3383——Tendency to a prevention of despatch if there were one department in the Office which should exclusively deal with questions of commerce, and attend to the forwarding of papers to the Board of Trade; this is now the duty of the senior clerk in each division, 3376-3379.

Report, 1864—*continued.*

Hanover. Communications from the British Minister at Hanover, together with a memorandum furnished by Count Platen, explanatory of the relative action of the Ministry of Foreign Affairs and the Ministry of Commerce, *App.* 280, 281.

Hanse Towns. Statement by Mr. Ward, Minister at Hamburgh, in explanation of the system of the Hanse Towns in dealing with commercial measures, *App.* 282.

Holland. In 1853, the Bradford Chamber of Commerce made representations to Government on the subject of the differential duties in Holland; and in 1854, these duties were removed, *Behrens* 431–433.

Home Department. Suggestion whether some of the duties now devolving upon the Home Department might not be entrusted to the Board of Trade, *Right Hon. E. Cardwell,* 3427.

Huddersfield Chamber of Commerce. Statement by the Huddersfield Chamber of Commerce, in April 1864, on the subject of the Italian tariff, and the treaty with France, *Hammond* 1702——Reference to the official steps taken in connection with a memorial from Huddersfield, as showing how delay sometimes rests with foreign Governments, *ib.* 3300, 3301.

I.

Import Duties. Statement showing the effect of a diminution in the import duties on certain articles upon the amount of revenue received on those articles, *App.* 265.

India Office. Doubt as to the Secretary of State for India being in the habit of consulting the Board of Trade, *Booth* 2159–2161——Explanation as to the Board of Trade not being consulted by the India Office, *Sir J. E. Tennent* 2341, 2342——Constant complaints made against the tariffs of India, *ib.* 2343.

Absence of any consultation with the Board upon questions affecting the immense trade between India and Great Britain, *Mallet* 2578, 2579. 2713–2721. 2735——Indian laws or treaties are not submitted in any way to the Board of Trade, *ib.* 2715–2717——Alterations in the Indian tariff are never submitted to the Board, *ib.* 2718——Representation exclusively by the India Office of the commercial interests of England with India, *ib.* 2735–2737——Probable advantage in the India Office and Colonial Office consulting the Board, if efficiently constituted, *ib.* 2912–2916.

The Board sometimes supplies the Indian Department with information, but is not consulted by the latter, *Right Hon. T. M. Gibson,* 3443. 3477——Considerations as to the part taken by the Board, or by the India Office, in reference to supplies of cotton from India, and other questions connected with Indian produce, *ib.* 3484–3492——Necessity of representations being made to the India Office, rather than to the Board of Trade, upon questions relating to the Indian tariff, *ib.* 3519–3522.

ITALY:

1. *Complaints by the Commercial Community as to the Action of Government in the matter of the Franco-Italian Treaty, and in the subsequent Negotiations with Italy.*
2. *Explanatory Statements on the part of the Foreign Office and Board of Trade.*
3. *Statements and counter-statements as to the Communication with Signor Marliani, when in London.*
4. *Correspondence in detail relative to the Treaty between Great Britain and Italy.*
5. *System in Italy of dealing with Commercial Questions and Negotiations.*

1. *Complaints by the Commercial Community as to the Action of Government in the matter of the Franco-Italian Treaty, and in the subsequent Negotiations with Italy:*

Statement as to the Bradford Chamber not having been able to obtain the required information from the Foreign Office on the subject of the Franco-Italian Treaty, *Behrens* 510–512——Grounds for concluding that Mr. Mallet was sent to Italy at too late a period to be of any service, *ib.* 513–519. 695–698——Great cause for complaint in the Manchester trade, but not in the Bradford trade, in regard to the existing tariff, *ib.* 530–535——In witness's trade, the Franco-Italian Treaty has not made matters any worse, *ib.* 668–670.

Consideration of witness's reasons for condemning the course pursued in reference to the Franco-Italian Treaty; he knows nothing of the private negotiations between the English and Italian Governments on the subject, *Behrens* 665–711. 853–863——Statement that no demand was insisted upon in regard to the Bradford or Lancashire trade in the case of the Italian Treaty, *ib.* 705–709. 853–857——Reference to the negotiations

ITALY—continued.

1. *Complaints by the Commercial Community, &c.*—continued.

tiations between the English and Italian Governments as having resulted in much offence being given to the latter, *Behrens* 844–846.

Nature of the representation which might have been made to Italy, with a view to reduction in their tariff, in the case of cotton goods, &c., *Ashworth* 1102–1106. 1112–1114.

Inability of witness to ascertain what are the precise duties upon Scotch yarns and jute goods going to Italy; reference hereon to a statement by the Board of Trade that the duties would be the same as under the Franco-Belgian Treaty, *Sturrock* 1145–1152——Conclusion as to the unfavourable position of the jute manufacture, as compared with the linen manufacture as regards trade with Italy, *ib.* 1153–1167——Details relative to communications between the Board of Trade and the Dundee Chamber, before and after the Franco-Italian Treaty, *ib.* 1168–1191.

Grounds for the conclusion that if proper representations have been made by Government relative to the revision of the Italian tariff, jute would not have been put into a worse position than linen, *Sturrock* 1171–1211——Circumstance of witness having received no definite information about the Franco-Italian treaty until the treaty had been concluded, *ib.* 1173–1181. 1189–1191——Representation made, without any successful result, on the conclusion of the Franco-Italian treaty, *ib.* 1182–1188. 1196–1200.

Similar footing of French and English jute goods as regards admission into Italy, the complaint against the Italian tariff being that jute goods are charged as linen, and that no distinct and lower duty was imposed, *Sturrock* 1255–1261. 1306–1319——Doubt as to the representations really made by Government on the subject of the Italian tariff and the jute trade, *ib.* 1267–1270.

2. *Explanatory Statements on the part of the Foreign Office and Board of Trade:*

Examination as to the part taken by the Foreign Office, in 1862, with reference to the negotiations between France and Italy for a revision of the Italian tariff; defence of the Foreign Office from the charge that they were remiss in their communications with the Italian Government, *Hammond* 1578 *et seq.*——The Foreign Office eventually obtained from the Italian Government the most favoured nation clause, *ib.* 1588, 1589.

Opinion as to the uselessness and inexpediency of any active interference by the Foreign Office in connection with the negotiations between France and Italy, *Hammond* 1589–1620——Grounds of the Foreign Office for concluding that Italy would do nothing until they had settled the French treaty, *ib.* 1611–1623——Statement to the effect that delay was not created, under the system of two departments, in obtaining information from Turin relative to the negotiations with France, *ib.* 1625–1627.

Examination as to a draft treaty with Italy, suggested by the Board of Trade, not having been forwarded to Mr. West or Sir James Hudson at Turin; this draft was not forgotten, but there was some reason for not sending it on, *Hammond* 1653–1676. 1890——Explanatory statement as to the part taken by the Foreign Office in reference to representations in 1862, on the part of the jute trade, relative to the Italian tariff, *ib.* 1677–1686—— Conclusion as to the slight result which would have attended any strong representations about jute goods, *ib.* 1680–1686.

Obstacles to the Foreign Office obtaining information as to the detailed negotiations between France and Italy, *Hammond* 1686–1689——Instructions from the Board of Trade under which Mr. Mallet went to Italy, *ib.* 1691, 1692——Satisfaction given to several chambers of commerce by the grant of the most favoured nation clause by Italy; memorials and letters by various chambers adverted to hereon, *ib.* 1692–1694. 1701–1707——Belief that on the whole the country is well satisfied with the treaty, *ib.* 1692, 1693. 1707——Communication from the Bradford Chamber of Commerce, in March 1864, expressing satisfaction with the Franco-Italian treaty as regards woven fabrics of wool or of wool mixed with other materials, *ib.* 1702.

Further explanations on the subject of the Italian tariff, and the several steps taken in reference thereto in Italy since 1859, *Hammond* 1747–1749.

Impression as to there having been no communication with the Board of Trade on the subject of the treaty projected with Italy in 1862, *Sir J. E. Tennent* 2324–2329——Want of information at the Board of Trade, in 1862 and 1863, as to the basis upon which the Italian Government were prepared to negotiate; advantage if the Board had been in direct communication with our minister at Turin, *Mallet* 2498–2511.

Mission of witness to Turin, in May 1863, adverted to with reference to the question of his having been sent by the Foreign Office or the Board of Trade, *Mallet* 2501–2509——Witness soon ascertained at Turin that Italy would concede nothing more to Great Britain than the most favoured nation clause, *ib.* 2510–2512. 2525, 2526——Greater probability of a more favourable result if witness had been sent to Turin pending the negotiation of the Franco-Italian treaty and the revision of the Italian tariff, *ib.* 2512–2534.

Reports, 1864—*continued.*

ITALY—continued.

2. *Explanatory Statements on the part of the Foreign Office, &c.*—continued.

Representation made by witness to the Italian Government, on the part of the British jute manufacture; considerations hereon as to their refusal to make any concession in the matter, *Mallet* 2513–2534——Witness cannot say that if he had been sent earlier to Turin he could have done any good, or could have obtained concessions from the Italian Government, *ib.* 2840–2850. 2865——It never reached witness that the Italian Government felt they had been badly treated by Great Britain, *ib.* 2842–2844.

Explanation relative to an apparent omission or delay on the part of the Foreign Office, in 1862–63, with respect to the draft treaty in the case of Italy, *Earl Russell* 3067. 3099–3102——Impression that Italy refused to entertain any negotiation with this country until the Franco-Italian treaty was concluded, *ib.* 3072——Doubt as to the cause of the non-representation of the British jute interest at Turin when the negotiations with France were going on, *ib.*——Opinion that better results could not have been produced, *ib.* 3090. 3116.

3. *Statements and Counter-statements as to the Communication with Signor Marliani when in London:*

Statement upon the question of the Italian treaty, and the circumstance of witness having been unable to obtain from the Board of Trade any information about the movements of Signor Marliani, *Ripley* 92–96. 210–219——Advantage if the Bradford Chamber had been placed in communication with the Italian envoy when in England, *Behrens* 520–522.

Reference to the date of arrival and stay in this country of Signor Marliani in 1862; understanding as to his having been in communication with the Board of Trade, *Hammond* 1628–1632. 1644–1651——Witness cannot say why Signor Marliani was not put in communication with the chambers of commerce, *ib.* 1652.

Understanding as to there having been frequent personal interviews between Mr. Milner Gibson, Earl Russell, and Signor Marliani, with reference to the Italian treaty, *Sir J. E. Tennent* 2407. 2410——Explanation in regard to witness not having seen Signor Marliani when in London; delay through the Board having to communicate with the Treasury a certain proposition forwarded from the Foreign Office, *Mallet* 2555–2561.

Statement showing that when Signor Marliani was in this country certain reductions in the wine and sugar duties were demanded as the condition of concessions on the part of Italy, which reductions could not be assented to, *Earl Russell* 3067–3069——Verbal communication of the representatives of the Board of Trade and Foreign Office with Signor Marliani; his refusal to negotiate until the French Treaty was concluded, *ib.* 3096–3105.

4. *Correspondence in detail relative to the Treaty between Great Britain and Italy:*

Copies of correspondence between the Board of Trade and Foreign Office, respecting the negotiation of a commercial treaty between Great Britain and Italy, *App.* 334–355.

5. *System in Italy of dealing with Commercial Questions and Negotiations:*

Letters from Mr. Elliot to Earl Russell in April and May 1864, together with memorandums explanatory of the system of the Italian Government in dealing with commercial matters, and in carrying out commercial negotiations with foreign countries, *App.* 284–286.

J.

Japan. Circumstance of the Board of Trade not having been consulted by the Foreign Office about the first treaty with Japan, *Sir J. E. Tennent* 2320.

Jute Trade. Immense increase, since 1838, in the import of Italian jute to Dundee, and in the jute manufacture, *Sturrock* 1135–1140——Amount of the former duty in France upon Scotch yarns and linens, *ib.* 1141 —— High price of jute goods in Dundee, through the cotton scarcity, so that articles of French manufacture are largely imported, *ib.* 1142, 1143 ——Belgium is in the same position as France as regards the Scotch jute manufacture, *ib.* 1144.

Inability of witness to ascertain what are the precise duties upon Scotch yarns and jute goods going to Italy; reference hereon to a statement by the Board of Trade, that the duties would be the same as under the Franco-Belgian treaty, *Sturrock* 1145–1152—— Conclusion as to the unfavourable position of the jute manufacture as compared with the linen manufacture, as regards trade with Italy, *ib.* 1153–1167——Grounds for the conclusion, that if proper representations had been made by Government relative to the revision of the Italian tariff, jute would not have been put in a worse position than linen, *ib.* 1171–1211.

Jute Trade—continued.

Representations made by the Dundee Chamber of Commerce to Government on the subject of the jute trade with the Zollverein; subsequent communication from the Foreign Office, *Sturrock* 1212-1215——Statement as to witness having communicated with both the Foreign Office and the Board of Trade respecting the admission of jute manufacturers into Russia, and as to the similar effect of the replies from each department whilst in each case the first reply was contradicted by the second, *ib.* 1216-1232. 1271-1287——Very satisfactory manner in which the Foreign Office carried out the representations with Russia in the matter of the jute trade, *ib.* 1241. 1271.

Further statement as to the French treaty having resulted in Dundee importing jute goods from France, instead of exporting them to France; explanation on this point, *Sturrock* 1245-1247. 1262, 1263. 1322——Character of the French jute trade; it is not nearly so large as the Scotch trade, *ib.* 1252-1254. 1305.

Similar footing of French and English jute goods as regards admission into Italy, the complaint against the Italian tariff being that jute goods are charged as linen, and that no distinct and lower duty was enforced, *Sturrock* 1255-1261. 1306-1319——Great spread of the Scotch jute manufacture further adverted to, *ib.* 1264-1266. 1320, 1321——Doubt as to the representations really made by Government on the subject of the Italian tariff and the jute trade, *ib.* 1267-1270.

Explanatory statement as to the part taken by the Foreign Office in reference to representations in 1862, on the part of the jute trade, relative to the Italian tariffs, *Hammond* 1677-1686——Doubt whether the memorial of the Dundee Chamber of Commerce, in July 1862, was forwarded to Turin, *ib.* 1677-1679——Conclusion as to the slight result which would have attended any strong representations about jute goods, *ib.* 1680-1686.

Representation made by witness to the Italian Government on the part of the British jute manufacture; considerations hereon as to their refusal to make any concession in the matter, *Mallet* 2513-2534.

Doubt as to the cause of the non-representation of the British jute interest at Turin when the negotiations with France were going on, *Earl Russell* 3072.

Memorial of the Directors of the Dundee Chamber of Commerce, dated 12 May 1862, with reference to the treaty between France and the Zollverein, and the expediency of steps being taken in the interests of the jute trade in Dundee, &c., *App.* 262-264.

L.

Leeds Chamber of Commerce. Memorial from the Leeds Chamber of Commerce on the subject of the Italian and Prussian tariffs, *Hammond* 1702.

Legal Advice (*Public Departments*). Communication of the Foreign Office with the law officers of the Crown as well as with the Board of Trade, *Hammond* 1753-1757. 1837-1839——Great advantage of the legal advisers attached to the Board of Trade; necessity of legal knowledge being equally available in the case of a commercial department in the Foreign Office, *Mallet* 2602-2607——There is no reason why the great departments should not have commercial advisers as well as legal advisers, *ib.* 2918-2920.

Lighthouses (*Board of Trade*). Explanation relative to the operation of the Lighthouses Branch in the Marine Department of the Board of Trade, *Mallet* 2776-2781.

Lindsay, William Schaw (*Member of the House*). (Analysis of his Evidence).—Is largely interested as a shipowner, and has taken several steps with a view to the removal of foreign restrictions upon British shipping, 3241-3243——Different questions upon which shipowners consult the Foreign Office and Board of Trade respectively 3244-3246——Delay through the Board of Trade having to communicate with the Foreign Office in connection with any negotiations for the removal of differential dues on shipping, the Foreign Office not possessing the required knowledge in such matters, 3247-3249.

Difficulty apprehended with respect to any direct communication between the Board of Trade and foreign agents, or if carried on under flying seal through the Foreign Office, 3350-3254——Approval of the formation of a commercial department in the Foreign Office, by the transfer of permanent officials from the Board of Trade, or by an extension of the existing consular department, 3254, 3255. 3294——Advantage in negotiations about shipping &c., being entirely in the hands of the Foreign Office, 3258-3261.

Statement as to the expediency of our ambassadors and diplomatists abroad having had a training in matters of commerce and navigation, so that they might be more competent to deal with foreign governments on such questions, 3259-3264. 3267-3269. 3273. 3282-3293——Great facility with which witness has obtained information from the Foreign Office, 3262. 3271——Peculiarly excellent character of the business arrangements of the Office; opinion that it is the best arranged of all the public departments, 3262. 3270-3272——Particulars relative to the unofficial negotiations of witness with

Report, 1864—*continued.*

Lindsay, William Schaw (*Member of the House.*) (Analysis of his Evidence)—*continued.*

France and other countries on the subject of differential dues upon shipping; he received every facility and support from the Foreign Office, 3265, 3266. 3274-3281.

Admission by Lord Cowley and Lord Lyons that they did not understand the details of the question of dues upon shipping; disadvantage in their obtaining information second hand from the consuls, 3267-3269——Lord Cowley offered witness every facility in his communications with the French Government, 3273——Limited character of the special education desirable in diplomatic servants upon the subject of differential dues, 3287, 3288——Expediency of our foreign agents being more largely employed in impressing the principles of free trade upon foreign nations, 3288-3293.

Linen Trade (*Scotland*). During the negotiations preceding the French Commercial Treaty witness was one of those deputed to inspect the Scotch linen trade, *Sturrock* 1133, 1134.——*See* also *Dundee. Jute Trade.*

London Gazette. Practice as to the publication of commercial information in the "London Gazette"; defects of this mode of publicity, *Mallet* 2467-2470——Improvement as regards commercial information, if the "Gazette" were published daily, and if the price were only one penny, *ib.* 2789. 2803——Character of the "Gazette" as the vehicle of publication further adverted to with reference to the French "Moniteur" and "Annales du Commerce," *ib.* 2803-2810.

See also *Publication of Commercial Information.*

M.

Mallet, Louis. (Analysis of his Evidence.)—Has since 1847 filled various positions in the Board of Trade; is now assistant for commercial business, 2436-2441——Was appointed to assist Mr. Cobden with reference to the French commercial treaty, and has since been sent on missions to Paris, Berlin, and Turin, 2442, 2443——The Foreign Office business in witness's division passes through witness and Mr. Emerson Tennent; particulars as to the practice in dealing with this business, 2444-2448.

Larger share taken formerly by the Board of Trade in commercial negotiations than has been the practice in recent years, 2446-2451——Increase of the executive business of the Board, whilst the consultative action has been diminished, 2452, 2453——Delay in the publication of important information from abroad, on account of such information being supplied to the Board of Trade through the Foreign Office, 2454-2472——Practice as to the Board sometimes publishing information not obtained from the Office, 2457-2460. 2463-2465.

Earlier information frequently obtained by the Board from the French "Moniteur" than from the Foreign Office, 2459, 2460——Illustration of the important character of the information in the "Annals du Commerce," 2460-2462——Reliable character of the information generally received from the Foreign Office, 2466——Practice as to publication in the "London Gazette;" defects of this mode of publicity, 2467-2470——More prompt and complete information if the ministers and consuls abroad were in direct communication with the Board of Trade, 2471, 2472——Frequency of the Board not being provided with sufficient information to enable them to advise the Foreign Office, 2473-2476.

Very valuable information received by the Board from private merchants and commercial bodies at home, 2477——Ample facilities of the Board for being informed as to the interests and wants of the commercial classes, 2478——Good ground for the complaint that the permanent officers of the Board are frequently unable to supply merchants with sufficient information as to what is passing in foreign countries, 2479 *et seq.*

Very rare occasions of information obtained privately by the Foreign Office being communicated to the Board of Trade, 2482, 2483——Advantage if the Board had more free and systematic communication with the foreign ministers in London, 2484-2496——Communication between M. Van de Weyer and witness in 1851 with reference to the Belgian treaty, but not in 1861 or 1862; 2489-2496——Want of information at the Board of Trade in 1862 and 1863 as to the basis upon which the Italian Government were prepared to negotiate; advantage if the Board had been in direct communication with our minister at Turin, 2498-2511.

Mission of witness to Turin in May 1863 adverted to with reference to the question of his having been sent by the Foreign Office or the Board of Trade, 2501-2509——Witness soon ascertained at Turin that Italy would concede nothing more to Great Britain than the most favoured nation clause, 2510-2512. 2525, 2526——Greater probability of a more favourable result if witness had been sent to Turin pending the negotiation of the Franco-Italian treaty and the revision of the Italian tariff, 2512-2534——Representation made by witness to the Italian Government on the part of the British jute manufacture; considerations hereon as to their refusal to make any concession in the matter, 2513-2534.

Practical

Report, 1864—*continued.*

Mallet, Louis. (Analysis of his Evidence)—*continued.*

Practical completion of the negotiations between Prussia and France at the time of witness's visit to Berlin, 2535–2537——Intimation to witness by the Prussian Government that they could not entertain the suggestion of tariff reductions in a treaty with this country, 2538, 2539——Other cases, in addition to that of the Italian treaty, in which the Board of Trade were not supplied with sufficient information to advise the Foreign Office, 2540, 2541.

Statement as to the Board of Trade not having been consulted with reference to the reciprocity treaty between the United States and Canada, although it was pre-eminently a case in which they ought to have been consulted, 2542–2549——Nor was the Board consulted until after the completion of the French treaty, 2550——Greater probability of a reduction of the Spanish and Portuguese tariffs if there had been earlier communication on the part of our Government, 2551–2554——Explanation in regard to witness not having seen Signor Marliani when in London; delay through the Board having to communicate with the Treasury a certain proposition forwarded from the Foreign Office, 2555–2561.

Statement explanatory of the very limited communication which now takes place between the Treasury and Board of Trade, 2562–2566. 2575–2577——Information relative to the international conference at Paris in 1863, with reference to the sugar duties, and the attendance of witness and Mr. Ogilvie of the Customs, whilst the Foreign Office was not represented; disadvantage of this omission, 2566–2574——Rare instances of any result following the opinions of the Board of Trade in regard to the colonial Acts submitted for the consideration of the Board, 2577.

Belief that the Indian Office has not in any case consulted the Board, 2578, 2579——Very limited consultation of the Board by the former Board of Control, 2580——Increasing impression of late years as to the Board becoming less and less a consultative body; expression of this view by Mr. Cardwell, 2581, 2582——Reference to the Report of the Commission of 1853, as contemplating the progressive diminution of the importance of the Board, 2582——General results arrived at by the Commission of 1863, as regards the executive and consultative functions of the department, 2583–2587.

Condemnation of the present relations between the Foreign Office and Board of Trade, not only because of the irregular and tardy manner in which information is received by the Board, but because of the want of some clear responsibility in the President, 2588–2590——Importance attached to the proposition for a commercial department in the Foreign Office, 2591, 2592——Particulars as to the practice in France, Prussia, and Italy in regard to a foreign commercial department, both for the Foreign Office and Ministry of Commerce, 2593–2597——In the United States the Secretary of the Treasury transacts such consultative business as devolves upon the Board of Trade in this country, 2598.

Expediency of a commercial department in the Foreign Office being so constituted that it should have equal weight and authority to that now possessed by the Board of Trade; question hereon as to the appointment of a political Under Secretary of such department, 2599–2601. 2627——Great advantage of the legal advisers attached to the Board of Trade; necessity of legal knowledge being equally available in the case of a commercial department in the Foreign Office, 2602–2607.

Anticipated efficiency of system if the Board of Trade could communicate directly abroad, and if it were placed on an equality with the other great departments, so that greater force might be given to its recommendations, 2608–2611. 2616–2628——Impracticability of efficiency under the present indirect system, 2609–2611——Inexpediency of maintaining the Board of Trade as a consultative department with reference to the use made of it by the Treasury and Colonial Office, 2609, 2628–2634.

Advantage of an officer in the Foreign Office specially charged with the duty of attending to the Board of Trade correspondence, and who should also communicate freely with the officials of the Board, 2612–2615—— Great improvement if the Board of Trade were placed in the same position to the Foreign Office that the Customs department holds to the Treasury, 2621–2625——Conclusion that the remedy mainly required is that some one department shall be in a position to do the work satisfactorily on its own direct responsibility, 2628–2635. 2638–2641.

Advantage in commercial complaints as to the operation of any duty or tax being laid directly before the Treasury rather than the Board of Trade, 2636, 2637——Expediency of the Board being furnished with the fullest information, if retained as a consultative department, 2638–2641——Witness is aware of Mr. Hammond's objections to a commercial department in the Foreign Office, 2642, 2643——Further statement as to the importance of the Board of Trade communicating directly with our foreign representatives; witness sees no practical inconvenience in their doing so, 2644. 2657 *et seq.* ——Advantage in the case of the French treaty of the details having been left to the Board of Trade, 2644–2647.

Report, 1864—*continued.*

Mallet, Louis. (Analysis of his Evidence)—*continued.*

Probability of great advantage having been derived if the Board of Trade had it in its power to appoint an agent to act, or if witness when in Paris had authority to act, with the representatives of France at the time of the negotiations with Italy, Belgium, &c., 2648-2656——Great importance of the Board of Trade having direct communication abroad on the score of the propagation of the principles of free trade; disadvantage in this respect in having to communicate through the Foreign Office, 2662-2678.

Particulars as to the circuitous course pursued in dealing with individual representations to the Board of Trade, upon matters arising out of the French treaty; more prompt settlement of such questions if the Board could communicate directly with Lord Cowley, 2679-2707——Investigation of the question as to the actual delay attributable to the system of communication with Lord Cowley through the Foreign Office; witness makes no charge against the Foreign Office in the matter, 2691-2709.

[Second Examination.]—Statement as to the opinion of the Board of Trade having been overruled by the Colonial Office in 1859, upon the question of a commercial union between all the Provinces of British North America, 2710-2712. 2790-2792——Absence of any consultation with the Board upon questions affecting the immense trade between India and Great Britain, 2713-2721. 2735——Great omission and delay in regard to the publication of a valuable report made by the consul at Zanzibar in 1860; 2722-2731——Small number of consular reports received in proportion to the number of persons in the consular service, 2730-2732.

Preparation and publication by the Foreign Office of the consuls' reports; formerly they were prepared for publication by the Board of Trade, 2733, 2734——Considerable interest taken by the commercial public in these reports, 2734——Many of them are of a very valuable character, *ib.*——Representation exclusively by the India Office of the commercial interests of England with India, 2735-2737——Either there should be one consultative office for the Government departments, or each department should be a self-contained office, consulting officers of its own, 2736.

Necessity of communication between witness and the British Minister at Berlin, if witness had been placed in co-operation with the representatives of France when negotiating the treaty with Prussia, 2738-2742——Great zeal displayed by our representatives at Paris, Turin and Berlin, in co-operating with witness; importance attached by them to commercial matters, 2743, 2744——Objection to the political and commercial points which arise on the negotiation of foreign treaties being dealt with by different offices, 2745.

Further expression of the opinion that the Board of Trade might communicate with the consuls without any practical difficulty arising, 2746——Probability of greater zeal in the discharge of commercial duties if the foreign agents communicated directly with the Board of Trade upon commercial matters, 2747, 2748. 2816——Effect of political considerations in retarding progress in the negotiation of treaties of commerce, 2749-2752——It would be but a subordinate advantage to have some one in the Foreign Office whose special duty it should be to see that the correspondence with the Board of Trade was conducted with promptitude and despatch, 2753.

Expediency of increased weight being given to the Board of Trade if retained as a consultative department, this being the weak point in the present Board, 2754, 2755——Mode of operation of the commercial department in the French Foreign Office, 2756——Objection to commercial questions which are apparently trifling being dealt with by the Foreign Office in communication with the ministers abroad without reference to the Board of Trade, 2757-2760——Sense in which it may be said that there is still a pending negotiation for a commercial treaty between Great Britain and Prussia, 2761.

Doubt as to there being any negotiations going on for a treaty of commerce with Austria; question hereon whether a new tariff, published in Austria last year, with reference to the Zollverein, should not have been more promptly communicated to the Board of Trade, 2762-2775——Reference to the operation of the Lighthouse branch in the Marine department of the Board of Trade, 2776-2781——Necessity, on many occasions, of a commercial department in the Foreign Office consulting other departments, 2782——Witness repeats that each executive department should be self-contained, and should consult another executive office only upon questions falling within the executive work of such office, *ib.*

Ample duties for a minister of commerce to perform, irrespectively of consultative duties, 2783, 2784——Instance of the French minister of commerce communicating with a French agent abroad, 2785, 2786. 2969——Necessity in any case of treaties of commerce being fully examined by the Foreign Office, 2787——Check contemplated on the part of the Foreign Office, on political considerations, over communications from another department with a foreign country, 2787*, 2788——Improvement as regards commercial information if the "Gazette" were published daily, and if the price were only one penny, 2789. 2803.

Witness

Report, 1864—*continued.*

Mallet, Louis. (Analysis of his Evidence)—*continued.*

Witness cannot say whether the Austrian government were prepared to enter into a treaty with this country, or whether the British Government have been in communication with Austria upon the subject, 2793–2798——Further reference to the circumstance of the Board of Trade having formerly been more frequently placed in personal communication with foreign ministers when negotiating treaties in London, 2799——Witness does not impute delay to the Foreign Office in connection with the reports by foreign agents, 2800–2802.

Character of the "Gazette," as the vehicle of publication, further adverted to, with reference to the French "Moniteur" and "Annales du Commerce," 2803–2810——Duty of the Board of Trade, rather than of the Foreign Office, to set on foot a publication like the "Annales du Commerce," 2806, 2807. 2811, 2812——Particular instances of important decrees which have appeared in the "Moniteur," having been gazetted by the Board of Trade from that journal before receiving them from the Foreign Office, 2813. 2820, 2821——Occasional representation to the Foreign Office on the subject of the omission or delay in sending these decrees to the Board of Trade, such omission resting most probably with our foreign agents, 2814–2819.

Competency of our foreign agents to deal with commercial questions further adverted to, with reference to the expediency of their reporting to the Board of Trade, 2816–2819——Circumstance of the Foreign Office having expressed disapproval of the publication by the Board of any information not received from them, or from official sources, 2820. 2822, 2823——Expediency of all information for publication coming through one authentic channel, 2824, 2825——Importance of our agents abroad having a proper knowledge of the bearing of legislation upon trade, 2826——Omission in attachés not undergoing an examination in political economy, *ib.*

With regard to the statement by witness, as well as by Sir Emerson Tennent, that the Board of Trade was not consulted relative to the Reciprocity Treaty with the United States, witness is referred to certain correspondence between the Foreign Office and Board of Trade in 1852–54, showing that the latter department was consulted, 2827–2839——Witness cannot say that if he had been sent earlier to Turin he could have done any good, or could have obtained concessions from the Italian government, 2840–2850. 2865——It never reached witness that the Italian government felt they had been badly treated by Great Britain, 2842–2844.

Doubt as to foreign countries, when negotiating between themselves alterations of their tariffs, being always willing to acquaint us with their proceedings, 2851–2857——Inaccuracy of a statement by Mr. Ridley as to the operations of the Foreign Office and Board of Trade, under the present system, being attended with a barrenness of results——Doubt as to France having concluded any more treaties than Great Britain in recent years, 2862–2864——Distinct promise given by the Prussian government to make a similar treaty with us as with France, as soon as the latter treaty comes into operation, 2866–2872——Belief that any earlier application to Prussia and Austria would not have led to their giving us the most favoured nation clause at any earlier period, 2873–2875.

Witness does not represent it as any grievance that the Foreign Secretary withholds private information from the permanent officials at the Board of Trade, 2876–2881——Examination upon the suggestion that there should be greater facilities of communication between witness's department and the foreign ministers in London, 2882–2897——Circumstance of Lord Cowley being in constant and direct intercourse with the Minister of Commerce at Paris, 2885. 2969——Frequent communication between Mr. Milner Gibson and M. Van de Weyer, relative to the Belgian treaty; important details dealt with in this case, 2892–2897——With regard to reductions not having been obtained in the Spanish and Portuguese tariffs, witness makes no charge against the Foreign Office in the matter, 2898–2907.

Further argument that the same department should deal with the principles and details of a negotiation, and with the political and commercial bearing of the question, 2908——Opinion that the most perfect system would be to make the Foreign Office a self-contained office, like the India Office; objections to this view considered, 2908–2931——Contemplated consultation of the Board of Trade upon questions belonging to the executive functions still attached to that department, 2908. 2921–2923.

If the additional functions proposed to be thrown upon the Foreign Office are more than it can efficiently discharge, the best alternative is to render the Board of Trade really efficient as a consultative department, and to give greater weight and responsibility to the head of the department, 2908–2911. 2932, 2933——Disadvantage in continuing the present ill-defined and limited consultative functions of the Board of Trade, 2909——Entire departure from the original idea of the Board of Trade as a consultative office, *ib.*——Probable advantage in the India Office and Colonial Office consulting the Board, if efficiently constituted, 2912–2916.

Consideration of the question as to the responsibility respectively of the Secretary of State and of an Under Secretary in charge of the proposed commercial branch; doubt

Report, 1864—*continued.*

Mallet, Louis. (Analysis of his Evidence)—*continued.*

as to any serious difficulty on this score, 2924–2931. 2957–2964——Advantage of a Parliamentary Under Secretary at the head of the department 2925. 2959–2964——Limited personal communication between the officials in the Foreign Office and Board of Trade further adverted to; improvement if there were more personal intercourse, 2934–2941——Further reference to the circumstance of its having been stated to witness, when in Paris, that the French Government would have associated a British agent with their own representatives in their negotiations with Belgium, &c., 2942–2944.

Witness has always found the greatest possible willingness in the Foreign Office and its agents to act on behalf of the commercial interests of the country; he finds fault with the system, not with the men, 2945, 2946. 2973, 2974——Delay in the publication of the Zanzibar Report further adverted to, 2947——Witness is not aware of the reason of the transfer from the Board of Trade of the publication of the consuls' reports, 2948–2950——Inconvenience in the Foreign Office having to consult the Board of Trade upon all tariff questions, 2951, 2952——Circumstance of the Foreign Office finding it necessary largely to consult the Colonial Office, 2953–2956——Impression as to there being still a British consul at Paris, 2965.

Obstacle to the Board of Trade making representations to the Foreign Office in disapproval of their mutual relations, 2966–2968——Great development of the foreign trade of this country; the larger the trade the more likely is it that Government intervention will be required with reference to any obstructions by foreign nations, 2970–2972——Though there may be some remissness on the part of the Foreign Office in the interests of British trade abroad, there certainly is not any intentional remissness, 2973, 2974.

[Third Examination.]—Further evidence on the subject of the action of the Board of Trade in the matter of the Reciprocity Treaty with the United States, with reference more especially to the ultimate settlement of the treaty upon a basis very different from that recommended by the Board, 3173–3205——Reference to the correspondence in this matter between the Foreign Office and Board of Trade, as showing the part taken by the former department, and the several suggestions made by the Board, 3173–3194——Witness was in error in a former statement, that the Board had not been communicated with or consulted on this treaty, 3191–3195.

Illustration in the case of the American treaty of the inconvenience and delay under the present system of two departments, 3194. 3199——Witness is not aware of the actual circumstances under which Lord Elgin signed the treaty, or whether there was opportunity previously to consult the Board of Trade upon the treaty, 3196, 3197. 3200–3202——Witness does not blame the Foreign Office in the matter of this treaty, nor does he consider the Office responsible that the arrangement first projected was not carried out; there should, however, have been some communication to the Board of the grounds upon which the negotiation was resumed, 3196–3205.

Malmesbury, The Right Hon. the Earl of, G.C.B. (Analysis of his Evidence.)—Has held the office of Foreign Secretary at two different periods, 3206——Considers that the delay complained of under the present relations between the Foreign Office and Board of Trade would not be obviated by the establishment of a commercial department in the former Office, 3207–3209. 3212, 3237——Suggests that much delay may be avoided in the transmission of despatches to the Board of Trade, if the foreign agents docketed their despatches as "Political," or "Commercial," and if the latter were, in the first instance, sent on at once from the Foreign Office, 3209–3211.

Advantage in the Board of Trade taking the initiative upon the "commercial" despatches, and in these being submitted subsequently to the Foreign Secretary, together with the views of the former department upon them, 3209. 3211. 3228——Non-objection to the Board of Trade communicating with the consuls and ministers under flying seal, through the Foreign Office, upon purely commercial matters, 3210, 3211. 3218–3225. 3239, 3240——Approval of more importance being attached to the Board of Trade as a public department; advantage of the President being always a member of the Cabinet, 3213–3215——Probable improvement if there were a special clerk in the Foreign Office for superintending the communications with the Board of Trade, 3216. 3237, 3238.

Witness contemplates that the Foreign Office should still be responsible for the carrying out of treaties, but that all the technical part, so far as trade is concerned, should be managed by the Board of Trade, 3218–3223. 3239——With regard to the mode of dealing with the foreign despatches when witness was Foreign Secretary, and the delay which ensued, it is explained to him (by Mr. Layard), that the system now in force is very prompt and rapid, 3226–3229——Dissent from the views of Mr. Hammond on the subject of the Slave Trade Department; its value as a means of teaching international law, 3230–3236.

Manchester.

Report, 1864—*continued.*

Manchester. Great cause for complaint in the Manchester trade in regard to the existing Italian tariff, *Behrens* 530–535.

Large extension of district, and enormous interest in cotton manufacture represented by the Manchester Chamber of Commerce, *Ashworth* 905–908——Statement of the number and character of the communications received by the Manchester Chamber from the Foreign Office over a period of eight years; total of eighteen communications, only three of which related to foreign tariffs, *ib.* 912–915——Doubt as to the chamber having been informed by the Foreign Office, or Board of Trade, of the mission of an Italian envoy to England, with reference to treaty arrangements in 1863, *ib.* 916–919.

Total of only sixteen communications received from the Board of Trade in eight years, exclusive of printed documents; nature of these communications, *Ashworth* 920–922——The Manchester Chamber of Commerce had no communications with the Foreign Office on the subject of the French treaty, *ib.* 922——Statement as to the Manchester Chamber having been referred from the Board of Trade to the Foreign Office, and back again, with regard to some papers relating to the Philippine Islands, *ib.* 923–925.

Conclusion of the Manchester Chamber as to the Board of Trade being the proper and responsible department for the supervision and conducting of matters relative to foreign trade, *Ashworth* 926, 927. 938–944——Circumstances under which the Manchester Chamber waited upon Lord Palmerston early in 1864, with a memorial relative to the inadequate attention paid to the demands of commerce, *ib.* 932–934——In former interviews with the two departments, the representatives of the chamber had remarked upon the inefficiency of the arrangements between the two offices, *ib.* 933. 935, 936.

Very little use of the commercial information afforded to Manchester by Government, either in direct communications or through the "London Gazette," *Ashworth* 978. 1063–1076. 1098–1101——Uselessness to Manchester of the favoured nation clause in the case of Italy and the French treaty, *ib.* 979. 982–986. 1087. 1116–1123——Very little use of the consular reports to Manchester; statement hereon as to witness not reading these reports, and as to the Manchester Chamber not taking in the "London Gazette" which contains them, *ib.* 980, 981. 1025–1027. 1059–1076. 1124–1126.

Statement showing the forward part taken by the Foreign Office in communication with the Manchester Chamber of Commerce, and the Cotton Supply Association, with a view to increased supplies of cotton from sources other than the United States, *Hammond* 1801–1808——Inaccuracy of the statements in a memorial from the Manchester Chamber of Commerce, on the subject of duties on foreign rags, *ib.* 1828, 1829.

Memorial of the Board of Directors of the Manchester Chamber of Commerce, dated 22 February 1864, with reference to the inefficiency of the present system of communicating with foreign governments, *App.* 260, 261.

Marliani, Signor. See *Italy*, 3.

Mercantile Marine Department (*Board of Trade*). Way in which any information required in the negotiation of treaties from the Mercantile Marine Department is now obtained; increased facility if there were a commercial department in the Foreign Office, *Booth* 2057–2069.——*See* also *Board of Trade*, 8.

Minister of Commerce. Proposition that a Minister of Commerce be attached to the Foreign Office, who should conduct commercial negotiations with foreign countries, and should have the appointment and surveillance of consuls abroad, *Akroyd* 887–892——All political matters should rest with the Foreign Office, independently of the office of the Minister of Commerce, both offices being in the same building, *ib.* 888–892.

See also *Board of Trade.*

"*Moniteur,*" *The* (*France*). Earlier information frequently obtained by the Board from the French "Moniteur" than from the Foreign Office, *Mallet* 2459, 2460——Particular instances of important decrees which appeared in the "Moniteur" having been gazetted by the Board of Trade from that journal before receiving them from the Foreign Office, *ib.* 2813. 2820. 2821.

Morier, Robert B. D. (Analysis of his Evidence.)—Has been in the diplomatic service since September 1853; is now second Secretary at Berlin, and was previously at Vienna, 3131–3135——The attachés have been converted into second and third Secretaries, 3136, 3137——The Foreign Office has shown every desire to obtain information from witness upon matters of trade, 3138–3142——Statement as to witness having been sent by the Foreign Office to Vienna and Munich in December 1862, and as to his having reported fully upon the negotiations between France and the Zollverein, and between Austria and Prussia, 3140–3143——Mission of Mr. Ward to Berlin in the summer of 1861, whilst the negotiations were pending between Prussia, on the part of the Zollverein and France, 3144, 3145.

Distinct refusal by the Prussian Government to negotiate with Great Britain, whilst the negotiations were pending with France, 3146——Improbability of any better result if Mr. Mallet had been sent earlier to Berlin, Mr. Ward having been there, and having moreover been placed in communication with the chambers of commerce in this country, 3147–3149. 3157–3162——Distinct refusal by Austria, as well as by Prussia, to enter into

Report, 1864—*continued.*

Morier, Robert B. D. (Analysis of his Evidence)—*continued.*

negotiations with this country until relations with the Zollverein were settled, 3150, 3151 —— Promise by Prussia to give Great Britain the same advantages as France, as soon as certain German States had signed the Zollverein treaty with France, 3152, 3153.

Desire on the part of the diplomatic servants to devote attention to matters of trade, 3154——Entire inaccuracy of any impression that the Foreign Office discourages the study of commercial subjects by the diplomatic body, 3155, 3156——Advantage in the abstract of the principle of direct communication, 3163——Benefit experienced by witness in communicating privately with Mr. Mallet on commercial matters, as well as with Mr. Layard; inference as to the advantage of more direct communication between the Board of Trade and the foreign agents generally, 3163–3172.

Most Favoured Nation Clause (*Foreign Treaties*). Right of Government to ask other nations for the most favoured nation clause, but not to ask for any reduction of the tariffs; illustration in the case of Prussia, *Behrens* 755–790. 829–831.——*See* also *Austria. Belgium. Italy. Prussia.*

N.

Netherlands. Communication from Mr. Ward, dated The Hague, 18 and 23 April 1864, relative to the concert between the Ministry of Foreign Affairs and Ministry of Commerce in negotiating treaties of commerce, *App.* 281, 282.

Newcastle-upon-Tyne. Witness, as representing the Newcastle Chamber of Commerce, submits a summary of the evidence which he is prepared to lay before the Committee, *Allhusen* 881, 882.

Inaccuracy of the inference sought to be drawn by Mr. Allhusen, of Newcastle, to the prejudice of the Foreign Office, in reference to the negotiations with Berlin in November 1861, *Hammond* 1700——Communication from the Newcastle Chamber of Commerce in March 1864 with reference to the Franco-Italian treaty, *ib.* 1702.

Memorial of the Newcastle-upon-Tyne and Gateshead Chamber of Commerce, dated 13 February 1863, containing suggestions for facilitating the early reductions of foreign tariffs, *App.* 257–259.

P.

Palmerston, Lord. Circumstances under which the Manchester Chamber waited upon Lord Palmerston early in 1864, with a memorial relative to the inadequate attention paid to the demands of commerce, *Ashworth* 932–934——Exceptions taken to Lord Palmerston's defence of the present system, as well as to his statement that we could not look for a reduction of foreign tariffs, as we had now nothing to give in return, *ib.* 936, 937. 1018–1021. 1096.

Paper Trade. The paper trade is peculiarly interested in the fiscal regulations of foreign countries, *Evans* 1326——Very unfair competition to which the paper trade is subjected on account of the heavy export duties of foreign rags and the free admission of French paper into this country, *ib.* 1326–1329. 1336, 1337. 1365–1367——Absence of official communication with the paper trade pending the negotiations for the French treaty, *ib.* 1328——Frequent representations made in different quarters relative to the export duties upon foreign rags, but without effect, *ib.* 1330–1332. 1346–1349.

Reference to a statement by Mr. Gladstone that France would make some concession as to the duty on rags, and that in Italy the duty would be abolished; question as to the information on which the statement is made, *Evans* 1333, 1334. 1338. 1350. 1351. 1369–1372——Want of information displayed by Earl Russell on the subject of the paper trade and the rag duty, *ib.* 1335. 1360–1364. 1373——Very close supervision required of foreign tariffs in the interests of the paper trade, *ib.* 1336——Increase in the export duty on rags in part of Italy, *ib.* 1338–1341.

Absence of official intimation to the paper trade when the Italian tariff was being revised, and when an envoy was sent to this country, *Evans* 1342–1345. 1352–1354—— Representations made on several occasions to the Foreign Office as well as to the Board of Trade, *ib.* 1346–1349——Belief that France would have given us free trade in rags if insisted upon as a condition of our giving them free trade in paper, *ib.* 1355–1359. 1368.

Statement explanatory of the steps taken by the Foreign Office in communicating with foreign governments upon the subject of a reduction of duties upon rags; every effort has in fact been made, *Hammond* 1826–1829——Inaccuracy of the statements in a memorial from the Manchester Chamber of Commerce on the subject of the duties on foreign rags, *ib.* 1828, 1829.

Memorandum relating to the duty placed upon the export of rags by foreign countries, and the expediency of a removal or reduction of the duty, *App.* 273, 274.

Letter from Sir Emerson Tennent to Mr. Layard, dated 11th January 1864, upon the question of urging upon the Prussian and other governments the expediency of adopting a more liberal policy as regards the exportation of rags and other materials for paper-making, *App.* 274.

Report, 1864—*continued.*

Paris (*English Consulship*). Inexpediency of the abolition of the English consulship at Paris; extent to which useful, *Behrens* 573-576. 791-796——Impression as to there being still a British consul at Paris, *Mallet* 2965——Inaccuracy of a statement that the consul at Paris had been done away with; reason for a consul being maintained there, though the office is not considered necessary, *Hammond* 3337-3340.

Permanent Officials. Inexpediency of any undue power or control being given to permanent officials, *Mallet* 2958.

See also *Board of Trade. Foreign Office. Personal Communication.*

Personal Communication. Limited personal communication between the officials in the Foreign Office and Board of Trade; improvement if there were more personal intercourse, *Mallet* 2934-2941——Approval of personal communication occasionally between the Foreign Secretary and the officials at the Board of Trade; witness often had such communication, *Earl of Clarendon* 2984. 2986——Witness does not have individual communication with the permanent officials of the Board of Trade, *Earl Russell* 3065. 3086-3088——Action frequently taken by the Foreign Office by means of personal communication at times when, judging from the correspondence, there was omission or delay on their part, *ib.* 3107, 3108——Frequency of verbal communication between witness and the Foreign Secretary, *Right Hon. T. M. Gibson* 3451.

Political Questions (*Treaties of Commerce*). The commercial question and political question are so involved, that the same department should equally represent both, *Behrens* 593-597. 635-637——All political matters should rest with the Foreign Office, independently of the office of the proposed Minister of Commerce; both offices being in the same building, *Akroyd* 888-892——Effect of political considerations in causing delays in negotiation, *Sir J. E. Tennent* 2323; *Mallet* 2749-2752; *Earl of Clarendon* 3044.

Statement as to political considerations not being always communicated to the Board of Trade; doubt as to any disadvantage on this score, *Sir J. E. Tennent* 2304-2310. 2323——Objection to the political and commercial points which arise in the negotiation of foreign treaties being dealt with by different offices, *Mallet* 2745——Effect of political considerations in retarding progress in the negotiation of treaties of commerce, *ib.* 2749-2752——Check contemplated on the part of the Foreign Office, on political considerations, over communications from another department with a foreign country, *ib.* 2787,* 2788.

Further argument that the same department should deal with the principles and details of a negotiation, and with the political and commercial bearing of the question, *Mallet* 2908——The political bearing of each negotiation should be dealt with by the same minister who deals with the commercial question, *ib.*——Close connection in foreign countries between political and commercial business, *Earl Russell* 3073.

Portugal. Greater probability of a reduction of the Portuguese tariff if there had been earlier communication on the part of our Government, *Mallet* 2551-2554——Witness, however, makes no charge against the Foreign Office in the matter, *ib.* 2898-2907.

Repeated representations made to Portugal relative to promised reductions in their wine duties, but without effect, *Earl Russell* 3117.

Communications from Sir A. Magenis to Earl Russell, dated 18 and 20 April 1864, explanatory of the action between the Portuguese Foreign Office and Ministry of Commerce on commercial matters, *App.* 286, 287.

President of Board of Trade. See *Board of Trade*, 3.

Private Correspondence (*Foreign Office*). Instance in which the Foreign Office might advantageously correspond privately with the English Minister in Paris, *Mallet* 2683.

Strong objection to the suggestion by Mr. Mallet that some questions with foreign Governments might be disposed of by private correspondence, *Hammond* 3303.

Private Information (*Foreign Office*). Practice of the Secretary of State for Foreign Affairs in communicating any private information to the permanent officials upon political and commercial matters respectively, *Hammond* 1511-1520.

Very rare occasions of information obtained privately by the Foreign Office being communicated to the Board of Trade, *Mallet* 2482, 2483——Witness does not represent it as any grievance that the Foreign Secretary withholds private information from the permanent officials of the Board of Trade, *ib.* 2876-2881.

Prussia. Examination to the effect that though the most favoured nation clause could not now be obtained from Prussia and Austria, it might have been obtained if there had been proper action taken on former occasions, and efforts should now be made to obtain it prospectively, *Behrens* 738-745. 755-790.

Practical completion of the negotiations between Prussia and France at the time of witness's visit to Berlin, *Mallet* 2535-2537——Intimation to witness by the Prussian Government that they could not entertain the suggestion of tariff reductions in a treaty with this country, *ib.* 2538, 2539——Necessity of communication between witness and the British Minister at Berlin, if witness had been placed in co-operation with the representatives of France when negotiating the treaty with Prussia, *ib.* 2738-2742——Sense

Report, 1864—*continued*.

Prussia—continued.

in which it may be said that there is still a pending negotiation for a commercial treaty between Great Britain and Prussia, *Mallet* 2761.

Distinct promise given by the Prussian Government to make a similar treaty with us as with France, as soon as the latter treaty comes into operation, *Mallet* 2866-2872——Belief that any earlier application to Prussia and Austria would not have led to their giving us the most favoured clause at any earlier period, *ib.* 2873-2875.

Absence of any better result if Mr. Mallet had been sent earlier to Prussia, *Earl Russell* 3113-3115——Endeavour made to obtain information from Prussia at the time of her negotiations with France, *ib.* 3124, 3125——The Prussian Government always declined to give any information, *ib.* 3124.

Mission of Mr. Ward to Berlin in the summer of 1861, whilst the negotiations were pending between Prussia on the part of the Zollverein and France, *Morier* 3144, 3145——Distinct refusal by the Prussian Government to negotiate with Great Britain whilst the negotiations were pending with France, *ib.* 3146——Improbability of any better result if Mr. Mallet had been sent earlier to Berlin, Mr. Ward having been there, and having moreover been placed in communication with the Chambers of Commerce in this country, *ib.* 3147-3149. 3157-3162——Promise by Prussia to give Great Britain the same advantages as France, as soon as certain German States had signed the Zollverein Treaty with France, *ib.* 3152, 3153.

Communications from Sir A. Buchanan, dated Berlin, 17 and 19 April 1864, with reference to the relations between the Minister of Foreign Affairs and the Minister of Commerce, *App.* 278.

Publication of Commercial Information. Undue delay in the publication of the consular reports, so that their value is not much, *Behrens* 659-661——Expediency of Government collecting commercial information and disseminating it to the Chambers of Commerce as promptly and efficiently as possible; defects of the system of publication in the "Gazette" adverted to hereon, *ib.* 806-825.

Absence of delay on the part of the Foreign Office in publishing the consuls' reports, *Hammond* 1816, 1817——Doubt as to the expediency of publishing annually a full report of our foreign commercial relations and of all negotiations for new treaties; considerable expense of such publications, *Booth* 2033-2035——Check to be exercised by the Board of Trade before publishing the reports of the consuls, if the latter communicated directly with them, *ib.* 2154-2158.

Delay in the publication of important information from abroad, on account of such information being supplied to the Board of Trade through the Foreign Office, *Mallet* 2454-2472——Practice as to the Board of Trade sometimes publishing information not obtained from the Foreign Office, *ib.* 2457-2460. 2463-2465——Practice as to the publication in the "London Gazette;" defects of this mode of publicity, *ib.* 2467-2470——Preparation and publication by the Foreign Office of the consuls' reports; formerly they were prepared for publication by the Board of Trade, *ib.* 2733, 2734.

Character of the "Gazette" as the vehicle of publication further adverted to with reference to the French "Moniteur" and "Annales du Commerce," *Mallet* 2803-2810——Duty of the Board of Trade rather than of the Foreign Office to set on foot a publication like the "Annales du Commerce," *ib.* 2806, 2807. 2811, 2812——Circumstance of the Foreign Office having expressed disapproval of the publication by the Board of any information not received from them, or from official sources, *ib.* 2820. 2822, 2823——Expediency of all information for publication coming through one authentic channel, *ib.* 2824, 2825——Witness is not aware of the reason of the transfer from the Board of Trade of the publication of the consuls' reports, *ib.* 2948-2950.

Explanation as to the objection raised by the Foreign Office, in correspondence with the Board of Trade, to the publication by that department of information received from the foreign agents, unless it came through the Foreign Office, *Hammond* 3328——Rule followed by the Foreign Office as to the time of publishing the consular and diplomatic reports, *ib.* 3341.

Reference to the practice of the Foreign Office forwarding to the Board of Trade matters for publication, such as alterations in foreign tariffs, *Rep.* iv——Dissatisfaction on the part of the commercial community with respect to the system of publication as involving delay, *ib.*

See also *Zanzibar* (*Consul's Report*).

Rags. See *Paper Trade.*

Reciprocity Treaty (*Canada and United States*). Statement as to the Board of Trade not having been consulted with reference to the Reciprocity Treaty between the United States and Canada, although it was pre-eminently a case in which they ought to have been consulted, *Sir J. E. Tennent* 2212-2319; *Mallet* 2542-2549.

With

Reciprocity Treaty, &c.—continued.

With regard to the statement by witness, as well as by Sir Emerson Tennent, that the Board of Trade was not consulted relative to the Reciprocity Treaty with the United States, witness is referred to certain correspondence between the Foreign Office and Board of Trade in 1852–54, showing that the latter department was consulted, *Mallet* 2827–2839.

Further evidence on the subject of the action of the Board of Trade in the matter of the Reciprocity Treaty with the United States, with reference more especially to the ultimate settlement of the treaty upon a basis very different from that recommended by the Board, *Mallet* 3173–3205——Reference to the correspondence in this matter between the Foreign Office and Board of Trade as showing the part taken by the former department and the several suggestions made by the Board, *ib.* 3173–3194.

Witness further admits that he was in error in a former statement that the Board have not been communicated with, or consulted upon, the Reciprocity Treaty, *Mallet* 3191–3195——Illustration in the case of this treaty of the inconvenience and delay under the present system of two departments, *ib.* 3194. 3199——Witness is not aware of the actual circumstances under which Lord Elgin signed the treaty, or whether there was opportunity previously to consult the Board of Trade upon the treaty, *ib.* 3196, 3197. 3200–3202.

Witness does not blame the Foreign Office in the matter of this treaty, nor does he consider the office responsible that the arrangement first projected was not carried out; there should, however, have been some communication to the Board of the grounds upon which the negotiation was resumed, *Mallet* 3196–3205.

Witness has drawn up and reads to the Committee a memorandum explanatory of the action respectively of the Foreign Office and Board of Trade with regard to the negotiation of the Reciprocity Treaty with the United States in 1852–54, *Hammond* 3297.

Responsibility. Examination in support of the conclusion that there should be one department solely responsible in the matter of foreign trade and commercial negotiations, and that the double action and divided responsibility under the present system should at once be abolished, *Ripley* 108–129. 231–237. 392–422——The commercial question and political question are so involved that the same department should equally represent both, *Behrens* 593–597. 635–637——Difficulty as to which department is to be blamed for the unsatisfactory results produced, *Ashworth* 931——Expediency of such a change of the present system that one department may be entirely responsible, *ib.* 1022–1024——Whether it be the Foreign Office or the Board of Trade, there should be but one department for the commercial community to deal with, and for the carrying out of negotiations, *Sturrock* 1299–1304.

Convenience in one department undertaking a general supervision of trade, *Booth* 2006–2008——Responsibility of the Secretary of State considered in connection with the functions to be exercised with the proposed officials in charge of a commercial department in the Foreign Office, *ib.* 2094–2109. 2163 *et seq.*——Further reference to the responsibility of the Secretary of State in acting upon information obtained from a commercial department in the Foreign Office and from the Board of Trade, *ib.* 2163–2168. 2179–2186. 2195–2200——Degree of responsibility in Parliament or in respect of correspondence abroad which might attach to a commercial under-secretary at the Foreign Office, *ib.* 2225, 2226. 2233–2237.

Commercial representations about foreign trade should be made to the Foreign Office as being the responsible department, the Board of Trade being applied to by the Foreign Office for all information required before taking action, *Sir J. E. Tennent* 2283. 2338–2340. 2379–2380.

Condemnation of the present relations between the Foreign Office and Board of Trade, not only because of the irregular and tardy manner in which information is received by the Board, but because of the want of some clear responsibility in the president, *Mallet* 2588–2590——Conclusion that the remedy mainly required is that some one department shall be in a position to do the work satisfactorily on its own direct responsibility, *ib.* 2628–2635. 2638–2641——Consideration of the question as to the responsibility respectively of the Secretary of State and of an under-secretary in charge of the proposed commercial branch; doubt as to any serious difficulty on this score, *ib.* 2924–2931. 2957–2964.

Propriety of the Foreign Secretary rather than the President of the Board of Trade replying to the questions in Parliament upon matters of foreign trade, *Right Hon. T. M. Gibson* 3449——Responsibility of the Foreign Office rather than of the Board of Trade in regard to action with foreign countries in matters of trade; opinion that both departments should be, and are, jointly and severally responsible, *ib.* 3450——Views of Mr. Spring Rice, one of the senior clerks in the Foreign Office, in defence of the present action of the Foreign Office and of the Board of Trade in matters of foreign trade, *Hammond* 1825.

Report, 1864—*continued.*

Ripley, Henry William. (Analysis of his Evidence.)—Dyer and merchant at Bradford; has for many years been intimately acquainted with the home and foreign trade of the district of the worsted manufacture, 1–6——Has been President of the Bradford Chamber of Commerce since 1858, and has taken an active part in communications with the Foreign Office on the subject of trade and treaties with foreign countries, 4 *et seq.*

Frequent presentation of memorials from the Bradford Chamber of Commerce previously to the Franco-Belgian Treaty of 1861, upon the subject of trade with Belgium, and the preference given by Belgium to French goods over English goods, 8–29—— Preference to French goods over English goods under the Belgian duties previously to 1861; great increase of this preference by the treaty of that year, 11–20——Duty of the British Government to have taken steps for removing the preference complained of by the British merchants, 20, 21.

Communication from the Bradford Chamber of Commerce to Lord John Russell, as Foreign Secretary, dated 3 November 1860, relative to the expediency of the British trade with Belgium being placed upon a footing of equality with that of other nations, 22, 23——Statement as to no answer having been received from the Foreign Office to the foregoing letter, nor to a subsequent letter on the 18th December, 24–26——Further letter from the Chamber of Commerce, dated 4 January 1861, relative to the undue privileges in Belgium to French goods as compared with English goods, 27–29—— Acknowledgment by the Foreign Office on 3 January 1861 of the receipt of the letters of November and December 1860; 30, 31.

Circumstance of the letter of 3 November 1860 not having been forwarded by the Foreign Office to the foreign minister at Brussels until 3 January 1861; loss of very valuable time thereby, 32. 35–37—— Grounds for concluding that neither the Board of Trade nor the Foreign Office had really looked into the question up to the end of 1860; 33–35——Letter from the Foreign Office to the Bradford Chamber of Commerce, dated 11 January 1861, conveying an assurance that there was no intention on the part of the Belgian Government to make any distinction between the import duties upon French and British woollens; satisfaction felt with this letter, 38–40.

Reference to the passing of the Franco-Belgian treaty, and the representation consequently made by the Bradford Chamber to the Foreign Office; reply to this representation on 22d May 1861; 40–49——Subsequent communications from the Chamber of Commerce to the Board of Trade, representing the expediency of steps being taken for the due protection of British merchants in the treaty or negotiations then pending with Belgium, 50–53——Conclusion as to its having been owing to the omission or neglect of the Foreign Office that Belgium did not concede the same privileges to this country as to France, 54–59.

United action of various other Chambers of Commerce, and of the Bradford Chamber in June and July 1861, when it was suggested that Mr. Cobden should be asked to go to Brussels on the subject of the new tariff, 60–66——Statement as to its having been suggested, in July 1861, that Mr. Cobden and Mr. Mallet should be sent to Berlin on the subject of the treaty then contemplated between France and the Zollverein; circumstance of Mr. Ward having been sent instead, 63–68. 75–81—— Meeting of the Associated Chambers of Commerce in February 1862, when it was again urged upon Lord J. Russell, at the Foreign Office, to send to Brussels and Berlin some one really conversant with commercial details; Mr. Mallet, of the Board of Trade, was shortly afterwards sent to Berlin, 67–69. 87, 88.

Active measures taken by the Chambers of Commerce in May 1862, relative to the Belgian treaty; shortly after this movement the treaty was signed, 70–74——Request made by witness, in letter to Lord John Russell on 10 August 1861, that Mr. Ward should be put in communication with the Chambers of Commerce with reference to the tariff with the Zollverein; subsequent memorial on the subject on 7th September, the previous letter not having been replied to, 82–84—— Letter from the Foreign Office, dated 20 September 1861, stating that Mr. Ward had been directed to communicate with the Chambers of Commerce; he did not, however, make any communications to the Bradford Chamber, 85, 86——Belief that if Mr. Mallet had been sent to Berlin in July 1861, instead of in February 1862, the Zollverein tariffs would have placed England upon the same footing as France, 89–91.

Statement as to the Bradford Chamber of Commerce having, in July 1862, requested, through the Foreign Office, to be put in communication with Signor Marliani on the question of the Italian treaty which he had been deputed to negotiate; departure of Signor Marliani without any such inter-communication having taken place, 92–96—— Correspondence between the Bradford Chamber of Commerce and the Board upon the subject of the appointment of a French consul or vice-consul at Bradford; better chance of such appointment if the Board of Trade had acted promptly in the matter, 97–101.

Practice of the Bradford Chamber of Commerce to send duplicate memorials to the Board of Trade, on account of the unsatisfactory results of their communications with the Foreign Office, 102–107——Courtesy and attention shown to witness whenever at the

Report, 1864—*continued.*

Ripley, Henry William. (Analysis of his Evidence)—*continued.*

the Foreign Office; he has always felt, however, that there was an immense amount of ignorance in the office as to commercial questions generally, 104, 105. 107——Strong disapproval of the practice whereby the commercial community are constrained to communicate with the two departments, and are kept in uncertainty as to whether representations will be attended to, 106–108. 112–114.

Evidence to the effect that one special department, whether in the Foreign Office or the Board of Trade, should exclusively deal with questions of foreign trade and treaties, 108–123——Satisfactory manner in which the Board of Trade exercised extended functions with reference to the French commercial treaty, 108. 118. 133–138——The department contemplated by witness should have power of direct communication with our consuls and agents abroad, and with the commercial communities at home, 108, 109. 112–116. 231–237.

Consideration of the question whether the Foreign Office or the Board of Trade should supply the proposed department; respects in which the Foreign Office is the more fitting place for it, 109–129 —— Great willingness always evinced by the Board of Trade to discuss commercial matters with the mercantile community, 110——Necessity of a new and special department in the Board of Trade, if the Board were entrusted with matters of foreign trade and treaties, 111. 128, 129——Powerlessness at present of the Board of Trade in reference to negotiations abroad, 112.

Witness dates chiefly from 1860 the grievances complained of in delays with the Foreign Office, 117–121. 130——Explanation as to duplicate copies of the correspondence in 1860 with the Foreign Office not having been sent by the Bradford Chamber to the Board of Trade, 131, 132——Further statement as to the probability of equal concessions by Belgium to England as to France, if the Foreign Office had been more prompt in making representations on the subject, 139–144. 150 *et seq.*

Reference to a memorial from the Bradford Chamber of Commerce to the Foreign Office, in January 1859, and to the reply of Lord Malmesbury, with regard to the Belgian treaty of 1851; 145–149——Grounds for concluding that if the Foreign Office had acted with energy and promptitude Belgium would at the same time have made the same concessions to this country as to France, 159–188——Injurious effect upon the Bradford trade in the interval between the conclusion of the Franco-Belgian treaty and the Anglo-Belgian treaty, 184 186.

Further statement relative to the Zollverein treaty with France, and the sending of Mr. Ward and Mr. Mallet to Berlin on the subject, 189–199——Grounds for concluding that if Mr. Mallet had been sent earlier to Berlin the Zollverein would have granted the same concessions to England as to France, 198–203——Understanding as to the treaty being concluded conditionally between France and the Zollverein, and absolutely between France and Prussia, 204–209.

Further statement upon the question of the Italian treaty, and the circumstance of witness having been unable to obtain from the Board of Trade any information about the movements of Signor Marliani, 210–219——Grounds for concluding that the Foreign Office did not enter into any communication on the subject of the appointment of a French consul or vice-consul at Bradford, 220–228——Effect of the delay on the part of the Foreign Office in regard to the non-appointment of a consul, 229, 230.

Examination to the effect that it is for the executive to determine whether the proposed new department should be in the Foreign Office or the Board of Trade; witness declines to give any opinion upon this point, 231–237. 360–362. 392–422——Grounds for concluding that, although Lord Cowley was joint negotiator with Mr. Cobden in the matter of the French treaty, he had little or nothing to do with the tariff arrangements, which were settled by Mr. Cobden and Mr. Mallet in communication with the Board of Trade, 238–253. 288, 289. 312–317.

Understanding as to the Foreign Office being the proper department to which to apply for information upon foreign commercial questions, 254–258——Condemnation of the present relations between the Foreign Office and Board of Trade on account of the barrenness of results; witness does not know what the precise relations are, 259–269. 286, 287——Assurances given by the Foreign Office, in the time of Lord Malmesbury, to the Bradford Chamber of Commerce, previously to the reply in April 1859 to the memorial from the Chamber in the preceding January, 270–275.

Explanation that the first communication from Bradford to the Board of Trade with reference to the Belgian treaty was in July 1861; 276–280——Satisfaction felt at the time by the Bradford Chamber upon having applied to the Board of Trade and having been promised the assistance of the Board in the matter of the Belgian treaty, 281–285—— Claim of this country to favourable consideration at the hands of Belgium, 290, 291—— The complaint against the Foreign Office refers not only to the Belgian treaty, but to the Zollverein case and the Italian case, 292, 293.

Grounds for the conclusion that in the Foreign Office there is a great ignorance upon commercial questions, and that the commercial community should have a properly informed

Report, 1864—*continued.*

Ripley, Henry William. (Analysis of his Evidence)—*continued.*

formed department to go to on such matters, 294–298——With regard to there not being in the Belgian treaty of 1861 any most favoured nation clause, witness still maintains that a prompt and early action on the part of the Foreign Office, when the Franco-Belgian treaty was in contemplation, might have removed the difficulties subsequently experienced, 299–305. 318–321——Amount of injury to the Bradford trade in consequence of the Franco-Belgian treaty further adverted to, 306–311.

Probability of better results in the case of Belgium if the same course had been pursued as in the case of France, where the matter was arranged by Mr. Cobden and the Board of Trade, 321–328. 336——Expediency of our consuls abroad being thoroughly conversant with commercial matters, and of their reports to the department at home being forwarded to the chambers of commerce, 328. 344, 345——Statement as to the consular reports not being now furnished to the chambers of commerce, or put into a tangible shape for their use, 329–335. 345. 367–370.

Advantage if there were a department in England similar to that of the Ministry of Commerce in Paris, the minister not being bound to communicate through the Foreign Office, 337–342——Witness complains not of the high tariffs in foreign countries, but that men properly conversant with commercial matters are not appointed as consuls and diplomatic agents to make representations on the subject, 343–366——Any tariff alterations between foreign countries should in fact be watched closely in the interests of this country, 350, 351——Ignorance upon commercial matters of the great majority of our foreign consuls; grounds for this conclusion, 355–366.

Commercial knowledge and zeal at the Board of Trade, whilst there is a deficiency of those qualities at the Foreign Office, 360, 361——Further reference to the importance of direct communication between the proposed department and the consuls abroad, 362. 419. 421——Way in which the opposition in Belgium to the treaty with England might have been modified if, when the Franco-Belgian treaty was being negotiated, the Foreign Office were also in the field, 371–374——Expediency of English interests being properly represented to foreign governments at the time that any tariff alterations are being negotiated with other countries, instead of after treaties have been concluded, 375–388.

Improbability of the Belgian concessions to France having been prevented if England had been applying at the same time for similar concessions, 384–388——The action of the Foreign Office in the matter of the Belgian treaty was not postponed advisedly, the delay having been owing to omission or neglect, 389–391——Further examination in support of the conclusion that there should be one department solely responsible in the matter of foreign trade and commercial negotiations, and that the double action and divided responsibility under the present system should at once be abolished, 392–422.

Russell, The Right Hon. Earl, K. G. (Analysis of his Evidence.)—Has been Foreign Secretary on two occasions; was never connected with the Board of Trade, 3056–3058——Considers that disadvantage rather than advantage would result from a commercial department in the Foreign Office, whether under a Parliamentary or a permanent Under Secretary, 3059–3062——The Foreign Secretary has ample work to do without entering into the details of trade, 3060——When witness requires commercial information of any importance, he consults Mr. Milner Gibson, and has every facility of obtaining information or advice, 3063–3065——Witness does not have individual communication with the permanent officials of the Board of Trade, 3065. 3086–3088.

Probable advantage of a special officer in the Foreign Office for attending to the correspondence with the Board of Trade, and for receiving information from that department, 3066. 3073. 3085——Explanation relative to an apparent omission or delay on the part of the Foreign Office in 1862–63 with respect to the draft treaty in the case of Italy, 3067. 3099–3102——Statement showing that when Signor Marliani was in this country certain reductions in the wine and sugar duties were demanded as the condition of concessions on the part of Italy, which reductions could not be assented to, 3067–3069——Differential duties upon tobacco required by Austria in the event of concessions by that country, 3068.

Advantage if our foreign ministers could be put in possession of more complete information when negotiations are pending between foreign nations, 3070——Impression that Italy refused to entertain any negotiation with this country until the Franco-Italian treaty was concluded, 3072——Doubt as to the cause of the non-representation of the British jute interest at Turin when the negotiations with France were going on, 3072——Obstacle to the Board of Trade communicating directly with the diplomatic agents, commercial and political matters being closely intermixed on foreign countries, 3073. 3085——Doubt as to any advantage in the Board of Trade communicating upon matters of detail with the foreign agents under flying seal through the Foreign Office, 3074–3076. 3085.

Opinion that the president of the Board of Trade should be a cabinet minister, but that it is not essential the department be made a Secretaryship of State, 3077–3080——Statement of the circumstances under which the treaty of commerce with France was first brought forward, 3081——The question was considered by the Cabinet whether it

was

Report, 1864—*continued.*

Russell, The Right Hon. Earl, K. G. (Analysis of his Evidence)—*continued.*

was advisable to open negotiations with Spain and other countries before Government had committed itself to the reductions under the treaty, 3082–3084——Witness, though at present opposed to a commercial department in the Foreign Office, will carefully consider the suggestion, as well as others that have been submitted to the Committee, 3089.

Opinion that neither in the case of Belgium or Italy could better results have been produced, 3090. 3116——Necessity of all treaties of commerce being considered in the Foreign Office before they are finally settled, 3092–3095——Verbal communication of the representatives of the Board of Trade and Foreign Office with Signor Marliani; his refusal to negotiate until the French treaty was concluded, 3096–3105——Constant personal communication between M. Van de Weyer and Mr. Milner Gibson and witness when the Belgian treaty was under negotiation, 3106, 3107.

Action frequently taken by the Foreign Office by means of personal communication at times when, judging from the correspondence, there was omission or delay on their part, 3107, 3108——Several causes for which the Belgian Government refused to enter upon negotiations, 3109–3112——Absence of any better result if Mr. Mallet had been sent earlier to Prussia, 3113–3115——Repeated representations made to Portugal relative to promised reductions in their wine duties, but without effect, 3117——Expediency of its resting with the Secretary of State as to the most judicious time to open negotiations; impolicy of pressing matters unless there is fair prospect of success, 3117–3120. 3123.

With regard to an intimation by the French Government to Mr. Cobden that they would gladly admit a British representative to co-operate in their negotiations with other countries, witness does not recollect that Mr. Cobden ever transmitted this intimation to the Foreign Office, 3121, 3122——Endeavour made to obtain information from Prussia at the time of her negotiations with France, 3124, 3125——Reference to the apparent omission on the part of several consuls to make reports; doubt whether there has been any omission on their part in regard to special reports upon cotton, 3126–3130.

Russia. There is not any report from Russia by the secretary of the Embassy, *Behrens* 497, 498——Prohibitory effect of the Russian tariff upon the export of Bradford goods to Russia, *ib.* 536–538——Changes made in the Russian tariff in 1863; understanding as to the French Ambassador having been first consulted, *ib.* 539–542. 723, 724——The Russian tariff is the worst as regards this country, *ib.* 663.

Statement as to witness having communicated with both the Foreign Office and the Board of Trade respecting the admission of jute manufactures into Russia, and as to the similar effect of the replies from each department, whilst in each case the first reply was contradicted by the second, *Sturrock* 1216–1232. 1271–1287——Very satisfactory manner in which the Foreign Office carried out the representations with Russia in the matter of the jute trade, *ib.* 1241. 1271.

With regard to a statement by Mr. Forster that England was behindhand as compared with France in communicating with the Russian Government, and in obtaining reductions in the Russian tariff, witness cites a despatch from Lord Napier denying the accuracy of this statement, *Hammond* 1796, 1797.

The Board of Trade were consulted in all the stages of the Russian treaty, *Sir J. E. Tennent* 2322.

Communications from Lord Napier to Earl Russell, dated St. Petersburg, 17 and 18 April 1864, conveying information relative to the relations between the Ministry of Foreign Affairs and the Department of Commerce in the Ministry of Finance, *App.* 284.

S.

Secret Negotiations. Witness approves of secret negotiations by Government in the matter of foreign tariffs, but concludes there have been no such negotiations with any amount of success, *Behrens* 746–754. 861–863.——*See* also *Political Questions.*

Secretaries of Embassy and Legation. See *Diplomatic Service.*

Sewing Machines. Steps taken by the Foreign Office with reference to some sewing machines adverted to as illustrative of the prompt action of the department, *Hammond* 3302.

Shipping (*Differential Dues*). Different questions upon which shipowners consult the Foreign Office and the Board of Trade respectively, *Lindsay* 3244–3246——Delay through the Board of Trade having to communicate with the Foreign Office in connection with any negotiations for the removal of differential dues on shipping, through the Foreign Office not possessing knowledge in such matters, *ib.* 3247–3249——Advantage in negotiations about shipping, &c., being entirely in the hands of the Foreign Office, *ib.* 3258–3261.

Report, 1864—*continued.*

Shipping (*Differential Dues*)—continued.

Statement as to the expediency of our Ambassadors and diplomatists abroad having had a training in matters of commerce and navigation, so that they might be more competent to deal with foreign governments on such matters, *Lindsay* 3259–3264. 3267–3269. 3273. 3282–3293——Particulars relative to the unofficial negotiations of witness with France and other countries on the subject of differential dues upon shipping; he received every facility and support from the Foreign Office, *ib.* 3265, 3266. 3274–3281.

Admission by Lord Cowley and Lord Lyons that they did not understand the details of the question of dues upon shipping; disadvantage in their obtaining information second-hand from the consuls, *Lindsay* 3267–3269——Limited character of the special education desirable in diplomatic servants upon the subject of differential dues, *ib.* 3287, 3288.

Silk Trade. Limited importance of statistics of silk as compared with cotton statistics, *Ashworth* 987–1000.

Statistics relative to the silk trade since the year 1820, and the rates of duty upon raw silk and upon foreign manufactured silk, *App.* 267.

Slave Trade Department (*Foreign Office*). Extent and operation of the slave trade department; opinion that it would be better if it did not exist as a separate department in the Foreign Office, *Hammond* 1765–1767——Working of the slave trade department further adverted to in connection with the question of a commercial department, *ib.* 1842–1845——Conclusion as to there not being any advantage in the separate character of the slave trade department, *Earl of Clarendon* 2999, 3000.

Dissent from the views of Mr. Hammond on the subject of the slave trade department; its value as a means of teaching international law, *Earl of Malmesbury* 3230–3236.

Spain. Very high and vexatious character of the Spanish tariff as regards Bradford goods, *Behrens* 471–473——Frequent changes in the Spanish tariff during the last few years, *ib.* 474–476——Reference to a certain Bill brought in by the Spanish Government in January 1863, of which the Bradford Chamber were not informed by the Board of Trade until the 17th March following, *ib.* 477–483——Statement as to a Spanish decree in February 1862, which affected Bradford goods, not having been brought by Government to the notice of the Bradford Chamber; information first obtained on the subject through the "Moniteur," *ib.* 484–493.

Circumstance of there not being any report from a secretary of Legation relative to the general trade of Spain, *Behrens* 494–498——Reference to the differential duty in favour of Spanish shipping; an intention to increase this duty was not made known to the Bradford Chamber by Government, *ib.* 507–509——Further reference to the grounds of complaint relative to the proceedings of Government in regard to changes in the Spanish tariff, *ib.* 645. 688–694——Probable advantage if Government had made some better effort in the case of Spain, *ib.* 645.

Doubt as to the expediency of publishing a report as to the operation of the Spanish tariff, unless drawn up in a very careful manner; otherwise more harm than good would result, *Hammond* 1429–1436——The British Government have done their utmost to induce the Spanish Government to carry more liberal views into action, *ib.* 1437——With regard to a certain Bill and decree on the part of the Spanish Government, they were doubtless communicated by the Foreign Office to the Board of Trade, *ib.* 1695–1697——Information relative to various measures brought before the Spanish Cortes, having been communicated by the Minister at Madrid to the Foreign Office, and by the latter to the Board of Trade; absence of delay on the part of the Foreign Office, *ib.* 1744–1746.

Greater probability of a reduction of the Spanish and Portuguese tariffs if there had been earlier communication on the part of our Government, *Mallet* 2551–2554——With regard to reductions not having been obtained in the Spanish and Portuguese tariffs, witness makes no charge against the Foreign Office in the matter, *ib.* 2898–2907.

Grounds for concluding that the want of concessions on the part of Spain is in no way owing to any want of proper representations by the British Government, *Earl of Clarendon* 3037, 3038——Close connection between political and commercial matters in Spain, *Earl Russell* 3073——The question was considered by the Cabinet whether it was advisable to open negotiations with Spain and other countries before Government had committed itself to the reductions under the French Treaty, *ib.* 3082–3084——Opinion that no advantage would have resulted from earlier and more pressing representations to the Spanish Government; that is, before the conclusion of the French Treaty of Commerce, *ib.* 3082.

Communications from Sir J. Crampton to Earl Russell, dated Madrid, 17 and 21 April 1864, explanatory of the arrangements under which the commercial business of the Spanish Government is carried out, *App.* 285.

Report, 1864—*continued.*

Statistical Department. Absence of inconvenience if applications from other departments to the Statistical Department went directly, instead of through the Board of Trade, *Booth* 2004–2006——A Commercial Department in the Foreign Office would, after consulting the Statistical Department, communicate directly to the Foreign Secretary, when at present the required information from the Statistical Department is communicated to the Board of Trade, *ib.* 2016–2025——Approval of the functions of the Statistical Department being rendered quite independent, *ib.* 2080–2084——Facility of direct communication between a Commercial Department in the Foreign Office and the Statistical Department, *ib.* 2085–2089——The proposed officer at the head of a Commercial Department might communicate freely with the Statistical Department, *ib.* 2125–2127.

Means of the Foreign Office for obtaining details from the Statistical Department without direct consultation with it, *Right Hon. E. Cardwell* 3403-3405. 3423–3426——Separate character of the Statistical Department, though nominally a branch of the Board of Trade, *ib.* 3424–3426——Neccessity for keeping up the Statistical Department in connexion with the interests of trade, *Right Hon. T. M. Gibson* 3482. 3509-3514.

Staveley, Mr. Views of Mr. Stavely of the Foreign Office, in defence of the present action of the Foreign Office and Board of Trade in matters of commerce, *Hammond* 1825.

Sturrock, Robert. (Analysis of his Evidence.)—Secretary to the Dundee Chamber of Commerce, 1127, 1128——The Dundee Chamber represents the Scotch linen trade, 1129——The trade lies chiefly with America, but there is a large continental trade, 1131, 1132——During the negotiations preceding the French Commercial Treaty, witness was one of those deputed to represent the Scotch linen trade, 1133, 1134——Immense increase since 1838 in the import of Indian jute to Dundee, and in the jute manufacture, 1135–1140——Amount of the former and present duty in France upon Scotch yarns and linens, 1141——High price of jute goods in Dundee through the cotton scarcity, so that articles of French manufacture are largely imported, 1142, 1143.

Belgium is in the same position as France as regards the Scotch jute manufacture, 1144——Inability of witness to ascertain what are the precise duties upon Scotch yarns and jute goods going to Italy; reference hereon to a statement by the Board of Trade, that the duties would be the same as under the Franco-Belgian Treaty, 1145-1152——Conclusion as to the unfavourable position of the jute manufacture as compared with the linen manufacture, as regards trade with Italy, 1153–1167.

Details relative to communications between the Board of Trade and the Dundee Chamber, before and after the Franco-Italian Treaty, 1168–1191——Grounds for the conclusion that if proper representations had been made by Government relative to the revision of the Italian tariff, jute would not have been put into a worse position than linen, 1171–1211——Circumstance of witness having received no definite information about the Franco-Italian Treaty, until the treaty had been concluded, 1173–1181. 1189–1191——Representation made, without any successful result, on the conclusion of the Franco-Italian Treaty, 1182–1188. 1196–1200.

Representation made by the Dundee Chamber of Commerce to Government on the subject of the jute trade with the Zollverein; subsequent communication from the Foreign Office, 1212–1215——Statement as to witness having communicated with both the Foreign Office and the Board of Trade respecting the admission of jute manufactures into Russia, and as to the similar effect of the replies from each department, whilst in each case the first reply was contradicted by the second, 1216–1232. 1271–1287——Explanation as to witness deeming it expedient at times to communicate with both departments on the same subject, although he would much prefer having but one office to do with, 1233–1235. 1272–1293.

Duty of Chambers of Commerce to place information before Government, although in the case of Dundee and the jute trade with Italy, no result has been produced, 1236–1239——Courtesy and attention experienced at the hands of the Government officials in each department, 1240. 1248–1251——Very satisfactory manner in which the Foreign Office carried out the representations with Russia in the matter of the jute trade, 1241. 1271——Want of organisation between the two departments, 1242——Satisfactory manner in which the details of the French Commercial Treaty were carried out under the Board of Trade and Mr. Cobden, 1242–1244.

Further statement as to the French Treaty having resulted in Dundee importing jute goods from France, instead of in exporting them to France; explanation on this point, 1245–1247. 1262, 1263. 1322——Character of the French jute trade; it is not nearly so large as the Scotch trade, 1252–1254. 1305——Similar footing of French and English jute goods as regards admission into Italy, the complaint against the Italian tariff being that jute goods are charged as linen, and that no distinct and lower duty was imposed, 1255–1261. 1306–1319——Great spread of the Scotch jute manufacture further adverted to, 1264–1266. 1320, 1321.

Doubt as to the representations really made by Government on the subject of the Italian tariff and the jute trade, 1267–1270——Opinion as to the advantage that would result if the Foreign Office attended entirely to matters of foreign trade, and had an

Report, 1864—*continued.*

Sturrock, Robert. (Analysis of his Evidence)—*continued.*

efficient staff for the purpose, 1288–1298——Whether it be the Foreign Office or the Board of Trade, there should be but one department for the commercial community to deal with, and for the carrying out of negotiations, 1299–1304.

Sugar Duties. Information relative to the international conference at Paris in 1863, with reference to the sugar duties, and the attendance of witness and Mr. Ogilvie of the Customs, whilst the Foreign Office was not represented; disadvantage of this omission, *Mallet* 2569–2574——Statement as to the Board of Trade not having been officially consulted this year on the subject of the sugar duties, *ib.* 2575, 2576.

Particulars in connection with the consultation of witness, when at the Board of Trade, by the Colonial Office, with reference to the sugar duties, *Right Hon. E. Cardwell* 3420–3422.

Sweden. Statement as to the Bradford Chamber having memorialised the Foreign Office in November 1863 with reference to negotiations between France and Sweden; apprehension that no steps will be taken by Government until it is too late, *Behrens* 562–566——The tariff of Sweden, as regards this country, is one of the worst, *ib.* 663.

Any memorial from the Bradford Chamber of Commerce to the Foreign Office relative to the Swedish tariff was duly forwarded to the Board of Trade, *Hammond* 1698, 1699——Date at which the Bradford memorial relative to the Swedish treaty was received at the Foreign Office, and was forwarded to the Board of Trade, *ib.* 1743.

Communication from Count Manderström, containing particulars of the system in Sweden of dealing with commercial questions, and the arrangements in regard to the consular service, *App.* 291–294.

Switzerland. Letter from Admiral Harris to Earl Russell, dated Berne, 30th April 1864, together with a memorandum supplied by the President of the Swiss Confederation, explanatory of the relations and action between the departments of politics and commerce in Switzerland, *App.* 287, 288.

T.

Tariff Revisions (Foreign Countries). Any tariff alterations between foreign countries should be watched closely in the interests of this country, *Ripley* 350, 351——Expediency of English interests being properly represented to foreign Governments at the time that any tariff alterations are being negotiated with other countries, instead of after treaties have been concluded, *ib.* 375–388——Advantage in English manufacturers being placed in contact with the Government of any country when revising its tariff with another nation, *Behrens* 526–529.

Doubt as to foreign countries, when negotiating between themselves alterations of their tariffs, being always willing to acquaint us with their proceedings, *Mallet* 2851–2857.

Tennent, Sir James Emerson. (Analysis of his Evidence.)—Has been in the Board of Trade since 1852; is joint secretary in charge of the Commercial Department, 2241–2243——All consultative communications from the Foreign Office come under witness's branch, 2244——Consultation of witness's department not only by the Foreign Office but the Colonial Office, 2244——The Foreign Office not only consult upon all questions connected with foreign treaties and tariffs, but communicate to the Board of Trade consular reports and other information connected with trade, 2244–2249.

Origination in the Foreign Office of the communications between the two departments, 2250–2252——The communications come in the name of the Secretary of State, and are addressed to the Secretary of the Board of Trade, 2253–2255——With some few exceptions, the communications take place in writing, 2256–2260——Varying practice in regard to communications from commercial bodies coming to the Board of Trade or to the Foreign Office, 2261——Consultation generally with the Board of Trade before the Foreign Office gives replies to commercial deputations; exceptions to this rule, 2262. 2264–2271——Presence of witness, or his colleague, at the reception of deputations by the President of the Board, 2263.

Practice of the Board in communicating with the Foreign Office upon receiving individual complaints of grievances, 2272–2275——Discretion exercised by the Foreign Office in regard to consulting the Board of Trade when individuals complain first to the former department, 2276–2278——Frequent communication between the Board and the Chambers of Commerce and individual merchants, 2279, 2280.

With regard to the frequent complaint by the commercial classes as to the disadvantages and delay in having to deal with two offices, witness questions whether there is real ground for the complaint, 2282, 2283——Necessity, in many cases, of application being made to both departments, notwithstanding any arrangements that might be made at

Report, 1864—*continued.*

Tennent, Sir James Emerson. (Analysis of his Evidence)—*continued.*

at the Foreign Office. 2283——Suggestion that the deputations should go direct to the Foreign Office, in applications of the ordinary kind, *ib.*

Practice of the Foreign Office to send to the Board of Trade all the information which they consider concerns the department, 2284. 2293-2310——Earlier information obtained by merchants upon matters of trade and changes of tariffs in foreign countries than is obtained by the Board of Trade through the reports forwarded from the Foreign Office, 2284-2292——Occasional difficulty through the Foreign Office omitting to supply information which is afterwards required; this is always remedied on application by the Board, 2293-2299——Opinion as to complete information, for the purposes of the Board, being generally supplied by the Foreign Office, 2300-2310——Probability of more early and complete information in the possession of the Board of Trade if it were in direct communication with the officers abroad, 2301, 2302.

Statement as to political considerations not being always communicated to the Board; doubt as to any disadvantage on this score, 2304-2310. 2323——Practice of the Foreign Office not always to consult the Board of Trade before treaties affecting commerce are concluded with foreign nations, 2311-2329——Circumstance of the Board of Trade not having been consulted with reference to the Canadian Treaty of 1854; 2312-2319——Nor were they consulted about the first treaty with Japan, 2320——Nor before the conclusion of the French Treaty, 2321. 2351——The Board were consulted in all the stages of the Russian Treaty, 2322.

Concurrence of the Foreign Office in all substantive recommendations by the Board of Trade relative to foreign tariffs; any delay has been from political considerations, 2323——Impression as to there having been no communication with the Board on the subject of the treaty projected with Italy in 1862; 2324-2329.

With regard to the formation of a commercial department in the Foreign Office, witness is satisfied it would never work well, 2330-2332——Belief that if the proposed department were established, the present establishment of the Board of Trade would be equally required, and two offices instead of one must be consulted, 2332-2334——Objection on account of the additional labour to be imposed upon the Secretary of State, 2334-2337. 2379-2391——Disapproval of the proposed department being under a Parliamentary Under Secretary, 2335.

Expediency of commercial representations being still made to the Foreign Office, and of that department resorting to the Board of Trade for information, the responsibility of action resting with the Foreign Secretary, 2338-2340. 2379-2391——Much more complete and valuable character of the information obtained by the Board of Trade in its collective capacity than of information obtained by sectional departments acting separately, 2340——Apprehended antagonism between the departments if each acted upon the advice of a commercial branch of its own, *ib.*

Explanation as to the Board of Trade not being consulted by the India Office, 2341, 2342——Constant complaint made against the tariffs of India, 2343——Useful consultation of the Board of Trade with reference to Colonial duties, 2344-2346——Doubt as to the Board having ever been consulted by the Treasury, that is, within witness's experience, 2347-2350——Probability of advantageous representations on the part of the Board if it had been referred to at an earlier stage of the French Treaty, 2351-2353.

Advantage if the Board of Trade were placed on an equality with the Foreign Office, &c., so that it should be able to give greater force to its recommendations, 2354-2356. 2366. 2376-2378——Objection to the Vice President of the Board of Trade being an Under Secretary in the Foreign Office for commercial purposes; this arrangement would, however, have some advantages, 2357, 2358——Improvement if there were a special clerk in the Foreign Office in charge of the communications with the Board of Trade, 2359-2364. 2366. 2373. 2392-2401.

Great increase in trade adverted to with reference to the question of amending the relations between the Board of Trade and the Foreign Office, 2365, 2366——Considerable advantage anticipated if the Board of Trade were placed in communication with the consuls under flying seal through the Foreign Office, 2366-2378. 2399——Inexpediency of the commercial community being debarred from complaining to a department like the Board of Trade, 2369——Advantage of the power of the former Board of Control for India of enforcing its policy upon the Court of Directors, it having been the practice of the former body to consult the Board of Trade, 2402-2404.

Perfectly harmonious action between the Foreign Office and Board of Trade, 2405, 2406——Understanding as to there having been frequent personal interviews between Mr. Milner Gibson, Earl Russell, and Signor Marliani, with reference to the Italian Treaty, 2407. 2410——Personal communication also between the heads of the two departments and M. Van de Weyer, in negotiating the Belgian Treaty, 2408, 2409.

[Second Examination.]—Better understanding of late on the part of the commercial community as to the distinction between the functions of the Board of Trade and of the Foreign Office, 2411-2413——With regard to its being felt as a grievance that the com-

Report, 1864—*continued.*

Tennent, Sir James Emerson. (Analysis of his Evidence)—*continued.*

mercial community are referred from one office to another, the necessity of application to both departments would still exist if there were a commercial branch in the Foreign Office, 2414–2427——Further statement as to the advantage of a special clerk, or a registrar, in the Foreign Office, in order to see that communication with the Board of Trade is promptly and efficiently carried out, 2428–2435.

Tennent, Sir J. Emerson. Very good and able character of the evidence generally of Sir Emerson Tennent, *Earl Russell* 3081.

Trade. Great increase in trade adverted to with reference to the question of amending the relations between the Board of Trade and Foreign Office, *Sir J. E. Tennent* 2365, 2366 ——Immense development of the foreign trade of this country; the larger the trade the more likely is it that Government intervention will be required with reference to any obstructions by foreign nations, *Mallet* 2970–2972.

Treasury. Reference to the Treasury as finding it necessary at times to communicate with and consult the Board of Trade, *Hammond,* 1497–1500——Explanation as to the Foreign Office having consulted the Board of Trade rather than the Treasury upon a proposition for the reduction of certain duties upon Italian produce; doubt whether the required information would have been more quickly received directly from the Treasury, *ib.* 1633–1643.

Doubt as to the Board of Trade ever having been consulted by the Treasury, that is, within witness's experience, *Sir J. E. Tennent* 2347–2350——Statement explanatory of the very limited communication which now takes place between the Treasury and Board of Trade, *Mallet* 2562–2566. 2575–2577——Advantage in commercial complaints as to the operation of any duty or tax being laid directly before the Treasury rather than the Board of Trade, *ib.* 2636, 2637.

Considerable extent to which the Board of Trade is now made use of by the Treasury in matters relating to the revenue, *Right Hon. T. M. Gibson* 3459.

Treaties of Commerce. Practice of the Foreign Office not always to consult the Board of Trade before treaties affecting commerce are concluded with foreign nations, *Sir J. E. Tennent* 2311–2329——Necessity, in any case, of treaties of commerce being fully examined by the Foreign Office, *Mallet* 2787——Inaccuracy of a statement by Mr. Ridley as to the operations of the Foreign Office and Board of Trade, under the present system, being attended with a barrenness of results; conclusion of several treaties adverted to hereon, *ib.* 2858–2864.

Advantage in the Foreign Office applying to the Board for the aid of an efficient officer in conducting such treaties as the French Commercial Treaty, *Earl of Clarendon* 3032, 3032*——Expediency, in all cases, of the Foreign Office superintending the wording and the final settlement of treaties, *Earl of Clarendon,* 3033–3035; *Earl Russell* 3092–3095.

V.

Van de Weyer, M. See *Belgium.*

Vice President of Board of Trade. See *Board of Trade,* 4.

W.

Ward, Mr. Very excellent reports by Mr. Ward, Consul at Hamburgh, *Behrens* 572.

West, Mr. Very able character of Mr. West's reports to the Foreign Office, *Mallet* 2818.

Wickham, Henry Wickham (*Member of the House*). (Analysis of his Evidence.)—Was Member for Bradford in 1856, and saw Mr. Hammond at the Foreign Office, in September of that year, on the subject of a memorial previously submitted by the Bradford

Report, 1864—*continued.*

Wickham, Henry Wickham. (Analysis of his Evidence)—*continued.*

Bradford Chamber, on the subject of the Belgian Treaty, 1735, 1736——It was stated by Mr. Hammond that he could find no fault with the arguments used by the Bradford Chamber, 1737——When at Brussels witness had interviews with Lord Howard de Walden and the Secretary of Legation, who showed every willingness to go into the question; he did not hear from them that there was any difference of opinion between the Foreign Office and the Board of Trade, 1738–1742.

Written Communications (*Foreign Office and Board of Trade*). Importance of communications between the two departments being in writing, as a means of record, *Earl of Clarendon* 2984.

Wurtemberg. Communication from Mr. Gordon to Earl Russell, dated Stuttgardt, 2d May 1864, relative to the system of managing commercial affairs and negotiations in Wurtemberg, *App.* 288, 289.

Z.

Zanzibar (*Consul's Reports*). Great omission and delay in regard to the publication of a valuable report made by the Consul at Zanzibar, *Mallet* 2722–2731. 2947.

Explanation of the delay imputed to the Foreign Office in regard to the publication of a report from Zanzibar, *Hammond* 3329–3333.

Zollverein. Statement as to its having been suggested, in July 1861, that Mr. Cobden and Mr. Mallet should be sent to Berlin, on the subject of the treaty then contemplated between France and the Zollverein; circumstance of Mr. Ward having been sent instead, *Ripley*, 63-68. 75-81——Meeting of the Associated Chambers of Commerce in February 1862, when it was urged upon Lord John Russell, at the Foreign Office, to send to Brussels and Berlin some one really conversant with commercial details; Mr. Mallet of the Board of Trade was shortly afterwards sent to Berlin, *ib.* 67–69. 87, 88.

Request made by witness, in letter to Lord John Russell on 10th August 1861, that Mr. Ward should be put in communication with the Chambers of Commerce with reference to the tariff with the Zollverein; subsequent memorial on the subject on the 7th September, the previous letter not having been replied to, *Ripley* 82–84——Letter from the Foreign Office, dated 20th September 1861, stating that Mr. Ward had been directed to communicate with the Chambers of Commerce; he did not, however, make any communications to the Bradford Chamber, *ib.* 85, 86——Belief that if Mr. Mallet had been sent to Berlin in July 1862, the Zollverein tariff would have placed England upon the same footing as France, *ib.* 89-91.

Further statement relative to the Zollverein Treaty with France, and the sending of Mr. Ward and Mr. Mallet to Berlin on the subject, *Ripley* 189–199——Grounds for concluding, that if Mr. Mallet had been sent earlier to Berlin, the Zollverein would have granted the same concessions to England as to France, *ib.* 198–203——Understanding as to the treaty being concluded conditionally between France and the Zollverein, and absolutely between France and Prussia, *ib.* 204-209.

Reference to and comment upon certain communications from the Foreign Office and the Board of Trade to the Bradford Chamber of Commerce, in September and December 1861, on the subject of the Zollverein Treaty, *Behrens* 543–548——Conclusion that Mr. Mallet was sent at too late a period to Berlin with respect to the Zollverein Treaty with France, *ib.* 549–552——Virtual ratification of the Zollverein Treaty, as between France and Prussia, *ib.* 553-556——Expediency of a clear understanding that England is to be placed by Prussia under the most favoured nation clause, *ib.* 557-560.

Question at present between Austria and the Zollverein adverted to with reference to the present very high tariff of Austria, *Behrens* 662-667——Advantage if Mr. Mallet instead of Mr. Ward, or in addition to him, had been sent to Prussia in the first instance, *ib.* 725-733——Binding character of the treaty between France and Prussia, though not ratified, *ib.* 734-737.

Statement as to witness having been sent by the Foreign Office to Vienna and Munich in December 1862, and as to his having reported fully upon the negotiations between France and the Zollverein, and between Austria and Prussia, *Morier* 3140-3143——Mission of Mr. Ward to Berlin in the summer of 1861, whilst the negotiations were pending between Prussia, on the part of the Zollverein, and France, *ib.* 3144, 3145——Distinct refusal by Austria, as well as by Prussia, to enter into negotiation with this country, until relations with the Zollverein were settled, *ib.* 3150, 3151——Promise by Prussia to give Great Britain the same advantages as France, as soon as certain German States had signed the Zollverein Treaty with France, *ib.* 3152, 3153.
